By D. APPLETON AND COMPANY.

PREFACE.

THE most important event of 1898, not to our country alone, but to all mankind, was the short but decisive contest that destroyed the naval power of an ancient and famous kingdom, banished the last vestige of Spanish rule from the western hemisphere, thus closing the four-century drama that began with Cortez and ends with Cervera, added to the American Union territory equal to several large States, and opened the eyes of Europe to the fact that the western republic might at any time successfully assert itself as a world power of the first rank. A succinct account of this remarkable war, with illustrations, will be found in the article "United States." It is to be expected that, as in the case of all wars, some points will be hotly disputed, and, perhaps, never settled; but we believe that ours will be found to be as accurate and impartial an account as can be written while the occurrences are so new. To it we have added a statement, compiled with considerable labor and expense, showing the progress and participation of every regiment, battery, and vessel, all being arranged for ready reference in alphabetical and numerical order. In connection with this subject the reader will be interested also in the articles on "The Philippines," "The Ladrões," and "Puerto Rico." And he will also find biographical sketches, with portraits, of the more prominent military and naval commanders.

Next in importance comes the peaceful acquisition by the United States of the Hawaiian Islands, which are not only "the paradise of the Pacific," but the great strategic point in that mighty ocean which is rapidly becoming a mercantile rival of the Atlantic. Our colored map of this group is given in the volume for 1892, and that of Cuba in 1896, while colored maps of Puerto Rico and the Philippines appear in this volume.

World's fairs—now called "expositions"—which were hailed as a remarkable invention less than half a century ago, are becoming, if not every-day, almost every-year occurrences. This year we record, with illustrations, that which was held in Omaha, Neb.

Our regular articles on "Astronomy," "Chemistry," "Metallurgy," "Mineralogy," "Physics," and "Physiology" show what was done in the progressive sciences. But there were two scientific triumphs in 1898 of so great importance as to demand separate and illustrated articles; these are "Liquefied Air" and "Wireless Telegraphy." There is also an article on "Motor Carriages," which are believed to be the next thing we are to have for ordinary travel. Other advances in material improvement—less noticeable, but perhaps hardly less important—are set forth in the articles on "Lighthouses," "Refrigerating and Ice-Making," and "Steel Buildings."

In the moral and social world there is progress also. One remarkable phase of this is set forth in our article on "Social Settlements"; while the showing that we make every year under the title of "Gifts and Bequests" proves the existence of a wonderful spirit of munificence toward education and charity. In 1893 the aggregate of these gifts was \$29,000,000; in 1894 it was \$32,000,000; in 1895 it was almost \$33,000,000; in 1896 it was \$27,000,000; in 1897 it was \$45,000,000; and in 1898

it was \$38,000,000. The reader who wishes to pursue this subject further should look also at the record of mission work in the articles on the great religious denominations.

The articles "Financial Review of 1898" and "Finances of the United States" will give a clear idea of the mercantile and monetary movements of the year; and in connection with these the reader should look at the tabulated trade summaries in the articles on the more important countries.

The series of portraits of new governors in the articles on States of the Union is continued. It is not complete, for the reason that one was unwilling to have his portrait published, and one or two others failed to respond at all.

The literatures of the world—American, British, and Continental—are presented in the usual summaries, which give a rapid survey of the whole field. And the "Disasters" and "Events" of the year are treated in brief chronological paragraphs. These articles are intended as indicators rather than an attempt to give full information, which would be impossible in a volume like this.

Among the eminent dead of the year the names of the two great European statesmen—Bismarck and Gladstone—stand pre-eminent. On each of these there is a special article, written by a competent hand, with a portrait in photogravure. The soldiers that died in this year included Gens. Augur, Buell, and Rosecrans, who won their fame in the civil war; the two Caprons, victims of the Spanish war; and Calixto Garcia. Among the naval officers that passed away were Daniel Ammen, Worth Bagley, Daniel L. Braine, Charles V. Gridley, Milton Haxtun, and William A. Kirkland. The lawyers and statesmen included Thomas F. Bayard, Thomas M. Cooley, Robert M. McLane, Justin S. Morrill, Don M. Romero, William H. Trescot, and Sir George Grey. The dramatic profession lost some who were once universal favorites but had retired, and some who were still on the boards, including William Barry, Charles W. Coudock, Fanny Davenport, Virginia Dreher, Helen Faucit, Clara Fisher, E. J. Henley, Thomas W. Keene, Margaret Mather, and William J. Scanlan. The list of authors who closed their careers in 1898 includes two young Americans, each of whom produced a book of phenomenal popularity—Edward Bellamy and Edward N. Westcott. The other names on the literary death roll include William Black, Mary Cowden Clarke, Madeleine Vinton Dahlgren, Charles L. Dodgson, Georg Moritz Ebers, Theodore S. Fay, Harold Frederic, Blanche Willis Howard, Richard Malcolm Johnston, George Parsons Lathrop, Mrs. E. Lynn Linton, James Payn, Maria Louise Pool, Frederick Tennyson, and David A. Wells. The scientists lost James Hall, Joseph A. Lintner, William A. Rogers, and George E. Waring; the journalists, Isaac H. Bromley, Frederick W. Conrad, William T. Giles, and Charles L. MacArthur; the inventors, Sir Henry Bessemer, Wilson Eddy, and A. C. Goodell; the artists, Burne-Jones, Philip H. Calderon, Puvis de Chavannes, John A. Fraser, and Anton Seidl. Of the eminent persons in the necrology who could not be classed with any of the foregoing were the reformers Matilda Joslyn Gage, Parker Pillsbury, and Frances E. Willard; the impostors, Arthur Orton (Tichborne claimant) and John E. W. Keely; Calvin Fairbank, the abolitionist; H. C. L. Dorsey, known as "the prisoner's friend"; Gardner Q. Colton, one of the claimants to the discovery of anæsthetics; A. Oakey Hall, of Tweed-ring fame; and Adolph Sutro, the mining engineer. Sketches of all these and scores of others—many of them accompanied with portraits—will be found under the head of "Obituaries."

The notable illustrations not already mentioned include colored maps of Asia and Egypt and several full-page engravings.

An index to the three volumes of the series closes the book.

CONTRIBUTORS.

Among the Contributors to this Volume of the "Annual Cyclopædia" are the following :

Oscar Fay Adams,

Author of "A Dictionary of American Authors," etc.

COOLEY, THOMAS MCINTYRE,
DODGSON, CHARLES LUTWIDGE,
EBERS, GEORG MORITZ,
JOHNSTON, RICHARD MALCOLM,
PAYN, JAMES,
PERRY, WILLIAM STEVENS,
and other articles.

Francis Bellamy.

BELLAMY, EDWARD.

Marcus Benjamin, Ph. D.,

Editor of United States National Museum.

ASSOCIATIONS FOR THE ADVANCEMENT OF SCIENCE,
HALL, JAMES,
NATIONAL ACADEMY OF SCIENCES,
NEW YORK STATE,
ROGERS, WILLIAM AUGUSTUS,
and other articles.

J. H. A. Bone,

Of the "Cleveland Plain-Dealer."

OHIO.

John Henry Boner,

Of the "Standard Dictionary" staff.

ALABAMA,
ARIZONA,
IDAHO,
NEW MEXICO,
NORTH CAROLINA,
MISSISSIPPI,
MISSOURI,
and other articles.

Arthur E. Bostwick, Ph. D.,

Librarian of the Brooklyn Library.

LIQUEFIED AIR,
PHYSICS,
TELEGRAPHY, WIRELESS.

Thomas Campbell-Copeland,

Author of the "American Colonial Handbook."

SAMPSON, WILLIAM THOMAS,
SHAFTER, WILLIAM RUFUS,
UNITED STATES MILITARY RECORD.

Mrs. Helen C. Candee.

SETTLEMENTS, SOCIAL.

James P. Carey,

Formerly Financial Editor of the "Journal of Commerce."

FINANCIAL REVIEW OF 1898.

John Denison Champlin,

Editor of "Cyclopedia of Painters and Paintings."

FINE ARTS IN 1898.

Hon. Benjamin F. Clayton,

Ex-President of the Farmers' Congress.

FARMERS' CONGRESS.

Charles Henry Cochrane,

Author of "The Wonders of Modern Mechanism."

LIGHTHOUSES,
REFRIGERATING AND ICE-MAKING,
STEEL BUILDINGS.

Mrs. Bessie Nicholls Croffut.

LITERATURE, AMERICAN, IN 1898,
LITERATURE, BRITISH, IN 1898,
RESERVATIONS, INDIAN.

Mrs. Fredericka B. Gilchrist.

PROTESTANT EPISCOPAL CHURCH.

Rev. William Elliot Griffis, D. D.,

Formerly Professor of Physics in the University of Tokio.

JAPAN,
KOREA.

George J. Hagar,

Associate Editor of the "Columbian Cyclopædia."

GIFTS AND BEQUESTS,
OBITUARIES, AMERICAN.

Rev. Moses Harvey,

Author of "Text-book of Newfoundland History."

NEWFOUNDLAND.

Elwood Haynes.

GAS, NATURAL.

J. Castell Hopkins,

Author of "Encyclopædia of Canada."

BRITISH COLUMBIA,
CANADA, DOMINION OF,
MANITOBA,
NEW BRUNSWICK,
ONTARIO,
QUEBEC,
YUKON DISTRICT,
and other Canadian articles.

THE ANNUAL CYCLOPÆDIA.

A.

ABYSSINIA, an empire in eastern Africa, embracing the kingdoms of Tigre, Amhara, and Shoa, with Gojam, Lasta, the Galla and Kaffa countries, and other dependencies. The Emperor, bearing the title Negus Negusti (King of Kings), is Menelek II, who, after the death of Johannes II. in 1889, overcame the rival claimants with the aid of weapons furnished by the Italians, with whom he made a treaty on May 2 of that year, which was confirmed in the following October in a convention concluded by his plenipotentiary in Italy. The Italian Government proclaimed a protectorate over the whole Ethiopian or Abyssinian Empire by virtue of this treaty, although Menelek protested that the Amharic text recorded simply a treaty of alliance and mutual protection between independent sovereigns. The governments of Germany and Great Britain recognized the protectorate and conceded an Italian sphere of influence, embracing all of Abyssinia and adjacent parts of Somaliland and the Soudan, a total area of 648,000 square miles. The line of demarcation separating the British and Italian spheres, as fixed in the agreements of 1891 and 1894, follows the Juba river up to 6° of north latitude, and then that parallel westward to 35° of east longitude, whence it runs northward to the Blue Nile. In consequence of the defeat at Adua on March 1, 1896, Italy renounced the protectorate over Abyssinia and evacuated the Kingdom of Tigre which had been occupied in 1895. In the treaty of peace finally concluded at Adis Abeba on Oct. 26, 1896, Abyssinia was recognized as an independent power and the rivers Mareb, Belesa, and Muna were declared the southernmost boundaries of the Italian possessions.

The area of Abyssinia, with Gallaland, is about 150,000 square miles and the population 3,500,000. In Somaliland the Negus claims the whole interior back of the coast strip of 180 miles reserved to Italy by the treaty of Adis Abeba as far south as the border of British East Africa, comprising an area of 100,000 square miles.

The Abyssinians are a mixed race, in which Arab, Jewish, and negro types are grafted on the original north African or Berber stock. They have been Christians since the fourth century, belonging to the Alexandrian Church. Their religious rites include many Jewish ceremonies. The *abuna*, or ecclesiastic chief, is a Copt appointed by the Alexandrian patriarch. The monks and priests are the only instructors, teaching a part of the children grammar and poetry, religious chants and Bible texts. The system of government is feudal. The chief industry is raising cattle, sheep, and goats. Cotton, coffee, dates, and grapes grow wild, and there are extensive forests of valuable timber. Bar-

ley, dhurra, wheat, and sugar cane are cultivated, but agriculture is not much practiced. Besides hides and skins the chief exports are wax, coffee, and civet, also gold and ivory, on both of which the Negus receives a large royalty. The imports are cotton goods of American, British, and Indian manufacture, Turkey red, and French cutlery and glass. The Maria Theresa dollar, which has been struck in Austria for the Abyssinian trade since the last century, is being supplanted by a coin bearing the image of Menelek, having the same nominal value, though containing a fifth less silver.

Count Nicholas Leontieff, who went to Abyssinia in 1893 on a Russian political mission, veiled as a scientific expedition, and afterward obtained a cession of an immense tract of country, called the Equatorial Province, lying southwest of the Emperor Menelek's dominions and extending within two degrees of the equator, organized with Prince Henri d'Orleans a chartered company for the purpose of organizing the government of this country in the name of the Emperor of Ethiopia. The territory embraces a great part of the Italian sphere, a great part of the sphere claimed by the British East African protectorate, and the banks of the upper Nile in the Anglo-Egyptian sphere. Large quantities of arms were imported into Abyssinia by the French and Russians, whose influence was so powerful at Menelek's court that the British Government, on the eve of the expedition for the reconquest of the Egyptian Soudan, sent James Rennell Rodd as a special envoy to prevent a possible alliance between the Abyssinians and the dervishes. The treaty concluded by him with Menelek, at Adis Abeba, on May 14, 1897, provided for the freedom of the subjects of both countries to come and go and engage in commerce, while forbidding armed bands to cross the frontier without authorization. The caravan route between Zeyla and Harar, by way of Gildessa, was declared free to the commerce of both nations. Material destined for the service of the Ethiopian state was permitted to be imported through Zeyla free of duty, and arms and ammunition for the Emperor's army to have free transit, subject to the conditions of the Brussels act of 1890. Menelek engaged himself to do all in his power to prevent the passage through his dominions of munitions of war for the Mahdists, whom he declared to be the enemies of his empire. The boundary between Abyssinia and British Somaliland was settled by Rennell Rodd with Ras Makonen at Harar. Starting from the seashore opposite the wells of Hadou, it follows the caravan road by Abbassouen to Mount Samadou, passes through the summits of Saw and Egu to Moga Medir, thence to Eylinta Kaddo and Arran Arrhe

and onward to 44° of east longitude and 9° of north latitude, then in a direct line to 47° of east longitude and 8° of north latitude, and after that follows the line fixed in the Anglo-Italian convention of May 5, 1894, down to the sea. This boundary conceded and transferred to Abyssinia about 15,000 square miles of British Somaliland, a district in which the British had not been able to protect the Somalis from the raids of the Abyssinians, who carried their conquests even beyond the new frontier and were accustomed to baptize by force the Mohammedan inhabitants. In the negotiations it was stipulated that the Lion of the Tribe of Judah, the title given to Menelek, shall treat the people well and provide them with an orderly government. In return for the cession of the interior of British Somaliland, cutting off that protectorate from the British East African sphere, Menelek relinquished to Great Britain his claim to a strip of table-land about 4,000 square miles in extent on the south-eastern border of the protectorate. The rectification of the frontier reduces the size of the elephant reserve, recently constituted by the British authorities. Concerning the Gallas in the south, who have been forced to pay tribute to the Abyssinians, though within the borders of British East Africa, the treaty says nothing, nor concerning the rights assumed by Menelek at the instigation of the French and Russians to the equatorial provinces of Egypt as far as the shore of Lake Rudolf and the Nile region.

The French had ceded to Abyssinia the greater part of the *Hinterland* of their colony of Obok. They had written engagements with Menelek, the nature of which was not made public. The expedition of the Marquis de Bonchamps that was advancing across the Anglo-Egyptian sphere to the upper Nile to join hands with the French expeditions that were already in the former Egyptian province of the Bahr el Ghazal, consisted of an Abyssinian force led by Freuchen. Russian missionaries, teachers, and physicians went to Abyssinia, and the Russian Red Cross Society organized a hospital in Menelek's capital. Count Leontieff returned to Russia, and in the early part of 1898 arranged for the establishment of Abyssinian commercial agencies at St. Petersburg, Moscow, and other cities, and for the introduction of all kinds of Russian goods in Abyssinia, in the hope of creating a direct trade between the two countries. He also shipped military stores to the Negus, some of which were seized by the British customs authorities at Zeyla. Then he joined Prince Henri d'Orleans at Paris, and the two proceeded to Adis Abeba, taking a force of Cossacks and Senegalese, with which they set out for the equatorial provinces and the Nile. The difficulties encountered on the way, if not the obstacles created by Lieut. Harrington, the British agent who was appointed to the court of the Emperor Menelek, compelled them to renounce this expedition. That of the Marquis de Bonchamps likewise came to naught.

The Marquis de Bonchamps gave up his attempt to join the Marchand mission after passing through the country of the Yambos and reaching the White Nile. Of his force of 140 men 20 were killed and as many wounded. He made many treaties in the name of the Emperor Menelek with native chiefs whom he won away from British influence, but was finally obliged to turn back, as his men were exhausted and he had no boats to navigate the rivers and very few provisions left. Prince Henri d'Orleans prepared a new expedition for the coming winter, which he intended to conduct through Shoa independently of Count Leontieff and the Russians. Envoys from the Negus were received by President Faure in July. The French began the

construction of a railroad from Jibutil to Harrar with the object of opening up trade with Ethiopia. A more elaborate administrative organization was introduced in French Somaliland. Hausa troops, recruited in Dahomey, were sent to strengthen the native force at Jibutil. The population of this port had been increased by the railroad enterprise from 85 Europeans and 4,000 natives in 1897 to 1,400 Europeans and 8,000 natives in 1898. Lieut. J. L. Harrington arrived in Abyssinia in October to enter upon his mission as British resident at the court of Menelek.

AFGHANISTAN, a monarchy in central Asia, separating British India from Russian Turkestan. The reigning Ameer, Abdurrahman Khan, was placed on the throne by the British in 1880 after they had expelled Yakub Khan and occupied Cabul. The kingdom has a length of 600 miles and an extreme breadth of 500 miles. The population is about 4,000,000. The Amu Daria, or Oxus river, forms the boundary between Afghanistan and the Russian possessions up to its source in Lake Victoria, whence the boundary follows a line eastward to a peak in the Sarikol range on the border of Chinese Turkestan. The delimitation of the frontier by British, Russian, and Afghan commissioners established the fact that this southern arm of the Oxus is the main stream, and consequently the Afghans relinquished to Russia the khanates of Roshan and Shignan, together with the main part of the Pamirs. The boundary between eastern and southern Afghanistan and the British sphere has been demarcated in accordance with the Durand agreement of 1893, with the exception of the section between Asmar and the Khaibar. The Ameer agreed that Chitral, Bajaur, Swat, and Chilas should be included in the British political boundary and conceded the British claim to Waziristan, while he retained Asmar and the Kunar valley as far as Chanak, with the tract of Birmal. Kafiristan, which was acknowledged to be on the Afghan side of the boundary, was afterward occupied by a military force, and the inhabitants, who have their own religious and social system, were thoroughly subjugated.

The Ameer levies taxes in kind, varying from a tenth to a third of the produce in proportion to the benefits of irrigation. He receives a subsidy of 18 lakhs of rupees per annum from the Indian Government. With the aid of this subvention he has revived the regular army, established after the European pattern by Shere Ali, and maintains in the neighborhood of Cabul, the capital, about 20,000 troops, including 2 field batteries, 6 mule batteries, and an elephant battery. In his arsenal rifled cannon, magazine rifles, and cartridges are manufactured with European machinery under the superintendence of an Englishman. Including tribal levies the effective war strength of the Afghan army is supposed to exceed 50,000 men. The chief products of Afghanistan are wheat, barley, rice, millet, peas, beans, maize, spices, nuts, fruits of many kinds, which are preserved for export to India, the castor-oil plant, madder, and asafetida, which are abundant in the wild state, large quantities of the latter drug being exported, iron, gold, and precious stones, and of manufactured articles earpets, silk, felt, and sheepskin garments. The principal imports are cotton goods, sugar, indigo, and China tea. The chief exports are wool, fruits and nuts, and horses.

During the armed conflict of the Afridis and other border tribes with the power of Great Britain the Ameer suffered much loss and inconvenience from the interruption of commerce and was placed in a difficult position, being unable to support or aid either the tribesmen or the British Government.

without incurring political dangers. Arms and ammunition were supplied to the tribesmen through Afghanistan, but the Indian Government was not disposed to call Abdurrahman to account for any covert action or complicity so long as his public attitude was correct. Afridi refugees who sought an asylum in Afghanistan were harbored, since the Ameer was bound by his religion to receive them as fugitive Mohammedans. Afridi envoys, however, who went to Cabul in May, 1898, to solicit his aid and protection, were dismissed without an audience.

ALABAMA, a Southern State, admitted to the Union Dec. 14, 1819; area, 52,250 square miles. The population, according to each decennial census since admission, was 127,901 in 1820; 309,527 in 1830; 590,756 in 1840; 771,623 in 1850; 964,201 in 1860; 996,992 in 1870; 1,262,505 in 1880; and 1,513,017 in 1890. Capital, Montgomery.

Government.—The following were the State officers during the year: Governor, Joseph F. Johnston; Secretary of State, James K. Jackson;

JOSEPH F. JOHNSTON, GOVERNOR OF ALABAMA.

Treasurer, George W. Ellis; Auditor and Comptroller, Walter S. White; Attorney-General, William C. Pitts; Commissioner of Agriculture, Isaac F. Culver; Superintendent of Education, John O. Turner; Adjutant General, Robert F. Ligon; Chief Justice of the Supreme Court, Robert C. Brickell; Associate Justices, Thomas N. McClellan, Thomas W. Coleman, James B. Head, and Jonathan Haralson; Clerk, Sterling A. Wood—all Democrats.

Finances.—The receipts and disbursements of the treasury during the fiscal year ending Sept. 30, 1897, were as follow: Balance in treasury Sept. 30, 1896, \$58,319.40; receipts from Oct. 1, 1896, to Sept. 30, 1897, \$2,174,644.37; total, \$2,232,963.77. Disbursements on warrants of current year paid from Oct. 1, 1896, to Sept. 30, 1897, \$2,188,955.20; outstanding warrants of previous years paid during the year, \$3,028.36; total, \$2,191,983.56. Balance in the treasury, \$40,980.21. There were outstanding warrants, \$9,249.24; salaries earned and not paid, \$6,837.99; balance due the university on appropriation, \$3,000. Amounts due to special funds: Penitentiary fund, \$36,263.07; soldiers and widows, \$116,807.99; Agricultural Department, \$28,485.82; colleges of agriculture and mechanic arts, \$17,761.75; educational fund, \$167,514.29; 2- and 3-per-cent. fund, \$428.63; total, \$386,348.78; deduct cash balance in treasury, \$40,980.21, and the net deficiency was \$345,368.57. Receipts and disbursements during the year ending Sept. 30, 1898, were: To balance in treasury Sept. 30, 1897, \$40,980.21; to total receipts from Oct. 1, 1897, to Sept. 30, 1898, \$2,242,894.73; total, \$2,283,874.94. To

disbursements on warrants of the year, \$2,205,244.37; to disbursements on outstanding warrants of previous years, \$3,387.32; total, \$2,208,631.69; balance in treasury, \$75,243.25. Against this balance there were chargeable: Outstanding warrants, \$13,467.43; salaries earned and not paid, \$4,713.60; amounts due special funds: Pension fund, \$122,136.24; Penitentiary fund, \$85,680.13; educational fund, \$56,437.96; Agricultural Department, \$15,523.16; colleges of agriculture and mechanic arts, \$18,612; 2- and 3-per-cent. fund, \$428.63; total, \$316,999.15; deducting cash balance in treasury, \$75,243.25, left net deficit of \$241,755.90.

Banks.—According to the statement of the Comptroller of the Currency, the condition of the 26 national banks in the State was as follows in February, 1898: Resources—Loans and discounts, \$5,721,483.14; overdrafts, \$241,522.69; United States bonds to secure circulation, \$903,500; United States bonds to secure United States deposits, \$100,000; United States bonds on hand, \$1,500; premiums on United States bonds, \$80,591.13; stocks, securities, etc., \$1,341,152.55; furniture and fixtures, \$411,377.42; other real estate and mortgages owned, \$224,514.78; due from other national banks (not reserve agents), \$1,281,419.41; due from State banks and bankers, \$446,756.37; due from approved reserve and other cash items, \$61,502.23; exchanges for clearing house, \$59,099.24; bills of other national banks, \$148,439; fractional paper currency, nickels, and cents, \$5,414.98; lawful money reserve in bank: gold coin, \$360,197.60; gold Treasury certificates, \$39,780; silver dollars, \$157,062; silver Treasury certificates, \$117,180; silver fractional coin, \$43,607.66; total specie, \$717,827.26; legal-tender notes, \$398,105; total, \$1,115,932.26; 5-per-cent. redemption fund with Treasurer, \$39,809.56; due from United States Treasurer, \$1,680.60; total, \$14,292,525.59. Liabilities—Capital stock paid in, \$3,355,000; surplus fund, \$650,965.84; undivided profits, less expenses and taxes paid, \$515,521.45; national bank notes issued, \$813,150; less amount on hand, \$33,340; amount outstanding, \$779,810; due to other national banks, \$342,614.14; due to State banks and bankers, \$241,879.62; dividends unpaid, \$4,864.67; individual deposits, \$8,153,142.61; United States deposits, \$81,624.55; deposits of United States disbursing officers, \$18,094.44; notes and bills rediscounted, \$134,003.77; bills payable, \$15,000; average reserve held, 40.53 per cent.

Education.—In 1898 the number of children attending school was 567,110—whites, 312,660; colored, 254,450. The total educational fund was \$425,319.41. A report issued by the Superintendent of Education, giving the educational status of the State from 1855, when the school system was organized, to 1898, was journalistically regarded as "a splendid showing for the progress of education in Alabama and for the present school system." In 1855 there was appropriated to the school fund from all sources \$237,515.39, and there were 145,588 pupils; in 1896 there was contributed from all sources \$657,516.64, and there were 308,507 pupils.

Convicts.—The gross earnings from the hire and labor of convicts for the two years ending Aug. 31, 1898, was \$325,196.10 and the expenses (not including the cost bills) was \$136,662.50, showing a net profit of \$188,533.60. There was a cash balance in the treasury to the credit of the convict fund of \$82,619.39, in addition to which there was due from contractors for the hire of convicts \$10,780.56 and the product of the Alabama Cotton Mill to the amount of \$25,102.56, making the available resources of the bureau \$118,502.51; the convict cotton crop of the year was valued at \$17,500, and the Alabama Cotton Mill plant at \$78,347.77, making a grand total of \$214,350.28. The Penitentiary

was out of debt. Disbursements for the maintenance of convicts for the two years ending in 1898 amounted to \$128,288.55, against \$173,033.25 for the former biennial period.

The Alabama Cotton Mill has 3,300 spindles, and was largely built by convict labor; its entire cost was paid for during the two years ending in 1898, excepting \$9,801.74, which was paid in the preceding biennial period; it began operation in 1897. The entire expense incurred in the operation of the mill, charging it with cotton at the market price, was \$42,987.16; the proceeds from the sale of cloth of the crop of 1896 was \$27,701.76, and the product of the mill on hand of the crop of 1897 was valued at \$25,102.56, making the output of the mill \$52,804.56; deducting disbursements, \$42,987.16, left a net profit of \$9,817.16.

In 1898 there were on hand 1,763 State and 786 county convicts. The inspector said in his report that "a great number of convicts are received into the Penitentiary in bad physical condition, due to the terrible condition of our jails and overcrowding."

Coal.—The production of coal in 1897 amounted to 5,868,271 tons. The number of men employed was 11,091. The total coke production was 1,395,252 tons.

Iron.—About 750,000 tons of pig iron were shipped from the Birmingham district during 1897, and 40,924 tons of iron pipe. The pig iron produced in the State amounted to 947,831 tons. The iron shipped does not represent all made and used, a large quantity being consumed at home. Pig-iron shipments from the Birmingham district for the first five months of 1898 were 323,000 tons, an increase of 43,894 tons over the same period of 1897. Cast-iron-pipe shipments for the first five months of 1898 were 20,750 tons, an increase of 6,511 tons. Export shipments fell off as compared with 1897, on account of the war with Spain.

Wages.—The miners of the State met in convention in May, 1898, and organized themselves into a State district affiliated with the United Mine Workers of America. Statistics compiled by the secretary of the Birmingham Commercial Club show that there was an increase of one third in the number of wage earners in the Birmingham district during 1897; then there were 9,000 names on the pay rolls of the industrial companies, and the number had reached 12,000. The wages per month in 1897 amounted to \$480,000, and had risen to \$640,000. In Jefferson County, not including Birmingham and the immediate suburbs, the wage earners numbered more than 17,000, with about \$700,000 in pay rolls, distributed as follow: Furnace employees 3,500, wages per month \$140,000; coal miners 6,507, wages per month \$260,280; iron-ore miners 4,000, wages per month \$140,000; coke-oven employees 1,400, wages per month \$50,000; employees in foundries, pipe works, etc., 2,000, wages per month \$100,000. In city and county there were 29,407 employees, receiving monthly in wages \$1,380,280. In 1897 the wage earners in the county numbered 24,000, with monthly wages amounting to \$1,110,000, showing an increase in 1898 of 5,000 employees and \$200,000 per month in wages.

Gold.—There is some gold mining in the counties of Clay, Cleburne, and Randolph. It is reported that within 18 miles of Anniston "gold is to be found in paying quantities, and hundreds of men are searching for it and finding it." A dispatch to the Montgomery "Advertiser" said: "Some rich finds have been made recently in the gold region of Cleburne County, about 20 miles from Anniston. There is no excitement here over the finds, for the people of this section have long known that gold existed in Cleburne. It is only recently, however,

that any special effort has been made to work the field, and even now it is being done in a comparatively small way and with inadequate machinery. Hundreds are working small creeks and branches with good results, and many gulches running off the backbone of the ore system are paying handsome profits."

Cotton.—The acreage given to the cotton crop in 1897 was 2,656,333; bales produced, 833,789, or 422,731,023 pounds; average price per pound, 6.69 cents; total value of crop, \$28,280,705.

Cattle.—The breeding of cattle for shipment to the West, there to be fattened, is a new industry in the State. It is estimated that 200,000 head were shipped in 1898.

Enterprise.—An industrial awakening was reported from many parts of the State. The American Net and Twine Company, of Boston, Mass., established a factory at Anniston in 1897, and were soon working 150 men and making 20,000 pounds of yarn and twine a week, with prospects of producing 50,000 pounds a week. The Alabama Steel and Wire Company was incorporated in 1898, with capital stock of \$2,000,000. The mill, which was planned to be in operation by June, 1899, is to have a capacity of 600 tons a day, with arrangement to increase the capacity to 900 tons in twenty-four hours. The output is to be sold to foreign markets exclusively. The Avondale Cotton Mills, a \$1,000,000 plant on the outskirts of Birmingham, was ready to commence operations. A number of Birmingham foundries were running day and night on orders for machinery for Louisiana sugar refineries. During the year new dwelling and business houses were erected in Birmingham to the value of about \$200,000. Birmingham bank clearings for the first six months of 1898 were \$11,837,631.44, against \$9,648,315.12 for the same period in 1897, an increase of \$2,280,315.72. The product of brick in the East Birmingham yards was 10,500,000.

Good Roads.—A State roads convention was held at Anniston and a permanent organization was reached.

Negro Farmers.—The colored farmers of the capital county of the State met in convention to discuss the interests of their industry, and the following resolutions were adopted:

"Whereas, We feel that the great curse of the negro farmer of the South is the continuous practice of wholesale mortgaging of growing crops and the excessive rates of interest on the money and goods received as a result of such mortgages; be it resolved,

"That it is the sense of this meeting to discourage the practice of mortgaging and as far as practicable advise the discontinuance of the same.

"That we advise our fellow-farmers to give more thought, time, and labor to raising of such products as will be of immediate use and benefit to their homes.

"That it shall be our future purpose to encourage our brother in black to practice economy, and thereby be enabled to purchase his own farm, throw off the shackles of mortgages, and sleep under his own vine and fig tree."

ANGLICAN CHURCHES. Statistical.—The fiftieth report of the Ecclesiastical Commissioners gives their total income as about £1,335,000. Its sources are, approximately: Rents of lands (mainly agricultural) and premises, £240,000; rents of houses, property, etc., in London and suburbs, £115,000; tithe and corn rent charges, £233,000; ground rents (mainly in London), £348,000; mining royalties, etc., £341,000; other receipts, £58,000. In another year, after putting £85,000 to their reserve fund, as they did in 1897, the commissioners propose to use £150,000 for the augmentation of endowments

and benefices. Till the present time their augmentations and endowments are equivalent to a capital value of about £30,000,000. The report showed that during the fifty years since 1840, when the commission was created, the commissioners had augmented or endowed upward of 5,800 benefices by annual payments charged on the common fund by capital sums expended in the provision of parsonage houses, etc., and by the annexation of tithe charges, etc. The value of the grants exceeded £813,380 per annum in perpetuity, and was equivalent to a capital value of £24,462,000. The value of benefactions met for the most part by grants from the commissioners exceeded £184,850 per annum in perpetuity, equivalent to a capital sum of, say, £5,545,500. A further sum of £26,000 per annum was also contributed by benefactors to meet the commissioners' grants for curates in mining districts. The total increase in the incomes of benefices thus resulting from the operations of the commissioners exceeded £1,024,230 per annum, which might be taken to represent a capital sum of £30,787,500.

Society for the Propagation of the Gospel.—The annual meeting of the Society for the Propagation of the Gospel in Foreign Parts was held in London, May 5, the Archbishop of Canterbury presiding. A resolution of sympathy with Mr. Gladstone in his illness was unanimously passed. It recalled with gratitude the many occasions on which since he became a member, in 1837, Mr. Gladstone had been the society's "eloquent advocate and devout supporter." The year's income of the society had been £317,512, including £205,434 in legacies and £11,289 in rents, dividends, etc. More than £177,000 had been received under the bequest of the late Mr. Alfred Marriott, but this in no way relieved the general fund. More than £100,000 of the bequest had been invested, and the rest had been distributed in North America (£7,130); the West Indies (£4,505); Africa (£23,730); Asia (£25,660); Australasia (£8,975); and Europe (£1,000). Including 12 bishops, 744 missionaries were maintained by the society, of whom 249 were in Asia, 171 in Africa, 27 in Australia and the Pacific, 209 in North America, 48 in the West Indies, and 38 chaplains in Europe. Of these, 127 were natives laboring in Asia and 50 in Africa. There were in all about 2,900 lay teachers, 3,200 students in the colleges, and 38,000 children in the schools. In consequence of inadequate funds the mission stations were everywhere undermanned, and further exertions were needed for the increase of the episcopate.

The Church Missionary Society.—The annual meeting of the Church Missionary Society was held in London, May 3, Sir John Kennaway presiding. The treasurer's report showed that the whole amount received for the society's general work was £305,625, £7,000 more than in 1896, and £44,000 more than in the year before that; and that the total income of the society, including all special funds, had been £331,598. This was the highest income ever received for the general work. The associations had contributed to the total of general receipts £197,224, the largest amount ever sent up by them. Great thankfulness was expressed in the report for the response which had been given to the appeal made two years previously on behalf of the "Three Years' Enterprise," to which £42,000 had been already contributed. Notwithstanding the large receipts and the fact that the previous year's deficiency of £9,000 had been wiped off, the rapid development of the work had resulted in an expenditure exceeding the annual income by £20,000. From the mission fields were returned 483 stations; 411 ordained and 127 lay European missionaries, with 300 wives and 254 other woman missionaries, making a total of 1,092;

357 native and Eurasian clergy, 5,601 native lay teachers, 63,768 communicants, 15,139 baptisms during the year, and 2,191 schools, with 82,696 pupils. New openings were reported in China, where 744 persons had been baptized during the year, and a very interesting work was going on among the policemen and soldiers of Japan. The Student Volunteer Movement, or the World's Student Christian Federation, was represented at the anniversary meeting of the society by its general secretary, Mr. J. R. Mott, as a society whose special object was the cultivation of the missionary spirit and the promotion of the success of missionary enterprise. It had been established ten years, and had enrolled 6,000 young men and women students in universities and colleges in all parts of the world in co-operation with its work.

The Church Army.—The report of the Church Army, made at its annual meeting, showed that during 1897 about 80 trained men and women had been added to its staff, which now included 316 parochial evangelists, 120 van evangelists and colporteurs, 65 social officers, 154 mission nurses, rescue and slum workers, and 77 associate trained evangelists. The missionaries in charge of the 48 vans had conducted during the year 2,400 seven-day parochial missions, and had sold or distributed a large number of Bibles and other good literature. The year's gross income had been £98,000, showing an increase of £5,000.

A statement of the social-work and labor-home system of the Church Army, made at a meeting held in London, March 14, represented that it had 70 labor homes and other institutions in the metropolis and throughout the provinces for dealing with the outcast—men, women, and boys—irrespective of creed, character, and color. More than 13,000 cases had been dealt with in 1897, and 58 per cent. of them had obtained a genuinely fresh start in life. The only qualifications required for admission to the homes were freedom from physical infirmity; a desire to make use of the offered chance of a fresh start; and that the person's age should not be more than forty years, or forty-five if possessing a trade. Nearly £13,000 had been paid in wages to the inmates of the homes during the past year. The average length of stay in a home was thirteen weeks.

Sunday Schools.—The report of the Church of England Sunday-School Institute, May 10, shows, from returns sent by 13,635 out of 13,872 incumbents, that the number of scholars in Church Sunday schools in 1897 was 2,910,565, the year's increase being 19,940. The teachers numbered 209,742. Four hundred and two associations were in union with the Institute, including 19 in India and the colonies. The Church of England Bible Readers' Union had 50,000 members. The report suggested that Sunday schools needed further episcopal recognition and support, and that teachers should be admitted to their office at a service in church or in the school. A properly organized effort was also needed to improve the teaching. The year's revenue had been £1,586 for the general fund, and £10,766 gross by the sale of publications.

Clergy Relief.—The Queen Victoria Clergy fund was incorporated by royal celebration in the sixtieth year of her Majesty's reign as a national fund to supplement the diminished incomes of the clergy. At a meeting in its behalf, held July 4, the Archbishop of Canterbury represented that of the 14,000 benefices in the country, 6,000 were of the value of less than £200 a year; about 4,600 of them had an average income of £150, and the remaining 1,400 an average income of £65. It was not only the case that the incomes were so small; a great number of these gentlemen had larger incomes only

a little while ago, but they had been gradually falling in consequence of the great diminution in the value of land and tithes.

The report of the Committee of the Poor Clergy Relief Corporation, made at the annual meeting, July 7, emphasized the great need of the society, in view of the fact that of all the educated professions the clergy of the present day belong to the poorest. Help was afforded to necessitous clergy without reference to party complexion or schools of thought. The income of the society for the past year had been about £15,000, and £5,912 had been absorbed in money grants to clergymen, widows, and orphans, besides £551 in holiday grants, while clothing of the estimated value of £3,994 had been distributed. A surplus of about £6,000 was left to be carried to capital account.

Bishop of London's Fund.—The Bishop of London's fund was established in 1864 by Archbishop Tait of Canterbury in aid of church-erection and mission work in the metropolis. The public has since then given it more than £1,000,000, and this sum has been spent in building 185 churches in London and its surrounding districts, and in assisting to provide clergy for those churches.

Society of the Sacred Mission.—The Society of the Sacred Mission was formed about 1890 at Brixton, having for its special object the training of laymen who are willing to take the monastic vow for service, more especially for the foreign-mission field. At a meeting in the interest of this work, held Feb. 1, to consider means for obtaining new quarters for it (preferably at Cambridge), the Bishop of Rochester presided, and made an address commending the enterprise as a feature of a great revival of the missionary spirit. The Rev. Canon Newbolt said he regarded the mission as an envoy in reviving monastic religious life, and spoke of the wrong that had been done in branding as lazy and vicious the monks in the religious houses that were suppressed. The purpose of the mission was not only to invite men to offer their service to the Church without prospect of reward, but to give them an opportunity to test their vocation. More candidates were applying than could be received.

Church Defense Committee.—The second annual meeting of the Church Defense Committee—an organization formed by amalgamating in 1897 the Church Defense Institution with the Central Church Committee—was held in the Church House, Westminster, March 28. The Archbishop of Canterbury presided. The report recorded the quiet but unremitting pursuit during the year of the work of Church defense and instruction. A circular had been sent to every beneficed clergyman suggesting the observance of Oct. 24 or some other convenient day as "National Church Sunday," and inviting sermons on Church defense and instruction, with offertories whenever possible. A larger number of illustrated lectures on Church history had been delivered than in the previous year. Six hundred and forty-nine ruridecanal and 5,959 parochial secretaries were recorded. The income of the committee for the year had been £11,307. The defeat of two parliamentary measures bearing adversely to the claims of the Church was mentioned. Resolutions were adopted pledging support to the benefices bill, which was designed to remedy acknowledged abuses in the Church and expressing gratification at the progress it had made; urging continued organization of ruridecanal and parochial committees and continued effort "to disseminate an accurate knowledge among all classes of society of the history and work of the national Church"; and expressing hope for a speedy satisfactory settlement by the royal commissioners of the question of the burden of local taxation borne by the clergy.

Church Association.—The annual meeting of the Church Association was held in London, May 2, Capt. A. W. Cobham presiding. The income of the association had been £7,183, but although a balance of £46 was returned, the funds were declared to be totally inadequate. The van colporteurs had given 2,322 addresses and distributed 116,000 Protestant publications in 1,541 villages.

Church Reform League.—The third annual report of the Church Reform League contains the names of 1,600 Churchmen who have joined the society, including 842 clergymen. Sixty-eight branches have been formed in England and Wales, some of which are diocesan and some ruridecanal. Sir Alfred Holdsworth has been employed as paid secretary, and an office has been established at the Church House, Westminster. The total receipts for 1897 were £360, of which a balance of £22 remained. About one hundred meetings were held during the year, and a number of pamphlets and leaflets had been published and widely distributed, among which was a letter from Mr. Gladstone expressing sympathy with the movement.

The Liberation Society.—The sixteenth triennial Conference of the Society for the Liberation of the Church from the Patronage and Control of the State was held in London, May 3 and 4. The Rev. Dr. J. Guinness Rogers presided. The report of the executive referred to the results of the by-elections and the school-board elections, and the formation of the Free Church Council as indicative of the growth of liberationism and the increase of nonconformist strength; adversely criticised the bill for the reconstruction of London University; exhorted friends of religious equality to resist the endowment of a Roman Catholic university in Ireland; spoke of the present prospects of the nonconformist marriages bill as uncertain; and, referring to the "growing Romanistic lawlessness" within the Established Church and the attempts to reform abuses therein, expressed the opinion that the English Church can not be effectually regulated by legislative machinery or by appeals to judicial tribunals. The financial report represented that the receipts of the society had amounted to £4,649, and the expenditures to £4,500. This income was altogether inadequate to the demands made upon it, and needed to be increased by £1,000. Resolutions were adopted welcoming recent declarations of leaders of the Liberal party of continued adherence to the policy of disestablishment in Wales and Scotland; urging increased energy in carrying on the society's work; condemning the proposed establishment of a Roman Catholic University in Ireland as a retrograde measure, not called for by the necessities of the case, but calculated to intensify existing sectarian differences and injuriously affect the interests of learning; and instructing the executive to take such steps as might be necessary to defeat the measure, while they should support any needed changes in university teaching which would be "free from sectarianism and consistent with the maintenance of religious equality"; condemning the educational policy of the Government, and hoping that friends of unsectarian education would persistently aim at the establishment of a national system based on the principle of local and representative management, free from religious disabilities, and recognizing the just claims of the teaching profession.

At the autumnal meeting of the council of the society, Oct. 24, Mr. Albert Spicer, M. P., presiding, speaking in reference to the prevailing excitement concerning ritualism, said that some of them had always thought that disestablishment would come naturally from the dissensions in the Church of England, but it must never be overlooked that it

was the steady, able, and persistent work of the Liberation Society that had brought the question to the position in which it stood to-day. The society had kept the free-church principles to the front, and by its collection and diffusion of accurate information had supplied speakers with the means of educating public opinion. He thought the movement would gain by a sympathetic co-operation of the Liberation Society, with its long experience, and the new Nonconformist Political Council, with its youthful enthusiasm. A resolution was adopted affirming the belief that no effective remedy for the evils complained of would be found in either the action of the bishops of the Established Church, the renewal of ecclesiastical prosecutions, or new parliamentary enactments. The state, having proved itself unable to exercise adequate control over the Established clergy or successfully to regulate the Established Church's affairs, should withdraw from the Church national authority and endowments, and, concurrently therewith, permit its members to possess the same rights of self-government as are enjoyed by non-established religious communities. In the opinion of the Council the time had arrived when the question of disestablishment should be urgently pressed upon the leaders of the Liberal party, and also upon the constituencies, in view of the next general election. Another resolution called for new and vigorous efforts to remove the grievance caused by the absence of public unsectarian schools under popular control in thousands of English parishes, and urging especially the necessity of increased facilities for the training of teachers in undenominational colleges.

The Church and Papal Claims.—In a letter addressed to Cardinal Vaughan, March 12, concerning a paper issued by him entitled "A Vindication of the Bull *Apostolicæ Curæ*," the archbishops entered a denial of the claims made in the paper of supremacy of power and authority in the Pope, affirming that such claims had been deliberately and consistently rejected not only by the Church of England, but also by the great churches of the East, and declining to allow that those bodies "have given any evidence of that chaos which you suppose to be inevitable where the papal claims are not accepted." The letter called attention to the fact that the author of the "Vindication" had introduced the doctrine of transubstantiation as practically constituting "the one sure test of the validity of holy orders," while the Pope had made no direct reference to that subject. "Had his Holiness" they say, "followed the line of argument which you have now adopted, our answer must have taken a different form. But we could not answer what he did not say. . . . It is, for us, simply impossible to believe it to be the will of the Lord that admission to the ministry of the Church of Christ should depend upon the acceptance of a metaphysical definition, expressed in terms of mediæval philosophy, of the mysterious gift bestowed in the holy eucharist; above all, when we remember that such a definition was unknown to the Church in the early ages of its history and only publicly affirmed by the Church of Rome in the thirteenth century." The archbishops concluded their letter with the expression of the belief that among the hindrances to the fulfillment of the unity of the Church "there are few more powerful than the claims of supremacy and infallibility alleged on behalf of the Pope of Rome and the novel dogmas which have been accepted from time to time by the Roman Church."

Convocations.—At the meeting of the Convocation of Canterbury, Feb. 15, the reply of the Queen to the address presented by the Convocation to her Majesty on the occasion of her diamond jubilee

was read. The archbishop represented in the upper house that the working of the voluntary schools act of the last session had been very satisfactory, and the operation of the associations of schools had been exceedingly favorable all over the country. The creation of the federations of schools had had the effect intended. The archbishop and the Archbishop of York had agreed that the holding of joint sessions of the two convocations from time to time would be good for the Church. Resolutions appended to the report of the committee of the upper house on parochial councils and discussed in the lower house sought to impress upon the parochial clergy "the importance of securing the confidence and co-operation of lay Churchmen in the manner which in each parish may be best adapted to its wants," and suggest that one mode by which this may be accomplished would be by the formation of parochial Church councils, the initiative in forming these councils and the power of dissolving them to rest in the incumbent, subject to the approval of the bishop; the councils to consist of the incumbent, who should be chairman, the assistant clergy licensed by the bishop, the churchwardens, sidesmen duly appointed and admitted, and elected councilors, all to be communicants of the Church of England. The duties of the council should be to take the principal share in the raising of funds and administrative finance, and to assist the incumbent in the initiation and development in the parish of all departments of parochial Church work, and to advise him on matters in which he thinks it expedient to consult them. The House of Laymen directed the appointment of a committee to consider and report how "the freedom for self-regulation" referred to in a resolution passed by the house on May 13, 1897, should be exercised, and what steps should be taken with a view to obtain such freedom. The resolution of May 13 referred to in this action contemplated the institution of a reformed convocation "with the assistance in matters other than the definition and interpretation of the faith and doctrine of the Church of a representative body or bodies of the faithful laity."

The Houses of Convocation met again May 11. A petition was presented in both houses from Mr. John Kensit, publisher, 18 Paternoster Row, London, drawing the attention of the houses to the facts "that in a large number of the dioceses of the province, and especially in the metropolitan area services other than those in the Book of Common Prayer are in constant use, in most cases without lawful authority; that these services are largely those in use in the Church of Rome, and taken from the Roman Missal and other books belonging to that Church. I have been blamed for making public protest against these practices, and I desire to state that these protests are most painful to myself, and will most gladly be discontinued if those having authority will exercise the same and cause these illegal services to be discontinued." The archbishop, while criticising Mr. Kensit's proceedings in making the public protests, called attention to the importance of the subject and advised action upon it, saying that he had himself been intending to bring the matter before Convocation.

The lower house requested the archbishop to direct the appointment of a joint committee of both houses to consider and report on the position of the laity in the early Church and under the constitution of the Church of England, with reference to legislation on matters ecclesiastical, with power to confer with a committee of the Convocation of York appointed for the same purpose. It also suggested the appointment of a committee to confer with the Church Committee of the House of Com-

mons respecting bills before the house affecting Church interests.

At the third meeting of the Convocation, July 5, the upper house adopted a report concerning the re-marriage of divorced persons, explaining that in consequence of recent legislation the Church had had to consider the matter from the point of view of principle. In so doing it could not shut its eyes to a conflict of opinion on the subject of the Lord's words, and to the course adopted by the Eastern Church in allowing dissolution of marriage for adultery. The resolutions of the Lambeth Conference of 1883 were quoted, declaring divorces for adultery the only valid ones, with absolute prohibition of marriage of the guilty party during the life of the other, and recognizing difference of opinion within the Church as to the right of the innocent party to marry, in view of which the clergy should not be instructed to refuse the sacraments or other privileges of the Church to such parties remarried; and continued: "It ought, in our judgment, to be clearly and strongly impressed upon the faithful and upon the clergy as their advisers in matters of discipline and conduct that the Christian ideal is that of indissoluble marriage, and that the most dutiful and loyal course, even in the case of the innocent party, is to put aside any thought of marriage after divorce. But if any Christian, conscientiously believing himself or herself to be permitted by the Lord's words to remarry, determine to do so, then endeavor should be made to dissuade such people from seeking marriage with the rites of the Church, legal provision having been made for marriage by civil process. The language of the marriage service is unsuitable for repetition, except in case where the marriage tie has been dissolved by death or the marriage is proved to have been invalid from the beginning." Further, the report cites the declaration on the subject in the evangelical letter of the Lambeth Conference of 1897, uttering "earnest words of warning against the lightness with which the lifelong view of marriage is often taken, against the looseness with which those who enter this holy estate often regard its obligations, and against the frequency and facility of recourse to the courts of law for the dissolution of this most solemn bond."

The Convocation of York met Feb. 16. A resolution was passed expressing the opinion that the present method of procedure at the confirmation of bishops needs to be amended, and requesting the archbishop to counsel with the Archbishop of Canterbury on the subject. The archbishop was also requested, in view of the possible legal representation of the laity, to appoint a joint committee to determine what shall be the qualification of persons elected to serve as legal lay representatives. The lower house requested the archbishop to confer with the Archbishop of Canterbury with reference to the appointment of a committee duly representative of the Houses of Laymen of both provinces to consider and report upon the position which the laity should occupy in any scheme for the self-government of the Church; but advised that "it is not advisable to delay legislation on ecclesiastical matters until a reform of the Houses of Convocation and the legal representation of lay members have been effected."

At the second meeting of the Convocation, June 8, the Bishop of Liverpool moved, in the upper house, "that, in the opinion of this house, the increase of lawlessness on the part of many of the clergy in the conduct of divine worship in their churches, and especially the introduction of unauthorized services in the practice and celebration of the holy communion, and the growing dissatisfaction of the laity in consequence of such lawlessness demand the special attention of the bishops, and

therefore this house considers it necessary at the present juncture that the clergy of our respective dioceses should be called upon to remember the solemn declarations, subscriptions, and oaths made and taken by them at their ordination, licensing, or institution, and in particular their legal and moral obligation to use the form prescribed in the Book of Common Prayer and none other, except so far as shall be ordered by lawful authority." The bishop observed that he regarded the Church of England as at the present moment in a very perilous position, above all, from the dangerous fact that the people were complaining continually in every part of the land that the bishops would not speak out, and would not do anything to show whether they approved or disapproved of the movement that was going on in the Church of England. The result of that must certainly be that sooner or later, drifting as they appeared to be, the end of all would be disruption and disestablishment. Churchmen all over the land were angry, and many refused to go to church because they said the clergy were going behind the Reformation. The evil was increasing more and more, and was a cancer eating into the very vitals of the Church of England. The motion was supported by the Bishops of Manchester, Durham, and Sodor and Man, who recognized equally with the archbishop the gravity of the crisis and advanced arguments in substantial harmony with those which he had presented. The Bishop of Wakefield moved an amendment, declaring that, "in the opinion of this house, there is a serious danger at the present time of wide divergencies in liturgical practices, owing to the introduction on the part of some of the clergy of services and ceremonies unauthorized by lawful authority and alien to the principles of the Church of England, and especially owing to the alterations by way of omission or addition to the order for the administration of holy communion, and that these practices need some restraint and guidance, due regard being had under the authority of the ordinary to modern needs and the reasonable liberty which has always obtained in the Church of England." Supporting his motion, he claimed that the bishops had acted, and were acting, and held that it was futile to undertake to govern the Church of England as a system of machinery which was two centuries old, and which could not be applied in its entirety and strictness to the ends of the present day. A great growing and lively Church like this must have constant developments tried in order to provide an outlet for the religious needs of the present day. The Bishop of Chester did not regard the crisis as acute, and thought it would be better for them to content themselves with the utterance of opinions. The archbishop, closing the debate, thought that to regard the state of things as found in some quarters as characteristic of the Church as a whole would be a very grave exaggeration. His own impression was that there was, no doubt, in every diocese a certain number of instances in which the things described in the complaints were done, but these were a mere handful among the clergy of the Church of England; and he believed that the present evil, so far as it existed, was a temporary ailment which would sooner or later run its course and pass away. The amendment offered by the Bishop of Wakefield was adopted.

The Ritualistic Crisis.—The attention of the people of England has been forcibly directed to the development and extension of ritualism by a course of proceedings of novel and rather sensational character. The feelings of the antiritualists among the laymen were emphatically expressed in the House of Laymen of the Convocation of Canterbury by Sir Henry Embree, M. P., who said they

had heard a great deal about the susceptibilities of the clergy; he would venture to put in a plea for the susceptibilities of the laity. It would be unwise, he said, to shut their eyes to dissensions which existed in the Church. Interpolations of faith and doctrine were set before them by individual clergy, and they had "uses" introduced at their services which were alien to the Church of England. Had the laity no right to speak on such questions? They had every right, and they would exercise it. If they did not, to whom could they look for guidance? Not to the bishops. Why not? "Because we have bishops who do not govern, and clergy who will not obey." The Church of England, he contended, was passing through an extremely grave crisis, and to argue that the laity must have nothing to say to strange interpretations of faith and doctrine was absurd.

In January, Mr. John Kensit, of London, a publisher, began a course of visiting churches where ritualistic uses were practiced, and on their introduction, rising, and, as a communicant and ratepayer of the Church of England, protesting against them. So he did at the Church of St. Ethelburga, Bishopsgate, where he demanded to be given the communion "in the Protestant way," secured the removal of illegal objects, and caused the curate in charge to resign his position rather than give the communion to him as he demanded; and at St. Michael's Church, Curtain Road, where a protest was made against the ceremony of aspersion, or sprinkling with holy water, and one of his associates was arrested for "brawling," while a summons was asked for against the curate for assault by throwing water (the aspersion) upon the Protestants. For some of his protests Mr. Kensit was himself taken to court and fined. He prepared a petition to the Convocation of Canterbury, calling the attention of the houses to the alleged illegal practices and asking them to take steps to have them cease. He had difficulty in finding any member of Convocation willing to introduce the petition, when he received an unexpected letter from the Bishop of London offering to present it the next day. The bishop added to the offer the words: "It would greatly strengthen my hands in dealing with this very important matter if you would assure us that you would discontinue your protests at divine service and would submit to me a memorial stating objectionable practices and your reasons for objecting to them." Mr. Kensit replied with an assurance that he would make no public protest in any Church for two calendar months, and that he would cause arrangements that had been made for public protests in thirteen other dioceses to be similarly suspended. The following statements were made in Mr. Kensit's petition to the bishops:

"The petition of the undersigned, John Kensit, a baptized communicant of the Church of England, humbly sheweth—

"I. That grave scandal and distress have been occasioned to the minds of many, including the petitioner, by the restoration within many churches, both of the metropolis and throughout the land, of the practices and teachings which were discarded by the national Church at the time of the blessed Reformation, all of them borrowed from the Church of Rome, and designed to teach the false doctrine, among others (a) that the consecrated wafer is not merely an 'emblem of the Lamb of God,' but, in

the words of the Bishop of Southwell, is 'actually and really the Lamb of God,' to be worshipped by the congregation as being 'God blessed forevermore'; (b) that this 'Lamb of God' so reproduced in the hands of a priest 'under the form of bread and wine' is offered upon an 'altar' by the priest, as a sacrifice, for the remission of pain or guilt, and for the absent or dead.

"II. That grave injustice is done to the laity when idolatrous rites are enacted publicly by the officiant in public worship, because his acts are those of the congregation which he represents, and in whose person he addresses the Almighty. Every person present, therefore, who does not protest is an accomplice and participant in these illegalities. As a result, thousands of parishioners are debarred from attending public worship, and repelled from the Lord's Table by the conduct of clergymen who, though members of the Protestant Reformed Church of England as by law established, yet repudiate the very name of Protestant, and in defiance of their ordination vows preach, teach, and inculcate the doctrines and practices of the Church of Rome.

"III. That these abuses, though growing rapidly, owing to the protection afforded to the wrongdoers by the bishops, have gone on uninterruptedly for many years, and that the inaction of the bishops can be in no way due to the recent proceedings taken by your petitioner.

"IV. That great social and domestic evils are being felt in many families owing to the inculcation of the practice of sacramental confession upon candidates for confirmation and others for which no warrant exists in the Reformed Church of England; and nothing would do so much to check this evil as its outspoken condemnation by the House of Bishops.

"V. That your petitioner recognizes the right of the legislature to alter, vary, and add to the ritual now in lawful use, and also the binding nature of the decisions of the Queen in Council, but he respectfully submits that no other standard can possibly be acceptable to the whole Church as established by law. The only hope of peace in an established church is the common agreement to be bound by the same formularies until they have been amended by the same authority which originally enacted them.

"VI. Your petitioner submits the following list of some ornaments and ceremonies which have already been declared by the Queen's courts to be illegal: Unlawful ornaments of the minister: (1) the alb; (2) the berretta; (3) the chasuble; (4) the cope; (5) the dalmatica; (6) the tunic or tunicle; (7) the maniple. Unlawful ornaments of the church: (8) a baldachino; (9) lighted candles when not required for giving light; (10) a stone altar; (11) a cross on, or over, or in apparent connection with the communion table; (12) a crucifix; (13) stations of the cross. Unlawful ceremonies: (14) bowing down before or addressing worship to the consecrated elements; (15) the attendance of acolytes; (16) tolling of bell at consecration; (17) making the sign of the cross over the people; (18) hiding the manual acts; (19) elevation of the elements; (20) the use of incense; (21) the ceremonial mixing of water with the wine during divine service; (22) the use of wafers in lieu of bread 'usual to be eaten.'

"The growth of these illegal practices is indicated by the following table:

PARTICULARS.	1882.	1884.	1886.	1888.	1890.	1892.	1894.	1897.
Vestments.....	336	398	509	599	797	1,029	1,370	1,632
Incense.....	9	22	66	89	135	177	250	307
Altar lights.....	581	743	968	1,136	1,402	2,408	2,707	3,568
Mixed chalice.....								2,111
Hiding manual acts.....	1,662	2,054	2,433	2,690	3,133	3,918	5,037	5,964

"Under these circumstances, the Church has a right to expect that the bishops should suppress all unlawful practices at once, and direct the removal of stone 'altars' or other illegal furniture introduced without a faculty, and the restoration of the Ten Commandments to their accustomed place; should refuse to consecrate any church until illegal ornaments have been removed; and should at once suppress all variations in the communion service from the language and rubrical directions of the Book of Common Prayer, and that no office book be employed in any service which has not the authority of the entire Church of England. For these purposes the bishops have already ample powers. The bishops have already power to refuse to license any lawbreaking clergyman to a curacy, to test the Romanizing spirit of candidates for the ministry, and to refuse institution to lawbreakers who will not conform in future to the requirements of the law. The paternal authority of the bishops would enable them in the vast majority of cases to put an end to the irregularities complained of, but where that may not suffice they can direct a monition to be served, disobedience to which would lead in due course to the suspension, or it may be deprivation, of the contumacious wrongdoer. Your petitioner respectfully submits that the long neglect of the ordinaries themselves has been the cause of the confusion and disorder which now exist.

"Your petitioner humbly desires that your honorable house will take immediate steps for the repression of these evils and abuses."

An appeal issued by the Church Association to the people of England in the beginning of July called attention to the influence of secret societies as the source of the existing troubles and of dangers from the teaching of the doctrines of the mass, and of sacerdotalism, which were described in forcible language.

The subject formed the principal topic discussed at the annual meeting of the Church Association, May 2, when the presiding officer, Capt. A. W. Cobham, in his opening address spoke of the situation in its relation to the movement represented by the association as indicating an approaching crisis. "The apathy of Protestants had been rudely shaken by the archbishop's reply to the Pope, by the attempt to upset the educational settlement of 1870, by the proposal of an Irish Roman Catholic university," and by practices called idolatrons against which Mr. Kensit had been moved to utter open protests during service. The report of the council mentioned as the only effective remedy against the advance of sacerdotalism the organization of a Protestant party in the House of Commons, and they were now endeavoring to enroll 100 Protestant electors in every constituency, who would pledge their votes to the side which it might be decided to support. They had undertaken the cost of Mr. Kensit's appeal against his recent conviction (based on his protest), and the cost of his application for removing a tabernacle—an "ornament"—from the Lord's table in St. Ethelburga's Church. A memorial relating to St. Ethelburga's signed by 15,000 Protestant Churchmen had that morning been presented to the Bishop of London. The decision of the council to support Mr. Kensit was approved by the association, and it was decided to raise £2,000 for the purpose. Mr. Kensit attended the meeting and was received with cheers. He declared that he was going all over the country in his crusade against idolatry in the Church of England, and that he believed a glorious reaction in favor of Protestantism was setting in; but it was a time for deeds, not words.

At a large meeting of ministers of the Established Church, held in London in May, a memorandum

was adopted setting forth certain principles adherence to which was regarded as essential to enable the Church to maintain its position and secure healthy conditions for effective progress. It recognized that a chief difficulty hitherto to be contended with had been in securing those Catholic privileges which, while they obviously and certainly belonged to Churchmen, had been overlaid and forgotten in past years of apathy and neglect. Individuals endeavoring to vindicate their rights in this respect had been moved by a desire to be united with other parts of the Church in witness to Catholic doctrine, but their action was limited to securing what seemed fairly within the limits of the authoritative sanctions and traditions of the English Church. On the other hand difficulties had arisen out of a return to certain practices which were explicitly or by implication abolished at the Reformation, or out of a resort to certain foreign developments which never had any footing in the English Church. The signers of the memorandum wished to express their view that developments of this kind could not be introduced except by or under the sanction of authority, submission to which was a first principle of Catholicism. The immediate authority with which English Churchmen had to do was that of the English Church, not that of the Roman or the Gallican or any other Church. It followed that nothing could have valid ecclesiastical authority for English Churchmen which the English Church had never received or authorized, or which the English Church had definitely repudiated, whether explicitly or by implication, though it might at one time have had the authority of that Church. Authority expressed itself through the bishops jointly and severally. The Declaration of Assent in the use of the Book of Common Prayer was interpreted in this memorandum as a pledge to use the ceremonies therein prescribed "as the positive and sufficient rule and order of the ministrations of the Church for which they are provided as opposed to modifications of them, whether by change, addition, or division, except in so far as such modifications may be enjoined or allowed by lawful authority."

Action of the Church Union.—The annual meeting of the English Church Union was held June 16, Viscount Halifax presiding. The president, in his address, asserted the right of the Church to say or sing mass with the old ritual, except in such particulars as had been forbidden, denounced those who would interfere with it or disturb the exercise of it, and said he was quite certain that lights, vestments, and the mixed chalice would not be given up; but services not directly prescribed by the Prayer Book, such as the Three Hours, the Story of the Cross, and the Veneration of the Cross, must be given up if the bishop of the diocese desired. Obedience to authority was of more importance than any particular form of devotion or liturgical enrichment. No one, however, who respected the authority of the Church could object to those services as superstitious or sensuous. It was no more superstitious to bow to an altar than to the throne, to say "with my body I thee worship" to a wafer than to the emblem of our salvation. It was impossible to obey episcopal admonitions founded on a denial of the truth, such as a condemnation of bowing to the altar because it witnessed a belief in the real presence of the body and blood of Christ under the forms of bread and wine, or a proposal to renounce the Athanasian Creed because it insisted on the necessity of holding to the Catholic faith for salvation. It was necessary that present wants should be met by the sanction of additional services and collects. If individual priests had stretched the limits of their

responsibility, was it not partly due to the fact that the authorities of the Church had done so little? The need of authorized prayers for the faithful departed and the reservation of the blessed sacrament for the communion of the sick, the duty of restoring the last unction, the obligation of maintaining the duty of Christian marriage at all risks—when had these been put forward by authorities of the English Church for the last thirty years except by Bishop Hamilton of Salisbury? It was not necessary that every detail of the service should be referred to the bishop, or that authority should make itself felt to the same extent as in the Roman Catholic communion. Canon Gore advised circumspection and care to remove every cause of blame from among themselves. They could not forever acquiesce in the present situation; but history emphatically taught that there was no way to lose liberty like that of allowing themselves illegitimate license. The Rev. A. J. Suckling, of St. Alban's, Holborn, held that by altering anything while brutal and barbarous interference was going on they would play into the hands of those who were doing their utmost to drive them out of the Church. It would be an admission that they regarded ritual as a kind of play, while it was most serious as an exponent of doctrine. They could not help the bishops by giving in. A resolution, moved by the Dean of Rochester, was carried without dissent: "That this union is prepared to give all possible support to the lawful authority of the bishops as ordinaries in the settlement of liturgical difficulties, humbly confiding that, as members of the Catholic episcopate, they will impose nothing on the consciences of the clergy and laity which is contrary to the teaching and practices of the whole Catholic Church of Christ. That the Union will give legal and all other assistance in its power to incumbents and congregations in all necessary efforts to protect the celebration of the holy eucharist and the services of the Church from profanity and sacrilege. That it must not be supposed that members of the Union and other loyal Churchmen, because they have not resorted to prosecutions, disturbances, or brawling in church, do not feel most keenly the omissions and deviations from the Book of Common Prayer and the novel practices which have been allowed to grow up in a Protestant or Latitudinarian direction during the present century, as well as the denial of the services to which they have a right, or that they are not often aggrieved and driven away from their parish churches thereby."

Declarations of Bishops.—The controversy concerning ritual was referred to by most of the bishops in official addresses or charges, or in special communications to the clergy of their several dioceses. Many of them uttered specific instructions concerning proper ritual or admonitions against excess.

The Bishop of London sent letters to the clergy of his diocese informing them that any additional service used should conform entirely to the spirit and intention of the Prayer Book, and in all cases should be submitted to his sanction; that such services, when used, should be separated by a distinct interval from the services appointed in the Prayer Book, and should be announced as additional; they should consist of psalms, lessons, and prayers taken from the Prayer Book adapted for special classes, such as services for children, or for men and women, or members of parochial guilds or organizations, or they should be intercessions for special purposes, such as missions, or temperance, or the like.

The Bishop of Liverpool issued a circular specifically mentioning a number of ritualistic practices not authorized by the Prayer Book, and requesting ministers to abstain from them. The practices speci-

fied are: The use of incense; the use of lighted candles in or near the communion table when not required for the purpose of giving light; the use of sacrificial vestments at the holy communion; the use of catechisms for children directly teaching "Mariolatry"; the use of prayers for the dead at holy communion, not enjoined in the Book of Common Prayer and expressly excluded from the second book of Edward VI; the requirement of habitual auricular confession from communicants, as a condition precedent to communion, or as tending to promote the highest spiritual life, which was expressly condemned by the Lambeth Conference in 1878; the use of the "reserved sacrament" for invalids, which was condemned by the twenty-eighth article of the communion rubric; the public celebration of the Lord's Supper with less than three persons to communicate with the priest; and the use of the word "mass" in giving notice of the holy communion.

The Bishop of Hereford made a distinction between the ritual of reverent devotion and that which was symbolical of unsound doctrine. That which spread sacerdotal and sacramental theories had no basis in the New Testament. He deprecated the disposition to introduce new ceremonies into the service, which were almost always imitations of some Roman Catholic practice, and strongly deprecated habitual confession as involving the risk of an unnatural sentiment, dangerous to the moral and spiritual nature. As to the method of dealing with these excesses, he thought no wise bishop would resort to prosecutions till every other effort had failed.

The Bishop of Lichfield in September instructed the clergy of his diocese that:

"1. The prescribed offices in the Book of Common Prayer should be said as ordered without omissions or additions, except such as are allowed under the act of uniformity amendment act, or as might be lawfully authorized from time to time by the bishop of the diocese.

"2. Audible interpolations in the communion service are illegal.

"3. The reservation of the blessed sacrament for the purpose of adoration is neither legal nor primitive. Its reservation for administration to the sick is primitive, but is not legal.

"4. The ceremonial use of incense in the prescribed services of the Church is illegal.

"5. The holy communion should not be celebrated unless the number of persons to communicate with the priest required by their Church is assured.

"6. Prayers for the dead should be after the primitive model, and in entire accordance with the spirit of the Book of Common Prayer.

"7. The observance of saints' days and holy days besides those for which a collect, epistle, and gospel were provided in the Book of Common Prayer should be limited to those in the Prayer-Book calendar.

"8. No additional services should be held in the church without the permission of the bishop.

"9. The invocation of saints is illegal.

"10. It is not lawful to impose any conditions on the baptized antecedent to their presentation for confirmation, nor on the confirmed antecedent to their reception of holy communion, which are not imposed by any order contained in the Book of Common Prayer."

The bishop declared that the only right and reasonable course for the sake of order and in justice to the laity was to keep to the Prayer Book; that the test of reality of worship is righteousness of life in this world; and the test of the efficiency of the ministrations of the clergy was the moral standard of their parishioners.

The Bishop of Worcester sent a circular of questions to churchwardens inquiring, among other things, whether the vicar used incense or wafer bread; whether any other books were used in the offices of the church than the Book of Common Prayer; whether the services were conducted strictly in accordance with the Prayer Book, without addition, diminution, or alteration; whether water was mixed with wine during the service; and whether any additions or alterations had been made in the ornaments of the church or in the fabric itself since 1895, and if so, by whose authority.

The Bishop of Winchester requested his clergy to give him the opportunity of inspecting all forms and offices used in their churches in addition to those prescribed in the Book of Common Prayer, saying that "in times of anxiety, whether reasonable or unreasonable, our security seems to be in falling back upon the definite terms of the prescribed rule and system of our Church. The result must be to strengthen our mutual confidence, to allay fears if they are groundless, and to restrain irregularities where such there are."

Charge of the Archbishop of Canterbury.—The Archbishop of Canterbury, in his address to the Diocesan Conference of Canterbury, said that he did not think it worth while to deny that there were a few men who did very much desire to carry the Church of England back under the domination of the Church of Rome. There were also some men, probably quite as many, who would very much desire to get rid of the present constitution of the Church of England in such a way as to join with it the nonconformist bodies on their own terms. But to say that the great body of the clergy of the Church of England had the smallest desire to submit themselves to the domination of the Church of Rome he was certain was not the fact. The archbishop acknowledged the existence of a great many irregularities that had grown out of a good deal of mistaken zeal, which it would be necessary that the bishops generally should look to. A simple way to settle the matter would be for the clergy, in compliance with their ordination vows, to abandon all services that did not find a place in the Prayer Book.

The archbishop delivered in October a series of visitation charges, in the course of which he interpreted the doctrinal teachings of the Church on a number of points. Concerning the sacraments, having shown that the spiritual reception by the communicant of the flesh and blood is taught, he said, respecting the question of the real presence, that the Church certainly teaches Hooker's doctrine that the presence should be looked for in the receivers of the consecrated elements, but that it "nowhere forbids the further doctrine that there is a real presence in some way attached to the elements at the time of consecration," the Supreme Court of Appeal in matters ecclesiastical, he asserted, having declared in the case of Mr. Bennet that this is open to all to believe if they think fit. The Church condemned the Roman doctrine of transubstantiation, but permitted the teaching of the doctrine of Luther, or consubstantiation. As to objects of worship, the Church allowed none except God himself. The ecclesiastical courts had decided that prayer for the dead was not forbidden in the New Testament or by the Church of England, but the Church did not authorize the introduction of such prayers into public worship, except in the most cautious and guarded manner. The archbishop condemned habitual and compulsory confession, and explained the law of the Church of England on the subject to be that confession should be always free and voluntary. While the Church tolerated a large diversity of opinion, it was strict in the enforcement of unity

in ceremonial. "It is the rule of strict ceremonial," the archbishop continued, "that makes it unlawful by the Church's law to elevate the consecrated elements in the communion office; to reserve them after the office is over; to carry them out of the church for any purpose whatever; to use incense ceremonially by carrying it in procession, or by censuring persons or things; to mix water with wine ceremonially by doing it visibly during the office; to introduce additional prayers; to introduce psalms or hymns or anthems at any point during the services, except where there is special order permitting it or where the service is for any reason illegitimately interrupted." The lawful authority who could authorize any modifications was the bishop. Coercive jurisdiction was exercised through the courts, but the bishop had very little power of that kind. The one power he possessed was the power not to enforce, but to empower other people to abstain from enforcing. The archbishop deprecated recourse to the courts, because it presented the Church to the world in an aspect of strife.

National Protestant Congress.—The ninth annual Congress in connection with the National Protestant League met at Folkestone, Oct. 17. The chairman, Sir C. Robert Leighton, in his opening address, spoke of the plain statements of the Archbishop of Canterbury in his visitation addresses of the previous week as having, he hoped, not paralyzed, but electrified the Protestant people of England. The primate, he said, voicing almost the entire episcopate of the English Church, had declared that it was not unlawful to hold the Lutheran doctrine of consubstantiation, or to teach it in the Church of England. They knew now why Dr. Temple had, with the so-called wish of keeping the peace, vetoed them when they had endeavored to put down unlawful things in the Church of England, and they knew now why he had put off their appeals to him in their difficulties. It was useless to go on memorializing bishops, because they had practically avowed through their mouthpiece, the archbishops, that they were of the sacerdotal party. The duty of Protestants was to join together more firmly and unitedly than ever, and make a crusade against what they believed to be doctrine contrary to the Church of England, contrary to the teaching of the early infant Church, and dishonoring to the Lord. Besides addresses on a number of general topics relating to Christianity, discussions were had on subjects bearing upon the existing crisis, such as "The Encroachments of Priestcraft (a) in the Church and State; (b) in the Family and Society"; "The Imperial Protestant Federation"; "National Council of Evangelical Free Churches in its Relation to Protestantism"; "The Jesuits: (a) Their Tactics and Influence; (b) Notorious Secret Societies in the Church of England."

Resumption of the Protests.—Mr. Kensit gave notice, Aug. 3, that he had no intention of making any further protests till the first Sunday in November, by which time he hoped the bishops might have interfered. If not, he hoped to arrange for a thousand simultaneous protests in different parts of England, without, however, any disturbance. In the meantime he organized a body of young men as "Wycliffe preachers" to co-operate with him and assist him. A meeting preparatory to the resumption of the protests was held in London, Oct. 28, amid some demonstrations of opposition. Mr. Kensit addressed this meeting respecting his movement, and said that the protests he had been compelled to make in the house of God against ritualism were distasteful to him, but he believed that God had directed him to make them, and had used them to work up the nation to the importance of the movement. He

read a letter he had received from the Bishop of London, warning him against persistence in his proceedings, and predicting their failure. Concerning his own course, the bishop wrote that he was endeavoring by private exhortation to deal with such irregularities or indiscretions as were brought before his notice in such a shape that he could deal with them.

The Church Congress.—The Church Congress met at Bradford, Sept. 27. The Bishop of Ripon presided, and delivered an opening address on "The Opportunities, the Deeds, and the Characteristics of the Age, the Condition of the Church of England, and the Message of the Church." The regular proceedings of the Congress began with the reading of a paper on "The Share of Yorkshire and the Columban Mission in the Christianization of England," by the Bishop of Bristol. The subject of "The Mutual Relations of Clergy and Laity" was treated under various aspects and as to various periods; historically by the Rev. Dr. Jessopp, and with reference to the question whether any alterations are needed in the relative positions to-day of the clergy and the laity by Mr. Justice Grantham, the Archbishop of Canterbury, and Mr. John Ken-
sit, who rebuked the clergy and the bishops and archbishops for the prevalence of ritualism. Other subjects discussed were "Sunday Observance"; "The Mission of the Church in Relation to Imperial Policy"; "The Church's Duty as regards Various Aspects of Internal Affairs," such as (1) the responsibilities of capital and labor: (a) for healthy con-

ciety for the broadest toleration in ritual and sacerdotal doctrine, and by a meeting of the Church Congress Evangelical Union, at which Sir John Kenna-way presided, and, maintaining exactly opposite views from Lord Halifax, spoke of the present tension of the crisis through which the Church was passing. Other addresses were made respecting the gravity of the situation and the character and persistency of the ritualistic movement; a resolution was adopted inviting all loyal Churchmen "prepared to uphold in their integrity the principles of the Church as received from apostolic times and authoritatively set forth at the Reformation to unite in furtherance of a memorial on the present crisis to be presented to the archbishops"; and a committee was appointed to promote the objects of the meeting, with authority to add to their number clergymen of other schools of thought who are loyal to the Reformation settlement. A united Christian meeting and conference of all denominations was held after the close of the Congress for the consideration of the subject "The Message of the Christian Church to the English Nation, and its Outlook." The Dean of Ripon presided. Addresses were made by the chairman, the Rev. Dr. Glover, of Bristol, the Rev. W. L. Watkinson (Wesleyan), Dean Farrar, the Rev. Dr. Horton, and Mr. George Harwood, M. P.

ARCHÆOLOGY. Scotland. A Crannog on the Clyde.—A crannog, or ancient lake dwelling, of a very remarkable type discovered by Mr. W. A. Donnelly on the Dumbrook foreshores of the ancient Colquhoun County, on the banks of the river Clyde,

GENERAL VIEW OF THE SITE OF THE CRANNOG.

ditions of labor, (b) moral and religious; (2) co-operation: (a) general, (b) its rules and prospects; "Church Music: In Cathedral, Town, and Country"; "The Unrest of the Age, General, Intellectual, Social, and Moral"; "Gains from Recent Criticism: Gospels, Acts, Epistles, and New Testament Apocrypha"; "How can the Church Congress be made more practically useful?" "The Message of the Church to the Heart of Man"; "The Devotional and Practical Use of Holy Scriptures"; "The Church and the World: 1, Interchange between Home and Foreign Missionary Service; 2, Evangelization of the World in this Generation; 3, Aboriginal Races; 4, Revival of the Missionary Spirit."

The meeting of the Congress was preceded by a meeting of the English Church Union, where Lord Halifax presented the claims maintained by that so-

has received much attention from British archaeologists on account of its being the first instance recorded of such a structure on tidal waters. On the advice of the eminent archaeologist Dr. Munro, author of the book "Historic Problems," who recognized the importance of the discovery at once, careful and thorough excavations were undertaken, with siftings of the refuse mound of the former settlement, by Mr. Donnelly, with the help of the Helensburgh Naturalist and Antiquarian Society. The result of the work has made it plain that there were design and execution in the building, with occupation and habitation over a long period. Positive evidence of fire is afforded in the shape of numerous firestones and calcined embers, and excellent indications of the condition of life at the period in the implements, ornaments, and tools

recovered. The crannog, situated 1,600 yards east of the castle rock of Dumbarton, and about 2,000 yards from Dnnglass Castle, below high-water mark, is about 50 yards from the river at low tide, but is

village at Glastonbury, for example, yielded specimens of bronze fibulæ and other articles. The largest article found in the Dumbarton crannog was a canoe, 37 feet long and 40 inches beam, dug out of a single

PREHISTORIC IMPLEMENTS FOUND IN THE CRANNOG.

submerged when the tide is in to a depth of from 3 to 12 feet of water. The approach to the dwelling is from the north. The circuit of the crannog is 184 feet. The piles in the outer circle are of oak, which below the mud surface is still quite fresh. The transverse beams and pavements inside are of wood of the consistence of cheese (willow, alder, and oak), while the smaller branches are of fir, birch, and hazel, with bracken, moss, and chips. The stones in the outer circle and along the causeway leading to the dwelling place seem to have been set in methodical order, most of the boulders being about a lift for a man. The refuse mound extends for about 12 feet outside for the greater part of the circuit, and in this most of the bone and flint implements have been discovered. While this crannog does not differ in construction (of stones, wooden piles, and pavements) and shape from other well-known sites of the kind in Ireland and elsewhere, it is absolutely unique in two respects; first, in being situated on the shores of a tidal river; and, second, in that so far none but imple-

with some querns, the canoe, ladder, etc., have been placed in the museum at Glasgow.

A PREHISTORIC CANOE.

France. The Ancient Walls of Paris.—At Paris, behind the Church of Notre Dame, excavations made for the construction of a private house have brought to light extensive remains of the ancient wall of the city. They were found at a depth of about 16 feet below the actual level of the ground, running on a line of 195 feet between the Quai aux Fleurs, the Rue Chenimesse, and the Cloître Notre Dame, in the face of the Ile St. Louis. The wall was a strong construction, nearly 10 feet thick. The material of which it was composed consisted of large stones taken from older Roman buildings. Several blocks, cut in the shape of steps and covered with inscriptions, are supposed to come, like the pieces found several years ago on the Parvis de Notre Dame, from the ancient amphitheater known as the Arènes of the Rue Monge. The inscriptions contain certain names of the citizens of the ancient Lutetia for whom those seats were reserved.

A Phœnician Inscription at Avignon.—A Phœnician inscription discovered at Avignon in 1897 is the first of the kind found in France, the origin of which is beyond dispute. A translation of it which has been published by M. Mayer Lambert in the "Journal Asiatique," shows it to be the epitaph of a married priestess of a divinity whose name has been unfortunately mutilated. It ends with an injunction against opening the tomb. The fact that it was not found at a port, but a considerable distance in the interior is to be remarked.

Rome. The Graffito of the House of Tiberius.—A *graffito* discovered by Prof. Orazio Marucchi in the house of Tiberius on the Palatine Hill, in Rome, has attracted much attention because of a suggestion that was made at the time

A PREHISTORIC LADDER.

ments of flint and bone have been discovered. This would throw its occupation back to the Neolithic period, whereas crannogs are usually associated with the bronze age. The British lake

that it might be a rude representation of the Crucifixion. It is drawn on the cement in one of the rooms that were used as cells for the soldiers and slaves, reaches to a man's height on the wall, and is marked by the style as of the first century, A. D. A confused group of many words is visible on the upper part of the drawing, and among them a name which in its damaged condition has been variously read *Crestus*, *Cresus*, *Crescus*, and *Crescens*. Following this are an instrument resembling a hammer, lines of verses, and disconnected fragments of lines. Below these writings is a design of posts or poles standing upright in the ground, with lateral supports at their feet, and a crossbar connecting them at the top. Below this crossbar are smaller individual crossbars, giving the erections the likeness of crosses, from the right arm of each of which hangs a rope held by a man standing on the ground, and on one of them is a figure seeming to hold a hammer. Other figures stand on ladders leaning against the uprights of the crosses. Names are written above the heads of some of the figures, of which *Nostumus*, *Eulogus*, and *Tertius* have been made out, with another, which is variously read *Pilatus*, *Piletus*, and *Filetus*. The subject of the *graffito* is not explained. The suggestion uttered at the first sight of the figures—that it is a representation of the crucifixion—is not insisted upon. Some persons have supposed that it represented a naval manœuvre or the preparation for the launching of a vessel; others regard it simply as a scaffolding on which men are at work.

Greece. The Jewish Synagogue at Corinth.

—In the excavations at Corinth, in the valley east of the temple, under Prof. Rufus B. Richardson, a marble block about $3\frac{1}{2}$ feet long was found, one of the broad sides of which was elaborately and peculiarly carved, having a band of molding below it as well as above. This was, of course, the original face. On what was once its upper side or edge was cut an inscription, mutilated at both ends, in letters about two inches high, running thus:

ΑΓΩΓΗΕΒΡ

After reflection the discoverer concluded that the letters represented and were all that was left of the words *Synagogue Ebraion*, and that the stone probably "came from the very synagogue in which the apostle Paul reasoned every Sabbath and persuaded the Jews and the Greeks." It is not likely, however, that this block marked the site of the synagogue. It had probably been removed from there, and even when built into the synagogue in the first place had been taken from some structure in the old city. That the placing of it in the synagogue was not its first use is indicated by the existence of the original front of the stone with the molding.

Egypt. Relics of the Earliest Dynasties.—

A collection of antiquities from the excavations of the Egypt Exploration Fund at Denderah and of the Egyptian Research Account, under Mr. Quibell, at Hierakonpolis, exhibited by Mr. W. M. Flinders Petrie at University College, London, in July, included objects from the earliest dynasties. The history of Denderah as reflected in its cemetery was found to have had its beginning in the fourth dynasty, and to have included a flourishing age from the sixth to the eleventh dynasties, and then a later prosperity in the Ptolemaic or Roman times. While the remains of primitive kings hitherto found have been chiefly sepulchral, monuments of warfare and of history known to belong to the earliest dynasties have now, for the first time, been found at Hierakonpolis. The researches represented by these collections appear to fill a large intermediate space

between the aboriginal and the historical period, and extend our knowledge far back of any period it had distinctly reached before. Many of the most ancient objects are remarkable for their beauty and finish and their free and unconventional character. Some of Mr. Quibell's finds at Hierakonpolis are believed to date from before the fourth dynasty, or about 4000 B.C. The cemetery upon the desert yielded pottery of the types of the graves of Negada, of the "new race" described by Mr. Petrie in 1895, which go even behind the earliest kings. The later types are similar to those found in the tomb of Menes, and are assigned to the first dynasty. Among the objects found are slate palettes, mostly of the late square type, but one in the form of a scorpion, others with gazelles and giraffes and other animals, real or mythical, delineated with wonderful vigor and freedom. A trench found within the temple area was filled with ivory carvings, buried as offerings, much rotted and incrustated with lime, and believed to represent the second dynasty. The male figures have for the most part scanty pointed beards and sharp features, like the heads of the new race of prehistoric times, and are supposed probably to represent the Libyans, who then inhabited Egypt. Nearly all wear girdles, and most of them have a dagger sheath in front, while only one has the usual Egyptian kilt. The female figures are nearly all nude, with long wavy hair to the waist and two locks hanging in front over the breasts, and one of a dwarf bandy-legged type, familiar in figures of Ptah. Other figures are outlined upon ivory cylinders and plaques, one with the Ka name of King Nat-Met, holding a wand. Models of boats, bowls, and stone vases, maces, alabaster dishes and porphyry bowls, green glazed ware of very early date representing monkeys, pigs, calves, oryxes, pelicans, scorpions, and other animals, were also among the objects. The great limestone masses with relief sculptures are described as being of extraordinary interest and beauty. On one of them are several male figures, the king among them, beautifully wrought, and at the base hieroglyphics mentioning "oxen 400,000, goats 1,422,500, captives 120,000." A great palette in the part of the collection that went to the museum in Gizeh was represented in the exhibition in London. The figures upon it exhibit a curious diversity of human types, only one of which is of the later Egyptians. Two are bearded men with long hair, like some men shown in the tomb of Pahari at El-Kab. The design is very elaborate, with many figures of men and animals, and the tablet is regarded as an important historical monument of the early kings. Among the fruits, extending over a vast period, of Mr. Petrie's researches at Denderah, is a *stèle* of the third or fourth dynasty of a prophet of Hathor Suten-abu, which stood over an elaborately carved false door, the only sculpture found in the group of great brick *mastabas* of the earliest style. Large numbers of worked flints, mostly of palæolithic types, were picked up on the surface of the desert, but statues such as are common in the cemetery of the old kingdom at Memphis are rare at Denderah, and only one large one—of Prince Adu I—was found. The great *mastabas* of the princes of the sixth dynasty proved the most important in the cemetery. The series included Princes Mena and Adu under Pepi II, Prince Adu II, one nameless, Prince Merra, and Prince Beb. The catacombs for sacred animals, consisting of brickwork tunnels branching from main galleries, extended over a large area. A considerable quantity of blue glazed objects of temple furniture appeared, by the names, to belong to the eighteenth dynasty. In sculptures of Prince Merra, with his wife Beba and his daughter Dudu-erchetsa, of the late sixth or early seventh dynasty,

the style, though becoming degraded and clumsy, retains the character of the old kingdom. Besides many minor objects of the old and middle kingdoms, a beautifully carved group of Mentuhotep, son of Beba, and his wife Nefermeant, daughter of Hepry, probably of the eleventh dynasty, is mentioned. The man's head is lost, but the woman's is equal to the best work of the old kingdom.

The Tomb of Osiris.—In excavations begun in 1896 at Abydos in search of relics of the worship of Osiris, of which he had already found some traces, M. E. Amélineau reached a point within three or four metres of a large tomb. His work there was then suspended in consequence of his occupation at other points. The hill under which the tomb was hidden, 180 metres long by 160 metres wide, and between 7 and 8 metres high, was composed of "millions upon millions" of small jars and earthen vases, along with some large ones mixed up with sand and a few rare pieces of stone. From the first days of the new excavations, begun in December, 1897, pieces of pottery of all shapes, entire or broken, were found, bearing inscriptions written in hieroglyphic or hieratic signs. Large numbers of pieces mentioned the name of Osiris, and a smaller number bore the name of Amon-Ra. A few of them mentioned the House of Osiris. These discoveries impressed M. Amélineau so strongly, he says, that as early as Dec. 2 he recorded in the diary he kept of his excavations the belief that he was going to come across the tomb of Osiris. The tomb was a large rectangle in shape, and surrounded on its four sides by series of tombs numbering about 200 in all. Moreover, the necropolis, known in the country as Om-el-Gaab-el-Gharby, contained the sepulchres of persons of very high rank, among them kings whose *steles* had been discovered by M. Amélineau two years previously. On the 1st day of January the "fortunate staircase" mentioned in the text concerning the House of Osiris was discovered, and the next day a granite monolith in the shape of a bud decorated with the head and legs of a lion, on which was lying a mummy bearing what is known as the white crown, and holding in its hands, which came out of the case, a flagellum and a pastoral cane. Near the head were two hawks, and two more were at the feet. The head was designated by the inscription, "Osiris the Good Being." The hawks were labeled "Horus, avenger of his father"; and the goddess Isis was also designated by her name. The monument was 1.70 metre, or 5½ feet, in width, and about a metre (3 feet 3 inches) in height. The tomb itself had the shape of a dwelling, with a courtyard in front. It contained 14 rooms and the staircase, 5 rooms to the north, 5 to the south, and 4 to the east, while the western face was open. There were evidences of fire in the tomb, and it seemed to have suffered from spoliators; and for these reasons the results of the excavations are not so complete as was desirable.

The "Journal Egyptian," in publishing M. Amélineau's letter, observes that M. Mariette spent much time and money at Abydos in searching for the conventional tomb of Osiris. The discovery of M. Amélineau, astonishing as it may appear, is a possibility and in accordance with the records of all the ancient authors and the belief of most Egyptologists. The tomb spoken of in connection with this discovery and with M. Mariette's search is a conventional tomb, supposed to have been instituted by the priests in very ancient times, and not any real tomb in which the god was actually buried. It is possible that the tomb discovered may be proved, after more complete examination of the epigraphic documents exhumed, to be a sanctuary to Osiris erected during one of the later dynasties.

Tombs of Amenophis II and other Kings.—It was announced in April that M. Lovet had discovered and opened the tomb of Amenophis II, of the eighteenth dynasty, and found the mummy of that king intact, and with it the mummies of Thothmes IV, Amenophis III, Set Nakht, Seti II, and Rameses IV, Rameses VI, and Rameses VIII. The discovery marks the first instance in which the body of an Egyptian king has been found actually in the tomb prepared for him, in other instances the tombs having been found without the bodies or the bodies found removed from their tombs. In this case the valuable objects had been taken away, but the tomb was in perfect preservation, with the paintings fresh and the sarcophagi and chaplets of flowers in excellent condition. In the first chamber of the tomb the body of a man was found bound on a richly painted boat, his arms and feet tied with cord, a gag in his mouth, and wounds in his breast and head; and in the next chamber three other bodies of persons who had been killed by violence. It is believed that these bodies represent human sacrifices offered at the time of the royal burial.

Among the relics discovered by Mr. Petrie in his explorations of 1896, and described in his book on "Six Temples of Thebes," was a wine jar dated in the twenty-sixth year of Amenophis II, vindicating the statement of Manetho that this king reigned twenty-five years and ten months, and refuting M. Maspero's theory that his reign was a short one. "It is indeed wonderful," Mr. Petrie remarks, "how constantly Manetho's statements, after a long period of discredit, are justified by the monuments, and how accurate his records have lately proved."

Early Remains at Deshasher.—In the explorations of Deshasher, nearly opposite Beni Suef and near the site of the ancient Heracleopolis Magna, by Prof. Petrie in 1897, an account of which is published in the fifteenth memoir of the Egypt Exploration Fund, a portrait statue of Prince Neukheft-Ka, of the fifth dynasty, was recovered, the pleasing expression, European features, and execution of which bear witness to the high level attained by Egyptian art at that early age. Here also were found some of the oldest amulets in the world, differing somewhat from those in use in the twenty-sixth dynasty, which were considered the earliest known examples. Some excellent bas-reliefs of about a century later than the statue depict scenes in a war between the Egyptians and another people which are very spirited and dramatic, and so far the earliest of their kind. One of them represents the siege of a town defended almost entirely by women. A partly successful escalade headed by bearded archers has taken place, but the assailants are all disposed of by the women as they get over the ramparts, while outside a round-capped officer is seen leaning on his staff and directing the efforts of two soldiers who are mining the wall with pikes. Another discovery was that of many mutilated skeletons, the bodies having been dismembered before burial and each part wrapped separately in a linen cloth. Mr. Petrie suggests that this may be a "relic of cannibalism."

Development of Egyptian Funereal Art.—By a change in arrangement the mummies and coffins in the British Museum have been made more accessible, and may be seen to better advantage. The museum preserves about 44 mummies and 80 coffins, besides covers of coffins and various fragments, which, taken together, represent a period of about four thousand years. The oldest mummified human remains in the collection are those of Mycerinus, the builder of the third pyramid of Gizeh; and the most modern, those of a lady whose name is unknown, with her three children, who

were mummified about A. D. 400. The cover of the coffin of Mycerinus is inscribed with a text that was already several thousand years old in his time and describes the king as "living forever," a phrase which is cited in favor of the hypothesis that the Egyptians believed in a future life. Close by the remains of Mycerinus are six fine coffins, of, perhaps, about a thousand years later than he. The most important of these is the coffin of Anamu, which is inscribed within and without with a very ancient version of the Book of the Dead. The skeletons of Heni and Khati in this group are also of considerable interest, the skull of Khati being marked with two curious indentations on the upper part, one on each side, and both being free from indications of gout and rheumatism, from which Mycerinus seems to have suffered. Two coffins next to these, painted in bright colors, and "differing in every way from the somber rectangular coffins of the Anamu class," are of the twenty-second dynasty, and form part of a large collection of coffins of the priests of Amen, the god to whose power the Thebans ascribed the victory which their king, Sekenen Ra, gained over the king of northern Egypt. Amasis I enlarged the shrine of Amen at Thebes and made provision for his priests; his successors in the eighteenth and nineteenth dynasties enriched the shrine and conferred large benefits on the priests; and (probably) Amenophis I founded the college of Amen Ra and endowed it sufficiently to support a considerable number of Egyptians of high rank who as priests and priestesses, superintended the education of youth, the writing of the Books of the Dead and the embalming of the dead. To this confraternity we owe the splendid Books of the Dead of the eighteenth dynasty and the preservation of the funeral texts which were in use during the early dynasties at Heliopolis and Memphis, as well as several hundreds of very fine coffins. Its power was enormous, and its gradual growth from B. C. 1700 to B. C. 1000, when its chief priest seized the government, is described as one of the most instructive portions of Egyptian history. The progress of the confraternity can be plainly seen in the coffins. At first (about B. C. 1650) the color work on the coffins was done by the best artists, and the texts were written by the most careful scribes; two or three hundred years later we find careless painting and writing, inferior woodwork, and incomplete pictures and texts. About B. C. 1000, when the high priest became king, the colors on the coffins are gaudy, the varnish is daubed on, and new colors appear, with a number of gods and mythological passages never found on the coffins of the oldest time. The places of the old texts are usurped by what is called the Litany of the Sun, and scenes illustrative of new mythological conceptions begin to appear. From this it is clear that the confraternity of Amen did not abide entirely by old standards in religious matters. The British Museum has many interesting examples of mummies of the period from B. C. 900 to B. C. 600, swathed in linen as fine in color and texture as any known. About this time mummies were placed in cartonnage cases, and the highly colored scenes were occasionally defaced by daubing with bitumen. This is supposed to have been done in troubled times to prevent the tomb robbers from identifying the dead by the texts written upon them. A little before the rule of the twenty-sixth dynasty the mummies were covered with *faience* heads. The shape of the coffin changed considerably and a style of decoration peculiar to the time arose. The huge coffins of the fourth and fifth centuries before Christ are uninteresting, and it seemed as if the funeral artist endeavored to make up in size for what he lacked in skill; the mummies of the period, too, are of little

interest. At the beginning of the Ptolemaic period gold was freely used on the faces of the coffins, which are now identical in shape with the stone coffins of Tabuith and Eshmunazer found at Sidon. During the same period the coffins became much plainer and more decoration was bestowed upon the mummy. Brightly painted and gilded cartonnage cases were laid over it. The plaques, on which are painted figures of the gods, were made in hollow work. About the time of the Romans the use of coffins declined and the mummy, inclosed, in a painted cartonnage case, or smothered in painted bandages, was laid upon a rectangular board beneath a vaulted cover. Both board and cover were brightly painted with colors which are characteristic of the period. In the case of some mummies the swathing is a work of art, but usually those which belong to this period are shapeless bundles. In the first and second centuries of our era a portrait of the deceased was painted in colors upon a board which was fastened to the swathings of the mummy. In a very fine group of cartonnages of the members of one family, consisting of a man, his two wives, and several children, the portrait of the man is of considerable interest on account of the style of decoration and the Demotic inscription upon it, while the cartonnages of the women give an exact representation of their appearance during life as to height and figure, dress, ornaments, etc. These cases are probably unique, and their value archæologically is much enhanced by the fact that a date may be assigned to them which can not be far wrong. In the fourth and fifth centuries of our era models of the heads and necks of the deceased, made of painted plaster, were placed on the covers of coffins immediately over the heads of the mummified dead. While specimens of extremely ancient mummifications have not yet been acquired by the museum, we can in this collection, says the writer of a description of it in the London "Times," "examine in a way never before possible all the various developments of Egyptian funeral art and observe the persistence of its chief characteristics during a period of about four thousand years. We may also see that from first to last the Egyptians everywhere held firmly the belief in the resurrection and in immortality which had been handed down to them as an assured thing in the early days of their marvelous civilization. They mummified their dead and performed elaborate rituals on their behalf and hewed wonderful tombs for them, not from motives of pride and vanity, but as the result of a living faith in a world beyond the grave and of a hope of the life everlasting which is to be lived in a spiritual body after the judgment, along with the beatified, in the kingdom of Osiris."

The Oxyrynchus Papyri.—A selection from the papyri found at Oxyrynchus by B. F. Grenfell and A. S. Hunt in 1897 was published by them with notes, and in most cases an English translation in a quarto volume, at the Oxford University Press. Including the *Logia*, or sayings of Jesus, which was described in the "Annual Cyclopædia" for 1897, the volume contains 158 documents printed in full, descriptions of 49 others, and mentions 5 duplicates, recording therefore the contents of 212 manuscripts and fragments. Six of the documents, including the *Logia*, are theological. One of them, a bit of vellum, not a papyrus, contains a few verses from the gospel of Mark, belonging to a book probably written in the fifth or sixth century, the text of which agrees with the received text. Another has about two thirds of the first chapter of Matthew, supposed to date from the third century, and to be therefore older than any previously known manuscript of the gospel. It apparently tends to support the text of Westcott and Hort

rather than the received text. Nine of the manuscripts are new classical fragments. One of these is a part of a Sapphic ode, supposed to be by Sappho herself, in a badly mutilated condition. As represented in the attempted restoration by Prof. F. Blass, of Halle, it appears to have belonged to an ode in which the poet sought reconciliation with her brother Charaxus, whom she had offended. A fragment of a work on chronology includes the time of Alexander the Great. The death of the great conqueror is recorded two lines after a reference to the Olympic games. A chapter on rhythmic art, ascribed to Aristoxenus, has the peculiar interest that not one of the lyric passages cited—which are unfortunately all brief—in support of the author's argument is from extant poems. In the fragments from known poets and prose authors (three of them Latin), all dating from the Roman era in Egypt (not earlier than the first century, A. D.), the readings agree closely with those of the better mediæval manuscripts, and thus give an additional proof of the great trustworthiness of our Greek texts. The largest part of the collection consists of private papers—contracts, bills, children's exercises, and other documents, "whose very triviality gives them now a peculiar interest." These are arranged in two groups: (1) papyri of the first four centuries, and (2) papyri of the sixth and seventh centuries. They include wills made by persons sane and in their right minds and duly attested by witnesses, in one instance as many as six, registrations of live stock and slaves, leases of lands, notes from and to bankers, minutes of a trial made by the presiding judge, reports of public doctors, papers concerning the sale or emancipation of slaves, exemption from military or other public service, the return of wills to testators for revocation, a cook's monthly bill, private letters, and invitations. These last are of peculiar interest on account of the illustrations they afford of the social and domestic relations and customs of the people of the time. In one, "Cheremon requests your company at dinner at the table of the Lord Serapis to-morrow, which is the 15th, from the ninth hour" (about 4 o'clock); in another, "Herais asks you to dine to celebrate the marriage of her children at her house to-morrow, which is the 5th, from the 9th hour." The latter invitation does not necessarily point to the marriage of two couples on the same day, but to the intermarriage of a son and daughter, which was common in Egypt. One of the letters is from a lady in Oxyrhynchus requesting a friend to release a number of articles from pawn: a white veil, a handkerchief, two bracelets, a necklace, a large tin flask, etc. At the end the writer prays for her friend's health and sends greetings to a person named Aia and to all her friends. Another lady's epistle is a letter of condolence, composed with a feeling of helplessness. But, after all, what can "one do in the face of such things? Therefore comfort yourselves. Farewell." In a long business letter the writer sends a key which he would have sent earlier had there been a blacksmith in the neighborhood. He also sends six quarts of good apples, and desires his correspondent to buy him a silver seal and match a pattern of white violet color. In the postscript he adds that he wants an obol's worth of cake for a nephew. A boy in a letter to his father, who is going to Alexandria, wants to go with him, and threatens: "If you will not take me with you I will not write you a letter, I will not speak to you, I will not say good-by to you. . . . Send me a lyre, I beg of you. If you don't, I will neither eat nor drink. There now, I pray for your health." This letter betrays its boyish origin in its bad spelling and defective composition. Some of the legal documents contain

curious personal descriptions of the parties concerned. "I am forty-four years of age," writes a man in his will, "I have a scar on the left side of my neck." A woman registering a slave is described as "about fifty years of age, of middle height and fair complexion, with a long face and a scar on the left foot." The rent of a piece of ground was, to be paid partly in kind, partly in money. The kind payment was to consist of a fixed quantity (subject to allowance for a bad season) of fresh, clean, unadulterated wheat with no barley in it, measured with a bronze-rimmed measure. In some instances such statements appear as "I, Theon, the son of Theon, have signed for him, as he does not know letters."

Messrs. Grenfell and Hunt continued their examination of the papyri during the summer of 1898. Among the new additions to classical literature to Nov. 1 were a considerable fragment of Menander's *Περικλοποιήν*; part of a treatise on meters; some early scholia on the twenty-first book of the Iliad, written by the grammarian Ammonius; and some fragments of a tragedy on the subject of Niobe, perhaps by Sophocles.

Ancient Underground Canals.—In the prosecution of engineering works near Tunis two very large underground vaulted canals have been discovered directed toward the ruins of Carthage. While considerable labor will be required to lay bare the whole work, the part already exposed reveals large subterranean chambers containing riches which may have been intended for statues. Large stairways of red marble give access to them.

ARGENTINE REPUBLIC, a federal republic in South America. The President is elected for six years by electors chosen in the several provinces. The national Congress consists of a Senate of 30 members, 2 from each province, elected by the legislatures, and 2 from the capital district, elected by an electoral college, and a House of Deputies composed of 86 members, elected in separate districts by direct popular vote. Vice-President José E. Uriburu was proclaimed President on Jan. 22, 1895, for the remainder of the term ending Oct. 12, 1898, upon the resignation of Dr. Saenz Peña. Dr. Rafael Igarzabal was elected Vice-President in September, 1897. The Cabinet at the beginning of 1898 was composed as follows: Minister of Foreign Affairs, Dr. Amancio Alcorta; Minister of Finance, Dr. W. Ezequiel; Minister of Justice, Worship, and Public Instruction, Dr. Benjamin Belaustegui; Minister of War and Marine, Lieut.-Gen. N. Levalle.

Area and Population.—The area of the republic is 1,778,195 square miles, that of the provinces being 515,815 and that of the territories 1,262,380 square miles. The population enumerated in the census of May 10, 1895, according to the revised returns, was 3,954,911, of which number 3,851,542 were in the provinces and 103,369 in the territories. The population consisted of 2,088,919 males and 1,865,992 females. There were probably 60,000 persons not enumerated, including 30,000 Indians, and at least 50,000 Argentinians were living or traveling abroad. Buenos Ayres, the capital, had 726,917 inhabitants on July 1, 1897, of whom more than 346,000 were of foreign birth. The total number of foreigners in the republic at the time of the census was 1,004,527.

Finances.—The revenue of the Federal Government for the year ending March 31, 1896, was \$32,052,951 in gold and \$29,468,174 in paper. The expenditure amounted to \$46,891,221 in gold and \$92,122,343 in paper. For 1897 the expenditure was estimated at \$19,957,402 in gold and \$83,335,168 in paper. The estimated revenue for 1898 was \$32,049,454 in gold, chiefly from import and export duties, and \$40,546,009 in paper from internal taxes,

railroads, stamps, post office, licenses, land tax, etc. The estimated gold expenditure was \$19,957,402, of which \$17,619,362 was for the debt, \$2,025,000 for public works, and \$313,040 for foreign affairs; estimated expenditure in paper currency, \$92,159,745, of which \$21,710,098 was for the interior and Congress, \$592,648 for foreign affairs, \$6,709,933 for finance, \$5,552,422 for the national debt, \$8,824,577 for temporary debts, \$13,062,741 for justice and public instruction, \$16,581,004 for the army, \$10,626,319 for the navy, and \$8,500,000 for public works. The premium on gold in the middle of 1898 was 175 and over.

The national debt in the beginning of 1897 amounted to £86,635,680 sterling, consisting of an external debt of £63,380,290, \$91,861,000 of internal debts payable in gold and \$82,374,994 payable in paper. The provincial debts, including unpaid interest, amounted in 1895 to \$137,261,866 in gold and the municipal debts to \$24,596,422 in gold. A bill was passed in 1896 providing for the assumption of the provincial external debts by the Federal Government. The railroad guarantees were also assumed in accordance with the terms of another

gallons of alcohol. The vineyards cover 71,000 and the sugar plantations 82,000 acres. There were 21,702,000 horned cattle, 74,380,000 sheep, 4,447,000 horses, and 3,885,000 goats, etc., in 1895. In 1896 there were 367,230 cattle slaughtered. In 1897 there were 164,414 slaughtered and 73,867 shipped alive to England, where 345,217 sheep were also landed, being 68 per cent. of the total year's produce. The exports of frozen mutton, nine tenths of it for the British market, were 50,894 tons, showing an increase of 5,789 tons over the shipments of 1896. The exports of frozen beef show an increase year by year, but those of jerked beef are declining to a much greater extent. Efforts have been made to establish a large export trade in butter, but the shipments in 1897, amounting to 1,319,364 pounds, show a decrease of nearly a third, while the export of cheese was only half as great as in the preceding year, and a fifth of that of 1895. The export of Argentine wheat in 1897 was only 101,845 tons, one tenth of the quantity exported in 1895. The exports of corn were 374,942 tons, one fifth as great as in 1896 and less than half as great as in 1895. The exports of linseed was 162,477 tons, compared

THE MUSEUM IN LA PLATA.

act of Congress. A deficit in the revenue for 1897 was covered by an internal loan of \$39,000,000.

The Army and Navy.—The Argentine regular army numbers 29,513 officers and men. The National Guard is estimated at 480,000. It comprises the whole able-bodied male population, which receives military instruction four days in every year, while the young men first inscribed at the age of twenty are drilled in camp for two months.

The navy consists of the first-class cruisers "San Martin" and "Garibaldi," bought of Italy, 3 other armored cruisers, 3 second-class cruisers, 2 monitors, 11 small cruisers and gunboats, 4 destroyers, and 12 first-class and 10 third-class torpedo boats.

Commerce and Production.—The Argentine Republic is one of the greatest grazing countries in the world, and is rapidly becoming a great agricultural country also. Of a total cultivable area of 240,000,000 acres 15,000,000 acres were tilled in 1895. The production of wheat in 1897 was 1,500,000 tons, raised on 5,500,000 acres. The sugar crop in the northern provinces amounted to 110,000 tons. There were 42,267,000 gallons of wine and 10,582 tons of raisins produced in 1895, also 478,800

with 276,443 tons in 1895. The exports of wool were 204,571 tons, compared with 187,619 tons in the preceding year.

The total gold value of imports for 1897 was \$98,288,948, of which \$36,392,057 came from Great Britain, \$11,114,102 from Germany, \$11,019,576 from France, \$10,943,038 from Italy, and \$10,101,714 from the United States. The total value of exports was \$101,114,102, of which \$22,999,019 went to France, \$14,047,135 to Germany, \$12,999,019 to Great Britain, \$8,934,829 to Belgium, \$8,685,187 to Brazil, and \$8,321,611 to the United States. In 1896 the total value of imports was \$112,058,000, and of exports \$115,671,000. The imports of coin and bullion were \$6,063,345, and the exports \$2,178,891. Of the value of merchandise exports \$70,534,040 represented animals and animal products, \$36,963,480 agricultural produce, \$6,169,105 manufactured products, \$1,268,663 forest produce, \$352,840 mineral products, and \$382,836 various products. As compared with 1896 there was a falling off in the total trade of \$30,000,000, about equally divided between imports and exports. The cause was a failure of crops. The cattle exports

were 408,126 head in 1895, 382,539 in 1896, and 238,121 in 1897; but while the total decreased, the exports to Europe show a progressive gain.

Navigation.—There were 11,830 vessels, of 7,115,467 tons, entered at Argentine ports from foreign countries during 1896, of which 7,791, of 6,331,879 tons, were steamers, and 4,039, of 783,588 tons, sailing vessels. The merchant navy in 1895 consisted of 75 steamers, of 21,613 tons, and 125 sailing vessels, of 28,241 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1896 was 8,998 miles. The capitalized gold value was \$510,643,296, of which \$56,331,063 represented lines belonging to the confederation, \$83,859,062 provincial lines, \$113,311,995 guaranteed lines, and \$257,141,178 private lines. The gross earnings in 1896 were \$31,238,326, and expenses \$15,934,466.

The total length of telegraph lines in 1896 was 25,345 miles, with 59,060 miles of wire, of which 11,023 miles of line and 23,572 of wire belonged to the Federal Government, 7,070 miles of line and 18,717 of wire to the railroads, 4,428 miles of line and 7,462 of wire to telegraph companies, and 2,824 miles of line and 9,309 of wire to other companies and individuals. The number of dispatches in 1896 was 4,953,887.

The number of letters and packets that passed through the post office during 1896 was 177,183,190, of which 19,871,664 were foreign. The receipts from the postal service and Government telegraphs were \$30,069,799, and expenses \$27,169,020.

Political.—Gen. Julio Roca was proclaimed President and Dr. Quirno Costa Vice-President for the term beginning Oct. 12, 1898. A treaty of arbitration between Italy and the Argentine Republic was signed at Rome on July 23. In any dispute each government will choose a judge, who shall not be a citizen or resident of either of the contending countries, and a third judge, the president of the arbitration court, will be chosen by the two others, or, in case of their disagreeing, by the President of the Swiss Confederation or the King of Sweden and Norway. There shall be no appeal from the decision of the tribunal, the execution of which is left to the honor of the signatory powers. Under special conditions, however, the award may be open to revision.

In August Congress voted new internal duties on alcohol, wine, and oils, calculated to produce \$8,000,000 a year. The Government asked Congress to authorize the sale or lease of the national railroads.

The Chilean Boundary.—The dispute with Chili regarding the boundary in Patagonia became critical on several occasions in 1898, and both governments made military and naval preparations. The boundary commissioners were unable to agree upon the line between the Argentine Republic and Chili because the treaties of July 23, 1881, and Aug. 22, 1888, and the protocol of May 1, 1893, confounded the hydrographical with the orographical principle of delimitation. The protocol says that all lands, lakes, and rivers east of the highest crests of the Andes which divide the waters shall belong forever to the Argentine Republic. Since in this region low elevations in the valleys form the water-parting oftener than the ridges of the cordillera, while the Andes themselves consist of a dozen parallel chains, the treaty contradicts itself and is incapable of being fulfilled without an agreement as to its meaning. On April 27, 1896, the two governments formally agreed to submit any unsettled difficulties to the award of the British Government. Dr. Moreno met Barras Arana, the Chilean commissioner, on Aug. 25, and each drew up a general line of demarcation in accordance with the views of his Government and the knowledge obtained in recent explorations on the spot, as was agreed between the two governments in

May. The boundaries submitted by the two commissioners were irreconcilable. The Argentine Government informed the British Government that the whole question would be submitted to arbitration before receiving a note from the Chilean Government requesting a prompt reference. The Argentine Chamber authorized the Government to mobilize 80,000 men so as to be prepared for a failure to secure a pacific solution. The Chilean Government also decided to mobilize 50,000 men and obtained credits to the amount of \$22,000,000, to be met by additional taxation. Chili proposed unrestricted arbitration, but the Argentine Government still held out for the strict application of the contradictory terms in the treaties.

ARIZONA, a Territory of the United States, organized Feb. 14, 1863; area, 113,020 square miles. The population, according to each decennial census, was 9,658 in 1870; 40,440 in 1880; 59,620 in 1890; and estimated at 101,000 in 1897. Capital, Phenix.

Government.—The following were the Territorial officers during the year: Governor, Myron H. McCord; Secretary, Charles H. Akers; Treasurer, C. W. Johnstone; Auditor, G. W. Vickers; Adjutant General, R. A. Lewis; Attorney-General, C. M. Frazier; Superintendent of Education, A. P. Sherman; Chief Justice of the Supreme Court, Webster Street; Associate Justices, Richard E. Sloan, Fletcher M. Doan, George R. Davis; Clerk, Lloyd Johnston—all Republicans.

Finances and Valuations.—In his report to the Secretary of the Interior for the fiscal year of 1897 Gov. McCord stated that the treasury was in a prosperous condition. The bonded and floating debt at the first of the year aggregated \$965,588.12, leaving the net debt of the Territory \$885,758.19, the cash on hand being \$79,829.93. The aggregate value of lands was \$9,678,273.33, and the value of improvements thereon was \$4,905,418.97. Railroad property was valued approximately at \$5,139,669.60. More than 100,000 head of cattle were imported in the year, of which 12,749 were admitted free of duty. Internal-revenue collections during the year aggregated \$19,900. Goods were exported during the year aggregating in value \$1,032,414, an increase of \$90,635 over the previous year. The total valuation of all assessable property was reported for 1898 at \$31,473,359.96. Average valuations were as follow: Lands, \$1.56 per acre; horses, per head, \$18.24; mules, \$22.73; cattle, \$10.41; goats, \$2; hogs, \$2.70; asses, \$26.77; sheep, \$2; the average valuation for each mile of railroad was \$5,071.02.

Law-abiding.—It is claimed by the "Mining and Industrial Reporter" that the Territory is one of the most law-abiding regions of the country; that life is as safe in the Territory as in New York or Chicago, infractions of the law in Arizona being less in proportion to population than in either of the cities named; that telegraphic reports of crimes in the Territory do great injustice.

Education.—Gov. McCord's report gave the status of the public schools as follows: Enrollment, 13,361; school districts, 227; teachers, 354; children of school age at the last census, 17,427; average length of school term, 6.37 months; average salary paid teachers, \$68.69; amount paid in salaries of teachers, \$155,991; total expenditures, \$205,948; valuation of school property, \$445,379.

Mining.—Gold, silver, lead, copper, iron, lime, and coal are mined. The gold output for the year last reported was valued at \$5,200,000; silver, 1,650,530 ounces, which gave a return of \$1,105,855; copper, 71,210,331 pounds, valued at \$7,121,093; and lead, 21,255,000 pounds, valued at \$531,375. One gold mine is quoted in value at \$50,000,000, another at \$30,000,000, and there are many smaller properties that range in quoted value from \$7,000,000

down. The mining counties most noticeable in Territorial newspaper reports are Gila, Mohave, Pima, and Yavapai. In Mohave one mine was reported to be "producing so much \$100 gold ore that there are not teams enough to haul it." The production of copper is said to be attracting as much attention as that of gold. Hubernite, a variety of wolfram, used in preparing steel for fine-edged tools, has been discovered in the Dragoon mountains.

Agriculture, etc.—The report of the Governor states that the aridity of the Territory does not prove a bar to high agricultural development. The farming lands embrace about 1,000,000 acres, more than 260,000 acres of which are under canal irrigation, the only obstacle to the extension of the irrigating system being the lack of water. Lands are being brought under cultivation as rapidly as the development of water will admit. The notable increase in population during the past few years in the Salt River and Gila valleys, a population consisting almost entirely of farmers, is expected to result in great agricultural development. Among the most promising products new to the Territory are sugar beets, cannaigre, ramie, cotton, dates, tobacco, sugar cane, and peanuts; corn is a staple. It is estimated that 40,000,000 acres are suitable for grazing, a large part of which is used. It is said that in portions of the Territory corn and other cereals thrive without irrigation; that corn planted at the right season and properly cultivated ought to mature without irrigation in any part of the Territory; that the Papago and Navajo Indians have long been successful in this system of cultivation. It has been demonstrated that certain grains, such as the Egyptian maize, and certain forage plants, will come to maturity with the natural rainfall. It is contended by investigators that much more water is now used in the raising of crops by irrigation than is necessary, and that in the near future double the present irrigation area will be worked with the quantity of water now used. A great advance in agriculture and horticulture is looked for from the introduction of growths requiring comparatively little water, such as dates and olives. At the last meeting of the Arizona Agricultural Association it was shown that many varieties of the grape can be successfully raised. About 100 varieties are under cultivation at the experiment station. The sugar-beet is extensively raised, and cauliflower is beginning to be largely cultivated. In the raising of strawberries "smudging" has been resorted to to keep off frost. When freezing weather comes, piles of old straw and dry manure are set on fire about the vines, which are thus covered with a fog of smoke, and at the same time ditches around the vines are filled with water. Attention has been called by a newspaper to "the largest sweet potato ever raised, the weight being 40 pounds."

Statehood.—The question of statehood for the Territory was settled for the present at Washington in January, 1898, by the House Committee on Territories rejecting the Arizona, New Mexico, and Oklahoma bills.

Onyx.—A block of onyx of the translucent sea-green variety, weighing 13,150 pounds, has been taken from the Big Bug quarries.

ARKANSAS.—A Southern State, admitted to the Union, June 15, 1836; area, 53,850 square miles. The population, according to each decennial census since admission, was 97,574 in 1840; 209,897 in 1850; 435,450 in 1860; 484,471 in 1870; 802,525 in 1880; and 1,128,179 in 1890. By estimates based on the school census of 1897 it was 1,302,185. Capital, Little Rock.

Government.—The following were the State officers during the year: Governor, Daniel W. Jones;

Secretary of State, Alexander C. Hull; Treasurer, Ransom Gulley; Auditor, Clay Sloan; Attorney-General, E. B. Kinsworthy; Superintendent of Education, Junius Jordan, who resigned, Sept. 9, and was succeeded by J. W. Kuykendall, who served till J. J. Doynne's term of office began, Nov. 1; State

DANIEL W. JONES, GOVERNOR OF ARKANSAS.

Land Commissioner, J. F. Ritchie, succeeded, Nov. 1, by J. W. Colquitt; Commissioner of Mines, Manufactures, and Agriculture, W. G. Vincenheller, succeeded, Nov. 1, by Frank Hill; Adjutant General, A. B. Grace; Chief Justice of the Supreme Court, Henry G. Bunn; Associate Justices, S. P. Hughes, C. D. Wood, B. B. Battle, J. E. Riddick. All are Democrats.

Finances.—The valuations of taxable property this year show the total value of real estate to be \$117,873,253, of which \$12,747,515 is railroad real estate, \$73,934,207 is the value of farming lands, and \$31,191,531 is the value of town and city lots. The valuation of personal property amounts to \$59,552,873, of which \$8,562,479 is of rolling stock of the railroads. The number of persons liable to pay poll tax is 263,685.

An agreement was reached this year by which the debt of the State to the United States is to be settled. (See "Annual Cyclopaedia" for 1897, pages 30, 31.) The State is to pay \$572 at present and provide for the payment of \$160,000 in 1900. The bill provides that the State shall release to the railroad companies or their assigns all title to the 273,000 acres of land that have been in dispute, thus quieting the titles of settlers. It became a law by the signature of the President in April.

A suit involving the right of the State to assess the Western Union Telegraph Company, Pacific Express Company, and Pullman Palace Car Company for taxation, was decided in favor of the State, Nov. 18, 1897. The amount the State will recover is about \$62,000, which will be distributed—one third to the State, one third to the counties in which the three corporations do business, and one third to the school districts.

The disbursements of the State Treasurer from Sept. 1, 1897, to Sept. 30, 1898, amounted to \$1,387,887.42.

Pensions ranging in amount from \$25 to \$100 a year are given by the State to 1,178 Confederate veterans.

Education.—The annual enumeration of the school population—children between the ages of six and twenty-one years—as published in December, 1897, shows an increase of $2\frac{1}{2}$ per cent. over that of the preceding year. In enrollment in the schools there is an increase of $3\frac{1}{2}$ per cent., and in the aver-

age daily attendance, an increase of 14½ per cent. The total school population is 463,676. The amount of the annual apportionment to the schools in August was \$343,038.10.

The teachers of the State have united with those of Texas and Colorado in the organization of a Chautauqua association, which has purchased 20 acres near Boulder, Col., at the base of the Rocky mountains, for its buildings.

The State University graduated a class of 15 in June, and Ouachita College one of 6 in the regular course and 6 from special departments. From the medical department of the university 19 were graduated in April, and 9 in June from the law department of the Arkansas Industrial University, at Fayetteville.

At the School for the Blind 4 boys were graduated in June with diplomas for piano tuning and 2 from the Industrial Department.

The Deaf-Mute Institute has about 235 inmates. The buildings are on a tract of 90 acres on a high ridge overlooking Arkansas river. With the products of the gardens and shops the institution has become nearly self-supporting.

In accordance with a resolution of the Legislature in 1895, the Representatives of Arkansas in Congress requested that the compact entered into between the United States and the State of Arkansas with regard to the "sections of land No. 16 in every township," or an equivalent section, granting the proceeds of the sale of such lands "for the use of the inhabitants of such township for the use of the schools" be so modified that the funds arising from the sale of the lands shall be placed in the State treasury and applied to school purposes without regard to the townships where the sections sold were situated, but, like other school funds, apportioned according to the number of children of school age. The act of modification was passed by Congress in March.

The Insane.—The Asylum for the Insane comprises buildings with a capacity for 600 patients, and more than 500 are cared for now. It is on a height 2 miles west of the center of the capital city. The annual appropriation for current expenses is about \$88,000.

Criminals.—The State Penitentiary has about 990 inmates, of whom 10 are women, 7 colored and 3 white. The life prisoners number 15, and all of them are colored; 66 per cent. of the prison population is colored. A reform farm camp has been established at Palarm, to which prisoners under twenty-one are sent. Eight leased farms are worked by the convicts on the share-crop system, and this is reported to have resulted profitably. A convict farm is to be bought by the State and paid for by the products of its cultivation.

The law requires that the State shall furnish convicts with tobacco, the supply of which in 1897 cost \$3,400. This year the tobacco used was raised by the convicts themselves on the farm near Palarm, showing that a fairly good quality of this product can be grown in the State. In 1897 the Governor granted a total of 297 pardons, restorations to citizenship in cases where sentences had been served, and remissions of fines.

Several cases of lynching occurred in the State during the year. A negro accused of assault was hanged by a mob at Fairview, June 3, and soon afterward two negroes were hanged for the same crime by a mob of about 300 farmers in Monroe County. On July 4 a mob took a negro charged with murder from jail at Rison and hanged him. Two other negroes, it appears, had previously been lynched for participation in the same crime. July 14, two negroes charged with a murder in 1894 were shot in jail at Mouticello. They had been convicted

in two trials, but were awaiting a third trial, which had been granted by the Supreme Court. The most flagrant case of lawlessness occurred in Clarendon in August, on account of the murder of John P. Orr at his home there, July 30. The coroner's jury charged the crime to a negro, and accused as accessories four other negroes, the murdered man's wife, and a young Jewess. On Aug. 9 four of the negroes, one a woman, were taken from jail and hanged. They confessed to being accomplices. Mrs. Orr, who was also in jail awaiting trial, took poison, said to have been given to her by the mob to save her from the fate of the negroes, and died the next day. The circuit judge had promised to convene an extra session of court and see that the prisoners had a speedy trial.

Much trouble is encountered in the efforts of the authorities to put a stop to illicit distilling. It is difficult to get testimony against the law-breakers, for witnesses are subjected to all sorts of annoyance and loss and are in fear of their lives. One who had given testimony in a case of this kind in Cleburne County asked protection from the Governor in a letter which said: "We have been subjected to every kind of misuse by threats and destruction of property. My hogs died, my dogs were killed, my wagon was torn to pieces in the field, and last Saturday night at eight o'clock my barn was set on fire and burned to the ground with three cows and farming tools, grain, and fodder, my loss being not less than \$400. I have been warned that I must move out of my house and get out of the country right away. I have to guard night and day what I have left. I can't gather my crops. People are afraid to come to my house or have anything to do with me." The Governor issued a proclamation offering a reward for the arrest of any person guilty of the acts mentioned in the letter.

Railroads.—The figures given out in September by the Board of State Assessors show an increase of \$371,628 in the taxable valuation of railroads over that of 1897. The increase of mileage is 65.19; the total mileage, 2,612.17. The total valuation is \$22,995,492. This includes the sleeping-car, telegraph, and express companies, amounting to \$937,699.

Under a decree of the court back taxes to the amount of \$62,477 have been paid by the Pullman Palace Car Company, the Western Union Telegraph Company, and the Pacific Express Company.

The grant of 1,000 acres of State land to the Springfield, Little Rock, and Gulf road, on condition that it be built and equipped from Little Rock to Fourche la Pave river by June 26, 1898, was forfeited by failure to build, although some work was done; and the project appears to have been abandoned.

The Mississippi River, Hamburg and Western road was completed in September to Hamburg from Montrose, its junction with the Iron Mountain, a distance of 20 miles only, and contracts were let to carry it on to the Mississippi. The plan is to extend it to Texarkana.

According to the Arkansas "Gazette," charters have been granted for 431 railroads in the State since Dec. 12, 1851, the date of the first charter. Of these, about 400 have been forfeited by failure to construct the proposed roads. Work is in progress on an extension of the Choctaw, Oklahoma and Gulf road from Wister Junction to Little Rock, and at a foreclosure sale of the Little Rock and Memphis in October this road was bought for the former. A line for the capital city, competing with the St. Louis, Iron Mountain and Southern, is thus in prospect. The purchase price of the Little Rock and Memphis was \$325,000 above the amount of the mortgage upon it, \$3,325,313.

By a Supreme Court decision in April, the rule

requiring the purchase of tickets by passengers boarding trains at ticket stations was declared to be reasonable.

Cities and Towns.—The towns of Lake City, in Lawrence County, and Shiloh, in Cleburne County, were incorporated this year, making the whole number of cities and incorporated towns in the State 205.

Cotton.—Representatives of the various compress and warehouse companies in Arkansas met at the capital in May and organized the Arkansas Compress Association. Its object is to promote a uniform and efficient method of baling cotton, for, according to the report of a committee, it is generally admitted that the American cotton bale is now delivered at its final destination in a dirty, uneven, and ragged condition; and on account of this condition the cotton consumers are discriminating against American cotton. It was decided to recommend the adoption of a uniform press box, 24 x 54 inches, inside measurement. By making a bale of these dimensions, it is said, lower freight rates abroad can be secured.

Political.—A new political organization was formed at a convention held in May at Little Rock. It was named the Liberal party. Its platform favored prohibition; the initiative and referendum; woman suffrage; Government control of the means of transportation and communication; free coinage of silver at the ratio of 16 to 1; an income tax; direct election by the people of the President, Vice-President, and Senators; reduction of congressional representation; abolition of "useless offices with large salaries and insignificant services"; reductions in salaries of public officials; Sunday laws; the establishment of reform schools; abolition of official fees and payment by salaries; a new road law; the teaching in public schools of the effects of alcohol and narcotics; and amendments to the election law requiring the names of all party and independent candidates complying with nomination regulations to be placed on the official ballot at the expense of the entire people for whom the election is held; that the candidates of each party be placed in separate columns; entitling each of the three larger parties to a State and county commissioner and a judge of election of their respective choosing; allowing each party having candidates to be voted for a watcher to serve without fee under oath as to secrecy; and requiring that the ballots of electors who may be unable to prepare their own ballots in the booth shall be filled out in the presence of all the judges.

Alexander McKnight was nominated for the office of Governor. No other nominations for State offices were made.

The People's party held its convention in Little Rock, May 31. The platform was as follows: "We reaffirm the fundamental principles of our national platform adopted at Omaha and St. Louis; we also reaffirm the State platform adopted by the Populists of Arkansas in 1896, and call especial attention to that part denouncing the Arkansas election law; and in order to secure all necessary reforms we demand an amendment to our State Constitution giving to the people the right of direct legislation."

Following is the ticket: For Governor, W. S. Morgan; Secretary of State, A. T. Barlow; Attorney-General, R. A. Moore; Treasurer, B. L. Jones; Superintendent of Public Instruction, B. P. Baker; Commissioner of Mines, Manufactures, and Agriculture, T. W. Hays; Commissioner of State Lands, George Martin.

Candidates for the offices of Auditor and Associate Justice were afterward named by the State Central Committee.

The Democratic State Convention was held in

Little Rock, June 21. The platform reaffirmed the Chicago declaration of 1896, declared the Monroe doctrine to be a cardinal tenet of the party, approved the war with Spain, opposed the issuing of interest-bearing bonds for defraying the expenses of the war, favored the building and control of the Nicaragua Canal by the Government, and recommended the adoption of the proposed amendments to the State Constitution providing for the creation of a railroad commission and for the improvement of highways. A resolution contemplating the continued use of the primary-election system was defeated, and the county central committees are left to exercise their own judgment in prescribing the manner in which elections shall be held for State candidates, whether by primary election or convention of delegates.

The candidates named were: For Governor, Daniel W. Jones; Secretary of State, Alexander C. Hull; Treasurer, Thomas E. Little; Auditor, Clay Sloan; Attorney-General, Jefferson Davis; Commissioner of State Lands, J. W. Colquitt; Superintendent of Public Instruction, J. J. Doyme; Commissioner of Mines, Manufactures, and Agriculture, Frank Hill; Associate Justice of the Supreme Court, J. E. Riddick. All but two of these nominations were determined by the vote of the primaries on May 7.

The Republican convention in Little Rock, June 29, adopted a platform demanding that each party be represented on each election board. The St. Louis platform was reaffirmed and the McKinley administration commended, and declarations were made in favor of the Dingley bill and the gold standard, the annexation of Hawaii, the construction of the Nicaragua Canal, and a national quarantine law. On State matters the platform declared for consolidation of State and congressional elections, a constitutional convention, an amendment to the grape-culture law, encouragement of immigration, and the inviting of capital for the development of the State's resources. Protest was made against the exclusion of Republicans from the boards of the university and the other State institutions. Resolutions were adopted asking Congress to provide for the care of Confederate cemeteries, asking that the office of superintendent of the Hot Springs reservation be exempted from the operation of the civil-service law, and favoring instruction in military tactics at the Branch Normal College, at Pine Bluff. The ticket follows: For Governor, H. F. Auten; Secretary of State, H. H. Myers; Auditor, Andrew I. Roland; Treasurer, A. L. Krewson; Land Commissioner, George M. French; Superintendent of Public Instruction, J. R. Williford; Attorney-General, J. F. Henley; Associate Justice of the Supreme Court, James Brizzolara; Commissioner of Mines, Manufactures, and Agriculture, Charles W. Cox.

The result of the election, Sept. 5, was the success of the entire Democratic State ticket. The official returns gave the following figures on the candidates for Governor: Jones (Democratic), 75,362; Auten (Republican), 27,524; Morgan (Populist), 8,332; McKnight (Liberal), 679. The next State Senate will be entirely Democratic, while the lower house of the legislature will have two Republican and no Populist members.

Two constitutional amendments were submitted and both were carried, one providing for a railroad commission, the other giving counties power to levy a road tax of 3 mills, with the consent of the people. The counties voted on the question of granting liquor licenses and also on the sale of native wine.

At the November election the Democrats elected all their candidates for Congress.

ASSOCIATIONS FOR THE ADVANCEMENT OF SCIENCE. American.—The fiftieth meeting of the American Association was held in Boston, Mass., during Aug. 22-27, 1898. The officers of the meeting were: President, Frederick W. Putnam, of

FREDERICK W. PUTNAM.

Cambridge, Mass. Vice-presidents of the sections: A, Edward E. Barnard, Williams Bay, Wis.; B, Frank P. Whitman, Cleveland, Ohio; C, Edgar F. Smith, Philadelphia, Pa.; D, John Galbraith, Toronto, Canada, acting in place of Mortimer E. Cooley, Ann Arbor, Mich., absent owing to service in the navy; E, Herman L. Fairchild, Rochester, N. Y.; F, Alpheus S. Packard, Providence, R. I.; G, William G. Farlow, Cambridge, Mass.; H, J. McKeen Cattell, New York city; and I, Archibald Blue, Toronto, Canada. Permanent secretary, Leland O. Howard, Washington city. General secretary, James McMahon, Ithaca, N. Y. Secretary of the council, Frederick Bedell, Ithaca, N. Y. Secretaries of the sections: A, Winslow Upton, Providence, R. I.; B, William S. Franklin, South Bethlehem, Pa.; C, Charles Baskerville, Chapel Hill, N. C.; D, John J. Flather, Lafayette, Ind., acting in place of William S. Aldrich, Morgantown, W. Va., absent owing to service in the war; E, Warren Upham, Minneapolis, Minn.; F, Robert T. Jackson, Boston, Mass.; G, Erwin F. Smith, Washington city; H, Marshall H. Saville, New York city; and I, Marcus Benjamin, Washington city. Treasurer, Robert S. Woodward, New York city.

Opening Proceedings.—The usual regular preliminary meeting of the council with which the association begins its sessions was held in the council room at the Technology Club, 71 Newbury Street, on Aug. 20, at noon. At this session the final details pertaining to the arrangements of the meeting were settled and the reports of the local committees acted on. The names of 162 applicants for membership were favorably considered, which number, together with 37 names acted on at an extra meeting of the council held in Washington on April 20, 1898, brought the total membership up to 1,843. The general session with which the public meetings began was held in Huntington Hall of the Massachusetts Institute of Technology at 10 A.M., Aug. 22. The meeting was called to order by the retiring president, Oliver Wolcott Gibbs, of Newport, R. I., at whose request Bishop William Lawrence offered prayer. Gov. Roger Wolcott, of Massachusetts, then

welcomed the association. He said in part: "It is for you, little by little, as the years and centuries go on, with faithful and painstaking search, to learn a little more of that great ocean of truth and to launch your barks a little farther on the sea of science, and to know more about the stars, the plants, the pebbles, and the shells. The truth is that Science is still sweeping beyond you, and is beckoning you to follow her. Science would be less worthy of our regard if its benefits should be limited to any class, but it is open to all."

"It is as men of science that the Commonwealth welcomes you to-day. May you bear away from this meeting pleasant memories of the State, rich in the valor and achievements of her sons. And may you leave behind you that inspiration which is fostered and cherished by men who are brought together to compare notes and clasp hands, and carry back memories of this meeting. The Commonwealth greets you, and expresses to you her recognition, and bids you welcome to the old Bay State."

Mayor Josiah Quincy, as the representative of the municipality, welcomed the association to Boston in a few remarks, among which were references to the aid given by scientists to the working out of practical problems in the city. He said: "I am proud to say that we are commanding the interest and the services, and the hearty co-operation, without price and without reward, of men who are endeavoring to give in some measure a practical social science, and, while this may be a far less exact science than many others, I firmly believe that there is a social science and a political science, and that the domains which come within its knowledge are constantly widening, both as regards the body social and its evolution, and the body politic, and how to secure its best application. I heartily congratulate the American Association and welcome it back, after fifty years, to the scene of its birth and extend thanks and welcome on behalf of the city of Boston to each and every one of its members in view of this meeting here and the work which the association is yet to do in the first half of the century to come."

President James M. Crafts, of the Massachusetts Institute of Technology, likewise welcomed the members. He said: "Scholars who have walked in the fields with Gray and Agassiz, who have learned their mathematics from Peirce, their anatomy from Wyman, or their chemistry from your retiring president, might look the world over without finding leaders better fitted to guide them to the innermost chambers of scientific knowledge. In this place it is most fitting to mention the chairman of the first meeting of this association, William B. Rogers, who was a born educator. He loved science for its own sake. His later years were devoted to the institute which he built up, and which, now largely grown from small beginnings, has the honor of welcoming you this day; and it was on this stage that he fell, an unfinished sentence on his lips, giving his life to the cause which overtaxed his strength."

President Gibbs then presented his successor, President Putnam, who acknowledged the addresses of welcome on behalf of the association, and then declared the meeting open. A short address was then made in French by M. Désiré Charnay, the official representative of the French Government, and after the usual announcements the meeting was adjourned.

Address of the Retiring President.—The association met again in Huntington Hall, on Monday evening, to listen to the retiring address of President Gibbs. This distinguished scientist, who still follows his chosen study of chemistry in his private laboratory in Newport, was for nearly a quarter of a century Rumford professor in Harvard Univer-

sity, and with Agassiz, Gray, Lovering, and others did much toward inaugurating the great development in science that took place in Harvard subsequent to the arrival of Agassiz in this country. He chose as the subject of his address "Some Points in Theoretical Chemistry." He said: "All chemists are familiar with the terms atom and molecule. The use of these two words, with a clear conception of their meaning, forms an era in the history of the science. Our modern chemistry is built up of atoms and molecules, as we now define them. Our modern physics deals for the most part, and, as I think, too exclusively, with atoms, except, perhaps, in the case of what we now term physical chemistry, the new branch of science, which makes it difficult for us to determine where chemistry leaves off and where physics begins. The old controversy between the advocates of the continuity and those of the discontinuity of matter is not dead, but only sleeps."

Continuing, he added: "We owe to Dalton the first clear conception of the chemical atom as distinguished from the atoms of Lucretius and Democritus; to Frankland the conception of valence, which shows us what combinations of atoms can exist consistently with the number of units of affinity possessed by each individual atom, or, in other words, in what manner groups of atoms can form systems which are in stable equilibrium. This conception includes that of the chemistry of space, now so much employed in organic chemistry, as well as that of the motions of atoms within the molecule, as yet without supporters. To the conception of a definite number of units of affinity recent chemistry has added that of direction of action, statical according to one school of chemists, dynamical according to another. Within a comparatively short time attention has been directed to a large class of compounds exhibiting very interesting properties and forming peculiar series, some of which, at least, are made up of homologous terms. This group has been called complex-inorganic, because many of its members form highly complex molecules, of which no analogues are known."

He himself was one of the pioneer workers in certain of these complex-inorganic acids and their salts, and the history of his investigations formed the burden of his address. He called attention to the fact that "the term 'complex-inorganic' was at first intended to embrace all the compounds containing a relatively large number of molecules of tungstic and molybdic oxides as determinates, beginning with the silicotungstates of Marignac. Hitort, in 1859, appears to have first drawn the distinction between double salts which are decomposed by solution and those which are stable under the same circumstances. Finally, Ostwald proposed to restrict the term 'complex' to the salts which are not decomposed by solution and which gave none of the chemical reactions of the constituents. Of these two classes it is difficult to say which is the more interesting and theoretically important. The salts of the first class are comparatively new to chemists and, in spite of all which has been done, offer a very wide field for investigation. Those of the second class present new species of double and even of triple and quadruple salts. It will first be necessary to study the whole subject by physical as well as by the purely chemical methods which all chemists have hitherto employed, so as to define as distinctly as possible the limit, if there be one, which separates the two classes from each other."

In continuation he said: "I venture now to suggest that, in addition to its valence, each atom and each molecule possesses a special chemical potential, not necessarily a function of its valence. The expression 'chemical potential' is not wholly new, but

I think the conception has never been clearly defined. I would now define it as bearing the same relation to chemical action which the electric potential bears to electrical action, the two potentials being mutually convertible, all chemical compounds having residual affinities or potentials besides the valencies. If we suppose that the atoms within the molecule are in motion, such motion will be independent of the valencies and the molecule will have a certain amount of free kinetic energy convertible into chemical electrical energy or into heat. In inorganic chemistry four great problems now present themselves for solution. These are: The existence and chemical relations of the gaseous elements, of which five are known to exist in the atmosphere; the separation of the elements forming the rare earths by systematic processes and the determination of their positions in the periodic series; the thorough and, so far as possible, exhaustive study of the complex and double salts; and, finally, the determination of the atomic masses of the elements with all the precision of which the subject admits, and in the spirit of Stas, of Richards, and of Morley."

Proceedings of the Sections.—The association is divided into nine sections, each of which is presided over by an officer having the rank of vice-president of the association. Subsequent to the opening proceedings each section meets by itself and effects its organization by electing a fellow to represent it in the council, a sectional committee of three fellows, a fellow or member to the nominating committee, and a committee of three members or fellows to nominate officers of the section for the next meeting. As soon as this organization is effected, the secretary of the section reports to the general secretary, who then provides him with a list of papers that, having been considered suitable by the council, may be read and discussed before the section. A press secretary, whose duties are to prepare abstracts of the papers read and to give them to reporters of newspapers, is also commonly chosen.

A. Mathematics and Astronomy.—This section was presided over by Dr. Edward E. Barnard, formerly at the Lick Observatory, and now at the Yerkes Observatory, of the University of Chicago, but perhaps best known by his discovery of the fifth satellite of Jupiter. He chose as the subject of his address "The Development of Astronomical Photography."

He said: The great discovery of taking pictures by the natural light of the sun had just been made when the American Association held its first meeting, and while it then aroused great interest, there yet were few who even dreamed of the future value of photography to the world. One of those who saw the value of Daguerre's discovery was the celebrated astronomer and writer Dr. Dick. The astute Scotchman saw the opportunity to catch the features of the moon by means of the photograph; he thought that the planets would prove easy subjects to the new process, that perhaps there might be something discovered about the nebulae, and that objects not visible to the eye might find themselves depicted on the plated disks of Daguerre. It is a little curious to note that while much excellent work has been done on the nebulae, the photography of the planets seems to-day no nearer realization than in the days of Dr. Dick's predictions. In 1839 the astronomer Arago addressed the French Academy on the subject of photographing the skies, and within a year from that time the elder Draper in New York had succeeded in taking a picture of the moon. Five years later, Harvard College Observatory began its photographic work, when were secured pictures of the moon with the

15-inch equatorial. The speaker rapidly sketched the rise and progress of photography as applied to the moon, the sun, and the heavens, much of the work being done by American investigators. The completion of Lick Observatory marked a decided advance in study, since the large telescope there favored the work. The Paris photographs of Loewy and Puiseux, made with a special form of telescope, excel anything that has yet been done, however. Dr. Barnard followed the progress of work on the sun, which at first sought detail on the surface, next devoted itself to the prominences, then took up the corona, and with the invention of the dry plate has gone back to detail on the surface and within the sun spots. The dry plate has been the most important improvement which has contributed to the advance of astronomical photography. With the old wet processes the time of exposure was limited; it was not so flexible a method, and was most inconvenient. A most important branch of investigation is that of stellar photography, which dates practically from 1882. In an endeavor to catch the great comet of that year, Dr. Gill, at the Cape of Good Hope, secured the assistance of a local photographer, and when his pictures reached Europe the astonishing feature was the number of stars that they showed. The work has been taken up with energy by many observatories, and most excellent results have been accomplished.

A portion of Dr. Barnard's paper was devoted to recent work, especially that of Lick and Harvard, and an insight was given into the many different lines of research wherein the camera plays an important part—such as the noting of variable stars, the securing of plates whereupon positions may be measured, the catching of the details of nebulae and comets, and the discovery of asteroids.

Alexander Ziwet, of the University of Michigan, who was chosen secretary of this section last year, having declined election, his place was filled by the election of Winslow Upton, of Brown University.

The following-named papers were read and discussed before the section: "Making Astronomy Popular," by Miss Mary Proctor; "Correction of Local Error in Stellar Photometry," by Henry M. Parkhurst; "The Parallaxes of 61st and 61st Cygni from a Reduction of the Rutherford Measures," by Herman S. Davis; "The Praesepe Group: Measurement and Reduction of the Rutherford Photographs," by Frank Schlesinger; "Discordances between the North Polar Distances of Stars derived from Direct and Reflected Observations" and "The Treatment of Results from Reflection Observations at the Greenwich Observatory," by John R. Eastman; "A Summary of Planetary Work at the Lowell Observatory, and the Conditions under which such Work has been performed," by Andrew E. Douglass; "Astronomy in Southern California," by Lewis Swift; "A Description of Instantaneous Azimuth and Altitude Charts of the Heavens," by F. W. Coar; "Instruction in Elementary Astronomy by Means of Observations made by the Student," by W. Maxwell Reed; "Personal Equations during the Past Century: A Brief Summary," by Truman H. Safford; "On Rational Right-Angled Triangles, II," by Dr. Arctenns Martin; "Behavior of the Atmospheres of Gas- and Vapor-Generating Globes in Celestial Space," by J. Woodbridge Davis; "Graphical Logic," by Ellen Hayes; "Illustrations of the Comitant Method of constructing the Imaginary Loci of Analytical Geometry, so as to render Their Properties Evident to the Eye," by Frank H. Lound; "On the Operation Groups of Order 48 and those of Order $2p^2$, p being any Prime Number," by George A. Miller; "The Condition of the Surface of the Planet Jupiter," by George W. Hough; "The Yerkes Observatory and its Work," by George E.

Hale; "The General Theory of Anharmonics," by Edgar O. Lovett; "On the Aims of the International Society for the Promotion of Quaternions and Allied Branches," by Alexander Macfarlane; "Some Notes on 'Direction,'" by S. Edward Warren; "A Short Method for deriving Riemann's Theta Formula," by Franklin A. Becher; "A Ternary and a Quaternary Linear Congruence Group simply Isomorphic to the Linear Fractional Congruence Group," by Leonard E. Dickson; "Linear Transformations in Four Dimensions," by Arthur S. Hathaway; "The Limitations of the Present Solution of the Tidal Problem," by John S. Hayford; "Variation of Latitude at New York City and the Constant of Aberration from Observations with a Zenith Telescope (Talcott's Method) at Columbia University Observatory during the Years of 1892–1898," by John K. Rees, Harold Jacoby, and Herman S. Davis; "Fifty Years of American Geodesy," by Edward D. Preston; "On the Duplex Base Apparatus of the United States Coast and Geodetic Survey" and "On the Diminution of the Refraction of the Atmosphere with Height and its Effect upon Trigonometrically Determined Elevations from Reciprocal Zenith Distances," by William Eimbeck; "On a New Application of the Prismatic Camera to Total Eclipse," by David P. Todd; "On Harmonic Functions," "A Proposed Tidal Analyzer," "A Tidal Abacus," and "The Harmonic Analysis of High and Low Waters," by Rollin A. Harris; and "A Description of the Altazimuth Instrument recently constructed for the United States Naval Observatory," by George A. Hill.

Also the following reports were read: On "Theory of Invariants: The Chief Contributions of a Decade," by Henry S. White, and on "The Modern Group Theory," by George A. Miller.

A joint session was held with Section B, on Aug. 25, at which the following reports were read: "Report on the Recent Progress in the Dynamics of Solids and Fluids," by Ernest W. Brown, and "Report on the Recent Progress in the Mathematical Theory of Electricity and Magnetism," by Arthur C. Webster; also the following papers: "The Mass and Moments of Inertia of the Earth's Atmosphere," "Two New Forms of Apparatus for measuring the Acceleration of Gravity," and "The Gravitation Constant and the Mean Density of the Earth," by Robert S. Woodward, and "The Limitations of the Present Solution of the Tidal Problem," by John S. Hayford.

B. *Physics*.—The presiding officer of this section was Prof. Frank P. Whitman, of Adelbert College, Cleveland, Ohio, who presented an address on "Color Vision." This address was a summary of the progress in the department of the vision of colors, referring to the history of the research and summing up the matter in a statement of its condition at present. With a groundwork of the first definite and intelligible hypothesis, that of Sir Isaac Newton, Prof. Whitman related the story of color vision, noting the improvements to the original hypothesis suggested by Thomas Young, and finally those of his successors in this line of investigation. Color blindness was of course the burden of much of the address, the various ideas that have been advanced to account for the false appreciation of colors being passed in review. Much was said about the "visual purple," the purpose of which has been a puzzle to all anatomists. With reference to our present knowledge, it seems clearly proved that the number of color sensations is small and all hypotheses that a large number are, he said, untenable to-day. The vision of white light is by no means a compound sensation, no matter how complex the light may be physically, but at the same time it is not a purely independent one, for there are some

evident relations between it and vision by faint light in which all the colors fade and tend to become white. A definite and highly probable function has been assigned to the visual purple, that of adaptation and of causing or aiding vision in faint light. "Further than these few principles we can hardly go. The number and variety of known human phenomena are very great and constantly increasing. Their interrelations grow every day more complex, and the actual mechanism governing those relations still remains almost entirely unknown. The various theories have arrived at such a state of flexibility that, thanks to subsidiary hypotheses, almost any kind of visual result might be explainable. Perhaps the most hopeful line of research is that which, like the study of the visual purple, seeks to find a relation between color sensations and physical properties." In concluding he said: "It seemed not surprising if the next great step in advance might come from the chemical investigations rather than from the sides of physics, physiology, or psychology, which have held the field so long."

Owing to the resignation of Edward B. Rosa, of Wesleyan University, William S. Franklin, of Lehigh University, was chosen secretary of the section.

Subsequently the following-named papers were read and discussed before the section: "The Measurement of Thermal Conductivity in Iron," by Edwin H. Hall; "Second Report on the Magnetic Survey of Maryland," by Louis A. Bauer; "The Resistance of Iron Wires for Alternating Currents of Ordinary Frequencies" and "On the Magnetic Deflection of Diffusely Reflected Cathode Rays," by Ernest Merritt; "On the Electrical Properties of the Vapor from the Arc," by Ernest Merritt and Oscar M. Stewart; "The Heat of Fusion of Ice determined in Electrical Units," by Edward L. Nichols; "The Hysteresis of Iron and Steel at Ordinary Temperatures and at the Temperature of Solid Carbon Dioxide," by A. M. Thiessen; "The Electrical Resistance of Lead Amalgams at Low Temperatures," by G. W. Gressman; "The Most Efficient Thickness of Transformer Plate," by Frederick Bedell, R. M. Klein, and T. P. Thompson; "Photographic Studies of the Electric Arc," by N. H. Brown; "Exhibition of Certain Models in Physics and Dynamics," by Carl Barus; "Temperature and Vapor Gradients in the Atmosphere," by Edward H. Bigelow; "Report on the Velocity of Light in a Magnetic Field," by Edward W. Morley, Henry T. Eddy, and Dayton C. Miller; "A Study of Standard Meter Scales ruled on Nickel, Silver, and Glass," by Dayton C. Miller; "An Apparatus for determining Coefficients of Induction," by Sidney T. Moreland; "Study of Elastic Fatigue by the Time Variation of the Logarithmic Decrement," by Joseph O. Thompson; "A Redetermination of the Ampère," by George W. Patterson and Karl E. Guthe; "Polarization and Internal Resistance of the Voltaic Cell," by Karl E. Guthe; "A New Gas," by Charles F. Brush; "Hysteresis Loss in Iron for very Small Ranges of Induction (B)," by Henry S. Webb; "Note on the Testing of Optical Glass" and "A Lecture-Room Experiment in Electrostatics," by William S. Franklin; "A Study of Galvanic Polarization," by Barry McNutt; "On a Normal Curve of Magnetization of Iron," by Schuyler S. Clark; "Some Determinations of Dielectric Strength," by Thomas Gray; "On the Efficiency of Condensers" and "A Calorimetric Determination of the Energy dissipated in Condensers," by Edward B. Rosa and Arthur W. Smith; "Graphical Treatment of Mutually Inductive Circuits with Special Reference to the Case of Variable Frequency," by Henry T. Eddy; "The Effect of Fibrous

Structure in Iron on its Change of Length when Magnetized," by Edward Rhoads; "Progress in the Exploration of the Air with Kites at the Blue Hill Observatory," by A. Lawrence Rotch; "On the Use of Window Glass having a Diffusive Action on Light," by Charles L. Norton; "On the Relative Brightness of Pigments by Oblique Vision," by Frank P. Whitman; "Notes on the Effect of Silicon on the Magnetic Permeability of Iron," by Frank C. Caldwell; "On the Osmotic Pressure of Certain Ether Solutions and the Validity of the Boyle-Van't Hoff Law," by H. M. Goodwin and George K. Burgess; "On the Dielectric Constant and Electrical Conductivity of Liquid Ammonia," by Harry M. Goodwin and Maurice de Kay Thompson, Jr.; "A New Instrument for the Measurement of the Intensity of Sound," by Arthur G. Webster and B. F. Sharpe; "A New Chronograph and a Means of rating Tuning Forks" and "A Geometrical Method for investigating Diffraction by a Circular Aperture," by Arthur G. Webster; "On the measurement of Electrical Oscillations of Short Period and their Absorption by Water," by Alfred D. Cole; "The Effect of the Secondary on the Period of Oscillation in a Primary Condenser Circuit," by J. H. Smith; "Exhibit of an Automatic Mercurial Air Pump designed by Prof. E. W. Morley," by Dayton C. Miller; "An Improved Method for rating Tuning Forks" and "An Acoustical Micrometer," by John O. Reed; "An Instrument for measuring Radiance," by Knüt Angström; "A Device for Recording Photometer Readings," by C. P. Matthews; "Polarization in the Zn-H₂SO₄ Cell," by William A. Anthony; "A Harmonic Piano and Organ," by Levi Orser; and "On Certain Constants relating to Arc Lighting," by William Harkness.

C. Chemistry.—This section had as its presiding officer Prof. Edgar F. Smith, who fills the chair of Chemistry in the University of Pennsylvania. The subject of his address was "The Electric Current in Organic Chemistry." He said: "It is almost a century since Volta made his 'grand discovery,' which led to further investigations, with the final demonstration that animal and metal electricity are one. It also opened the way to the construction of the battery bearing the name of this honored investigator." Of the chemical phenomena, which were to Volta also entirely devoid of interest, were mentioned the discovery of the electrolytic decomposition of water and others of value, culminating in Davy's isolation of the two valuable alkali metals, sodium and potassium. After reviewing the important discoveries made by the application of the electric current to various compounds, Prof. Smith discussed more particularly the results won by the introduction of the current into the field of pure chemistry. Of its use in analysis he said: "It was our own Dr. Gibbs who in 1865 first called the attention of the chemical world to that simple yet beautiful and extremely satisfactory determination of copper in the electrolytic way which proved the incentive to further study in this direction, so that at present 21 metals lend themselves to electrolytic determination from solutions of the most varied character, and in the same manner at least 120 separations have been made, all of which, for accuracy, neatness, and rapidity, leave little to be desired." Its application in the establishment of industries of national importance was described. Then, reaching the main topic of his address, and beginning with the experiments made by Kolbe in 1848 of the electrolysis of concentrated solutions of potassium, acetate, and valerate, he gave a complete historical summary of the work accomplished by the application of the electric current to organic compounds. In closing, he quoted the words of

Michael Faraday, "truly a father of electro-chemistry, who said: 'It is the great beauty of our science . . . that advancement in it, whether in degree great or small, instead of exhausting the subjects of research, opens the doors to future and more abundant knowledge, overflowing with beauty and utility to those who will be at the . . . pains of undertaking its experimental investigation.'"

As many of the members of Section C are also members of the American Chemical Society, it has become customary for the last-named body to hold its summer meeting contemporaneously with Section C. The papers are grouped under special headings, and are read with a chairman presiding over each group.

The following is a list of the papers presented: *Analytical Chemistry*, in charge of Prof. William L. Dudley: "The Influence of Temperature upon the Specific Rotary Power of Sucrose," by Harvey W. Wiley; "The Determination of Water and Coke in Coal," by William A. Noyes and N. M. Austin; "Notes on Determination of Water in Coal," by William F. Hillebrand; "Analysis of Mixed Acids," by Charles E. Munroe; "A Simple Color Reaction for the Detection of Methyl Alcohol," by Samuel P. Mulliken and Harwood Scudder; "Detection of the Nitro Group in Organic Compounds," by Samuel P. Mulliken and E. R. Barker; "Electrolytic Determination of Tin in Tin Ores," by Edward D. Campbell and E. C. Champion; "The Determination of Undigested Fat and Casein in Infant Faeces," by Herman Poole; "New Method for the Determination of Zinc" and "Note on Determination of Arsenic in Glycerin," by A. C. Langmuir; and "The Estimation of Iron and Aluminum in Natural Phosphates," by Harvey W. Wiley and F. P. Veitch. *Teaching of Chemistry*, in charge of Prof. Frank P. Venable: "The Use of the Formula in teaching Chemistry," by Frank P. Venable; "The Teaching of Organic Chemistry," by Ira Remsen; "The Teaching of Industrial Chemistry," by Edward Hart; "The Teaching of Analytical Chemistry," by William L. Dudley. *Physical Chemistry*, in charge of Prof. Theodore W. Richards: "Progress in Physical Chemistry," by Theodore W. Richards; "Some Properties of Liquid Anhydrous Ammonia," by Edward C. Franklin and Charles A. Kraus; "The Solubility of Di-ionic Salts of Weak Acids in Solutions of Stronger Di-ionic Acids," by Arthur A. Noyes and David Schwartz; "The Solubility of Di-ionic Acids in Solutions of Di-ionic Salts of Other Acids," by Arthur A. Noyes and Edward S. Chapin; "The Solubility of Tri-ionic Bases in Solutions of Di-ionic Salts of Weak Bases," by Arthur A. Noyes and Edward S. Chapin; "The Solubility of Iodine in Dilute Potassium Iodide Solutions," by Arthur A. Noyes and L. J. Seidensticker; "The Rate of Reaction between Silver Acetate and Sodium Formate: A Reaction of the Third Order," by Arthur A. Noyes and George T. Cottle; "On the Influence of Silicic on the Heat of Solution of Coke in Cast Iron," by Edward Campbell and W. E. Hartman; "On the Passage of Bubbles through Media of Different Densities," by C. Gilbert Wheeler; and "Photographic Reproduction of Color," by Romyn Hitchcock. *Agricultural Chemistry*, in charge of Prof. Henry A. Weber: "Light: A Factor in Sugar Production," by Henry A. Weber; "The Determination of Starch in Agricultural Products," by J. B. Lindsay; "A Note on the Growth of Lupins on Calcareous Lands," by Eugene W. Hilgard; and "Some of the Important Results of the Recent Chemical Investigations of Plant and Animal Cells," by Emil A. de Schweinitz. *Industrial Chemistry*, in charge of Prof. Nathaniel W. Lord: "The Valuation of Coals," by Nathaniel W. Lord; "Determination of Turbidity in Water" and "Efficiency of

the Elmira Filtering Plant," by William P. Mason; "On the Composition of *Oscillaria prolifica* and its Relation to the Quality of Water Supplies," by Isabelle F. Hyams and Ellen H. Richards; "The Le Seuer Electrolytic Process for the Production of Caustic Soda and Bleaching Powder" and "Review of the Electrolytic Processes for the Production of Caustic Soda and Bleaching Powder," by Charles L. Parsons; "The Alum Question in Water Purification," by E. G. Smith; "The Effect of an Electrolytic Bath on the Tanning of Leather," by Charles F. Mabery and K. Landgrebe; "Some Records of the Year's Progress in Applied Chemistry," by William McMurtrie; "The Progress in Utilization of City Garbage, with Special Reference to the New Plant in Boston," by Bruno Terne; "On the Removal of Hardness from Water for Boiling Purposes," by Charles F. Mabery and E. B. Baltzy; "On the Properties of Galactose," by S. M. Babcock and H. L. Russell; "Composition of Ohio Wines," by O. W. Smith and Norman Parks; and "New Process for the Commercial Production of Oxygen," by Romyn Hitchcock. *Inorganic Chemistry*, in charge of Prof. Horace L. Wells: "Double Salts," by Horace L. Wells; "The Alkaline Reaction of Certain Natural Silicates," by Frank W. Clarke; "The Action of Soft Waters on Metals," by Ellen H. Richards and Willis R. Whitney; "Ferrous Iodide," by C. Loring Jackson and J. H. Derby; "The Action of Chromic Acid on Hydrogen," by Charles L. Reese; "On the Occurrence of Strontium and Barium," by John H. Kastle; "Use of Electric Current in Forming Alums," by James L. Howe and E. A. O'Neal; "The Color of Sulphur in the Gaseous State," by James L. Howe and S. G. Hamner; "A Study of the Tellurides," by Cabell Whitehead; "Magnetic Ferric Oxide," by William L. Dudley; and "The Action of Various Bases on Metallic Arsenites," by Charles Wellington. *Organic Chemistry*, in charge of Prof. Ira Remsen: "On the Sulphur Compounds and Unsaturated Compounds in Canadian Petroleum," by Charles F. Mabery and W. O. Quayle; "On the Composition of Commercial Paraffin and the Higher Constituents of Pennsylvania Petroleum," by Charles F. Mabery; "On the Constituents of California Petroleum," by Charles F. Mabery and E. J. Hudson; "Some Experiments on the Addition of Hydrogen to Acetylene," by Charles F. Mabery and H. L. Schrom; "The Oxidation of Formic Aldehyde by Hydrogen Peroxide," by John H. Kastle; "Certain Peculiar Reactions of the Tribromnitrobenzols," by C. Loring Jackson; "The Propyl Phosphines," by Peter Fireman and E. G. Portner; "The Action of Ethers on Phosphonium Iodide," by Peter Fireman and Ernestine Fireman; "Camphoric Acid: Synthesis of the Neighboring Xylic Acid," by William A. Noyes; "Hydrazo and Azo Derivatives of Tetraphenylmethane," by M. Gomberg and A. C. Campbell; "On Tetraphenylmethane" and "A Periodide of Bromotriphenylmethane," by M. Gomberg; "Oxyinduline—a New Blue Dyestuff," by Samuel P. Mulliken and W. Kelly; "The Benzaloximes," by Frank K. Cameron; "Certain Alkaloidal Periodides and the Volumetric Estimation of Alkaloids as Higher Periodides," by Albert B. Prescott and H. M. Gordin; and "On True and Bis-Nitroso Compounds," by E. Kneuer. *Physiological Chemistry*, in charge of Edward E. Smith: "American Research in Physiological Chemistry," by Edward E. Smith; "Investigations on the Nature of Nisse Granules" and "Studies in Epilepsy: A Contribution to the Subject of Metabolism in Nervous Diseases," by Samuel Bookman; "Proteids of the Brain," by P. A. Levene; "Experiments on the Metabolism of Matter and Energy in the Human Body" and "Experiments on the Metabolism of Alcohol in the Human

Body," by Wilbur O. Atwater and F. G. Benedict; "On the Availability of the Nutrients of Food Materials," by Wilbur O. Atwater and A. P. Bryant; "Urinary Acidimetry and Alkalimetry" and "The Normal Degree of Urinary Acidity," by Heinrich Stern.

D. Mechanical Science and Engineering.—At the Detroit meeting Prof. Mortimer E. Cooley was elected to the vice-presidency, presiding over this section, but as he was unable to be present at the meeting, owing to military duties in connection with the war with Spain, his address was not presented, and instead Prof. Robert H. Richards, of the Massachusetts Institute of Technology, addressed the section on the subject of "Ore Dressing." He called attention to one of the most important types of mills for concentrating ores, that using revolving screens and jigs, showing the system of sizing by screes and hydraulic classification to prepare the ore for the subsequent concentration by jigs and slime tables. A good deal of diversity of opinion exists upon the choice of the sizes of holes for the sieves which prepare the ore for jigs. Prof. Richards then described certain investigations which defined the laws governing this selection. His investigations into the laws of jiggling attribute the action of that machine mainly to two causes—separation under hindered settling conditions during pulsion or the upward movement of the water, in which the heavier particles form a layer below the light particles, and suction or the downward movement of the water, in which the fine particles of the heavy mineral are drawn down through the interstices between the coarse grains of quartz. He further gave results of investigations upon the slopes and water quantities to be used upon slime tables, showing the angles at which the rich mineral and the waste rock move. These results indicate the lines along which the improvement in slime tables should run.

The chosen secretary of the section, Prof. William S. Aldrich, was likewise absent from the meeting owing to the war, and it was decided that the officers of the previous year—i. e., Prof. John Galbraith and John J. Flather—should continue to act as vice-president and secretary.

The following-named papers were read and discussed before the section: "The Determination of the Lamp House per Day available for Electric Lighting from a Storage Battery Plant driven by a Twelve-Foot Aer-Motor," by C. L. Crandall; "Instruments and Methods of Hydrographic Measurements by the United States Geological Survey," by Frank H. Newell; "The Development of the Topographic Work of the United States Geological Survey and its Application to the Solution of Economic and Engineering Problems," by Charles D. Walcott; "On the Testing of Steam-Pipe Covers," by Charles L. Norton; "Time Test on Dry Long-Leaf Yellow-Pine Lumber in Compression Endwise," by John B. Johnson; "High-Speed Influence Machines," by Charles F. Warner; "Proposed Methods of Determining the Frequency of Alternating Currents," by Carl Kinsley; "A Combined Absorption and Transmission Dynamometer," by John J. Flather; "On the Use of a Platinum Resistance as a Pyrometer in Boiler Tests" and "On the Measurement of Train Resistance by Dynamometer," by Frank C. Wagner; "Note on a Curious Example of Elastic Anisotropy in Steel," "An Integrating Dynamometer for measuring the Work done in Drawing a Train," and "A Comparison of the Efficiency of the Rheostat and the Series-Parallel Controller for Electric Cars," by Thomas Gray; "The Efficiency of Refrigerating Plants," by Storm Bull; "On the Evaporation and Seepage from Reservoirs," "Losses from Rivers," and "Energy received from the Sun," by Louis G. Carpenter; "Some Micro-photographs

showing the Grains of Portland Cement between Diameters 0.02 mm. and 0.14 mm. as separated by the Schöne Washing Apparatus," by John B. Johnson; "Some Notes on Definitions of Mechanical Unit," by William Kent; and "The Theory of Half-Tone Press Printing," by Romyen Hitechock.

E. Geology and Geography.—The presiding officer of this section was Prof. Herman L. Fairchild, of the University of Rochester, who addressed the section on the subject of "Glacial Geology in America." He said: "The life of this association, with that of its predecessor, covers precisely the period since the glacial theory was introduced to American geologists. It seems highly appropriate, upon the occasion of the jubilee meeting of the society, to review briefly the history and growth of glacial geology in the country, and to give credit to the men who were pioneers, or who have been most influential in the development of this young and vigorous branch of earth study. Our early geologists had by no means neglected the study of the 'drift' of the country, but the formation of this was attributed to the action of great floods, so that the word 'diluvial' is of common occurrence in the early essays of our self-taught geologists. The first suggestion of ice as a contributory agent seems to have been made by Peter Dobson, of Connecticut, who, in a communication to 'Silliman's Journal,' spoke of the agency of icebergs. This was in 1825, and Murchison gives to Dobson the credit of suggesting the iceberg hypothesis to him. Conrad seems to have been the first of our students who suggested the agency of land or glacier ice, and this idea was taken up by Hitechock.

"A question of great popular interest concerning glaciation is that of time—time in years since the disappearance of the ice. That the time is very brief, judged by geologic standards, since the ice sheet disappeared from our region seems certain. Judging from the freshness of the glacial scorings and the deposits, five thousand or ten thousand or fifteen thousand years is thought by many glacialists to be a fair estimate of the length of their exposure. But no reliable chronometer has yet been found."

On Aug. 23 the Geological Society of America met with the section, at which time members of that society presented the following papers: "Some Features of the Drift on Staten Island, N. Y.," by Arthur Hollick; "Spacing of Rivers with Reference to the Hypothesis of Base Leveling" and "Loess Deposits of Montana," by Nathaniel S. Shaler; "Glacial Waters in the Finger Lake Region of New York," by Herman L. Fairchild; "The Stratification of Glaciers," by Harry F. Reid; "Evidences of Epeirogenic Movements causing and terminating the Ice Age," by Warren Upham; "Clayey Bands of the Glacial Delta of the Cuyahoga River at Cleveland, Ohio, compared with those in the Implement-Bearing Deposits of the Glacial Delta at Trenton, N. J.," by G. Frederick Wright; "The Middle Coal Measures of the Western Interior Coal Field," by H. Foster Bain and A. T. Leonard; "The Principal Missourian Section," by Charles R. Keyes; "Tourmaline and Tourmaline Schists from Belcher Hill, Jefferson County, Colorado," by Horace B. Patton; "Note on a Method of Stream Capture" and "Magnetic Differentiation in the Rocks of the Copper-Bearing Series," by Alfred C. Lane; "The Volume Relations of Original and Secondary Minerals in Rocks," by Charles R. Van Hise; "The Development of the Ohio River," by William G. Light; "Classification of Coastal Forms," "Dissection of the Ural Mountains," and "Note on Monadnock," by F. P. Gulliver; and "The Continental Divide in Nicaragua," by C. Willard Hayes.

Subsequently the following-named papers were read and discussed before the section: "Outline Map of the Geology of Southern New England," by Benjamin K. Emerson; "Basins in Glacial Lake Deltas," by Herman L. Fairchild; "An Exhibition of the Rare Gems and Minerals of Mount Mica," by Augustus C. Humlin; "The Hudson River Lobe of the Laurentide Ice-sheet," by Charles H. Hitchcock; "The Age of the Amboy Clay Series as Indicated by its Flora," by Arthur Hollick; "The Origin of the Limonite Ores of Nittany Valley, Pennsylvania," by Thomas C. Hopkins; "The Region of the Causses in Southern France," by Horace C. Hovey; "The Washington Limestone in Vermont," by C. H. Richardson; "Fluctuations of North American Glaciation shown by Interglacial Soils and Fossiliferous Deposits" and "Time of Erosion of the Upper Mississippi, Minnesota, and St. Croix Valleys," by Warren Upham; "Changes in the Drainage System in the Vicinity of Lake Ontario during the Glacial Period," by Major A. Veeder; "Recent Severe Seismic Movements in Nicaragua," by John Crawford; "Supposed 'Corduroy Road' of Late Glacial Age, at Amboy, Ohio," "The Age of Niagara Falls as indicated by the Erosion at the Mouth of the Gorge," and "A Recently Discovered Cave of Celestite Crystals at Put-in-Bay, Ohio," by G. Frederick Wright; "Geography and Resources of the Siberian Island of Sakhalin," by Benjamin Howard; "Another Episode in the History of Niagara River," and "Evidence of Recent Great Elevation of New England," by John W. Spencer; "The Oldest Palaeozoic Fauna," by George F. Matthew; "The Oldest Known Rock" and "The Origin of the Archean Igneous Rocks," by Nathaniel H. Winchell; "Joints in Rocks," by Charles R. Van Hise; "Notes on some European Museums," by Edmund O. Hovey; "History of the Blue Hills Complex," by William O. Crosby; "Palaeontology of the Cambrian Terranes of the Boston Basin," by Amadeus W. Grabau; "The Norseman the Conqueror of Britain," by Paul Du Chailu; "Diamonds in Meteorites," by Mrs. E. M. Souvielle; and "The Periodic Variations of Glaciers," by Harry F. Reid.

On May 25 the National Geographic Society met with this section, and the following-named papers were presented: "The Venezuela-British-Guiana Boundary Dispute," by Marcus Baker; "Considerations governing Recent Movements of Population," by John Hyde; "Some New Lines of Work in Government Forestry," by Gifford Pinchot; "The Development of the United States," by W. J. McGee; "Atlantic Estuarine Tides," by M. S. W. Jefferson; "The Forestry Conditions of Washington State," by Henry Gannett; "The Five Civilized Tribes and the Topographic Survey of Indian Territory," by Charles H. Pitch; and "Bitter Root Forest Reserve," by Richard U. Goode.

F. Zoology.—This section was presided over by Prof. Alpheus S. Packard, of Brown University, who delivered an address before the section on "A Half Century of Evolution, with Special Reference to the Effects of Geological Changes on Animal Life." Prof. Packard began: "Only a little less than fifty years have passed since the publication of Darwin's 'Origin of Species' and the general acceptance by naturalists of the theory of descent. Since 1848 the sciences of embryology, cytology, and morphology have been placed on a firm basis. It is but little over half a century since the uniformitarian views of Lyell were promulgated. The cell doctrine was born in 1839; the view that protoplasm forms the basis of life was generally received forty years since; fifty years ago the doctrine of the conservation of the forces was worked out, and already by this time had the idea of the unity of

Nature dominated the world of science. On the fiftieth anniversary, therefore, of our association, it may not be out of place first briefly to inquire into the present state of evolution, and then to dwell more at length on the subject of the effect of geological changes on animal life. To use a current phrase, he continued, the evolution theory has come to stay. It is the one indispensable instrument upon which the biologist must rely in his work. Not only has zoology been benefited by the acceptance of evolution, but every important department of intellectual thought has been rejuvenated and rehabilitated by the employment of the modern scientific method. Progress itself is dependent on the evolutionary principle involved: adaptation, the disuse or rejection of the unfit, the use or survival of the fittest, with the mechanical principle of economy of material. Though the chief arguments in favor of evolution have been drawn from observations of our own planet, and the life existing upon it, the nebular hypothesis teaches us that the same process has determined the origin of other worlds than ours, and applies in fact to all the members of the solar system, and with but little doubt to all the individual bodies in the universe." Prof. Packard then passed in review the more important revolutions in geological history, showing wherein the different classes of animals arose, noting especially the effect of the uplifting of the great Appalachian chain. This occurred near the close of the Palaeozoic, and, with the exception of that time, when all the great ranges of the continents were upheaved, is the most extensive and, from a biological point of view, the most noticeable event in geological history. The speaker referred to the origin of new forms and new classes, showing their relations to the geological revolutions, but being careful to indicate that their probable origin lay rather as the results of the gradual extension of the land masses and the opening of new areas. Finally he reviewed the effect of other revolutions and conditions of affairs, marking with some detail the effects of each of them on the forms of animals, showing how the enormous number of reptiles retarded the development of mammalian forms, how as the reptiles succumbed to new conditions the higher forms of life became stronger, how with these forms animal shrewdness and brain power increased until the line of development culminated in man." In closing, he said: "So strong is the testimony that geology affords to support the theory of evolution, that if it should be necessary to abandon evolution it would at the same time be necessary to give up gravitation, the correlation of physical force, and the conception of the unity of Nature."

At Detroit, Dr. Charles W. Stiles was chosen secretary of this section, but as Dr. Stiles was sent to Berlin as scientific *attaché* to the United States embassy there, he resigned, and Prof. Robert T. Jackson, of Harvard University, was chosen to fill the vacancy.

The following-named papers were read and discussed before the section: "Evolution and Migration of Hawaiian Land Shells" and "A New Classification of Fossil Cephalopods," by Alpheus Hyatt; "Notes on the Habits of Some Burrowing Bees" and "A New Method of studying Underground Insects," by John B. Smith; "On the Systematic Position of the Trilobites," "On the Carboniferous Fauna of Rhode Island," and "On the Markings of Nodontian Larvæ," by Alpheus S. Packard; "Some Points in the Oögenesis of *Virbivus zostericola* Smith" and "A New Species of Pigment producing Pathogenic Bacillus," by Frederic P. Gorham; "On the Types of Vertebrate Embryos" and "On the Embryology of the Rabbit," by Charles S. Mi-

not; "Variation *versus* Heredity," by Henry S. Williams; "The Proposed Attempt to introduce *Blastophaga psenes* into California," by Leland O. Howard; "The Records for 1898 of Broods VII and XVII of *Cicada septendecim*," by Charles L. Marlatt; "On the Genitalia of Ants, and their Value in Classification," by William H. Ashmead; "Naples Station: General Description and Notes on Methods of Work employed there," "General Statement of Types and Figured Specimens of Fossil Invertebrates in the American Museum of Natural History," and "Measurements of Two Large Lobsters recently added to the Collections of the American Museum of Natural History," by Edmund O. Hovey; "On the Present State of our Knowledge of the North American Tertiary Mollusk-fauna," by William H. Dall; "Some New Points in Dinichthyid," by Charles R. Eastman; "Moniloporidæ: A New Family of Palæozoic Corals," by Amadeus W. Grabau; "An Historical Notice of Ross's Rosy Gull, *Rhodostethia rosea*," by John Murdoch; "Localized Stages in Growth" and "Ink and Paper for Museum Labels," by Robert T. Jackson; "On the Piscine Ancestors of the Amphibians," by Theodore Gill; "Variation in the Shell of *Helix nemoralis* in the Lexington, Va., Colony," by James Lewis Howe; "Hibernation, Transformation, and Growth of the Common Toad (*Bufo lentiginosus americanus*)" and "The Transformation of the Brook Lamprey (*Lampera wilderi*) and Parasitism among Lampreys," by Simon H. Gage; "Leidy's Genus *Ooramœba*," by William L. Poole; "The Winter Food of the Chickadee," by Clarence M. Weed; "Notes on Life History of *Protoparce carolina*" and "The Life History of *Schizoneura lanigera*," by William B. Alwood; "Remarks on Aphorophora," by Edward S. Morse; "The Phylogeny of the North American Eucelidæ," by Harrison G. Dyar; "On the Anatomy and Physiology of the Spermatozoa of Invertebrate Animals," by George W. Field; and "Fauna of Cold Spring Harbor," by Charles B. Davenport.

G. Botany.—This section was presided over by Prof. William G. Farlow, who fills the chair of Cryptogamic Botany in Harvard University, and who addressed the section on "The Conception of Species as affected by Recent Investigations in Fungi." At the outset Prof. Farlow asked two questions, "What do we mean by species?" and "Do they exist in Nature, or are they created by us for our own convenience?" The best definition that has been given of species is an old one, "A perennial succession of like individuals." In the days of special creation, when every living thing was believed to have been originally created in the form in which it now exists, the permanence of species was a thing not to be discussed or doubted. Even in the early days of the association this idea was still strong. Before 1859 creation was one vast pudding in which the species had been placed by an Almighty hand, and the naturalists pulled out plums and cried, "See what a great naturalist am I—I have found a new species!" At this time, not to believe in the immutability of species was to make of one's self a scientific and almost a social outcast. From among the classes of plants with which he is most familiar, Prof. Farlow quoted the results of environment and of artificial culture. The rapidity of growth of the fungi makes this a fertile field in which to conduct experiments, and the results have been such that the speaker noted that the botanists were now following the prevailing business tendency of the age, and they are asking of the plants not so much "Who is your father?" as "Where did you come from, and what can you do?" The outcome of Prof. Farlow's argument was this: That the question whether spe-

cies exists in Nature is one that should be left to philosophy to discuss. The so-called species are attempts to arrange groups of individual plants in such a way that it may be easy to classify what is known about them, and to make this knowledge available. "The real purpose of these divisions into species," he said, "is to map out the vegetable kingdom in such a way that the horticulturist, the forester, and the physiologist may be able to obtain from the arrangement the facts needed by them in their work. Our present knowledge may not be sufficient to draw all the contours with accuracy; new information may at any time cause our classification to be remodeled. If this idea is carried out, we shall be able to lay up substantial material for future workers, but we must not delude ourselves with the hope of finding absolute, fixed standards."

The following-named papers were read and discussed before the section: "The Carposporic Type of Reproduction of Rhodophyceæ," by Bradley M. Davis; "The Comparative Anatomy of the Pistils of Apocarpous Families," by Ernst A. Bessey; "Origin and Homologies of Blepharoplasts," by Herbert J. Webber; "The Blepharoplast in the Spermatogenesis of Marsilia," by Walter R. Shaw; "Observations on the Relative Moisture Content of Fruit Trees in Winter and in Summer," by Charles S. Crandall; "Some Investigations bearing upon the Symbiotic Mycoplasma Theory of Grain Rust," by Henry L. Bolley; "Half Shade and Vegetation," "Starch Distribution as affected by Fungi," and "Influence of a Wet Spring on Parasitic Fungi," by Byron D. Halsted; "Leaves of Red Astrachan Apples immune from the Attack of *Gymnosporangium macropus*," "The Work performed by the Agricultural College toward a Botanical Survey of Michigan," "Remarkable Decrease in the Size of Leaves of *Kalmia angustifolia*, apparently due to Reduction of Light," and "Some Examples illustrating Modes of Seed Dispersion," by William J. Beal; "The Effect of an Atmosphere of Ether upon Seeds and Spores," by Charles O. Townsend; "Notes on the Physiology of the Sporophyte of Certain Mosses" and "The Toxic Action of a Certain Group of Compounds," by Rodney H. True; "On the Validity of the Genera *Senna* and *Chamaecrista*," "Species Characters among the Violets," and "Types of Vegetation on the Keys of South Florida," by Charles L. Pollard; "Potato as a Culture Medium, with Some Notes on a Synthesized Substitute" and "Some Little-used Culture Media which have proved Valuable for Species Differentiation," by Erwin F. Smith; "Temperature and Transportation of Desert Plants," by Daniel T. McDougal; "The Brown-Spot Disease of Apple Leaves, *Phyllosticta pirina*, and Fungus Forms associated therewith," by William B. Alwood; "Notes on Some Diseases of Southern Pines," by Hermann von Schrenk; "The Botanic Garden at Buitenzorg, Java," by David G. Fairchild; "Notes on the Strand Flora of Florida," by Herbert J. Webber; "Notes on the Relative Infrequency of Fungi upon the Trans-Missouri Plains and the Adjacent Foothills of the Rocky Mountains," by Charles E. Bessey; "Fermentation without Live Yeast Cells," by Katherine E. Golden and Carleton G. Ferris; "Deterrent Action of Salt in Yeast Fermentation," by Katherine E. Golden; "Fungus Gardening as practiced by the Termites in West Africa and Java," by Orator F. Cook and David G. Fairchild; "The Biology of Cheese Ripening," by S. Moulton Babeock and H. L. Russell; "On the Occurrence of a Yeast Form in the Life Cycle of *Sphaeropsis malorum* Peck," by William B. Alwood; "Observations on Stewart's Sweet-Corn Germ," by Erwin F. Smith; "A Bacteriological Study of Pear Blight," by Lillian Snyder; "Life

History and Characteristics of the Pear-Blight Bacteria," by Merton B. Waite; "Effect of Fertilizers on the Germination of Seeds," by Gilbert H. Hicks; "Development of the Pollen Grain in *Symplocarpus* and *Peltandra*," by Benjamin M. Duggar; "The Embryology of *Taxus*," by Elias J. Durand; "Notes on Some Monocotyledonous Embryo Sacs" and "Studies Relative to the Perigynium of the Genus *Carex*," by Karl M. Wiegand; "Observations on Some Hybrids between *Drosera intermedia* and *Drosera filiformis*," by John M. Macfarlane; "On the Rapidity of Circumnutation Movements in Relation to Temperature," by E. Simons and R. E. B. McKenney; "General Characteristics of the Dune Flora of Southeastern Virginia" and "Vegetation of the Wooded Fresh-Water Swamps of Southeastern Virginia," by Thomas H. Kearney, Jr.; "Notes on Arctic Willows," by W. W. Rowlee; "Some Steps in the Life History of *Asters*," by Edward S. Burgess; "The Pleistocene and Plant Distribution in Iowa," by T. H. Macbride; "A Self-registering Transpiration Machine," by Edward B. Copeland; "Methods of studying the Sap Pressure of the Sugar Maple," by Lewis R. Jones; "The Seeds and Seedlings of Some Amentifera," by W. W. Rowlee and George T. Hastings; "The Morphology and Taxonomic Value of the Fruits of Grasses," by P. Beveridge Kennedy; "The Caryopsis of the *Graminæ*" and "The Ecological Distribution of Colorado and Wyoming Plants," by L. H. Pammel; "Fertilization of the Muskmelon Flower," "Notes on destroying *Comptonia Asplenifolia*," and "Length of Time from Blossoming until Seed Development of *Leucanthemum vulgare*," by William Rane.

H. *Anthropology*.—The presiding officer of this section was Prof. J. McKeen Cattell, of Columbia University, New York, who is also well known as the editor of "Science." The subject of his address was "The Advance of Psychology." He said in part: "It is not strange that psychology should be among the later born of the sciences, for sciences dealing with man, life, and matter must rest one upon another, the last at the bottom; so psychology is willing to grant the past to the others, but claims the twentieth century for its own. The development of colleges into universities gave a chance for freedom of election in studies, thus opening the field for psychology. The present popularity of the study is shown by the 365 students in Dr. Munsterberg's classes in empirical psychology in Harvard last year. Eighteen doctorates, with psychology as a major subject, were given in American universities this year, more than in any other science except chemistry, and six times as many as in physics. Under the guidance of philosophy, psychology became at times unreal and imaginative, and needed to be crossed with natural science. This has been done by the developments of physiological psychology, in which Prof. Munsterberg, of Harvard, has played a notable part. England has had worthy successors to Locke, Berkeley, and Hume, in Bain, Ward, and Stout. The first laboratory in Cambridge University was founded by the author. Psychology in America before 1800 has as brief a history as the alleged chapter on snakes in the natural history of Iceland. Twenty years ago Prof. James, of Harvard, published his series of striking articles culminating in the issue of his 'Principles of Psychology.' The first American laboratory was started in Johns Hopkins in 1883 by Prof. Hall. The first chair of Psychology was founded in Johns Hopkins for me. The department at Harvard is now unequalled in any university on earth. With James, Munsterberg, Royce, Santosona, McDougal, and others, there is more reason for a German student to come to Harvard than for American students to go to Germany to study psychology."

The following-named papers were then read and discussed: "Typological Analysis" and "Anthropological Terminology," by Daniel G. Brinton; "Sophiology, or the Science of the Evolution of Opinion," by John W. Powell; "Papago Medicine" and "Some Definitions in Anthropology," by W. J. McGee; "Anthropological Problems of the Pacific Slope" and "Museum Presentation of Anthropology," by William H. Holmes; "The Significance of the Garment: A Study of the Omaha Tribe," by Miss Alice C. Fletcher; "The Earth Lodge," by Miss Alice C. Fletcher and Washington Matthews; "The Harmonic Structure of Indian Songs," by J. C. Fillmore; "Ritual of the Sacred Pole of the Omahas," by Francis La Flesche; "The Survival of African Music in America," by Mrs. Jeanette Robinson Murphy; "Some of the Evidences that Northmen were in Massachusetts in Pre-Columbian Times," by Miss Cornelia Horsford; "Subjects relating to the Physical Anthropology of North American Indians," by George A. Dorsey; "The Smith Sound Eskimo," by Alfred L. Kroeber; "The Maori of New Zealand: His History and Country," by Hugh H. Lusk; "Moros, or Malay Pirates of the Southern Philippines" and "The Philippine Islands and their People," by Dean C. Worcester; "The Tools of the American Pioneer" and "The Origin of Domesticated Animals," by Henry C. Merceer; "Burial Customs of the Ancient Zapotecs of Southern Mexico" and "Notes on the Lacandon Indians of Mexico," by Marshall H. Saville; "Tomahawk and Shield" and "Examples of Primitive Fire Working from Florida," by Frank H. Cushing; "Art in Prehistoric Times," "Prehistoric Musical Instruments," and "Arrow Points, Spearheads, and Knives," by Thomas Wilson; "Problem of the Rechaheerian Indians of Virginia" and "The Swastika and other Marks among the Eastern Algonkins: A Preliminary Study," by William W. Tooker; "The Water Burial Time," by Stansbury Hagar; "Time Reckoning among Early People" and "The Rite of Circumcision among the Early Races," by Robert J. Floody; "Anthropology, not Sociology, as an Adequate Philosophy," by Daniel Folkmar; "Science the Basis of Morals," by M. A. Clancy; "Variations of the Normal Tibia" and "Anthropological Differences between Typical White and Negro Girls of the Same Age," by Arles Hrdlička; "Résumé of Recent Studies on the Origins of European Races" and "Presentation of a Bibliography of the Anthropology and Ethnology of Europe," by William Z. Ripley; "Typical American Students, Illustrated by Charts and Statues," by Dudley A. Sargent; "A New Kymographion, a New Chronoscope," by George W. Fitz; "Anthropometric Instruments," by J. McKeen Cattell; "Psychology and Art," by Hugo Munsterberg; "The New Theory of the Light Sense," by Mrs. C. Ladd Franklin; "In Man, what Factors are due to Heredity and what to Environment?" a discussion by Daniel G. Brinton, W. J. McGee, and William Z. Ripley; "Social Organization and Laws of the Moki Indians" and "Korean Clan Organization," by Walter Hough; "The Otomies of Mexico," by Frederick Starr; "The Illusions of Craniometry," by Frank Baker; "Zuni Witchcraft," by Mrs. Matilda C. Stevenson; "Origin of the Confederacy of the Five Nations," by Charles H. Henning; "Is the Stringed Musical Instrument Pre-Columbian?" by Edward S. Morse; "The Norsemen the Conquerors of Britain," by Paul Du Chailu; "The Disappearance of the Cliff Dwellers," by Désiré Charnay; and "Report of Committee on the Establishment of an Anthropological Journal in America."

1. *Economic Science and Statistics*.—The presiding officer of this section was Archibald Blue, director of the Bureau of Mines, Toronto, Canada.

The subject of his address was "The Historic Method in Economics." The opening portion of Mr. Blue's address was devoted to a historic summary of the conditions that led to the organization of the various associations for the advancement of science, beginning with the German Union of Natural Philosophers, which was founded in 1822 by Dr. Lorenz Oken. He continued with the history of the British Association, which was organized in 1831; and then passing to the American Association, he gave its history, with special reference to the section on economic science and statistics. In concluding the first portion of his address he said: "The subjects of papers read in the economic sections of the British and American associations have usually appertained to the industrial life of the human race under varying conditions and circumstances, and the method of treatment has largely partaken of the concrete form. This was the case almost without exception in the first quarter of a century of the British Association, when, indeed, the only method allowed was the statistical. But ever since the enlargement of the scope of the section in 1856, the abstract or deductive method has had its exponents, and at least upon one occasion was ably represented by a president of the section—by Prof. Henry Sidgwick at the Aberdeen meeting in 1885. Personally, I favor the historical method of investigating economic subjects, which includes the use of statistics, because I find it easier to work that way. But I do not say it is the best for every one, for I think something depends on the mental bias. The man with a strong turn for philosophy prefers to study, criticise, and develop theories rather than to collect and systematize facts." Quoting eminent authorities like James Bryce, John Stuart Mill, and others, he showed their belief in the historic method of considering economical questions. "Let us not forget that society, or the state," he said, "is a developed organism, wherein every human will and passion have play and every constituent individual acts and reacts upon every other, and that to understand it aright we must know its life history. The story of nations abounds with events of every kind, transpiring under an infinite variety of conditions, each event the product of some antecedent thought or act, and each making its impress for good or ill upon the life of the community, of the nation, or of the world, according to its own intensity or impact. To study such events and their operation and influence, in so far as they relate to inquiries into the provision of subsistence for the people and the supply of revenue for the state, according to Adam Smith; or into the nature of wealth and the laws of its production and distribution, according to Mill; or into the way the wants of the people in food, clothing, shelter, fuel, etc., may be satisfied, and how the satisfaction of these wants influences the national life, and how they are in turn influenced by it, according to Roscher—this is the office of the political economist. It is not merely to discover facts, but to collate them and discover the method for ascertaining the laws of the facts." This point of view he still further emphasized by illustrations taken from historic sources, and in conclusion he called attention to the fact that in all quarters of the world "events have transpired during the lifetime of this association that are probably destined to influence society powerfully throughout the twentieth century." These he summarized, and concluded with: "All these events have quickened the world's life, and when affairs are finally adjusted we shall move, I trust, on a measurably higher plane in the twentieth century than we have moved in the nineteenth. It is inevitable that there will be social and economic changes, and it ought to be the business of econo-

mists to shape them in the light of experience to secure permanency, progress, and peace."

The following-named papers were read and discussed before the section: "The College of Forestry at Cornell University," by Bernhard E. Fernow; "High Wages in Money; or, What Money will buy, the Consequent of Low Cost of Production," "How to increase Exports and how not to," and "The Inherent Vice of Legal Tender," by Edward Atkinson; "Local Life by Local Times" and "A Study of Competition and Suburban Prices," by S. Edward Warren; "Executive Discretion in the United States," by Cora A. Benneson; "The Short Duration of School Attendance: Causes and Remedies," by Mrs. Daniel Folkmar; "The Progress of the Maritime Commerce of the World during the Past Fifty Years," by Edward L. Corthell; "Cuba: Past, Present, and Future" and "Nicaragua and the Canal," by Wolfred Nelson; "Examination of the Theory of Rent," by Edward T. Peters; "The Price of Wool," by Henry Farquhar; "The Transportation Problem," by John S. Willison; "The Formative Period of a Great City: A Study of Greater New York," by William H. Hale; "Deviations from the Normal in the Annual Rate of Agricultural Production," by John Hyde; "Railway Rates and Competition," by H. T. Newcomb; "A Sufficient Social Principle," by Charles A. Eaton; "Why not try a North American Zollverein?" by Richard T. Colburn; "The Gold Standard and the Unemployed," by Charles B. Spahr; "The Effect of Tariff Legislation on the Importation and Domestic Production of Sugar in the United States," by Frank R. Rutter; "The Ethical Function of the Economist" and "The Development of Colonial Policy," by John Davidson; "The Economic Status of the Nurse," by Mrs. Helen Davidson; "American Industrial Expositions, their Purposes and Benefits," by Marcus Benjamin; "Scientific Book-making," by Charles W. Felt; "A Plea for Manual Industrial Training in Horticulture," by William R. Lazenby; "On the United States's Alleged Policy of Imperialism, so-called, and in Connection therewith Some Reasons for and against the Proposed Anglo-Saxon Alliance," by W. Lane O'Neill; "The Economic Possibilities of Cuba," by Robert T. Hill; "The Economic Value of Good Roads," by A. W. Campbell; "The Study of Political Economy in Canada," by S. Morley Wickett; "The Agricultural Statistics of Ontario," by Charles C. James; "Canadian Forests and the Paper Industry," by Thomas Southworth; and "A Catalogue of Scientific and Technical Periodicals, 1665 to 1885," by Henry C. Bolton.

Affiliated Organizations.—Other scientific bodies, taking advantage of the gathering of so many members at the meeting of the American Association, have adopted the practice of holding meetings at the same place and contemporaneous with the American Association, but at such hours as not to interfere with the regular sessions of the larger body. This plan, which has been growing in practice, was found to be of conspicuous value in Boston, for by combining the public meeting of the society with those of the association a much larger number of papers were presented, and at the strictly business meetings a greater number of officers were usually in attendance. A conference of astronomers and physicists, similar to that which met at the dedication of the Yerkes Observatory, was held in the Harvard College Observatory on Aug. 18, 19, and 20. It adjourned to meet at a call of a committee appointed to organize a permanent national astronomical and astrophysical society. The Society for the Promotion of Engineering Education held its fifth meeting in the Massachusetts Institute of Technology on Aug. 18, 19, and 20, with

John B. Johnson, of St. Louis, Mo., as president, and Albert Kingsbury, of Durham, N. H., as secretary. The annual meeting of the Botanical Society of America was held in the Rogers Building on Aug. 19 and 20, when Lucien M. Underwood, of Columbia University, New York city, was chosen president, and George F. Atkinson, of Cornell University, Ithaca, N. Y., secretary. The tenth annual meeting of the Association of Economic Entomologists was held in the Natural History Building on Aug. 19 and 20, with Herbert Osborn, of Ames, Iowa, as president, and Charles L. Marlatt, of Washington city, as secretary. Simultaneously the Society for the Promotion of Agricultural Science met in Horticultural Hall with Byron D. Halstead, of New Brunswick, as president, and Charles S. Plumb, of Lafayette, Ind., as secretary. The American Mathematical Society held its annual meeting in the Rogers Building, on Aug. 19 and 20, with Simon Newcomb as president, and F. N. Cole, of New York city, as secretary. The seventeenth general meeting of the American Chemical Society was held contemporaneously with Section C of the association. Its president is Charles E. Munroe, of Washington city, and its secretary is Albert C. Hale, of Brooklyn, N. Y. Over 200 members were present. The Geological Society of America, of which John J. Stevenson, of New York city, is president, and Herman L. Fairchild, secretary, met in joint session with Section E on Aug. 23. The first summer meeting of the American Forestry Association was held in Horticultural Hall on Aug. 23 and 24. Its president is Francis H. Appleton, of Boston, Mass., and its secretary is George P. Whittlesey, of Washington, D. C. The American Folklore Society met with Section H on Aug. 23, and the National Geographic Society met with Section E on Aug. 25. The Botanical Club of the association, of which Daniel T. MacDougal, of Minneapolis, Minn., is president, and Arthur B. Seymour, of Cambridge, Mass., is secretary, met at intervals during the meeting, and ten papers were read and discussed before its members.

Final Sessions.—The amendments to the constitution having gone into effect at this meeting, there were in consequence but two general sessions, namely, the one with which the association began its formal meeting, and the one with which it terminated. Nearly all of the routine business was transacted by the council, and the same reported at the final session. Grants of \$50 each were made to the Committee on Standards of Measurement for work being carried on by Henry S. Carhart and to the Committee on the Ethnology of the White Race in America for instruments to be constructed by J. McKeen Cattell. Section H (anthropology) was authorized to hold a winter meeting in December, 1898, which will probably be held in Columbia University in New York city in connection with the meeting of the American Society of Naturalists and affiliated societies. The customary resolutions of thanks were offered by W. J. McGee and addresses in support of the same made by Daniel G. Brinton, Horace C. Hovey, William T. Sedgwick, H. W. Tyler, Désiré Charney, Benjamin Howard, Edward Everett Hale, and President Putnam.

In point of members the Boston meeting ranks fourth in the history of the association, but as two of the earlier meetings were in conjunction with the British Association, the present meeting has only been exceeded in registration of members by the Boston meeting of 1880, when 997 members were present as compared with 903 this year. There were 443 papers read before the association, distributed as follow: Section A, 39; B, 51; C, 90; D, 20; E, 54; F, 35; G, 56 (Botanical Club, 10); H, 55; and I, 33. The meeting was therefore an

unusually successful one, and had it not been for the excessive heat on the first days of the meeting, a much greater attendance would have been had.

The treasurer's report showed that during the year the receipts had been \$231, the expenditures \$100, and that the sum of \$5,829 was on deposit in savings banks. There were 273 persons elected to membership, and about fifty members advanced to the grade of fellows.

The Next Meeting.—Pressing invitations were received by the American Association to hold its meeting in 1899 in Philadelphia, Penn., and in Columbus, Ohio, and the council decided that the meeting should be held in the last-named place. The following officers were chosen: President, Edward Orton, Ohio State University, Columbus, Ohio. Vice-presidents of sections: A, Alexander MacFarlane, Lehigh University, Bethlehem, Pa.; B, Elihu Thomson, Thomson-Houston Electric Company, Lynn, Mass.; C, Frank P. Venable, University of North Carolina, Chapel Hill, N. C.; D, Storin Bull, University of Wisconsin, Madison, Wis.; E, J. F. Whiteaves, Canadian Geological Survey, Ottawa, Ontario; F, Simon H. Gage, Cornell University, Ithaca, N. Y.; G, Charles R. Barnes, University of Chicago, Chicago, Ill.; H, Thomas Wilson, United States National Museum, Washington, D. C.; I, Marcus Benjamin, United States National Museum, Washington, D. C. General secretary, Frederick Bedell, Cornell University, Ithaca, N. Y., Secretary of the council, Charles Baskerville, University of North Carolina, Chapel Hill, N. C. Secretaries of the sections: A, John F. Hayford, Washington, D. C.; B, William Hallock, Columbia University, New York city; C, Henry A. Weber, Ohio State University, Columbus, Ohio; D, James M. Porter, Lafayette College, Easton, Pa.; E, Arthur Hollick, Columbia University, New York city; F, Frederick W. True, United States National Museum, Washington, D. C.; G, William A. Kellerman, Ohio State University, Columbus, Ohio; H, George A. Dorsey, Field Columbian Museum, Chicago, Ill.; and I, Calvin M. Woodward, Washington University, St. Louis, Mo.

British.—The sixty-eighth annual meeting of the British Association for the Advancement of Science was held in Bristol during Sept. 7-17. The officers of the association were: President, Sir William Crookes. Section presidents: A, Mathematics and Physics, William E. Ayrton; B, Chemistry, Francis R. Japp; C, Geology, Wilfrid H. Hudleston; D, Zoölogy (and Physiology), Walter F. R. Weldon; E, Geography, George Earl Church; F, Economic Science and Statistics, James Bonar; G, Mechanical Science, Sir John Wolfe-Barry; H, Anthropology, E. W. Brabrook; K, Botany, Frederick O. Bower. General treasurer, Arthur W. Rücker. General secretaries, Edward A. Schäfer and William C. Roberts-Austen. Assistant general secretary, G. Griffith, College Road, Harrow.

General Meeting.—The association began its proceedings with a meeting of the general committee on Sept. 7, presided over by Sir John Evans, when the report of the council was presented by Secretary Schäfer, and other business attended to. Seven foreign scientists were elected foreign corresponding members, among whom were Prof. Carl Barus, of Brown University, Providence, R. I.; Dr. George W. Hill, of Columbia University, New York city; Prof. Edward W. Morley, of Adelbert College, Cleveland, Ohio; and Prof. William B. Scott, of Princeton University, Princeton, N. J. Various resolutions referred to the council for consideration and action were reported, among which was one recommending the appointment of a committee to consider the desirability of approaching the Government with a view to the establishment

in Great Britain of agricultural experiment stations similar in character to those which are producing such satisfactory results in Canada. The committee reported the work that it had performed in securing results that led to its decision. A committee appointed to urge upon the Canadian Government

SIR WILLIAM CROOKES.

the desirability of continuing its tidal survey reported that the Canadian Government replied that it was deemed advisable "to defer the prosecution of the survey for the present and to confine the work to the maintenance and operations of the tidal ganges already established and the preparation of tide tables." The British Museum, in reply to a resolution, advised the council that a bureau for ethnology would be established "as soon as certain rearrangements affecting space, etc., now in progress, shall have been finished." The treasurer reported that the receipts for the past year were £4,623 18s. 2d., and that there was a balance of £1,703 3s. 8d. in the treasurer's hands. The investments now amount, according to his report, to £11,137. Various new members of the council were chosen and the secretaries and assistant secretary re-elected. Prof. Arthur W. Rücker, having been appointed a trustee in succession to the late Lord Lyon Playfair, Prof. G. Carey Foster was elected general treasurer. The usual vote of thanks, on motion of Prof. A. B. Macallum, of Toronto, was adopted for the retiring president, Sir John Evans.

In the evening the association met in the People's Palace for the purpose of listening to the inaugural address of the president. The retiring president, Sir John Evans, occupied the chair and introduced the new incumbent as follows: He said that "he need hardly introduce his successor in the chair, for his name was known throughout the civilized world. At an early age he attained great eminence in chemistry, but he had not confined himself to chemical research, for he had experimented largely on various materials *in vacuo*, and the Crookes tube was known throughout the world. These experiments had led to more important results than the radiometer. From them had risen the Röntgen rays, the utility of which had lately been demonstrated by the application in the case of the Prince of Wales. They might look to Sir William

Crookes as the real originator of those rays." It may also be added that Sir William Crookes is a past president of the London Chemical Society and has for many years been the editor of the "Chemical News" of London.

Inaugural Address of the President.—In opening, Sir William Crookes said: "I propose first to deal with the important question of the supply of bread to the inhabitants of these islands, then to touch on subjects to which my life work has been more or less devoted. Many of my statements you may think are of the alarmist order; certainly they are depressing, but they are founded on stubborn facts. They show that England and all civilized nations stand in deadly peril of not having enough to eat. As mouths multiply, food resources dwindle. Our wheat-producing soil is totally unequal to the strain put upon it. After wearying you with a survey of the universal dearth to be expected, I hope to point a way out of the colossal dilemma. It is the chemist who must come to the rescue of the threatened communities. The consumption of wheat per head of the population (unit consumption) is over 6 bushels per annum; and taking the population at 40,000,000, we require no less than 240,000,000 bushels of wheat, increasing annually by 2,000,000 bushels, to supply the increase of population. Of the total amount of wheat consumed in the United Kingdom we grow 25 and import 75 per cent. Our stock of wheat and flour amounts only to 64,000,000 bushels—fourteen weeks' supply—while last April our stock was equal to only 10,000,000 bushels, the smallest ever recorded by 'Beerbohm' for the period of the season. Similarly, the stocks held in Europe, the United States, and in Canada, called 'the world's visible supply,' amounted to only 54,000,000 bushels, or 10,000,000 less than last year's sum total, and nearly 82,000,000 less than that of 1893 or 1894 at the corresponding period. The burning question of to-day is, What can the United Kingdom do to be reasonably safe from starvation in presence of two successive failures of the world's wheat harvest, or against a hostile combination of European nations? We eagerly spend millions to protect our coasts and commerce; and millions more on ships, explosives, guns, and men; but we omit to take necessary precautions to supply ourselves with the very first and supremely important munition of war—food. The problem is not restricted to the British Isles—the bread eaters of the whole world share the perilous prospect. In 1871 the bread eaters of the world numbered 371,000,000, and at the present time they number 516,500,000. To supply 516,500,000 bread eaters, if each bread-eating unit is to have his usual ration, will require a total of 2,324,000,000 bushels for seed and food. What are our prospects of obtaining this amount? The total supplies from the 1897-'98 harvest are 1,921,000,000 bushels. The requirement of the 516,500,000 bread eaters for seed and food are 2,324,000,000 bushels; there is thus a deficit of 403,000,000 bushels, which has not been urgently apparent owing to a surplus of 300,000,000 bushels carried over from the last harvest. We start with a deficit of 103,000,000 bushels and have 6,500,000 more mouths to feed. It follows, therefore, that one sixth of the required bread will be lacking unless larger drafts than now seem possible can be made upon early produce from the next harvest." Sir William Crookes then reviewed "the capabilities as regards available area, economic conditions, and acreage yield of the various wheat-growing countries." Concerning the United States, he said: "For the last thirty years the United States have been the dominant factor in the foreign supply of wheat, exporting no less than 145,000,000

bushels. This shows how the bread-eating world had depended, and still depends, on the United States for the means of subsistence. The entire world's contributions to the food-bearing area have averaged but 4,000,000 acres yearly since 1869. It is scarcely possible that such an average, under existing conditions, can be doubled for the coming twenty-five years. Almost yearly since 1885 additions to the wheat-growing area have diminished, while the requirements of the increasing population of the States have advanced, so that the needed American supplies have been drawn from the acreage hitherto used for exportation. Practically there remains no uncultivated prairie land in the United States suitable for wheat growing. The virgin land has been rapidly absorbed, until at present there is no land left for wheat without reducing the area for maize, hay, and other necessary crops. It is almost certain that within a generation the ever-increasing population of the United States will consume all the wheat grown within its borders, and will be driven to import, and, like ourselves, will scramble for a lion's share of the wheat crop of the world." Continuing, he described the conditions in Russia, Canada, Australasia, the various countries of Europe, South America, and Africa, and then claimed that "should all the wheat-growing countries add to their area to the utmost capacity, on the most careful calculation the yield would give us only an addition of some 100,000,000 acres, supplying, at the average world yield of 12.7 bushels to the acre, 1,270,000,000 bushels—just enough to supply the increase of population among bread eaters till the year 1931. By means of fertilizers containing nitrogen the yield of wheat per acre could be increased from 12.7 bushels to at least 20 bushels per acre, as had been shown by experiments at Rothamsted, where the high value of 36.4 bushels per acre had been obtained. The source and supply of nitrogen-yielding fertilizers was then discussed and the conclusion reached that it would be necessary to take it from the atmosphere by means of electricity. We start with a shortage of wheat, and the natural remedy is to put more land under cultivation. As the land can not be stretched, and there is so much of it and no more, the object is to render the available area more productive by a dressing with nitrate of soda. But nitrate of soda is limited in quantity, and will soon be exhausted. Human ingenuity can contend even with these apparently hopeless difficulties. Nitrate can be produced artificially by the combustion of the atmosphere. Here we come to finality in one direction; our stores are inexhaustible. But how about electricity? Can we generate enough energy to produce 12,000,000 tons of nitrate of soda annually? A preliminary calculation shows that there need be no fear on that score; Niagara alone is capable of supplying the required electric energy without much lessening its mighty flow."

The remainder of his address was devoted to a review of the recent advances in chemistry and physics. The brilliant researches in low temperatures by Dewar were mentioned. The new elements krypton, neon, and metargon, discovered by Ramsay, and coronium, discovered by Nasini, were alluded to. Electric signaling across moderate distances without connecting wires as introduced by Marconi and its future practical applications received attention. The phenomenon discovered by Zeeman, that a source of radiation is affected by a strong magnetic field in such a way that light of one refrangibility becomes divided usually into three components, two of which are displaced by diffraction analysis on either side of the mean position and are oppositely polarized to the third

or residual constituent, was referred to. The work on the relationship between ether and matter by Larmor received brief mention. At greater length he discussed the development of the researches that began with Röntgen's discovery of his peculiar rays of light, and in this portion of his address mentioned the growing acceptance of his own theory of a fourth state of matter announced in 1881. The fractioning of yttria, on which he began working in 1883, has been since continued and has recently culminated in "absolute evidence that another member of the rare earth groups has been added to the list." For this new "asteroid of the terrestrial family" he proposed the name monium. In closing he referred to his connection many years ago to certain psychic researches, and he boldly reiterated his belief "that thoughts and images may be transferred from one mind to another without the agency of the recognized organs of sense—that knowledge may enter the human mind without being communicated in any hitherto known or recognized ways."

Proceedings of the Sections. *A. Mathematics and Physics.*—This section was presided over by Prof. William E. Ayrton, who is Professor of Applied Physics in the Guilds' Central Technical College, in London. In opening he referred to the fact that "Section A this year is very fortunate in having its meetings associated with those of an International Conference on Terrestrial Magnetism and Atmospheric Electricity, which is attended by the members of the Permanent Committee for Terrestrial Magnetism and Atmospheric Electricity of the International Meteorological Conference. It has been arranged that this permanent committee, of which Prof. Rücker is the president, shall form part of the general committee of Section A, and also shall act as the Committee of the International Conference, which will itself constitute a separate department of Section A." Continuing, he said: "Among the various subjects which it is probable that the conference may desire to discuss there is one to which I will briefly refer, as I am able to do so in a triple capacity. The earth is an object of much importance, alike to the terrestrial magnetician, the telegraph electrician, and the tramway engineer; but while the first aims at observing its magnetism, and the second rejoices in the absence of the earth currents which interfere with the sending of messages, the third seems bent on converting our maps of lines of force into maps of lines of trainway." Thus he showed how electric traction seemed destined to ruin magnetic observations near towns, indeed had already done so in the United States and British North America. The second topic which he presented before the section was concerning "Science Abstracts," which, recently established, had for its aim to "produce in a single journal a monthly record in English of the most important literature appearing in all languages on physics and its many applications." The general proposition of the indebtedness of industry to pure science he demonstrated by several illustrations, after which he discussed with much interest some of his own studies on the laws that govern odors. He said: "There is a generally accepted idea that metals have smells, since if you take up a piece of metal at random, or a coin out of your pocket, a smell can generally be detected." Then, discussing the various odors from the metals, he concluded: "As regards the explanation of these metallic smells, which have hitherto been attributed to the metals themselves. This, I think," he said, "may be found in the odors produced when the metals are rubbed with linen soaked in dilute sulphuric acid. For here, apart from any contact of the metal with the skin, the aluminum, tin, and

zinc are found to smell alike; the copper group also smell alike, and the iron and steel give rise to the characteristic 'iron' smell, which, in this case, can be detected some feet away. Now, it is known that when hydrogen is evolved by the action of sulphuric acid on iron, the gas has a very unpleasant smell, and this is due to the presence of hydrocarbons, and especially of paraffin. I have been therefore led to think that the smell of iron or steel when held in the hand is really due to the hydrocarbons to which the operation gives rise; and it is probable that no metallic particles, even in the form of vapor, reach the nose or even leave the metal. Hence, although smell may not, like sound, be propagated by vibration, it seems probable that particles of the metal with which we have been accustomed to associate the particular smell may no more come in contact with the olfactory nerves than a sounding musical instrument strikes against the drum of the ear." His experiments made for the purpose of determining the diffusion of smell were then presented, as well as some tests on the power of different substances to absorb various scents from the air. In conclusion he said: "In presenting this brief introduction to the physics of smell I have aimed at indicating the vast territory that waits to be explored. That it will be found to contain mines of theoretical wealth there can be no doubt, while it is probable that a luxuriant growth of technical application would spring up later on. To conclude, I may say that one of my fondest hopes is that an inquiry into the physics of smell may add another to the list of wide regions of knowledge opened up by the theoretical physicist in his search for answers to the questions of the technical man."

Subsequently the following-named papers were read and discussed before the section: "Lenses not of Glass," by J. W. Gifford; "Conservation of Energy in the Human Body," by Wilbur O. Atwater and Edward B. Rosa, of Wesleyan University, Middletown, Conn.; "Articulation and Acoustics of the Spirate Fricative Consonants," by R. J. Lloyd; "Pneumatic Analogue of Potentiometer" and "Dalton's Law," by W. N. Shaw; "On a Comparison between charging a Secondary Cell at Constant Potential and at Constant Current, more especially as regards Efficiency," by A. A. Cohen and J. M. Donaldson; "A Magnifying or Bellowing Telephone," by Oliver Lodge; "An Elaborate Apparatus for the Measurement of Small Differences in Resistance," by E. H. Griffiths; "The Dynamical Theory of Refraction and Anomalous Dispersion" and "Continuity of Undulatory Theory for Sound, Elastic Solid, Light, and Electric Waves," by Lord Kelvin; "Heat of Combination of Metals in the Formation of Alloys," by A. Galt; "An Instrument for measuring Electric Pressure or Current by Means of the Increase of Resistance of a Fine Platinum Wire," by Hugh L. Callendar; "The Dissipation of Energy in the Dielectric of a Condenser," by Edward B. Rosa and A. W. Smith, of Wesleyan University, Middletown, Conn.; "Total Immersion Hydrometers," by A. W. Warrington; "Experiments in Radiation from a Source of Light in a Magnetic Field," by Thomas Preston; "Stream Line Motion with Viscous Fluids in Two Dimensions and in Three Dimensions," by H. S. Hele-Shaw; "Analogies between the Yearly Ranges of some Meteorological and Magnetic Phenomenon," by Dr. Van Rijckersels; "Exploration of the Upper Air by Means of Kites at Blue Hill Observatory, Massachusetts, U. S. A.," by A. Lawrence Rotch, Boston, Mass.; "The Classification of Polydiurnal Weather Types in Relation to the Prolongation of the Daily Forecast in Western Europe," by Douglas Archibald; "Rainfall of the Southwestern Coun-

ties of England," by John Hopkinson; "Discussion of Results of the Recent Solar Eclipse Expedition," by H. H. Turner and Sir Norman Lockyer; "Velocity of Electricity in the Electric Wind," by A. P. Chattock; "Carbon-Consuming Cell of Jaques," by S. Skinner.

Also a "Report of the Committee on comparing and reducing Magnetic Observations," a "Report of the Committee on Ben Nevis Observatory," a "Report of the Committee on Meteorological Photography," a "Report of the Committee on Seismological Investigations," a "Report of the Committee on the Establishment of a Meteorological Observatory on Mount Royal, Montreal," and a "Report of the Committee on Electrolysis," were presented and discussed.

During the meeting the International Conference on Terrestrial Magnetism, under the presidency of Prof. Arthur W. Rücker, held sessions, at which subjects connected with earth currents and effect of altitude on the terrestrial magnetic elements were discussed. On Sept. 13 the section on mechanical science met conjointly with Section A and the International Conference, when the subject of "Magnetic and Electrolytic Actions of Electric Railways" was discussed. This discussion brought out the facts that several magnetic observatories, including two in the United States (Cambridge and Washington), had been rendered useless by the disturbance caused by electric railways in their neighborhood.

B. *Chemistry*.—"Stereochemistry and Vitalism" was the subject of the address of the vice-president of the section, Prof. Francis R. Japp, who fills the chair of Chemistry in the University of Aberdeen. At the outset he said that certain portions of the earlier works of Pasteur furnished "a reply to the most fundamental question that physiology can propose to itself—namely, whether the phenomena of life are wholly explicable in terms of chemistry and physics; in other words, whether they are reducible to problems of the kinetics of atoms, or whether, on the contrary, there are certain residual phenomena inexplicable by such means, pointing to the existence of a directive force which enters upon the scene with life itself, and which, while in no way violating the laws of the kinetics of atoms—while, indeed, acting through these laws—determines the course of their operation within the living organism. I shall confine myself to a single class of chemical facts rendered accessible by Pasteur's researches on optically active compounds, and, considering these facts in the light of our present views regarding the constitution of organic compounds, I shall endeavor to show that living matter is constantly performing a certain geometrical feat which dead matter, unless indeed it happens to belong to a particular class of products of the living organism, and to be thus ultimately referable to living matter, is incapable—not even conceivably capable—of performing. In order to make clear the bearing of the results of stereochemical research on this physiological problem, it will be necessary to give a brief sketch of the stereochemistry of optically active organic compounds, as founded by Pasteur, and as further developed by later investigators." Following this he spoke of Kekule's celebrated paper "On the Constitution and Metamorphoses of Chemical Compounds and the Chemical Nature of Carbon," concerning which he claimed that it "was from this union of Pasteur's theory with that of Kekule that modern stereochemistry sprang." Continuing his discussion, he showed that "whenever we prepare artificially, starting either with the elements or with symmetric compounds, any organic compound which, when it occurs as a natural product of the living organism, is optically active, the primary product of our laboratory reactions, however

closely it may in other respects resemble the natural product, differs from it in being optically inactive." This barrier still exists, and he quoted from Pasteur the statement: "To transform one inactive compound into another inactive compound, which has the power of resolving itself simultaneously into a right-handed compound and its opposite, is in no way comparable with the possibility of transforming an inactive compound into a single active compound. This is what no one has ever done; it is, on the other hand, what living nature is doing unceasingly before our eyes." Then, reviewing the recent work in stereochemistry, he contended that "we thus arrive at the conclusion that the production of single asymmetric compounds, or their isolation from the mixture of their enantiomorphs, is, as Pasteur firmly held, the prerogative of life. Only the living organism, with its asymmetric tissue, or the asymmetric products of the living organism, or the living intelligence with its conception of asymmetry, can produce this result. Only asymmetry can beget asymmetry." His conclusions were: "Non-living, symmetric matter—the matter of which the inorganic world is composed—interacting under the influence of symmetric forces to form asymmetric compounds, always yields either pairs of enantiomorphous molecules (racemoid form) or pairs of enantiomorphous groups united within the molecule (meso-form), the result being, in either case, mutual compensation and consequent optical inactivity. The same will hold good of symmetric matter interacting under the influence of asymmetric forces (supposing that such forces exist), provided that the latter are left to produce their effect under conditions of pure chance. If these conclusions are correct, as I believe they are, then the absolute origin of the compounds of one-sided asymmetry to be found in the living world is a mystery as profound as the absolute origin of life itself. The two phenomena are intimately connected, for, as we have seen, these symmetric compounds make their appearance with life, and are inseparable from it. How, for example, could lavo-ratory protein (or whatever the first asymmetric compound may have been) be spontaneously generated in a world of symmetric matter, and of forces which are either symmetric, or, if asymmetric, are asymmetric in two opposite senses? What mechanism could account for such selective production? Or if, on the other hand, we suppose that dextro- and levo-protein were simultaneously formed, what conditions of environment existing in such a world could account for the survival of the one form and the disappearance of the other? Natural selection leaves us in the lurch here, for selective consumption is, under these conditions, as inconceivable as selective production. No fortuitous concurrence of atoms, even with all eternity for them to clash and combine in, could compass this feat of the formation of the first optically active organic compound. Coincidence is excluded, and every purely mechanical explanation of the phenomenon must necessarily fail. I see no escape from the conclusion that at the moment when life first arose a directive force came into play—a force of precisely the same character as that which enables the intelligent operator, by the exercise of his will, to select one crystallized enantiomorph and reject its asymmetric opposite."

Subsequently the following-named papers were read and discussed: "On the Extraction from Air of the Companions of Argon, and on Neon," by William Ramsay and Morris W. Travers; "A New Stand for Electrolytic Analysis," by Hugh Marshall; "Some Researches on the Thermal Properties of Gases and Liquids," by Sydney Young; "The Action exerted by Certain Metals and Organic Substances on a Photographic Plate," by William J. Russell; "The Action of Bacteria on Photographic Plates," by Percy

F. Frankland; "Further Experiments on the Absorption of the Röntgen Rays," by John H. Gladstone and Walter Hibbert; "The Cooling Curves of Fatty Acids," by A. P. Laurie and E. H. Strange; "The Equivalent Replacement of Metals," by Frank Clowes; "Juvenile Research," by Henry E. Armstrong; "The Analysis of Dorsetshire Soils," by C. M. Lux-Moore; "Green Cobaltic Compounds," by R. G. Durrant; "Recent Advances in the Tanning Industries," by J. G. Parker; "A New Class of Coloring Matters," by E. Noelting; "The Oxidation of Glycerin in the Presence of Ferrous Iron," by J. H. Fenton and Frank Jackson; "Action of Hydrogen Peroxide on Carbohydrates in the Presence of Iron Salts," by R. S. Morrell and J. M. Croft; "An Experiment illustrating the Effect on the Acetylene Flame of Varying Proportions of Carbon Dioxide in the Gas," by J. Emerson Reynolds; "A Ten-Candle Lamp to be used as a Standard of Light" and "On a Convenient Form of Drying Tube," by A. G. Vernon Harcourt; "Standards of Purity for Sewage Effluents," by Samuel Rideal; "Action of Certain Substances on the Undeveloped Photographic Image," by Charles H. Bothamley; "Action of Ammonia in Gun Cotton," by W. R. Hodgkinson and Capt. Owen.

Also a "Report of the Committee for deciding on Electrolytic Methods of Quantitative Analysis," a "Report on the Bibliography of Spectroscopy," a "Report on the Action of Light upon Dyed Colors," a "Report of the Committee on the teaching of Science in Elementary Schools," a "Report of the Committee on the Carbohydrates of the Cereal Straws," and a "Report of the Committee on the Promotion of Agriculture," were presented before the session.

C. Geology.—The presiding officer of this section was Mr. Wilfrid H. Hudleston, a past president of the Geological Society. After brief reference to the circumstance that last year many of the geologists were in Canada, and others in attendance at the International Geological Congress in St. Petersburg, he called attention to the fact that this year the gathering was a domestic one, indeed, "in that part of England which has no small claim to be regarded as the cradle of English geology." Accordingly he devoted the greater portion of his address to local considerations. For if "Europe is to be regarded as presenting a geological epitome of our globe, and if Great Britain is an epitome of Europe, then, without doubt, this particular block of the southwest which has Bath for its more exact center, with a radius, say, of fifty miles, may be said to contain almost everything to be found on the geological scale, except the very oldest and the very youngest rocks; while east of the Severn and south of the Bristol Channel true boulder clay is rare or absent." Recent information, the result of strides made during the last quarter of a century, were discussed, beginning with Palæozoic rocks, continuing through the Mesozoic, and concluding with the work done on the Tertiary, Pleistocene, and recent formations. While most of the remarks were devoted to matters pertaining to the arrangement of strata, still here and there a practical question was taken up. Concerning the probability of finding workable coal east of the proved Somersetshire field, he said: "Prospectors should bear in mind the warning of Ramsay, that the basins containing coal are but few in comparison with the number of basins throughout the Palæozoic rocks. No doubt the line indicated is more favorably situated for coal exploration than the eastern counties, where, for instance, the Coal Boring and Development Company has lately gone into liquidation. The unsuitability of East Anglia as a field for coal prospecting was insisted on in my second anniversary address to the

Geological Society, and the results seem to have been very much what might have been expected. If coal is to be found beneath the secondary rocks the line of search should be carried through the counties of Kent, Surrey, Berkshire, and Wiltshire, though the three latter counties have hitherto been content to leave their underground riches unexplored. The Kent Coal Exploration Company is doing some good work with a reasonable chance of success, though if they wish to find coal sufficiently near the surface they had better adhere as much as possible to the line of the North Downs, since operations on the Sussex side are only too likely to be within the influence of the Kimmeridgian Gulf, which was proved to exist at Battle (Netherfield). Mr. Etheridge, I hope, will have something to tell us as to the progress of the Kent Collieries Corporation, who now carry on the work at Dover."

The following-named papers were read and discussed: "The Geology of the District surrounding Bristol," by Lloyd Morgan; "The Builders of Clifton Rocks," "Work of Encrusting Organisms by the Formation of Limestone," and "The Relation and Extension of the Franco-Belgian Coal Field to those of Kent and Somerset," by Edward B. Wethered; "The Revision of South Wales and Monmouthshire (the South Wales Coal Field) by the Geological Survey," by Aubrey Strahan; "Exploration of Two Caves at Uphill, Weston-super-Mare, containing Remains of Pleistocene Mammalia," by H. Bolton; "Comparative Actions of Subaërial and Submarine Agents in Rock Decomposition," by Thomas H. Holland; "Arborescent Carboniferous Limestones from Bentry Hill, near Henbury, Bristol," by Horace B. Woodward; "The Comparative Value of Different Kinds of Fossils in determining Geological Age," by Othniel C. Marsh, of Yale University, New Haven, Conn.; "The Aggregate Deposits and their Relations to Zones," by J. F. Blake; "The Geological Structure of the Malvern and Abberley Ranges," by Theodore Groom; "The Probable Source of the Upper Felsitic Lava of Snowdon," by J. R. Dakyns; "On the Occurrence of Arenig Shales beneath the Carboniferous Rocks at the Menai Bridge," "On an Uplift of Bowlders at Llandegfan," and "The Glacial Sections at Moel Trifaen," by Edward Greenly; "The Age and Origin of the Granite of Dartmoor," by Alexander Somervail; "On the Comparative Dimensions of Some Atoms," "On the Leadhillite in Ancient Lead Slags from the Mendip Hills," and "On a Supplementary List of British Minerals," by W. L. Addison; "On the Laws of Climatic Evolution," by Marsden Marson; "The Sub-Oceanic Physical Features of the North Atlantic," by Edward Hall; "The Eastern Margin of the North Atlantic Basin," by Wilfrid H. Huddleston; "The Great Earthquake of 1897 from a Seismological Point of View," by R. D. Oldham; "Worked Flints from Glacial Deposits of Cheshire and the Isle of Man," by J. Lomas; "Some Dinosaurian Remains from the Oxford Clay of Northampton," by Charles W. Andrews; "Restoration by Charles Knight of the Extinct Vertebrates *Brontosaurus*, *Phenacodus*, *Coryphodon*, and *Teleoceras*," by Henry F. Osborn, of Columbia University, New York city; "Action of Waves and Tides on the Movement of Material on the Seacoast," by W. H. Wheeler; "Further Exploration of the Ty Nenydd Cave at Tremerchion, North Wales," by G. C. H. Pollen; and "Further Exploration of the Fermanagh Caves," by Thomas Plunkett.

Also a "Report of the Committee appointed for collecting Photographs of Geological Interest in Britain and in Canada," a "Report of the Committee of Fossil Phyllopoda," a "Report of the Committee on Life Zones in the British Carboniferous

Rocks," a "Report of the Committee on the Flora and Fauna of the Interglacial Beds in Canada," a "Report of the Committee appointed to examine the Conditions under which Remains of the Irish Elk are found in the Isle of Man," a "Report of the Committee on the Erratic Blocks of the British Isles," a "Report of the Committee for Seismological Investigation," a "Report of the Committee appointed to explore Certain Caves in the Malay Peninsula, especially near Singapore, and to collect their Living and Extinct Fauna," a "Report of the Committee appointed to consider a Project for investigating the Structure of a Coal Reef by boring and sounding," and a "Report on the Euryptends of the Pentlands."

D. Zoölogy (and Physiology).—This section was presided over by Prof. W. F. R. Weldon, who holds the chair of Comparative Anatomy and Zoölogy at University College, in London. In his address he discussed some of the principal objections which are urged against the theory of natural selection, and described the way in which, in his opinion, these objections could be met. He said the theory of natural selection is a theory of the importance of differences between individual animals. "Three principal objections are constantly brought forward against this theory. The first is that the species of animals which we know fall into orderly series, and that purely fortuitous variations can not be supposed to afford opportunity for the selection of such orderly series; so that many persons feel that if the existing animals are the result of selection among the variable offspring of ancestral creatures, the variations on which the process of natural selection had to act must have been produced by something which was not chance. The second objection is that minute structural variations can not in fact be supposed to affect the death rate so much as the theory requires that they should. And it is especially urged that many of the characters by which species are distinguished appear to us so small and useless that they can not be supposed to affect the chance of survival at all. The third objection is that the process of evolution by natural selection is so slow that the time required for its operation is longer than the extreme limit of time given by estimates of the age of the earth." These objections he discussed by applying the law of chance to various phenomena, showing thereby that this law "enables one to express easily and simply the frequency of variations among animals." In conclusion he said: "I hope I have convinced you that the action of natural selection upon such fortuitous variations can be experimentally measured, at least in the only case in which any one has attempted to measure it. I hope I have convinced you that the process of evolution is sometimes so rapid that it can be observed in the space of a very few years. I would urge upon you in conclusion the necessity of extending as widely as possible this kind of numerical study. The whole difficulty of the theory of natural selection is a quantitative difficulty. It is the difficulty of believing that in any given case a small deviation from the mean character will be sufficiently useful or sufficiently harmful to matter. That is a difficulty which can only be got rid of by determining in a number of cases how much a given variation does matter; and I hope I have shown you that such determination is possible, and if it be possible, it is our duty to make it."

The following-named papers were read and discussed: "As to whether *Præcis octavia-natalensis* and *Præcis sesamus* are Seasonal Forms of the Same Species," by Edward B. Poulton; "Photographic Records of Pedigree Stocks," by Francis Galton; "Preliminary Note on the Races and Migration of

the Mackerel" and "A Proposed Biological and Physical Investigation of the British Channel," by Walter Garstang; "Phylogeny of the Arthropod Anion," by Arthur Willey; "Microchemistry of the Cells" and "The Detection of Phosphorus in Tissues," by Alexander B. Macallum; "A Race of protectively Colored Mice from North Bull," by H. Lyster Jameson; "The Life Conditions of the Oyster, Normal and Abnormal," by William A. Herdman; "An Experimental Inquiry into the Struggle for Existence by Certain Insects," by Edward B. Poulton and Miss Cora B. Sanders; "An Account of the Methods and Apparatus adopted for rearing Larvæ to produce Pupæ of Different Shades," by Miss Cora B. Sanders; "Animal Intelligence as an Experimental Study," by C. Lloyd Morgan; "On the Families of Saurepodous Dinosauria," by Othniel C. Marsh, of Yale University, New Haven, Conn.; "So-called Fascination of Snakes," by A. J. Harrison; "A New Theory of Retrogression," by Charles H. Read; "A Circulating Apparatus for Use in Researches in Color Physiology," by F. W. Gamble and W. F. Keeble; "Scientific Experiments to test the Effects of Trawling in the Waters of Scotland, 1886-1897," by W. C. McIntosh; "Musical Organs in Spiders," by R. J. Pocock; "The Origin of the Vertebrate Notochord and Pharyngeal Clefts," by A. T. Masterman; "Le Développement du Cœur chez les Tuniciers; Quelques Considérations sur la Phylogénie des Aseïdies Simples," by Charles Julin; "The Classification of the Pelmatozoa," by Francis A. Bather; "A Demonstration of Dr. Field's Card Catalogue of Zoological Literature," by William E. Hoyle.

Also a "Report of the Committee on the Physiological Effects of Peptone and its Precursors when introduced into the Circulation" and a "Report on Caves in the Malay Peninsula" were read and discussed.

E. Geography.—Over this section Col. George Earl Church, a fellow of the Royal Geographical Society, presided. The subject of his address was "Argentine Geography and the Ancient Pampean Sea."

He said in opening: "Instead of addressing you upon geography as a science or summarizing the triumphs of explorers during the past year, I shall invite you to accompany me to southern South America—a step toward the antarctic regions—and let me try to add to your knowledge of Argentine geography and the ancient Pampean Sea." Then, after discussing in many of its phases the conditions and extent of the Pampean Sea, which he estimated to have covered an area of about 600,000 square miles, and to have been about 1,400 miles long, with an average width of about 400 miles during its existence some seventy thousand years ago, he referred to the climatic conditions of that time and said: "To the west, the Andes served as a lofty condenser, which, for a distance of over 2,500 miles, guided the cold polar currents toward the equator and safeguarded their vigor. Similarly, the Brazilian highlands largely confined them to the great valleys as they swept northward to do battle in the heart of South America with the warm vapors generated from the Pampean Sea and ancient lake, and the steaming, tropical basin of the Amazon. The rainfall over the inter-Andean region must have produced many large lakes similar to Lake Titicaca, and a great river system, which, tributary to the Colorado, swelled it into a stream of the first rank, pouring into it the sand and silt which have completely filled the enormous estuary, the outline of which is still traceable. One may believe that an increased rainfall gave a luxuriant vegetation, where herds of gigantic mammals found feeding ground; from which, from time to time, they were swept, by storm or swollen river, into the Pampean Sea, where also they may have

lost their lives in other ways, their remains being distributed over it by the currents. To a minor degree the ancient sea and lake must have affected the inter-Andean climate, from Cuzco to the south, throughout the lacustrine basin of Titicaca, giving it greater rainfall and fertility than it now has. Geological examinations show that Titicaca was once one of the large lakes of the world, and that it has slowly been drying up. Savage man may have lived in South America on the mountain slopes round the ancient sea. If so, he possibly hunted the mastodon, the megatherium, and numerous other of the gigantic fauna which probably were co-existent with him. His only highway, between the eastern and western halves of the continent, must have crossed the elevated region at the head of the Pampean Sea, lying between 17° and 19° south latitude, which is still the only route in use for communication by land between Bolivia and Matto Grosso."

The following-named papers were read and discussed before the section: "On Waves," by Vaughan Cornish; "The Temperature and Salinity of the Surface Waters of the North Atlantic," by H. N. Dickson; "The Oceanographical Results of the Austro-Hungarian Deep Sea Expeditions of 1890-'96," by K. Natterer; "On the Distribution of the Oceans and Continents," by J. Walter Gregory; "On Earthquake Study," by John Milne; "The Valley of the Yang-tze," by Mrs. Isabella L. Bishop; "A Description of the Great Assam Earthquake of June 12, 1897," by R. D. Oldham; "A Journey across the Sierra Madre from Mazatlan to Durango," by O. H. Howarth; "On Political Geography," by J. Scott Keltie; "The Prospects of Antarctic Research," by Hugh R. Mill; "National Photographic Record," by Sir Benjamin Stone; "On Sokotra," by Mrs. Theodore Bent; "On the Upper Nile," by Sir C. W. Wilson; "Twenty-eight Years in Central Australia," by Louis de Rougemont; "On Tirah," by Sir T. Hungerford Holdich; "Christmas Island in the Indian Ocean," by Charles W. Andrews; "A Visit to Northeastern Kamchatka," by G. E. H. Barrett Hamilton; "The Approaching Economic Revolution in China," by G. G. Chisholm; "On the Great Globe," by E. Reclus; and "The Outlook Tower, Edinburgh," by Patrick Geddes.

Also a "Report of the Committee on the Climatology of Africa" was read and discussed.

F. Economic Science and Statistics.—This section was presided over by Dr. James Bonar, who delivered an address on "Old Lights and New in Economic Study." He referred to the Bristol meetings held in 1836 and 1875, at the last of which Jevons called attention to the diminishing of the coal supply in England, concerning which he said: "The lessened growth of population makes that reduction less marked, but it gives us at least a slightly better prospect of moderating our own inroads on our coal and iron, while the United States, our principal rivals, will soon need all the warnings that our national candor has so freely bestowed on ourselves." He found that some earnest students, "especially among our more cautious and prudent philanthropists, lament that they can not feel at home with the older economists, while, nevertheless, they think they owe more to the older than to the new." This he explained as due to the fact that "we live in a world that has been much altered since they left it. This is a phenomenon we can observe in our own half of the century," and also for the reason that "the imperfection of all human records can not fail to make the judgment of the past somewhat more fallible than of the present. Presumably a man puts his best thoughts into his books; but he does not always tell us there how he arrived at them and unless he is a living author he can not be cross-examined." He reviewed the work

of certain of the more recent authorities, notably that of Pantaleoni and Loria. Concerning the latter he said: "It has excited interest chiefly in academic circles, but need not be disparaged on that account. His theory is that all progress is economic, and all economic change is due to the land and the growth of population thereon. Though he contrives to differ from Malthus, they have much in common; and we can not discuss the theory of our contemporary without remembering that it is exactly one hundred years since Malthus wrote his essay." Of the future he said: "It is surely not irrational to look for a larger diffusion of independence, in the sense of really mutual dependence, with a wider distribution of wealth. When dependence is mutual its sting is gone. In the future the really dependent men will probably be the incapable men, or else the men that have high capacities that are not at the moment wanted, while they have no secondary or second-rate powers on which to fall back. These two classes will give the future two problems to solve in place of some that now trouble us, but are ready to vanish away. The solution may be the public support of both classes of dependents—of the first because they are too bad, and of the second because they are too good, to work on exactly the same footing as their neighbors." He concluded with: "To preserve our judicial attitude we must have perfect freedom of criticism. We must not allow our 'institutions,' whether in art, science, or religion, to fall into the hands of one class of society, lowest or highest. We must not study our subject with a constant fear of what this rich man or even that poor man will say to what we find there. If deference to the opinions of the rich is subserviency, the more generous deference may easily slide into a love of popularity, and it is hard to say which of the two temptations is the more likely to bias the views of an economist at the present moment. In science honesty is not the best policy merely—it is the only policy; without honesty there is no science."

The following-named papers were read and discussed before the section: "A Defense of Poor-Law Schools," by W. Chance; "Poor-Law Administration," by Douglas Dent; "Economic Aspects of the Imperial Idea," by Miss Ethel Faraday; "Industrial Conciliation," by L. L. Price; "Banking in Canada," by B. E. Walker; "The Question of the Ratio," by F. J. Faraday; "Municipalities as Traders," by George Pearson; "Ought Municipal Enterprises to yield a Profit in Aid of Rates," by Edwin Carman; "Rectification of Municipal Frontiers," by W. M. Ackworth; "The Economic and Social Effects of Electric Traction," by Silvanus P. Thompson; "The Effect of Sugar Bounties," by George E. Davies; "Shipping Rings and the Manchester Cotton Trade," by John R. Galloway; "Comparison of the Changes in Wages in France, the United States, and the United Kingdom from 1840 to 1891," by A. L. Bowley; "Saving and Spending: A Criticism of Recent Theories," by A. W. Flux; "Partnership of Capital and Labor as a Solution of the Conflict between them," by Henry Vivian; "Details of Expenditure for One Year of Six Middle-Class Working Women," by Miss C. E. Collett; and "On the Wakefield Hand System," by W. P. Reeves.

G. *Mechanical Science*.—The presiding officer of this section was Sir John Wolfe Barry, a past president of the Institute of Civil Engineers. In beginning he spoke of the commercial importance of Bristol and said: "So far as customs revenue is concerned Bristol now stands third, and in regard to the gross value of her sea-borne trade she is thirteenth among ports of the United Kingdom." Then, pointing out how engineering skill had developed harbors from seaports lacking suitable facilities, he said: "The approach to Bristol from the

sea—that is to say, from King Road in the Bristol Channel—is certainly unpromising for large ships, and indeed, when contemplated at low water, appears not a little forbidding. Something has been done, and more is now in progress, toward straightening, deepening, buoying, and lighting the tortuous course of the Avon below Bristol. More, no doubt, would have been undertaken in former years if the great rise of tide in the river had not provided at spring tides a depth and width for navigation which were sufficient for practical purposes until the size of modern ships imperatively demanded increased facilities of approach. I think it is a remarkable thing that vessels of 3,000 tons burden, 320 feet in length, and drawing 26 feet of water succeed in reaching Bristol, and that the trade in the heart of the city continues to increase." Concerning the growth and the requirements of England's merchant navy he had much to say. "The British people are the chief carriers of the world, and are indeed those 'that go down to the sea in ships, and occupy their business in great waters.' Our oversea import registered tonnage is 34,000,000, and our export registered tonnage is 38,000,000. Our coastwise traffic amounts to 63,000,000 tons a year, making together a tonnage of 135,000,000 tons. If we add to these figures the tonnage of vessels in ballast and the number of calls of those vessels in the coasting trade which touch at several ports in the course of one voyage, we must add a further 55,000,000 of tonnage, making 190,000,000 of tonnage using our ports yearly; and if we divide these figures by, say, three hundred days, we have the result 633,000 tons a day entering and leaving our ports. Our merchant fleet is eleven and a half times that of France, seven times that of Germany, eighteen times that of Russia (in Europe), two and three quarter times that of the United States (inclusive of the craft on the Great Lakes), six and three quarter times that of Norway, fourteen times that of Italy, and fourteen times that of Spain. Out of our total tonnage of 10,500,000, 6,750,000 are steam vessels. In 1897, out of a total shipping trade (cargoes and ballast) dealt with in ships of all nations at the ports of the United Kingdom, amounting to 90,000,000 tons, 81,000,000 tons, or 90 per cent., were conveyed by steam vessels. Of the tonnage of vessels built in the United Kingdom in 1897, 86 per cent. were steamers." His concluding considerations were in connection with the development of early railways and steamships. He said in this connection: "Bristol was the birth-place of the Great Western Railway. I. K. Brunel, its engineer, had previously, by public competition, been selected to span the gorge at Clifton by a suspension bridge of the then almost unrivaled span of 702 feet. Again, under the influence of Brunel, Bristol became the home of the pioneers of transatlantic steamships, and the story of the initiation of the enterprise is thus told in the memoirs of his life. In 1835, at a small convivial meeting of some of the promoters of the Great Western Railway, some one said: 'Our railway to Bristol will be one of the longest in England,' and Brunel exclaimed, 'Why not make it the longest line of communication in the world by connecting it with New York by a line of steamers?' Out of this grew the 'Great Western' steamship, and the history of the enterprise and of its success is too well known, at least here, to require any allusion to the steps by which it was brought about. Suffice it to say that, in spite of much discouragement, the 'Great Western'—of the then unexampled size of 2,300 gross tons, and with engines of unparalleled power—was launched at Bristol in 1837, and ran successful and regular voyages till 1857, when she was broken up."

The following-named papers were read and discussed before the section: "The New Works

recently constructed at Barry Dock," by R. C. H. Davison; "On the Conditions Necessary for the Successful Treatment of Sewage Bacteria," by W. J. Dibdin and George Thudicum; "An Old Newcomen Engine at Long Ashton, near Bristol," by W. H. Pearson; "Fictitious Airs," by Sir Frederick Bramwell; "Some Mechanical and Economical Features of the Coal Question," by T. Foster Brown; "Hydraulic System of jointing Tubes on Tubular Bodies," by C. Johnson; "Description of an Instrument for measuring Small Torsional Strains," by E. G. Coker; "Electric Power in Workshops," by Alexander Siemens; "The Application of the Electric Power to Small Industrial Purposes and its Effect on Trade and on the Community Generally," by A. H. Gubbings; "Electric Power and its Application on the Three-Phase System to the Bristol Wagon and Carriage Works," by W. Geibel; "Notes on the Electric-Lighting Systems at Bristol," by H. Faraday Proctor; "A New System of propelling Electric Trams by Surface Contacts," by Silvanus Thompson and Miles Walker; "Schemes for the Improvement of the Water Way between the Bristol Channel and the Birmingham District," by Edward D. Marten; "On the Welsh Methods of shipping Coal," by J. Ryan; "A New Instrument for drawing Envelopes and its Application to the Teeth of Wheels, and for Other Purposes," by H. S. Hele Shaw; "Hydraulic-Power Transmission by Compressed Air," by William Walker; "Combined Electric Lighting and Power Plant for Docks and Harbors," by J. G. Aldridge and "Electric Canal Haulage," by Alfred H. Allen.

H. *Anthropology*.—The presiding officer of this section was Mr. E. W. Brabrook, a fellow of the Society of Antiquarians. In the beginning of his address he said: "Anthropology is in fact a group of sciences. There is what in France is called pure anthropology or anthropology proper, but which we prefer to call physical anthropology—the science of the physical characters of man, including anthropometry and craniology, and mainly based upon anatomy and physiology. There is a comparative anthropology, which deals with the zoological position of mankind. There is prehistoric archaeology, which covers a wide range of inquiry into man's early works, and has to seek the aid of the geologist and the metallurgist. There is psychology, which comprehends the whole operations of his mental faculties. There is linguistics, which traces the history of human language. There is folklore, which investigates man's traditions, customs, and beliefs. There are ethnography, which describes the races of mankind, and ethnology, which differentiates between them, both closely connected with geographical science. There is sociology, which applies the learning accumulated in all the other branches of anthropology to man's relation to his fellows, and requires the co-operation of the statistician and the economist. Great as is the diversity of the anthropological sciences, their unity is still more remarkable. The student of man must study the whole man. No true knowledge of any human group, any more than of a human individual, is obtained by observation of physical characters alone. Modes of thought, language, arts, and history must also be investigated. This simultaneous investigation involves in each case the same logical methods and processes. It will in general be attended with the same results. If it be true that the order of the universe is expressed in continuity and not in cataclysm, we shall find the same slow but sure progress evident in each branch of the inquiry. We shall find that nothing is lost, that no race is absolutely destroyed, that everything that has been still exists in a modified form, and contrib-

utes some of its elements to that which is." The greater-portion of his address was devoted to some recent contributions to anthropology. With reference to the discovery in Java of what purports to be a missing link in the chain of animal existence he regards it as "a valuable document in the early evolution of mankind," and "I believe that it is acknowledged by all that the femur belonged to an individual who stood upright, and I presume that the capacity of the skull being greater than that of any known anthropoid is consistent with the same inference." Concerning palaeolithic man he quoted Hughes, who said that he had "never yet seen any evidence which would justify the inference that any implements older than palaeolithic have yet been found." The early works of art fabricated by man were discussed and some interesting discoveries mentioned. Africa was referred to as a place where many remains would be likely to be found that would add to the chain of continuity in the ascent of man's development in industrial arts. The value of folklore in preserving information that had its origin in the remote past was insisted on and illustrations cited to prove this fact. The final portion of his address was a plea in favor of the work done by the Ethnographical Survey Committee, and also one for urging upon the "Government the necessity of establishing a Bureau of Ethnology for Greater Britain." In connection with the last-named he mentioned how those "who visited the United States last year had the opportunity of observing the excellent work which is done by the Bureau of Ethnology at Washington, and those who stayed at home are probably familiar with the valuable publications of that department."

The following-named papers were read and discussed before the section: "Human Life in High Altitudes," by O. W. Howarth; "The Human Ear as a Means of Identification," by Miss M. A. Ellis; "Tabu in Japan in Ancient Mediæval and Modern Times," by K. Minakata; "Stone Implements from South Africa," by G. Leith; "Roman Symbolic Hands on Disks, Tablets, and Monuments," by Frederick T. Elworthy; "The Boats of Siam" and "The Lao Organ of the Mekong Valley," by H. Warrington Smyth; "The Mediæval Population of Bristol," by Dr. Beddoe; "The Origin of Stone Worship," by H. A. Miers; "Prehistoric Antiquities in the Neighborhood of Bristol," by Lloyd Morgan; "The Stone Caves of Stanton Drew," by Alfred L. Lewis; "The Survival of Palæolithic Conditions in Australia," by Edward B. Tyler; "An Exile of Twenty-eight Years among the Cannibal Blacks of Unexplored Australia," by Louis de Rougemont; "The Tarahumare People of Mexico," by Dr. Krauss; "Myths and Customs of the Musquakie," by Miss Mary A. Owen; "A Bronze Image of Buddha found in an Irish Bog," by Miss A. G. Weld; "On the Hill Tribes of the Northern and Central Indian Hills: Their Ethnology, Customs, and Sociology," by W. Crooke; "On the Tribes inhabiting the Vicinity of the Mouth of the Wanigela (Kemp Wich) River, New Guinea," by R. E. Guise; "The Montzu of Western Szechuan," by Mrs. Isabella Bishop; "West African Conceptions of Property," by Mary H. Kingsley; "The Native Secret Societies of the West Coast of Africa," by H. P. Fitzgerald Marriott; "The Natives of the Niger Delta," by Charles De Cardi; "Ancient Works of Art from Benin City," by Charles H. Read; "Egypt under the First Three Dynasties, in the Light of Recent Discoveries," by W. M. Flinders Petrie; "The Folklore of the Outer Hebrides," by A. Goodrich Freer.

Also a "Report of the Committee on Mental and Physical Deviations from the Normal among Children in Public Elementary and Other Schools";

a "Report on the Northwestern Tribes of Canada," being (a) a "Report of the Investigations into the Physical Characteristics of the Tribes of British Columbia," by Franz Boas and Livingston Farrand, and (b) a "Summary of the Work of the Committee in British Columbia," by Franz Boas; a "Report on the Ethnological Survey of Canada" with appendices of (a) "On an Investigation into Haida Stories and Beliefs," by C. Hill Tont, and (b) "On an Inquiry into the Customs and Habits of the Earliest Settlers of Canada," by Benjamin Sulte; and a "Report of the Torres Straits Anthropological Expedition," were presented before the section.

K. Botany.—This section was presided over by Prof. Frederick O. Bower, who is Regius Professor of Botany in the University of Glasgow. The general subject of his address was "The Morphology of Plants." He said: "This is a department of science pure and simple. The results which it brings have not, and can not be expected to have, any money value in the markets of the world. The present time is one of unusual bustle and change in morphology, consequent upon the discovery of new facts and the introduction of new methods. The development of the study may be divided into three periods, we ourselves standing upon the threshold of the third. The earliest phase was that of description and delineation of what might be observed of the mature form of plants; this includes the work of the herbalists and of the earlier systematists, who thus furnished the basis for classification. The tendency to comparison thus already perceptible, asserted itself strongly in the next phase of our study, to which it gave its character. And now the need arose for observing development; this was initiated by Schleiden, and carried to a triumphant climax by Hofmeister. Morphology has lately passed to a third stage—that of experiment—with a view to ascertaining the effect of external agencies in determining form, and the limits of variability under varied circumstances. Development of itself shows only how a part originates; it does not demonstrate what it is, nor what it may become, under special conditions. The ideal aimed at in the study of the morphology of plants is to trace their real relationships and mode of origin, on the basis of the widest observation—in short, to reconstruct the evolutionary tree. In order to make comparison possible, or at least manageable, a terminology is necessary, and this not only of the plants themselves, but also of their parts. We may for the moment leave on one side that summing up of morphological opinion represented by the systematic arrangement of plants in a taxonomic system. I propose to-day to discuss not the classification of plants, but the classification of the parts of plants, their grouping according to their *homology*." This part of his address was quite lengthy, and necessarily highly technical. "But," he said, "the questions above discussed are mere matters of detail, compared with that great enigma of the alternation of generations in green plants, or of alternation at large. This is after all a question of degree of homology, not now of the parts only, but of the whole plant or 'generation.' How this greatest of all adaptations was really initiated we can not expect to bring to the point of demonstration; at best we can only venture opinions of probability." In this connection the following three topics were taken up as most material to the discussion: (1) The bearing of the algæ and certain fungi on the question; (2) the comparison from the bryophyta; and (3) the argument from abnormalities. In concluding, he said: "I have attempted to touch upon some of those questions in the morphology of plants which specially interest us at present, and I dare say in doing so have revealed to you some of the special weak-

nesses of this branch of the science. The want of finality in this unraveling of history without documents, the ample latitude for difference of opinion, according to the relative weight attached by one or another to the same facts—these are difficulties inherent in the very nature of our study, while to many minds they increase rather than diminish its attractions. Nevertheless, the progress of morphology in late decades has plainly been toward a truer appreciation of how divers forms have originated, and so toward a better recognition of affinities."

The following-named papers were then read and discussed: "The Form of the Protoplasmic Body in Certain Floridæ," by Reginald W. Phillips; "On Reproduction in *Dictyola dichotoma*," by K. Lloyd Williams; "The Origin of Railway Bank Vegetation," by J. T. Dunn; "A Method for obtaining Material for illustrating Smut in Barley," by W. S. P. Ellis; "A New Medullula from the Lower Coal Measures of Lancashire," "A Fine Specimen of the Halonial Branch of a Lepidodendron allied to *L. fuliginosum*," "On an English Botryopteris," and "On the Structure of Zygopteris," by D. H. Scott; "Penicillium as a Wood-Destroying Fungus," by Marshall Ward; "The Aleohol-Producing Enzyme in Yeast," by J. Reynolds Green; "The Breathing Mechanism of Plants, experimentally considered," by F. F. Blackman; "The External Characters, Internal Structure, and Geological History of a Rare Fern, the Genus *Matonia*," by A. C. Seward; "The Prothallus of *Lycopodium claratum* L.," by W. H. Lang; "On the Anatomy of the Stem of Species of *Lycopodium*," by C. E. Jones; "A Potato Disease not due to *Phytophthora*," by Marshall Ward; "The Peltation of Leaves," by C. de Candolle; "Changes in the Sex of Willows," by I. H. Burkhill; "Changes in the Gland Cells of *Drosera* produced by Various Food Materials," by Miss Lily H. Hule; "A Theoretical Calculation of an Osmotic Optimum," "The Unit to be adopted for Osmotic Measurement," and "The Structure of the Yeast Cell," by Leo Errera; "The Origin and Use of the Knight-Darwin Law," by Francis Darwin; "The Structure of the Yeast Plant," by Harold Wager; "Observations on the Cytology of *Achlya Americana* (var. nov.)," by G. Brebner.

Attendance and Grants.—The Bristol meeting may be regarded as highly successful, and this in spite of the somewhat oppressive heat and unfortunate destruction by fire, at the last moment, of Colston Hall, which had been selected for the larger gatherings. The number of members in attendance was 2,446. There was distributed £1,485 among the sections in grants for research, which was apportioned as follows: Mathematics, £470; chemistry, £70; geology, £155; zoölogy, £350; geography, £35; economic science and statistics, £5; anthropology, £180; physiology, £150; botany, £45; and corresponding societies, £25.

Next Meeting.—The association will meet in 1899 in Dover, beginning on Sept. 13. This meeting was selected owing to the meeting of the French Association for the Advancement of Science on the opposite side of the Channel, and arrangements have been considered for certain meetings to be held in common. Invitations were received from Bradford and from Cork for the meeting to be held in 1900, and it was decided to accept that of Bradford. Dr. Michael Foster, the eminent physiologist, who has filled the chair in Physiology in the University of Cambridge since 1893, and whose address at Toronto last year was so well received, was made president-elect for the meeting in 1899.

Australasian.—The seventh meeting of the Australasian Association for the Advancement of Science was held in Sydney, New South Wales, beginning on Jan. 6 and continuing until Jan. 15.

The officers of the meeting were as follow: President, Archibald Liversidge, Sydney, New South

ARCHIBALD LIVERSIDGE.

Wales. Presidents of sections: A, Astronomy, Mathematics, and Physics, Pietro Baracchi, Melbourne, Victoria; B, Chemistry, W. M. Hamlet, Sydney, New South Wales; C, Geology and Mineralogy, F. W. Hutton, Christchurch, New Zealand; D, Biology, Charles J. Martin, Melbourne, Victoria; E, Geography, Sir James Hector, Christchurch, New Zealand; F, Ethnology and Anthropology, A. W. Howitt, Melbourne, Victoria; G, Economic Science and Agriculture, R. M. Johnson, Hobart, Tasmania; H, Engineering and Architecture, A. B. Moncrieff, Adelaide, South Australia; I, Sanitary Science and Hygiene, Allan Campbell, Adelaide, South Australia; and J, Mental Science and Education, John Shirley, South Brisbane, Queensland. Permanent secretary, Archibald Liversidge, Sydney, New South Wales. General treasurer, H. C. Russell, Sydney, New South Wales. Assistant general secretary, Alexander Morton, Hobart, Tasmania.

Opening Session.—The formal opening of the Sydney meeting began on Jan. 6 with meetings of the sectional committees to arrange for the programmes of the session. Immediately afterward the General Council convened, with H. C. Russell, the senior past-president, in the chair. The principal business was the confirmation of the action of the local committee and the election of new members. Other business included the naming of a committee to advise action to perpetuate the memory of Baron von Mueller, the botanist and former president. Later in the week the committee reported that a resolution was passed to the effect that the association place on record its sense of the deep loss sustained by it owing to the death of the late Baron von Mueller, and its high appreciation both of his personal character and of the distinguished services rendered by him to science. President Liversidge and J. H. Maiden were appointed to officially represent the association upon the Baron von Mueller National Fund Committee. At the first meeting a committee was appointed to recommend action in regard to the International Catalogue of Scientific Literature, which is to be inaugurated in England with the beginning of the new century. Subsequently this committee recommended that some

recognized society in each colony should collect all necessary matter and forward it to the central bureau, London.

The place of meeting was the University of Sydney, and the grand hall of that institution was the gathering place for the general sessions.

President's Address.—Vice-President Ralph Tait, of South Australia, briefly introduced President Liversidge as one who "had two great claims upon them. First of all there was his claim as a scientist, and they must appeal to the records of European literature to know how much he was honored among the scientific men of the world. Last year he was elected one of the vice-presidents of the British Association for the Advancement of Science, whose efforts they sought to copy here. But apart from his scientific abilities, which had spread far beyond the narrow scientific center which they called Australia, he had also a great claim upon them as the earnest administrator who had governed this association to the grand position which it now held in the annals of the scientific world." President Liversidge, in opening, referred to the deaths of two past presidents who had died since the last meeting, namely, Sir Robert G. C. Hamilton and Baron von Mueller, after which he discussed the objects of the association, pointing out how the British Association was instituted in 1831 at a meeting held at the suggestion of Sir David Brewster, at York, in the hall of the Philosophical Society of Yorkshire, with the title of "The British Association for the Advancement of Science," and its objects were to give a stronger impulse and a more systematic direction to scientific inquiry; to promote the intercourse of those who cultivate science in different parts of the British Empire with one another and with foreign philosophers; and to obtain a greater degree of national attention to objects of science, and a removal of any disadvantages of a public nature which impeded its progress. Mention was also made of the International Catalogue of Scientific Literature soon to be taken up in London under the auspices of the Royal Society and with the co-operation of the Smithsonian Institution in the United States. The usefulness of the Imperial Institute in London was discussed, and he pointed out that it was "not only of a commercial value, but of a scientific value." Chemistry is the special field of President Liversidge, and in the final portion of his address he discussed the chemistry of the ancients, referring to the recent magnificent publications of Berthelot on alchemy, and he mentioned two recent notorious claims in the United States of persons who reported their ability to transmute the baser metals into gold. The teaching of chemistry was discussed and the conclusions of the special committee of the London Technical Education Board on this subject were given. A description of recent progress in chemistry, including the history of the discovery of the elements argon, helium, and asterium, together with the work done in the liquefaction of gases, formed the concluding portion of his address.

Proceedings of the Sections.—A. *Astronomy, Mathematics, and Physics.*—This section was presided over by Mr. Pietro Baracchi, who is the Government astronomer in Melbourne. His address was on the subject of "Astronomy and Terrestrial Physics."

He mentioned the four great observatories of Australia, namely, those of Sydney, Melbourne, Adelaide, and Perth, as the best places for carrying on observations of the highest precision. The work of the observatories, he thought, was much underrated and little understood by the general public, and he would confine himself to pointing out what was likely to be accomplished in the future. At

present the condition of the observatories hardly permitted the astronomers to engage in adventurous explorations of the heavens. The time that the astronomers could take from their many public functions for purposes of exploration was relatively very small, and consequently the work of discovery progressed but slowly. Sidereal astronomy was well advanced in the Southern Hemisphere. In all other respects our knowledge of the southern heavens was deficient. Celestial photography and astronomy of position and fundamental investigations for the improvement of both these branches should be the objects of their endeavors in the future. He then described the aid which photography had brought to astronomy, and predicted great results from its use. By the year 1900 they hoped to have formed a photographic catalogue of some 12,000 or 13,000 stars fundamentally observed with transit circles. He did not think that the Adelaide and Perth observatories could have a better opportunity of rendering valuable service, the one by continuing and the other by joining in the observation of zero stars for their astrophotographic plates and to carry on every investigation which might tend to improve the observations and free the results from error. There was still a wide field for amateur astronomers to help singly to widen the knowledge of the science, but co-operation of those working toward the same end must be beneficial to the majority of the persons concerned. In regard to terrestrial magnetism, he said scientists were not yet able to tell whether the earth acted as a great magnet or a great electro-magnet. He mentioned the varied theories on the subject, and urged that more careful and systematic observations should be made of the earth's currents with a view of obtaining a more correct and complete knowledge of the distribution of terrestrial magnetism and of its variations. He thought that the establishment of an observatory in the interest of this science was a duty New Zealand owed to the scientific world. He pointed out many other avenues in which research was necessary, and in conclusion expressed the hope that great success would result from such labors.

The following papers were read and discussed before the section: "Measurement of Cloud Heights and Velocity," by Pietro Baracchi; "Four Theorems in Spherical Harmonics" and "Some Expressions for the Component of the Magnetic Force Perpendicular to the Axis in the Interior of Solenoids," by C. Coleridge Farr; "The Tides of South Australia," by R. W. Chapman and A. Inglis; "The Trigonometrical Survey of New South Wales, with Mention of Similar Surveys in the Other Colonies," by T. F. Furber; "The Description of a New Tide-Predicting Machine," by A. Inglis; "On the Contact Force between Different Varieties of Sulphur" and "On the Question of the Effect of Light on the Electrical Resistance of Sulphur," by Richard Threlfall and J. Bernard Allen; "On Magnetic Hysteresis Losses in Feebly Magnetic and in Diamagnetic Substances," by Richard Threlfall and Miss F. Martin; "Results from Various-Sized Rain Gauges," by H. C. Kiddle; "Notes on the Vertical Component of the Motion of the Earth's Atmosphere, and an Exhibit, viz., a Wind Vane showing Vertical Motions of the Air," by Gen. Shaw; "The Source of the Periodic Waves, sometimes called Earthquakes, which reached Sydney from Time to Time," by H. C. Russell; "A General Expression for 'Flow in Tubes,'" by G. H. Knibbs; and "Notes on Comparisons of Steel and Iron Lineal Standards for Geodetic Purposes," by D. M. Maitland.

Also the following report was presented before the section: "On our Knowledge of the Thermodynamics of the Voltaic Cell," and one from the Committee on Seismological Phenomena.

B. Chemistry.—The presiding officer of this section was Mr. William M. Hamlet, who fills the place of Government analyst to the colony of New South Wales. He chose as the subject of his address "The Molecular Mechanism of an Electrolyte."

As indicated by the title, this paper was exceedingly technical. In part Mr. Hamlet said that he offered the suggestions as to the mechanism of the electrolyte—that is, of a body in solution or state of fusion, capable of being instantaneously decomposed by a current of electricity, and he claimed that if the explanation he offered was adequate for the electrolyte, it must hold good for the constitution of the matter in the universe, so that the treatise on the electrolyte has a most important scientific bearing. The method of investigating the action of one body upon another, he observed, was brought to a high degree of accuracy by the immortal work of Sir Isaac Newton. He alluded to some observations of the late Prof. William K. Clifford, made over twenty years ago, this authority remarking, almost prophetically, "We can look forward to the time when the structure and motions in the inside of a molecule will be so well known that some future Kant or La Place will be able to make an hypothesis about the history and formation of matter."

The following papers were read and discussed before the section: "The Coloring Matter of Wines," by M. Bruno; "Notes on the Coloring Matter of the Ericaceae Coriaceous and the Wax of Ceroplastes Rubens," by E. H. Gurley; "The Russell Process in Australia," by Edgar Hall and Edward S. Simpson; "Metallurgical Methods in Use at Broken Hill, New South Wales," by G. H. Blakemore; "The Water of the Water Vine," "On the Estimation of Wheat Meal in Oatmeal," and "On Manganese Nodules found at Onybygambah," by W. M. Doherty; "On the Mineral Waters of Australasia," by George Gray; "On the Red Rain Dust," by Thomas Steel; "On Modern Methods of teaching Chemistry," by W. J. Clunies Ross; and "Notes on the Constitution of Gluten," by F. B. Guthrie.

C. Geology and Mineralogy.—Prof. F. W. Hutton, of Canterbury College, Christchurch, New Zealand, was the presiding officer of this section, and he delivered an address on "Early Life on the Earth."

Paleontologists in search of fossils began with the younger fossils and worked downward. Their subsequent discoveries were traced through Cenozoic, Mesozoic, and Palaeozoic periods. Fossils were subsequently discovered at the base of the Cambrian and then in the pre-Cambrian rocks. Recently Dr. C. Barrois, in Brittany, had discovered what seemed to be a palaeontological base. He had found radiolarians and sponge spicules in a rock which appeared to be much older than any other fossiliferous rock known. They knew as a fact that the earth was a hot body traveling through space which was intensely cold. The earth must therefore be cooling. It must once have been molten, and the water of the ocean must once have been in a state of vapor. After traversing the various stages through which the earth passed—namely, the Laurentian period, the Huronian life, the Algonian life, and the Cambrian life—the lecturer gave some speculations regarding the pre-Ordovician life. Of the origin of life he said: It was highly probable that the first living organisms were evolved near the surface of a warm ocean. They might safely assume that the first protoplasm was not so complicated a substance as it had since become. Ordovician and Silurian life followed, and he said in closing: "We have thus arrived at the conclusion that the ocean was the mother of life; that on its sur-

face floated the first organisms, whose descendants, but little changed during all the millions of years that have since passed away, still float and multiply. Presently some of these animals found their way down to the bottom, where all the *débris* from the floating organisms collected, and here in still water they lived and increased for a long time. Slowly they invaded the rough waters of the coast line, and at last gained a footing on the land. It was plants which formed the army of invasion that conquered the land. This army was followed by a mob of camp followers and ragamuffins in the shape of cockroaches and scorpions, who fed and fattened on the plants, but who, notwithstanding their boasted superiority, were quite incapable of reclaiming a single acre of desert. The real victory belonged to the plants, who with undaunted courage led the congenial water to dare the vicissitudes of temperature and moisture on land, and thus made civilization possible."

The following-named papers were read and discussed before the section: "Notes on Geology and Mineral Deposits in Certain Parts of West Australia," by E. F. Pitman; "Further Evidence of Glacial Action in the Bacchus Marsh District," by C. C. Brittlebank, G. Sweet, and W. E. David; "The Glacier Beds of Toolleen, Coleraine, and Wanda Dale," by Evelyn G. Hogg; "The Early History of Tin," "The Pleistocene History of Northern Asia," and "The Bdelium of Scripture," by S. B. J. Skertchly; "Notes of a Geological Reconnaissance on the Mount Kosciuszko Plateau" and "Artesian Water in New South Wales," by J. Milne Curran; "Some Notes on the Basaltic Dike and Prismatic Sandstone Quarry at Bondi," by Robert L. Jack; "Notes on the Physiography of the Parish of St. George, New South Wales," by E. J. Statham; "The Recent Coral-boring Expedition to Funafuti," by T. W. E. David; "The Geology of Mount Kosciuszko," by A. E. Kitson and W. Thom; "Oligoclase from Mount Anakies, Victoria," and "Rock Specimens from near Mount Kosciuszko," by A. W. Howitt; "Note on the Occurrence of Fulgurites in the Sandhills at Kensington, Sydney, New South Wales," by G. H. Knibbs, J. W. Grimshaw, and J. Milne Curran; "Notes on Some New South Wales Rocks," by W. J. Clunies Ross; "Notes on the Australian Teneptoridae," by W. S. Dun; "On Deposits of the Silver Spur," by H. G. Stokes; "An Examination of the Tasmanian Graptolite Record," by T. S. Hall; "On the Geology of the Cow Flat District, near Bathurst," by A. C. Andrews.

Also the following reports were presented before the section: Reports of research committees on "The Occurrence of Glacial Boulders at Yellow Cliff, Crown Point Station, Finke Valley, Central Australia" and "The Evidence of Glacial Action in the Port Victor and Inman Valley Districts, South Australia."

D. Biology.—This section was presided over by Prof. Charles J. Martin, of Melbourne University, who delivered the presidential address, taking for his subject "The History of the Relations between Morphology and Physiology during the Last Fifty Years."

In opening he made eulogistic references to the services rendered to biological science by the late Prof. Jeffery Parker, the recent president of the section. It had been hoped that Prof. Parker would be there to deliver the presidential address, but the duty had devolved at somewhat short notice upon himself. He described the growth of the science from morphology, which is now a separate science from physiology, the scope of research in both directions having within the last fifty years become greatly widened. Morphology deals with the structural conformation and anatomy of animals, physi-

ology with the functional workings of the animal system. During the last half century the discoveries in both these sister sciences have been of a most beneficial character to mankind, and the future was full of possibilities. He then described technically some of the more prominent developments that had occurred in recent years.

The following-named papers were read and discussed before the section: "Plants of the Rabbit-Infested Country, Bull's River, Southwest Queensland," by J. F. Bailey; "The Plants of the Islands of Torres Straits and the Neighborhood of Somerset Cape, York Peninsula," by F. M. Bailey; "Methods of Fertilization of Some Australian Plants," by A. G. Hamilton; "The Occurrence of Eucalyptus Pulverulenta in Victoria," by A. W. Howitt; "Notes on Some Eucalypti of the New England Tableland," by J. H. Marden; "Nests and Eggs of the Honey Eaters, or Meliphagius Birds of Australia," by A. G. Campbell; "Zoology in a Technical Museum," by C. Finckh; "The Growth of Vegetable Galls," by W. W. Froggatt; "Notes on the Histology of Podocarpus" and "The Distribution of Lizards in the Pacific," by A. H. S. Lucas; "Some Points of Interest in the Structure of Certain Coccids," by C. Fuller; "Enlarged Models of Australian Plants," by R. T. Baker; "Notes on the Flora of the Mallee Districts of Victoria," by St. Elroy D'Alton; "Notes on the Fertilization of Some North Australian Plants," by N. Holtze; "Classification of Eucalypts based primarily on the Characters of the Fruit," by J. G. Luchmann; "A Statistical Account of Australian Fungi," by D. M'Alpine; "Underground Fungi of Tasmania," by L. Rodway; "Notes on the Flora of Bathurst," by W. J. Clunies Ross; "On the Copper Plant (*Polycarpaea spirostylis*)" and "Notes on the Sacred History of Gingko," by S. B. J. Skertchly; "Questions concerning the Temperature of Plants," by W. Soutter; "Suggestions for a New Classification of the Eucalypts" and "Host Plants of Some Australian Loranths," by Ralph Tate; "The Algæ of Victoria," by H. T. Tisdall; "Some Notes on the Marsupial Brain," by J. F. Flashman; "The Transplantation of the Recurrent Laryngeal Nerve," by T. F. McDonald; and "Some Observations on the Flowers of the Order Prolacæ," by J. Shirley.

E. Geography.—This section was presided over by Sir James Hector, a past president of the Association and chancellor of the New Zealand University, who also holds the place of director of the Geological Survey of New Zealand. The subject of his address was "Submarine Geography." Since their last meeting, he said, the results of the exploring expeditions equipped by the munificence of the late Sir Thomas Elder and Mr. Horne had been made public, and the wonderful expansion of our knowledge of central and western parts of the continent obtained through the intrepid journeys would greatly assist the material development of the vastly rich but hitherto neglected interior area of West Australia. Another feature of great promise to the future advance of geographical discovery in the more difficult parts of the Australian continent was the steady extension of the "artesian-well" system into the arid areas of the interior, where the absence of water had not only prevented the settlement of the country, but even its exploration, and had caused the loss of many brave and enthusiastic pioneers under circumstances of intense personal suffering. When the sources of underground-water circulation were fully comprehended and utilized, both exploration and occupation of large and almost unknown areas would become possible. After dealing with geographical researches conducted in different parts of the world, he said the crowning event that had absorbed the interest of geographers since

the last meeting was the successful achievements of Nansen. The scientific results of this wonderful venture had not yet been published, but two remarkable advances in geographical science were announced; (1) That the north polar ocean was not a shallow sea, with scattered islands, distributing icebergs, but a profound ocean basin; (2) that there were definite movements of the great ice cakes, and they crossed, and did not merely circulate round the pole. After discussing at length the many phases of the subject of submarine geography, the speaker said the practical use of a more extended study of submarine geography was undoubted. By gaining a familiarity with the geography of the sea bottom, such as they had with the land surface, the laying of telegraph cables would be less liable to encounter failure.

Subsequently the following-named papers were read and discussed before the section: "Sixty Years' Progress of Geographical Discovery, 1837-'97" and "Over Land and Sea: Dr. Andree's Aërial Voyage to the North Pole," by A. E. Macdonald; "Suggestions for the Continuation of Detailed Explorations of Central Australia," by W. H. Tietkens; "The Discovery of New Guinea by Antonio D'Abreu," by J. R. MacClymont; "Australian Oceanography and the Determination of Heights by Other than Spirit-Level Methods," by T. W. Fowler; and "Picturesque Tasmania," by Alexander Morton.

F. Ethnology and Anthropology.—A. W. Howitt, who for many years had been Secretary for Mines in the colony of Victoria, presided over this section, and delivered an address "On the Origin of the Aborigines of Tasmania and Australia." He said that the level of culture in the Tasmanian aborigines, apart from a consideration of their customs and beliefs, was best indicated by their weapons of war and implements, the former consisting of a thin pole, hardened and pointed in the fire, and a club, which was used also as a missile; while, as to their implements, flints chipped on one side were used for cutting and scraping, and were held in the hand without a handle for chopping. The aborigines of Australia stood on a somewhat higher level, being better armed and having ground and polished stone axes fixed into handles. Moreover, while the Tasmanian savages had only a rude raft made of bark tied together, the Australian aborigines had the bark canoe which could cross wider stretches of water than the catamarans of the Tasmanians. The Australian might, he thought, be said to represent hunting tribes of the neolithic age. He went on to say that it had been generally assumed that the ancestors of both the Tasmanians and Australians must have reached their habitats by means of canoes or ships, but there was but little direct evidence that such was the case. On the contrary, however, such a theory, which implied that the savages here were the degenerated descendants of people acquainted with navigation, was negatived by all they knew of their social and tribal customs. After drawing a number of conclusions from ascertained facts, he said that if his inferences were sound it would follow that the navigation of the primitive Tasmanians must be placed far back in prehistoric, if not in pleistocene, time at least. The weight of evidence went to show that the Tasmanian aborigines were offshoots of that stock to which the name of Oceanic Negritus was applied. To speak of the Tasmanian as being "Melanesian" appeared therefore to be hardly correct. The primitive Australians, in occupying the continent, must have amalgamated with the autochthonous inhabitants of the same stock as the Tasmanians. The conclusion that the primitive Australians migrated by land necessarily placed their separation from the present stock far back in time, although subsequent to the migration

of the primitive Tasmanians, while yet before that of the early Melanesians. The early Australian stock might be assumed to have been a low form of Caucasian Melanochroi. This solution, moreover, would connect the primitive Australian and the Dravidians of southern India, not, as some authors had postulated, by the arrival of shiploads of Dravidians in Australia, but by the common descent of both from a parent stock at a time when the state of culture was not higher than that of the socially most backward standing tribes of Australia at the present time.

The following-named papers were then read and discussed before the section: "Pictorial Art of the Australian Aborigines" and "Australian Initiation Ceremonies," by R. H. Mathews; "Some Customs and Superstitions of the Maoris," by Elsdon Best; "Mythology of the Efatese" and "The Oceanic Family of Languages," by Rev. Dr. Macdonald; "The Origin of the Aborigines of Tasmania and Australia," by A. W. Howitt; "The Dialectical Changes of the Indo-Polynesian Languages," by Samuel Ella; "Le Dieu, La Nature, et L'Ame," a translation of which was read by John Fraser; "The Life History of a Savage" and "Notes from New Guinea and New Britain," by George Brown; "Black, Red, and White as Symbols" and "On Some Indian Words of Relationship used by the Australian Tribes," by John Fraser; "A Female Hermit of the South Pacific, with her Song" and "Concerning Unga as a Term for Slave in Rarotong," by W. Wyatt Gill; "Proposal for a Bureau of Ethnology in Australasia," by A. Hamilton; "Ancient Geography of the Maoris," "The Geographical Knowledge of the Polynesians" and "How New Zealand became Inhabited," by S. Percy Smith; "Notes on the Disappearance of Native Races in General, and of Fijians in Particular," by H. H. Thiele; "Tahitian and Hawaiian Tattooing," by Miss Teira Henry; "Vocabularies of the Geelong and Colac Tribes in 1840," by J. J. Cary; "Notes bearing on Natives of the Upper Murchison District, Western Australia," by Alexander Morton; "Wollambi Rock Carvings," by J. Enright; "Australian Cave Paintings and Rock Carvings" and "Old Samoan Amusements, Trades, and Employments," by J. B. Stair; "The Murchison Blacks of Western Australia," by Alexander Morton; and "Syllabic Characters on a Cave Painting on the Glenelg River, N. W. Australia," by John Campbell.

G. Economic Science and Agriculture.—The presiding officer of this section was R. M. Johnson, the Statistician and Registrar General for Tasmania, and the author of a "Systematic Account of the Geology of Tasmania." He chose as the subject of his address "Comparative Share of Consumable Wealth actually appropriated or absorbed by the Various Agencies engaged in its Production." He said that the term "wealth" was the principal source of confusion in all social and economic questions. The manner in which the term should be used or interpreted depended entirely upon the nature of the question with which the generic word wealth was brought into relationship or conjunction. Owing to the backward state of economic science as compared with the various branches of natural science, the phrase "the wealth of a country" covered widely divergent conceptions. The statistician's wealth of a country might mean either private wealth or public wealth, or both. In any case, it rarely embraced more than one third of the real monetary value of the total wealth in exchange of the economist, and certainly seldom more than 2 to 3 per cent. of the corresponding monetary or exchange value of the total capital of the true wealth in exchange of the economist. It altogether

excluded the principal primary source of all wealth in exchange—namely, the existing productive personal services of man. The speaker then read statistics showing the corresponding wealths of the United Kingdom, New South Wales, and Tasmania, regarded first as the product of anterior labor agencies (fixed capital), and second, as the product of anterior and current labor agencies. Wealth in consumption was next dealt with, and the speaker proceeded to explain the laws ruling the distribution and consumption of wealth. He displayed in tabulated form the relative value of physical energy exerted by the various agencies engaged in the production of consumable wealth, and from this it appeared that, ignoring the claims of intellect and ability, and reserving the mere physical forces devoted to the production of consumable and other forms of wealth, the contribution of the wage earners amounted only to 30.52 per cent. of the whole of the necessary energy required to produce that volume of consumable wealth which would yield each class and individual that standard of living and comfort to which they had been accustomed. Another table showed the share of national income appropriated or absorbed by the various agencies employed in the production of consumable wealth. From this he argued that, so far from the capitalist class being enriched at the expense of the wage earner, the very opposite is the truth; for, instead of a reward being allotted in proportion to his share of energy contributed, it has been increased fully 100 per cent., energy expended being only 30.52 per cent., while his share of rewards represents 69.11 per cent.

The following-named papers were read and discussed before the section: "The Making and Improvement of Wheats for Australian Conditions: Details of the Work, its Aims, and Matters of Interest connected with it," by W. Farrer; "Applied Entomology in Western Australia," by C. Fuller; "Bacteriology in Relation to Australian Dairying," by M. A. O'Callaghan; "Notes on Rust in Wheat," by E. M. Shelton; "Graminæ of Western Australia," "Salsolacæ of Western Australia," and "The Supposed Poisonous Plants of Western Australia," by F. Turner; "Democracy and the Voice of History" and "The Advantage of a Federal Union," by W. Jethro Brown; "Propagation of Fruit Trees," by A. H. Benson; "The Practical Application of Economics," by Alfred De Lissa; "Federation and Responsible Government," by A. B. Piddington; "Wine Culture in New South Wales," by F. B. Kyngdon; "Milk Analysis in its Relation to the Butter and Cheese Industries," by H. W. Potts; "Farmers' Weights and Measures," by Henry Lord; "Farmers' Unions and Conservation of Forests" and "Forestry in New South Wales," by W. S. Campbell; "The Queensland Tick: How its Progress Southward might be prevented," by J. P. Dowling; "State Aid to Agriculture," by H. L. E. Rutlning; "Some Thoughts on Social Evolution," by J. C. Corlette; "The Federation of British Australasia," by J. T. Walker; "An Introduction to Political Economy," by Sir R. C. Baker; "Economic Feeding of Working Horses," by T. U. Walton; "Criminal Responsibility," by Sir Samuel W. Griffith; and "The Pine Trees of New South Wales," by R. T. Baker.

H. Engineering and Architecture.—This section was presided over by A. B. Monierieff, who has control of the construction and maintenance of railways, and also the water conservation in the province of South Australia. His address was on "Notes on Some Recent Engineering Experiences." In opening, he discussed the change that had taken place in South Australia in the carrying out of large Government works by contractors, as compared with

the carrying out of similar work by the Government Department of Public Works, as was formerly the case. He referred to the construction of railways, waterworks, and other large national undertakings. He contended that the present method was beneficial to the workmen, economical, and satisfactory as regarded the character of the work. He was not, he explained, treating the question from a political or social standpoint, but merely with a view to the engineering points involved. He gave a statement of the cost of some departmental manufactures, especially water pipes, and said that the Public Works Department was now making all the cast-iron pipes and all the brass work required in South Australia by the Government. The result was, he contended, satisfactory to the employees, and satisfactory, in the matter of price, to the public. Mr. Monierieff then dealt with the question of the carrying out of some of the deep-well bores for artesian water which had been undertaken by the Government department. Referring to the relation of this water supply to that from the great central Australian basin, he said there was no proof of any connection between the central Australian artesian system and that which extended over the head of the Great Australian Bight. He went on to give a description of the electric lighting of the beacons for navigation purposes of the Port Adelaide river. In conclusion, he strongly advised the establishment of some system for recording the rates and prices of work throughout Australasia, in order that each Government might be in a position fairly and justly to compare the prices of similar work in different places.

The following-named papers were then read and discussed before the section: "The Commercial Conditions governing Railway Extension in Australia," by C. O. Burge; "Notes on the Principles to be adopted in constructing Unballasted Lines of Railways," by H. Deane; "The Rapid Erection of an Iron Viaduct for Railway Purposes in New South Wales," by Walter Shellshear; "On Narrow-Gauge Tramways," by F. Baek; "Architecture and the Allied Arts in New South Wales," by J. B. Barlow; "A Review of Some of the Conditions of Building Construction and Requirements in Sydney, Past and Present," by G. Allan Mansfield; "Some Remarks on Details of Hospital Construction and Lay Management," by C. E. Owen Smyth; "The Ornamental Treatment of Iron and Steel in Building Work," by J. Naugle; "The Recent Fire in Melbourne," by John Sulman; "Coal Mining in New South Wales," by J. H. Ronaldson; and "The Grotesque in Modern Development of the Picturesque," by Howard Joseland.

I. Sanitary Science and Hygiene.—The presiding officer of this section was Allan Campbell, of Adelaide, South Australia, whose address treated of "Some Aspects of Public Health Legislation in Australia." He divided the subject into three parts, and dealt with the questions: 1. How far public hygiene claims attention from our legislators. 2. What Australia on general lines has accomplished in the direction of public hygiene and sanitation. 3. What remains to be done, and the lines on which immediate legislation should run. He declared that the history of hygienic progress during her Majesty's reign showed a record of achievement unparalleled in any previous reign. Public hygiene could have no existence without legislation, and it was therefore necessary to address legislators and plead for an advance throughout Australia. Referring to the compulsory element in health legislation, he pointed out that a strong element of compulsion ran through much of Australian legislation even for economic purposes, and where the object of legislation was to bring in conformity to natural

law, and not artificial law, the element of compulsion had a great deal more to recommend it. As a general conclusion it might be said that the people's representatives could not remain indifferent to the claims of modern hygienic science on behalf of the people, nor could they remain any longer unconscious of the power they possessed to pass intelligent and efficient laws against public enemies so subtle, so active, and so mighty. In dealing with the second part of his subject, the speaker referred to the larger works of a hygienic character that had been carried out in several of the colonies. He pointed out the influences at work throughout the colonies tending toward the creation of a better ideal of public hygiene. Among these he instanced the mingling of health topics in our various systems of public education, the existence of centers of instruction established by the St. John's Ambulance movement, the labors of scientific associations and popular health societies, the dissemination of useful information by the press, and the organization of several forms of charity, especially hospitals and training institutions for nurses. All these were indications of a preparedness to advance in numerous directions. In discussing the question of what lines should be taken by coming legislation, he said that the crucial point of a health bill lay in its definition of the powers and responsibilities of the central authority on the one hand, and those of the local authority on the other. He dwelt on the value of well-equipped bacteriological laboratories, and said that no hesitation should mark the steps of each Government in providing a laboratory for itself. He expressed the conviction that an immediate step in public-health legislation should be the adoption of the control and administration of infectious diseases by the state authority.

Subsequently the following-named papers were read and discussed before the section: "A New Method of preparing and preserving Anatomical and Pathological Tissues, with Special Reference to Color Preservation," by Sydney Jamieson; "A Brief Sketch of the History of Smallpox and Vaccination in New South Wales," by Frank Tidswell; "Tuberculosis and the Public Health," by G. Lane Mullins; "The Epidemiology of Lepa in Australia," by J. Ashburton Thompson; "The Scientific Basis of the Prevention and Treatment in Consumption," by W. Canac Wilkinson; "Vaccination in Australia," by E. Rougier; and "Death Certification," by G. E. Rennie.

J. Mental Science and Education.—This section was presided over by John Shirley, District Inspector of Schools, Brisbane, Queensland, who chose as the subject of his vice-presidential address "The Influence of English History upon English Literature." He said: The history of England might be represented graphically by an irregular wavy line, whose crests would depict years of victory and expansion, and whose furrows would show periods of loss and civil conflict and of depression. If they inserted the dates on these historical summits, it would be found that periods of great national success were synchronous with times of great literary activity, and that when the heart of the nation was stirred to its depths by threatened peril, only to be successfully avoided by mighty effort and sacrifice, a few master minds of the age, unconsciously, and almost Divinely inspired, gave tongue in prose or verse to the joy or thankfulness or exultation felt by the mass of their fellow-countrymen, though inarticulate in all but the selected few. Occasionally the genius was born after the national uplifting had ceased; or, still worse, before the nation was *in excelsis*; but, like the Hebrew prophet of old, when once the message had been given, it was delivered, whether in season or out of season, and

whether the outcome were acclamation or persecution. Occasionally, in times of misery the groans of the oppressed were voiced in the lamentations of a Piers Plowman, but the agony, however sincerely expressed, was seldom accompanied by talents above mediocrity. Again, both in history and literature there were periods of dull contentment or of national high living when fervor and patriotism were obscured and the Philistine was abroad in the land. The peaceful and comparatively prosperous reign of Henry VIII was also the era of Protestant reformation, and with the interminable controversies on the subject of religion came a quickening of the national intelligence and an extension of the benefits of education. New aims, new desires, new aspirations, needed once more the inspired voice to give them utterance, and under the Tudor sovereigns came the dawn of a glorious age, which, reaching its apogee under the last of the race, had been called the Elizabethan period. Discontent came in with the Stuarts, and the volcanic upheavals of a civil war choked the stream of genius which had flowed so freely in the sixteenth century. After England had crushed the power of Louis XIV, this period of victory and exaltation was as favorable to the production of genius as the Elizabethan age, and the times of Queen Anne could boast of Swift, Pope, Addison, and Steele. Under the last of the Stuarts the newspaper began to assume its modern form. To this period might also be referred many of the stages in the development of the modern novel. The literature of the present day was a direct continuation of the Georgian era, and it was questionable whether the standard of merit was being maintained. If there had been a time during the present century when the minds of Englishmen were in accord, it was during the late period of storm and stress when Germany, a blood relation, and a supposed friend, took advantage of the difficulties to do them an unfriendly act, yet the situation evoked nothing better than Austin's pitiful poem—a possible sign that the inspiration which had been created by the long struggle with Napoleon had spent itself, and a literary decadence had set in.

The following-named papers were read and discussed before the section: "The Relation of Ethics to Political Economy," by Thomas Rosely; "Idealism in Ethics and Religion," by A. J. Griffith; "English Theories of Individual Freedom," by James Hill; "The Psychology of Attention," by N. J. Cocks; "The Place of Museums in University Education," by Miss L. Maedonald; "The Permanent Place of Literature in Education," by C. J. Prescott; "Socialism in Education," by P. F. Rowland; "The Function of Classical Study in Education," by F. V. Pratt; "Financial Aspects of Secondary Education," by P. Ansell Robin; "Is there a Science of Education?" by Mrs. W. L. Atkins; "A New Educational Experiment," by Miss M. Hodge; "Teaching *versus* Education," by Miss H. Newcomb; "The Rationale of Miraculous Cures in Modern Days," by S. T. Knaggs; "Evolution and Sociology," by T. F. Maedonald; "Technical Education in England, Germany, America, and New South Wales," by Prof. Selman; and "Friedrich Nietzsche and his Relation to Schopenhauer and Wagner," by C. J. Brennan.

Final Session.—The final session of the association was held on Jan. 14, when the reports of the various committees were received. Of these perhaps the most important was that of the recommendation committee recommending (1) that the New South Wales Government acquire the quarry of prismatic sandstone at Bondi with a view to its preservation as a remarkable geological occurrence; (2) the reappointment of the committee on the

systematic conduct of the photographic work of geological surveys; (3) the appointment of a seismological committee for the year 1900; (4) the appointment of a committee to secure magnetic surveys at the extreme southern portion of New Zealand; (5) that the committee be reappointed to continue the investigation of the mineral waters of Australia; (6) that the New South Wales Government be recommended to complete the borings at Funafuti, while the boring apparatus remains at the island and the bore remains open; (7) that a committee be appointed to draw up a list of works and papers relating to Australian flora; (8) that the Government of New Zealand equip Timaru with approved seismological instruments, to be placed in charge of Mr. George Hogben, and that a contribution of £25 be granted toward carrying out that object. All of which were adopted. The usual votes of thanks were passed, and the sessions declared adjourned. More than 300 members were present at the meetings, and 269 papers were presented.

Next Meeting.—The meetings of the association are naturally held in the different colonies in succession, and in order that ample time may be had for preparation the place of meeting is usually designated at least two meetings in advance of the gathering. In 1900 the meeting will be held in Melbourne, Victoria, and in 1902, by rights, the meeting should be held in New Zealand, but as the representatives of that colony asked for postponement, Tasmania was selected and the place named was Hobart. For the presidency of the Melbourne meeting R. L. J. Ellery, late Government astronomer of Victoria, was chosen. C. R. Brackett, Government analyst of Victoria, was elected local treasurer, and W. Baldwin Spencer and E. F. J. Love, local secretaries.

ASTRONOMICAL PROGRESS IN 1898. As regards important discoveries in astronomy, the present year may be said to equal any of its predecessors since the discovery of the fifth satellite of Jupiter.

The Sun.—Although since the invention of the telescope the Sun has been subjected to most rigid observation, yet in regard to his physical structure—the cause of his light, and heat, and spots, and faculae, and pores, and prominences, and coronal atmosphere, or whether he contains any solid matter at all—we know absolutely nothing. There is not an astronomical fact on which to base the oft-repeated theory, that eighteen million years hence he will cease his shining and become a worn-out world. Neither is there an astronomical fact to prove that his heat was ever less intense than in our age.

To obtain the Sun's horizontal parallax has always been considered the grandest problem that man ever attempted to solve. Though its true value has doubtless been obtained within narrow limits of error, yet it is not certain that its exact value has been ascertained. It is now assumed to be $8.80''$, the mean of its determinations by various processes, including the transits of Venus. Adding to or subtracting from this value the minute amount of only $0.01''$ decreases or increases the computation of the Sun's distance from the Earth to the extent of 105,000 miles.

The following statistics regarding the Sun, though probably not exact, are the most reliable that can be given now. They are based on the assumption that his parallax is $8.80''$. His mean distance from the Earth (always reckoned from center to center) is 92,885,000 miles, with a variation between Jan. 1 and July 8 of 3,100,000 miles, owing to the ellipticity of the Earth's orbit. His angular diameter = $32' 4''$, and his linear diameter

886,400 miles, or 109.3 times that of the Earth. The mean time of his rotation on his axis is about 25.38 days, but in different latitudes the time of rotation differs, being twenty-five days at his equator, and increasing to 27.5 at latitude 45° north or south. Authorities differ widely as to the temperature of his surface. The lowest estimate (probably much too low) is $18,000^\circ \text{F.}$ or $10,000^\circ \text{C.}$ Until the Sun's parallax is exactly ascertained it is incorrect to say that planets are so many miles from the Sun; it should be said they are so many times the Earth's distance. When this was assumed to be 95,000,000 miles, the computed distance and volume of every heavenly body (the Moon excepted) was too great.

At the eclipse of the Sun on Jan. 21, 1898, which was total through India, and was observed by a large number of astronomers, many important observations and discoveries were made, as at every station occupied by astronomers the sky was clear. At this writing only brief newspaper reports have been published, the more extended ones being reserved for publication in "An Eclipse Volume." The great southwest ray which attracted so much attention, as photographed by Mrs. Maunder, extended to six diameters of the Sun, or a distance of 5,188,400 miles. This is the longest coronal streamer ever photographed, though Prof. Langley claims to have seen one from Pike's Peak at the eclipse of 1878 extending to a distance of nearly 10,000,000 miles.

The corona is a magnificent appendage or halo surrounding the Sun, whose diameter is at least 10,000,000 miles, seen only during the few moments of total eclipse. Near the Sun it appears like striated filaments, some radial and others tangential, its circumferential portion ending in a diffused light. While the prominences are red, the corona is of silver whiteness. Recent spectroscopic analysis of the coronal light gives a faint continuous spectrum, showing it to be from solid matter; also an additional spectrum of bright lines emanating from glowing gases, notably from hydrogen. In the green there is a double line, which for a long time was without a known representative on the Earth, and was called the 1474 line before it was found to be double. Finally it received the name helium. This is now found to be a widely distributed terrestrial element, though in very minute quantities. One of the lines is now found to coincide with a dark iron line in the solar spectrum. The substance producing the other line has not been found on the Earth. It has received the name coronium.

Mercury.—Astronomers are not in accord on the subject of the alleged markings on Mercury. The weight of evidence, which, of course, is purely negative, is against their reality. Whether, therefore, he rotates in about twenty-four hours, as many suppose, or in eighty-eight days, is still a disputed point, as is also the question whether the real surface of the planet ever has been seen.

Venus.—The remarks above apply also to Venus, a world that, with the exception of the Moon and the newly discovered asteroid DQ, makes the nearest approach to the Earth of any heavenly body. Some astronomers with inferior instruments, using small apertures, claim to see markings of dark streaks similar to those that some see on the planet Mars. On the other hand, astronomers of large observational experience on planetary details, and with telescopes of mammoth size, like those at the Lick and Yerkes Observatories, see nothing at all. We are confronted here with one of the strangest and most inexplicable phenomena within the domain of observational astronomy. The drawings of those who claim to see the markings do not agree

among themselves. Since attention is called to their existence, and drawings of their appearance have been widely distributed among astronomers, it is amazing that our best observers, with powerful telescopes of marvelous perfection, see nothing that others claim to see with small apertures and low powers. Prof. A. E. Douglas, of the Lowell Observatory, at Flagstaff, Arizona, who, with Percival Lowell, is the champion of the theory that the markings have a real existence, and may possibly be canals, says: "I decided long since that in planetary work the greatest efficiency is obtained with the smallest aperture that supplies the required illumination. An inch-and-a-half lens shows the markings on Venus nicely, but they are not so well defined as in a lens of three inches." He further says, in "Monthly Notices of the Royal Astronomical Society" for May, 1898, that he "has had at his command various optical powers on telescopes of 3, 6, 13, 18, and 24 inches aperture, using generally a magnifying power of 150 diameters, and has spent many thousand hours on Venus alone, using the telescope in both normal and reversed positions, which shows that their object glasses and eyepieces are free from fault."

Mars.—Capt. P. B. Molesworth, of Ceylon, has forwarded to the Mars section of the British Astronomical Association a memoir, accompanied by seven very detailed drawings and a map of Mars, as seen by his 9-inch reflector. The results arrived at are the most remarkable yet published. He independently confirms the existence of the fog that covered the north polar region to the extent of 60°, equal to 2,240 miles. He reports on observing 15 to 20 of the lakes seen by others. In addition to the lakes he gives a list of 31 canals he had observed, 8 of which were seen double on various occasions. Something like 50 canals have been recorded as seen by others. As to the origin of the network of the so-called canals, astronomers are not agreed; in fact, many deny their existence. Astronomers are pretty generally agreed that the supposed canals are not canals at all, but dikes thrown up to control the spread of surface water.

The extraordinary discrepancy in the results of many astronomical determinations of the polar compression of Mars is one of the most amazing in the history of astronomical measurements. Sir William Herschel made the compression $\frac{1}{14}$; Kaizer, $\frac{1}{12}$; Main, $\frac{3}{8}$; Young, $\frac{1}{12}$; Barnard, with the 36-inch telescope at the Lick Observatory, $\frac{1}{10}$; Schur, $\frac{1}{7}$; Adams, $\frac{1}{10}$. Daws found none, and on one occasion found an elongation. Arago, from observations of thirty-six years, got the enormous value of $\frac{1}{6}$. The polar compression of the earth is $\frac{1}{290}$, equal to 26½ miles.

Asteroids.—The most remarkable discovery in astronomy since Barnard found the fifth satellite of Jupiter has recently been cabled from Europe. Mr. G. Hitt discovered, on Aug. 13, an asteroid whose provisional number is DQ, having an extraordinarily rapid motion. As computed from observations made on Aug. 14, 23, and 31, it was found that at perihelion the little planet will be nearer the sun than Mars; or, in other words, the perihelion of its orbit lies between the Earth and Mars. This is the only known instance of an asteroid orbit whose eccentricity is such that its perihelion point lies inside that of Mars. This discovery raises anew the question whether the almost microscopic satellites of Mars were not originally asteroids, and also whether, in the coming ages, he may not obtain another. The field of imagination here is wide, and asks if the little fifth satellite of Jupiter may not also have been originally an asteroid, the eccentricity of whose orbit was so great as to cause its aphelion to extend to or beyond Jupiter's orbit.

The following elements of this remarkable member of the asteroidal group have been computed for it: Epoch 1898, Aug. 31.5 Berlin mean time. Mean anomaly, 220° 14' 3.7"; node to perihelion, 178° 28' 26.2"; longitude of node, 308° 48' 53"; inclination, 11° 6' 57.1"; angle of eccentricity, 13° 13' 3.8"; eccentricity, 0.22865; 2,010.131"; mean daily motion, semi-axis major, 1.46057; period, 644.7 days.

At perihelion it approaches within 14,000,000 miles of the Earth. At a favorable opposition, therefore, this asteroid will afford the best opportunity known for determining the Sun's parallax, and therefore the dimensions of the solar system and the diameter of every planet. At this opposition the planet was of about the eleventh magnitude, but when its perihelion and opposition occur simultaneously it will be of the sixth magnitude and visible to the naked eye.

Since the last report, nine asteroids have been discovered, as follow:

NO.	Designation.	Discoverer.	Date.	Name.
428.....	DK	Villager.	Nov. 18, 1897.	Monachia.
	DL	Charlois.	Nov. 9, 1897.	
	DM	Charlois.	Dec. 18, 1897.	
	DN	Charlois.	Dec. 18, 1897.	
	DO	Charlois.	Dec. 18, 1897.	
	DP	Charlois.	July 18, 1898.	
	DQ	Hitt.	Aug. 13, 1898.	
	DR	Wolf.	Sept. 11, 1898.	
	DS	Wolf.	Sept. 11, 1898.	

Jupiter's Satellites.—Prof. A. E. Douglas, in "Astronomische Nachrichten," has given a description, accompanied by an illustrated sheet of the markings on Jupiter's third satellite, made at the Lowell Observatory, at Mexico, and Flagstaff with the 24-inch Clark refractor. They much resemble those alleged to be visible on Mercury, Venus, and Mars. From these markings he calculates the rotation period to be nearly one week, being about the same as the period of its revolution around Jupiter.

After a reduction of the observations on the fourth satellite was begun he met with this curious fact: that either the satellite rotates in one half of its period of revolution, or the detail is symmetrical with respect to its axis. From the motion exhibited from day to day by the more conspicuous points of its detail, he judged the latter to be the case. He also made prolonged observations of all the satellites except the fifth. From observations of the first satellite, he concludes that the rotation period is 12^h 28^m 48^s. Its axis is assumed to be perpendicular to the plane of its orbit. His micrometer measurements give a very elliptical form to the first satellite, which would indicate a period of rotation much shorter than that given above.

Saturn.—The following is a brief *résumé* of discoveries made on this interesting planet, notably at the Juvisy Observatory, France, in 1897 and 1898, by MM. Flammarion and Antoniadi: The belt north of the equator is always seen double by them. The dark spots discovered on the belt in 1891 by Stanley Williams were frequently seen at Juvisy in 1896, 1897, and 1898 by both observers and by persons who knew nothing of their existence. Few astronomers, however, have been able to see them. No trace of Encke's division of the outer ring (A) was seen by them, though assiduously searched for; but Cassini's division was easily seen all round the ring. Extensive observations were made on the middle ring (B), but little detail was observed save the convincing evidence that its inner edge is not a real edge toward the inner ring (C) or the gauze ring. The planet has lately been better situated for observation than for the past fifteen years, and the ring system is open the widest possible to our line of sight. The observers at Juvisy declare that the

ring system is always eccentric to the globe, nearer west than east—that is, the eastern vauity is greater than the western. Two sets of accordant measures gave 4.3" for the distance separating the planet's limb from the inner edge of ring B, and 4.0" for the corresponding distances of the west. Several observers declare they have seen the middle ring divided as distinctly as the visibility of Eneke's division of the outer ring. By one astronomer the middle ring was seen divided into three parts. The inner ring was exceedingly faint, but was seen separate from ring B by a distinct shading. The planet was seen clearly through the crape ring (C), and the shadow on the globe sharply defined with no irregularities.

Planetary Magnitudes.—At length we doubtless have the diameters of the planets and their satellites more accurately determined than has heretofore been possible. Dr. E. E. Barnard, at the Lick Observatory, made an extensive series of micrometrical measurements, lately published, of all the planets and some of the satellites. They were all made with the 36-inch telescope, except those of Mercury, which were made while he was transiting the Sun with the 12-inch telescope contracted to 4 and 5 inches. To be as brief as possible, their dimensions are given in miles only: Mercury, 2,765 miles; Venus, 7,826; Mars, equatorial, 4,352; Mars, polar, 4,312; Mars's spheroidity, 40; Jupiter, equatorial, 90,190; Jupiter, polar, 84,570; Jupiter's spheroidity, 5,620; Saturn, equatorial, 76,470; Saturn, polar, 69,780; Saturn's spheroidity, 6,690; outer diameter of ring A, 172,610; inner diameter of ring A, 150,480; outer diameter of ring B, 145,990; inner diameter of ring B, 110,070; space between rings A and B, 2,245; inner diameter of crape ring, 88,190; Uranus, diameter, 34,900; Neptune, diameter, 32,900. *Satellites:* Jupiter No. I, 2,452 miles; Jupiter No. II, 2,045; Jupiter No. III, 3,558; Jupiter No. IV, 3,445; Saturn's Titan, 3,720. *Asteroids:* Ceres, 485 miles; Pallas, 304; Vesta, 243; Juno, 118.

Stellar Parallax.—Dr. Gill, from observations made at the Cape of Good Hope Observatory, concludes that the parallax of Alpha Centauri is certainly between 0.74" and 0.75", and that of Beta Orionis (Rigel) is not greater than 0.01". He finds that of Alpha Gavis to be 0.015". It is perhaps needless to notify the reader that but little credence can be given to measurements so minute as the last. M. Höffler finds the mean distance of Beta, Gamma, Delta, Epsilon, and Zeta Ursæ Majoris (five of the seven stars forming the Great Dipper) is four million times that between the Earth and the Sun; and that Epsilon is forty times brighter intrinsically than the dog star.

Proper Motion of Stars.—Dr. Capteyn recently discovered a star that has a larger proper motion than has Groombridge 1830, which heretofore has been considered the most rapid known, and has been called the "runaway star." Capteyn's star is in the Cordoba Zone Catalogue, where its place is given as right ascension $5^h 6^m 40.61^s$; declination south $44^\circ 58.176'$, for the epoch of 1873. He deduces an annual proper motion for it of 8.707", while that for Groombridge 1830 is but 6.723", or nearly two seconds greater. The star is of the ninth magnitude, much fainter than the Groombridge star.

Discovery of Nebulae.—Since Dr. Lewis Swift, with his astronomical instruments, removed from the Warner Observatory, at Rochester, N. Y., to the Lowe Observatory, at Echo Mountain, California, he has devoted his time to the discovery of nebulae and comets. In the past three and a half years he has discovered 6 comets, and more than 300 nebulae, nearly all southern. The "Astronomische Nachrichten," No. 3517, published at Kiel, Germany,

contains a catalogue of 243 of the nebulae discovered at Lowe Observatory, with a description of each, and several notes. They are mostly very faint. A few are very interesting. From his low latitude, $34^\circ 20'$ north, he has a great advantage over most other northern observatories. Besides this, the number of clear nights is out of all proportion to those enjoyed elsewhere. In July, 1897, there were 31 clear nights, and in August 29, and during the year 299 nights were clear, 25 partly clear, and 41 cloudy. One of the nebulae is a nebulous star of the eighth magnitude in the center of a round, sharply defined nebulous atmosphere. Two were line nebulae, which must be either rings or flat disks, with their edges parallel to the line of sight. The ring nebula in Lyra is perpendicular to the line of sight. This remarkable object was discovered in 1779 in France, by Darquier. The spectrum shows it to be composed wholly of gas, without a star. Between us and it or beyond, we know not which, is a central star of unimagined faintness. On it and within it the great Lick telescope shows 11 stars besides the central one.

Astronomical Constants.—The exact value of the astronomical constants—precession, aberration, and nutation—has ever been disputed, and lately the question has assumed the dignity of international importance. For many years prior to A. D. 1900 the value given in the "American Nautical Almanac" to precession of the equinoxes was $50.2411'' + 0.0002268t$, for nutation $9.2231'' + 0.000009t$, in which t is the number of years since A. D. 1800, and to aberration $20.4451''$. As the evidence appeared strong that they were slightly erroneous, Prof. William Harkness, who is now its director, has for the "Almanac" for A. D. 1900 changed those constants as follow: Precession to $50.2482'' + 0.00022t$, nutation to $9.21''$, and aberration to $20.47''$, and mean obliquity of the ecliptic to $23^\circ 27' 8.26''$. Aberration is the displacement of a star by the Earth's orbital motion combined with the motion of light. It therefore follows that if the velocity of light be known, and the amount of aberration with exactness, the most elementary mathematical calculation will determine not only the rate of motion of the Earth in its orbit, but its circumference also and the radius, and finally the solar parallax itself. The velocity of light is considered to be accurately known; and were the value of the aberration equally trustworthy this method of obtaining the parallax of the Sun would be one of the most exact and convenient we possess. Unfortunately this, like all the other processes for obtaining the Earth's distance from the Sun, has a slight uncertainty, which until recently was supposed not to exist. Prof. Dobereck, of the Hong-Kong Observatory, has introduced a very extraordinary element of doubt into the problem by discovering that the value of the aberration constant decreases with the decrease of the magnitudes of the stars observed. For instance, when the average magnitude of the stars observed was $4\frac{1}{6}$, the constant came out 20.639"; with stars of $5\frac{1}{6}$ magnitude it became 20.430", and with $6\frac{1}{6}$ it was only 20.385". The almost inconceivable variation, as indicated above, entails a vast difference in the Sun's distance from the Earth, showing that it may be either 93,641,600 miles, 92,693,300 miles, or only 92,489,100 miles. Prof. Dobereck is of the opinion that the constant of aberration thus found to depend on the magnitude of the stars observed may reconcile the differences in the values obtained at different observatories.

Variable Stars.—The discovery of stars that vary in brightness has made much advancement during the past few years. The number of astronomers, and especially of amateurs, engaged in their detection and the law of their variation is very

large. As an observatory and expensive instruments are not required, it has become a delightful pastime for amateurs, and consequently the catalogue of known variables has assumed immense proportions. The number now known amounts to several thousand. The cause of their variability has given rise to much discussion. That the majority vary from eclipses, total and partial, by dark satellites, is the most rational theory that has been advanced. The variations are from a fraction of a magnitude to invisibility, except with powerful telescopes. The most surprising of all is the finding of 310 variables in the cluster Messier 3; one ninth of all the stars in the cluster vary in brightness. Prof. Pickering records the discovery of 3 variables in the southern sky, their fluctuations being detected by examination of their spectra. At the Cape of Good Hope Observatory 16 new variables were lately discovered. Stanley Williams, in "Astronomische Nachrichten," Nos. 3440 and 3450, gives a list of 13 that thus vary. Mr. Espin announces the variableness of a star in right ascension for A. D. 1900, $20^h 29^m 55^s$; declination north, $54^\circ 57'$. It varies from ninth to fourteenth magnitude, or practically to invisibility. R. Carinae is a very interesting variable through wide limits, though not in a very short time, like many others. According to Prof. John Tebbutt, of Windsor, New South Wales, it varies from a pretty bright star to complete invisibility without a telescope. In four months and fifteen days it decreased from the 4.9 magnitude to 9.3. It is exceedingly improbable that the fluctuations of this star can be caused by an eclipse of one star by another.

The photometric observations of U. Pegasi show that a principal maximum alternates with a secondary minimum, the light curve closely resembling that of Beta Lyra. The period is $8^h 59^m 41^s$, which differs from Dr. Chandler's value of $5^h 32^m 15^s$; but it is pointed out that 16 half periods are nearly equal to 13 of Chandler's, each being just less than three days. Hence, Omega Centauri 19, with a period of $7^h 11^m$, now displaces U. Pegasi as having the shortest period known.

Celestial Chemistry.—Within the past twenty-five years the splendid discovery of spectroscopy, aided by great improvements in photography, the increased size of telescopes, and the adoption of electric appliances, has given rise to what may be called a new astronomy. The uses of the different varieties of spectroscopes are many and varied. There are four forms of the instrument—the prismatic camera; the slit spectroscope, used with the telescope as an analyzer; the slit spectroscope, used without a telescope, as an integrator; and an analyzing spectroscope, used without a slit.

During total eclipses of the sun the spectroscopy has solved several disputed points, notably the cause of the "flash," or reversing layer, as Prof. Young, its discoverer, calls it—a beautiful phenomenon which appears just at the beginning of totality, when the rapidly narrowing strip of continuous spectrum is invaded by a series of bright points, which shine for an instant as a crowded series of bright little colored arcs after the continuous spectrum has gone, and disappear, in their turn, a second and a half later. The same phenomenon, but in opposite order, is seen at the end of totality. There is no doubt, says Prof. E. W. Maunder, of London, as to the meaning of that short-lived phenomenon. It represents a region of glowing gas, extending to a height of about 700 miles above the solar surface. So much seems clear. The debatable point is the relation of these gases to the dark lines which are found in the spectrum of the solar disk. The literature of the subject is extensive, involving the discussion of two theories, which can not be dealt with here.

Celestial Photography.—At the Meudon Observatory, France, the nebulae are being photographed by a reflector of one metre aperture and three metres in focal length, which reveals some singular and unexpected results. The ring nebula in Lyra was taken with an exposure of twenty, thirty-five, and fifty-five minutes. The nebulosity in the interior increases in brightness and density with the length of exposure, while the diameter of the ring increases but very little. An exposure of fifty minutes on the planetary nebula in Aquarius shows an appendage surrounding it resembling the ring of Saturn. A photograph of the Pleiades shows additional streamers of nebulosity.

In "Monthly Notices of the Royal Astronomical Society," No. 7, 1898, Isaac Roberts, the distinguished celestial photographer, has a seven-page article on the photograph of the nebulae in the Pleiades and surrounding stars, with an exposure of ten hours, accompanied with two half-tone illustrations. The long exposure of course overexposed the brighter stars, but it brought to light many thousands of stars never before revealed to human eyes. It shows the Merope nebula and the others heretofore seen by the telescope, and additional to these it shows numerous nebular streaks invisible with the telescope, and, what is singular if they are not results of some defects in the camera, they are all nearly parallel with each other. He is of the opinion that the bright stars, as we see them, have no connection with the nebulae, but are simply depicted on the nebulae, which may be either beyond the stars or this side of them. He is also of the opinion that the streaks have no connection with the flocculent nebulae, but are nebulae seen nearly edgewise. It seems incredible that so many flat-disk nebulae should, on so small an area of the sky, have their edges so nearly parallel to our line of sight. In his description of this remarkable admixture of nebulae and stars he makes no mention of the new Merope nebula seen by mammoth refractors. The old Merope nebula is of the streaky character, with the star (a naked-eye one) in the center of the denser part. Electra does not seem to be involved in nebulosity, but there is a streak of strong nebulosity extending $14'$ of arc from it. Aleyone is involved in nebulosity, both of the streaky and flocculent kinds, the streaks crossing those of the Maia nebula without any apparent disturbance or commingling.

During the total phase of the eclipse of the Sun Jan. 21, 1898, many photographs of it all along the line of totality were taken, by comparison of which many details of progressive changes were seen. The great southwest ray on one plate extended almost to its edge, three diameters from the Sun's limb, or nearly 2,750,000 miles in length. An attempt was made to photograph the zodiacal light, but nothing was depicted on the plate after an exposure of two and a quarter hours. Many photographs of the Milky Way and other regions rich with stars, not visible from northern countries were taken. One of the remarkable features of the scheme was the immense size of the field the Dallmeyer lens gave, which covered fully 40° in diameter, the first time, says Mr. Maunder, that anything like so wide a field without distortion was ever made. It was a little stigmatic lens only $1\frac{1}{2}$ inch in diameter and 9 inches in focal length. It was also used on the corona during the total phase of the eclipse. The exposures of the star fields were four and a half hours each.

Mr. Loewy's "Annual Report of the Paris Observatory" for 1897 has lately been published, and, as usual, contains much interesting and instructive information in regard to the work carried on at that observatory. The great equatorial Coudé has

been chiefly employed in taking negatives of the Moon for the Photographic Atlas of her surface that is now being published.

The first part of the task allotted to the observatory in connection with the photographic construction of the great catalogue of stars is practically completed. Of the 1,260 plates that fell to its share, only a few remain to be taken, and these only for some which, from accidental causes, were rejected during the progress of the work. The rectilinear co-ordinates of the stars to the eleventh magnitude have already been determined on 429 of these plates. Attention is called to an admirable heliograph of the crescent Moon when 44^d 6^h 24^m old, which never has been surpassed.

Photographic Spectra.—After many unsuccessful attempts to photograph the spectrum of the aurora at the many observatories Mr. E. S. King has succeeded. One plate shows four bright lines, and another two bright lines. Assuming that the lines on both occasions were the same, the four lines have wave lengths 3862, 3922, 4288, and 4964.

A photograph of the spectrum of shooting stars was obtained at the Harvard College Branch Observatory, at Arequipa, Peru, on June 18, 1897. The spectrum consists of six bright lines, the intensity of which varies on different portions of the photograph, thereby showing that the light of the meteor varied as its image passed across the plate. The approximate wave lengths of the lines are 3954, 4121, 4195, 4344, 4636, and 4857, and their intensities are estimated as 40, 100, 2, 13, 10, and 10 respectively. The first, second, fourth, and sixth of these lines are probably identical with the hydrogen lines $H\epsilon$, $H\delta$, $H\gamma$, $H\beta$, whose wave lengths are 3970, 4101, 4341, and 4862. The fifth line is probably identical with the band at wave length 4633, belonging to the spectra of stars of the fifth type, and forming the distinctive feature of the third class of these stars. This is the first time a spectrum has been obtained of a shooting star.

Photography of Meteors.—Meteor trains on photographic plates are of frequent occurrence. Dr. E. E. Barnard, of the Yerkes Observatory, at Williams Bay, Wisconsin, who is authority on celestial photography, says: "For such work it is best to use a short-focus portrait lens, or, where the scale is not too important, a small cheap lantern lens is far more rapid and gives a wider field. This is best attached to an equatorial telescope with clock motion, but good work can be done with a fixed camera, and if two observers are situated several miles apart their parallaxes and, of course, their height in miles above the Earth may be easily obtained."

Star Showers.—Before the volume in which this article appears is published, the fore-runner of the great shower of 1899 will have occurred, and before the volume of 1900 reaches its readers the return of the great meteoric showers of 1799, 1833, and 1866 will also have taken place. It seems, therefore, advisable to go somewhat into detail as to its cause, and what may be expected on its return in 1899.

Prolonged investigation has revealed the fact that shooting stars have their origin in disintegrated comets. They are cold, dark bodies, but in encountering our atmosphere, moving as they do with unimagined swiftness, they are instantly, by friction with the atmosphere, converted into heat so intense that they are instantly burned up. Only while undergoing the process of combustion do they become visible. They are very small, probably not larger than rice grains. Bolides and the fall of meteoric stars have no connection whatever with shooting stars, which never reach the Earth; the atmosphere, acting as a cushion, prevents, especially

during a star shower, a dangerous bombardment. Many millions enter our atmosphere daily and are dissipated into vapor. Each one is a remnant of the tail of some comet. These are called sporadic meteors, to distinguish them from those that fall in showers, of which something like 100 are known, 50 of which have their radiant well established.

The history of the Nov. 13th shower can be traced to A. D. 902 (O. S.). At that time it occurred in October. It is the greatest of them all, and was historically noticed on the morning of Nov. 12, 1799, on the 13th in 1833, and on the 14th in 1866, and it will reappear on the morning of the 15th, 1899. The writer witnessed that of 1833, when it was estimated that 230,000 shooting stars were seen from any one point. The display was visible throughout the length and breadth of the American continent. It was immediately noticed that, in whatever part of the sky they were seen, their trails, if traced backward, would meet like the radii of a circle, at the sickle of Leo, called the radiant. The radiant of the 1899 shower will still be there, or very near it. It is not a point, but an ellipse about five degrees in diameter.

The cause of this shower, briefly stated, is about as follows: In A. D. 902 a large comet entered our system, having a direct motion (west to east), and, passing near the planet Uranus, had its orbit changed to retrograde (east to west), and threw off a long tail, which, after several reappearances and repetitions, formed a ring of comet tails around the sky, so situated that the Earth passes diagonally through it about the middle of every November, producing a light shower of meteors, which lasts as long as the Earth is passing diagonally through it and no longer, five or six hours. On one of its returns, the comet, from some unknown cause, burst, scattering its little particles, called meteoroids, along its path for many million miles. These meteoroids revolve around the Sun once in thirty-three and a quarter years; and as this is not an even multiple of the Earth's revolution, the Earth passes annually through it in a new place, which brings the swarm to the crossing point about three times in a hundred years. The last took place in 1866, and the next will occur on the morning of Nov. 15, 1899. It may possibly be on the 14th, which was the case in 1866, and as the swarm is many million miles long, it is expected that the Earth will pass through one end of it in 1898, and through the other end in 1900. Neither the point where, in the cluster, the Earth will pass through nor which continent will be ahead, so to speak, when the cluster is encountered, can be foretold. It is expected that the middle shower (1899) will far outshine the other two, but unfortunately it will happen in the presence of a full Moon. The reader may ask why this shower always takes place in the morning hours, while the Aug. 10th shower always occurs in the evening hours? The meteoric ring that causes the Nov. 15th display (not the Nov. 27th shower) revolves around the Sun retrograde; the Earth therefore overtakes it on the front side, so to speak, or, in the morning hours, while the ring that produces the Aug. 10th shower, the Persids, moving direct, overtakes the Earth on the rear or evening side.

Prof. Theodor Bredikhine has given, in the "Bulletin of the St. Petersburg Academy," the results of his investigations as to what members of the solar system are responsible for the disturbances in those meteoric systems encountered by the Earth in its annual orbit. He adopts the view that meteoric systems are composed of the fragments of comets which, traveling the interplanetary spaces, have lost a portion of their material. The larger number of meteoric streams examined have resulted from long

disturbances by the Sun. Among these are the Leonids, Quadrantids, Geminids, and Aquarids. The Orionids owe their origin to the perturbations set up by Jupiter, while the Lyrids are due to Saturn.

Messrs. Schaeberle and Colton have succeeded in getting the parallax of a meteor, and if this is correct, its height above the earth is easy of computation. They made the parallax 9.09', and the height of the middle of its path above the Earth 99 miles.

During the Jan. 1st, 1898, shower one observer counted in six hours 109 Quadrantids and 21 others. From observations reported from various places, the usual number were seen belonging to the various showers above named, all going to show that we have many things to learn about them before meteoric astronomy can become an exact science.

Mr. Denning, of England, who is our best authority on meteoric astronomy, urges the value of observations of the real paths of meteors and fireballs in supplying data for the after comparison, especially in tracing their identity with individual meteors of former years. Thus he points out that a brilliant meteor radiating from the constellation Auriga in 1896, Sept. 10, came from the same stream that gave the fireball of 1866, Sept. 6, and 1867, Sept. 8, and that all three are identical with the showers of 1870, Aug. 29, 1885, Sept. 12 and 15, and 1879, Sept. 15-16. He cites one or two cases where meteors became visible at great heights. The greatest instance was that of a small Perseid on Aug. 15, 1893, which at its first appearance was 126 miles above the Earth. On or about Nov. 23, 1898, or 1899, the meteors connected with Biela's comet, which radiate from Andromeda, may be expected. They made splendid displays in 1872 and 1885. But the most important of all the 50 star showers are the Leonids of Nov. 14-15. Its history can be traced nearly one thousand years. A singular feature of it is that a telescopic comet (Tempel's) revolves around the Sun in the same orbit, and to this comet the meteors owe their parentage. It was discovered Jan. 1, 1866, and will probably be reobserved in the spring of 1899.

Double Stars.—The discovery of double stars is progressing at a rate unprecedented, which is confirmatory of the supposition of many, that when larger and more powerful telescopes are made, and more observers are engaged in the fascinating work, more stars will be found to be double, triple, and multiple than were deemed probable in the days of the Herschels, who were pioneers in the work. In Gould's "Astronomical Journal," now edited by Dr. S. C. Chandler at Cambridge, Mass., in Nos. 431 and 432, 1898, is a surprisingly long list of new double stars discovered at the Lowell Observatory, at Mexico, and at Flagstaff, Arizona, by Dr. T. J. J. See. It fills 32 three-column pages of the "Journal." It contains the places for Jan. 1, 1900 A. D., their magnitudes, distances apart, and other important data, of 500 members, all southern stars. Many are very interesting for various reasons, especially from their brightness and excessive closeness. Many are considered binaries. The number of double stars now known, reckoning only those that are sufficiently close to be eventually proved binaries, amount to several thousand, and still there is a daily addition to the number, for there are many enthusiastic workers in the field. Dr. See, in "Astronomische Nachrichten," Nos. 3495, 3496, has published a list of double stars that he has measured, some of which he has discovered. In many cases his measures are the first that have been made and published. In prosecuting the work more than 10,000 stars were examined, and more than 1,000 double, triple, and multiple stars were measured.

Dr. See has been observing the binary stars Burnham 883, Sirius, and Procyon. The distance of the

components of β 883 are only about one quarter of a second of arc. During the past year the angle of motion has not changed more than 6", yet between 1894 and 1895 the arc moved over was 25", which indicates a long radius vector. He thinks that in about another year the distance between them will be greatly diminished, and then the angular motion will become very rapid. He makes the distance between the components of Sirius, the dog star, 4.86", and the motion accords with that theoretically ascribed for it years before it was optically discovered to be double by Alvan G. Clark in 1862. Its period is fifty-two years.

Procyon, like Sirius, was theoretically known to be a double star by its perturbations, caused by a component which no one could see, though it was long searched for, until three years ago, when Prof. Schaeberle, with the 36-inch telescope at the Lick Observatory, discovered it. Its distance from the large star is now 4.78", and it has an annual orbital motion of 6". It is of the thirteenth magnitude. The companion has been observed at the Greenwich Observatory on three nights. It was noticed that its appearance was unlike the companion of Sirius; for while the wire of the micrometer totally eclipsed the companion of Sirius, that of Procyon was seen on both sides of the wire. Perhaps the companion is a nebulous star.

Gamma Leonis is one of the most beautiful double stars in the heavens. It has always been considered a long-period binary. Prof. S. W. Burnham has collected all the best available angular positions since its discovery by Sir William Herschel in 1782. In 1824 Sir John Herschel said: "There can be no doubt of the motion of Gamma Leonis, though it is probably less rapid than supposed by Sir William Herschel." Prof. Burnham, who is authority second to none on binary stars, has lately arrived at the conclusion that the motion observed by different astronomers is rectilinear instead of orbital.

On pages 220 and 221 in "Monthly Notices of the Royal Astronomical Society" is a list of several hundred double stars, by all the principal observers, including the computation of the periods of six orbits, as follow:

NAMES OF STARS.	Period of revolution.	Semi axis major.
82 Ceti.....	16.3 years.	
Sirius.....	51.8 "	7.62"
Burnham 883.....	5.5 "	0.76"
Burnham 395.....	16.3 "	0.57"
Mu ² Boötes.....	275 "	1.48"
O. Struve 400.....	85 "	
Gamma Lupi.....	83 "	

Only three known telescopic binaries exceed 82 Ceti in the shortness of their periods. They are Burnham 883, Chi Pegasi, and Delta Equelei, with periods of 5.5, 11.42, and 11.45 years respectively.

Three classes of binary stars have been discovered by the spectroscopie, viz.: 1. Bright stars with relatively dark companions, the plane of whose orbits is so inclined that one periodically eclipses the other, of which Algol is a distinguished example. 2. Bright stars with relatively dark companions, whose orbits are so inclined that they never occult each other. 3. A system of two or more bright stars. Those belonging to the first class are called Algol stars, one component only being visible with the telescope or the naked eye. Of the Algol type, 16 are now known, some of which have two minima, caused undoubtedly by eclipses of the brighter and the fainter component alternately. An inequality in the period of some seems to indicate that the star is triple, one bright and the other two dark.

To the second class belong Spica and Pollux, which show by the shifting of the lines in their

spectra, by an increase and decrease in their velocity toward and from the Earth, that they are accompanied, but not eclipsed, by their dark disturbing companions. It is almost certain that Eta Aquilla and Delta Cephei belong to this class.

Five binaries of the third class have been discovered through the curious process of the doubling of their spectral lines. The first discovered were Mizar and Beta Auriga, and recently Mrs. Fleming has added Beta Lupi to the list, but the period has not been discovered. The periods of some of them are very short. The relative velocities of the components of μ^9 Scorpii, Argentina General Catalogue, No. 10,534, are 290 and 380 miles a second respectively. These are much greater velocities than those of Mizar and Beta Auriga.

"Harvard College Circular" No. 12 gave a description of the spectrum of Zeta Puppis, in which, in addition to the usual series of lines of hydrogen, a second series of rhythmical lines were observed. Prof. Pickering and H. Kayser, in their examination of these lines, came to the conclusion that they are probably due to hydrogen under conditions of temperature and pressure as yet unknown to us. Some of these lines are also to be seen on photographs of the spectrum of 29 Canis Majoris. The third and fourth of these lines coincide with the principal lines in the V type. They are also present in Gamma Velorum, some being bright and some dark.

Stanley Williams announces an interesting fact concerning the southern variable Lacaille 3105, discovered a few years ago. At that time his observations indicated a period of four and a half days. Other observers considered the period much shorter than this. Prof. Pickering now announces that he finds the star to be a spectroscopic binary, with a period of 3.115 days, and Mr. Williams states that half of this period, or 1.558 days, will satisfy all observations. This star is a double star as well as a variable, which indicates that the variability is caused by one component occulting the other. The literature of variable stars, including their several varieties, is very extensive, and is scattered through many astronomical publications.

Comets.—Several comets, both new and expected, have appeared since the report of comets of 1897 was published, raising the number appearing in one year above the average, while in 1897 the number was much below the average. One remarkable circumstance, unexampled in the history of observational astronomy, was the discovery of five comets in eight days—three new ones and two that were expected. Comet B 1897 was discovered at the Lick Observatory, by Mr. C. D. Perrine, on the evening of Oct. 16. It was of moderate brightness, being easily seen with a 3-inch telescope. It had a well-marked nucleus, of the brightness of a star of the eighth magnitude, but was not a point like a star. Instead of being round, as nuclei always are, it was decidedly elliptical, the major axis being twice as long as the minor. This is proof that the nuclei of comets are not solid. In the 36-inch telescope a tail 4' long was visible, but it was 10' in length on a photographic plate. The following elements have been computed for it, which do not resemble those of any previous comet: Time of perihelion passage, 1897, Dec. 8.55, Greenwich mean time; from node to perihelion, $65^\circ 48' 38''$; longitude of node, $32^\circ 2' 57''$; inclination, $69^\circ 35' 52''$; logarithm of perihelion distance, 0.13269.

Winnecke's periodic comet, an ephemeris of which was widely disseminated among astronomers, was discovered by Perrine, with the 36-inch telescope, on the morning of Jan. 2, 1898. It was very faint. The correction to the ephemeris was very little.

Comet E 1898 was also discovered by Perrine on the morning of March 20. It had a tail 1° in length, the northern half being much brighter than the southern. A photograph of it, taken with an exposure of forty minutes, on the 25th, with a 24-inch projecting lens, at Carlton College, Northfield, Minn., showed two tails—one straight, $2'$ long, pointing directly opposite the Sun; the other curved toward the rear of its motion. The following elements have been computed for it: Perihelion passage, March 17, two days before discovery; node to perihelion, $47^\circ 36' 8''$; longitude of node, $262^\circ 33' 26.3''$; inclination, $72^\circ 26' 50.4''$; perihelion distance, 1.1003; period, 305.2 years.

Encke's comet, which has the shortest period of all the known periodics, was discovered within five minutes of its computed place on the night of June 7, by John Grigg, of New Zealand. This comet, unlike all the other short-period comets, seldom escapes detection on its return to perihelion.

Comet C 1898 was discovered by Perrine on June 14. The comet when brightest was faint and without a nucleus. Near the end of June his two comets, B and C, passed each other within half a degree, this being the second instance of the passing of two comets so near each other. The following elements were computed for it by Berberich: Time of passage, 1898, Aug. 16.338, Berlin mean time; from node to perihelion, $204^\circ 55'$; longitude of node, $259^\circ 9'$; inclination, $70^\circ 1'$; logarithm of perihelion distance, 9.8030.

On June 17, 1898, Prof. W. J. Hussey, using the 36-inch telescope at the Lick Observatory, found Wolf's periodic comet very close to the place assigned it by Thrace's ephemeris. It was also easily visible in the 12-inch telescope at that observatory. This was its second return since its discovery by Max Wolf, at Heidelberg, Sept. 17, 1884. It is a member of what is called the Jupiter family of comets.

On examining the negative plate of a photograph of the region of Alpha Scorpii made for another purpose, on June 9, 1898, Mr. Coddington, of the Lick Observatory, noticed a faint streak on the plate that looked as if it might have been caused by an undiscovered comet. On making a telescopic examination of the region on the evening of June 11, his suspicion was verified. It was Coddington's comet. When discovered it had a short, broad tail, and was moving rapidly in a south-westerly direction, and was soon too far south for northern observers. The following elements have been computed for it: Time of perihelion passage, 1898, Sept. 8.36, Greenwich mean time; node to perihelion, $227^\circ 40'$; longitude of node, $73^\circ 58'$; inclination, $71^\circ 47'$; perihelion distance, 1.8003.

A new comet was discovered on June 18 by M. Giacobini, at Nice, France, in right ascension $20^h 36^m 28^s$; declination south $21^\circ 14'$, or in Capricorn. The following are its elements: Time of perihelion passage, July 25.85, Greenwich mean time; node to perihelion, $22^\circ 41' 26.5''$; longitude of node, $278^\circ 17' 30.3''$; inclination, $166^\circ 50' 58.1''$; logarithm of perihelion distance, 0.175956.

Comet Perrine was discovered on Sept. 13, 1898, and independently by Chofardet on the 14th. From observations made on Sept. 12, 13, and 15 the following elements have been computed: Time of perihelion passage, 1898, Oct. 19.9565, Berlin mean time; node to perihelion, $165^\circ 56.29'$; longitude of node, $36^\circ 20.85'$; inclination, $29^\circ 16.41'$; logarithm of perihelion distance, 9.57608. Its brightness on Oct. 18 was eight times that at discovery.

Tempel's comet of 1867 escaped detection, although a finding ephemeris was published.

Meteoric Iron.—Lieut. Robert E. Peary, traveling in the region of Melville Bay, Greenland, in

1894, found one immense mass and two smaller ones of meteoric iron, weighing respectively 200,000 pounds (90 tons), 6,000 pounds, and 1,000 pounds. In 1895 he brought the two smaller ones to the United States, and in 1897 he transported the large one in the steamer "Hope." It measures 12 feet by 8 feet by 6 feet. In size and weight it immensely exceeds any ever found on the Earth. Polished samples of the three resemble highly polished steel. The universal feature of all meteoric irons, the Widmanstättic lines, are finely marked on them, unmistakably showing that they fell from the sky. Analysis shows them to consist of 92 per cent. of iron and 8 per cent. of nickel. Some scientists entertain the opinion that they are large shooting stars. In the writer's opinion they have no connection with them or with comets. It is a significant fact that during the great star shower of 1833, when countless millions of shooting stars appeared, there was no recorded instance of a meteoric stone having fallen to the earth.

Prizes.—The Council of the Royal Astronomical Society of London awarded its gold medal to William H. Denning, of Bristol, England, in recognition of his numerous discoveries in meteoric astronomy. The Laland prize was awarded to C. D. Perrine for the discovery of several comets in 1897 and 1898.

Endowment.—Miss Gould has given to the United States National Academy of Sciences the sum of \$20,000 to form a Benjamin Apthorp Gould fund, in honor of her distinguished father's memory. The expenditure of the increase is to be controlled by Profs. Lewis Boss, Seth C. Chandler, and Asaph Hall. The object of the gift is to assist observers and investigators, actual expenses being considered rather than their personal support. She desires that preference be given to Americans, and to astronomers of precision, rather than to astrophysicists, and hopes her gift may relieve the Bache fund of the Academy of some of its astronomical expenses.

Telescopes.—On the comparative value of refracting and reflecting telescopes for astrophysical investigations varied opinions exist, which have caused much and prolonged discussion. Prof. George E. Hale, director of the Yerkes Observatory, finds certain important advantages in the reflecting form of telescopes, as follow: "1. Perfect exemption from chromatic aberration: all wave lengths, from the extreme infra-red to the extreme limit of the ultra-violet, being brought to the same focal plane. 2. Relatively small absorption for large apertures, the Newtonian reflector bringing about 60 per cent. of the visual, and 48 per cent. of the photographic rays to the focal plane. Hence for apertures much larger than that at the Yerkes Observatory (40 inches) the reflector gives brighter images than the refractor in both visual and photographic regions, and if the infra-red and ultra-violet are alone considered, the refractor would be of relatively small importance." These opinions, with others, coming from so experienced an investigator, are important as concerning future discoveries in astrophysics. The securing of large angular and linear apertures, coupled with the small cost of a speculum compared with a refracting object glass, the small cost of mounting, and an almost inexpensive dome, are matters of vast importance to the astronomy of the future. This settles a question which has been much discussed for many years.

AUSTRALASIA, one of the grand divisions of the globe, consisting of the continent of Australia and the island colonies of Great Britain in the Pacific, with intervening islands, all British dependencies except the Dutch and German parts of New Guinea, the German protectorates of Bismarck

Archipelago and the northern Solomon Islands, the French colony of New Caledonia, and smaller groups and islands still under native rule. The five colonies of Australia and the colonies of Tasmania and New Zealand are self-governing, each having its representative legislature and its responsible ministry, disposing of its own revenues and making all its own laws under constitutions granted by the British Parliament, subject to a certain veto power reserved to the Imperial Government and the appellate jurisdiction of the Judicial Committee of the British House of Lords in matters of imperial concern. The Crown is represented by a governor in each colony, who, as the executive head of the colonial Government, acts on the advice of ministers chosen from the party or combination that forms the majority of the Legislative Assembly. Fiji is a Crown colony, in which the natives are governed partly by their own chiefs in accordance with their traditional customs.

Area and Population.—The area of the British Australasian colonies, according to the latest surveys, and their estimated population are as follow:

COLONIES.	Square miles.	Population.
New South Wales.....	310,700	1,311,440
Victoria.....	87,884	1,171,888
Queensland.....	668,497	472,170
South Australia.....	903,090	355,383
Western Australia.....	975,920	162,374
Tasmania.....	26,385	172,541
New Zealand.....	104,471	743,214
Fiji and Rotuma.....	8,045	120,500
Total.....	3,085,592	4,472,419

The Australian aborigines are almost extinct in the older colonies. There were 8,280, including 3,183 half-castes, in New South Wales in 1891; in Queensland, about 12,000; in South Australia, 3,369 in the settled districts; in Victoria, 565. In Western Australia there were 5,670 civilized aborigines, and of those living in the unexplored regions no estimate could be made.

The population of New South Wales comprises 702,395 males and 609,045 females. Sydney, with its suburbs, had 410,000 inhabitants in 1896.

About five ninths of the population of Victoria live in towns. Melbourne, the capital, has 451,110 inhabitants; Ballarat, 45,315; Bendigo, 41,660.

The population of Queensland in 1891 consisted of 223,779 males and 169,939 females. There were 8,574 Chinese. Brisbane, the capital, with its suburbs, had 100,913 inhabitants at the end of 1896.

In South Australia there were 182,185 males and 173,101 females. In 1891 the Chinese numbered 3,848. The population of Adelaide, the capital, in 1897 was 144,352, including the suburbs.

Tasmania is scarcely increasing in population from European immigration, but there is a slow accession resulting from the movement between the island and Victoria. The population of Hobart, the capital, is about 26,000.

Of the population of Western Australia estimated in September, 1897, the males numbered 112,383 and the females 50,011. Perth, the capital, had about 43,000 inhabitants.

The white population of New Zealand on April 12, 1896, was 703,360, of whom 371,415 were males and 331,945 females. Of these, 63 per cent. were born in the islands and 31 per cent. in the United Kingdom. There were 19,080 foreigners and 3,711 Chinese. The Maoris numbered 39,854, consisting of 21,673 males and 18,181 females, and including 3,503 half-castes and 229 Maori wives of European husbands. The population of Auckland, including suburbs, was 57,616 at the census of 1896; that of Wellington, the seat of Government, 41,758; of Christchurch, 51,330; of Dunedin, 47,280.

The population of Fiji, consisting of 66,571 males and 53,929 females, comprises 3,292 Europeans, 1,201 half-castes, 10,433 East Indians, 2,310 Polynesians, 2,156 Rotumans, 100,321 Fijians, and 787 others. The native Fijians at the present rate of decrease will become extinct within a century. Their children are instructed by Wesleyan missionaries without Government aid.

The vital statistics of the several colonies for 1896 were as follow :

COLONIES.	Mar- riages.	Births.	Deaths.	Natural Increment.	Net Im- migration.
New South Wales..	8,495	36,506	15,839	20,667	117
Victoria.....	7,625	32,178	15,174	17,004	* 14,567
Queensland.....	2,823	14,017	5,645	8,372	1,941
South Australia...	2,183	10,012	4,038	5,974	* 3,033
Western Australia..	1,077	2,782	2,020	762	35,949
Tasmania.....	964	4,603	1,901	2,702	3,657
New Zealand.....	4,843	18,612	6,432	12,180	1,472
Fiji and Rotuma..	3,969	5,131	+ 1,162

* Net emigration.

† Decrease.

The Chinese are gradually leaving Australia in consequence of the poll tax of £100 levied on their immigrants. In 1896 the arrivals in New South Wales were 99 and the departures 450; in Queensland 395 immigrated and 397 returned to China; in Victoria there were 9,377 in 1891, and the number has rapidly diminished since.

Finances.—The budgets of the several colonies and the state of their debts for the fiscal year ending June 30, 1897, in New South Wales, Victoria, Queensland, and South Australia, and March 31, 1897, in Western Australia, Tasmania, New Zealand, and Fiji are shown in the following table :

COLONIES.	Revenue.	Expenditure.	Debt.
New South Wales.....	£9,309,399	£9,330,559	£62,411,373
Victoria.....	6,629,613	6,825,911	40,929,321
Queensland.....	3,613,150	3,604,264	31,873,934
South Australia.....	2,628,049	2,635,860	23,337,200
Western Australia...	2,440,390	2,362,003	4,732,554
Tasmania.....	797,976	750,244	8,251,778
New Zealand.....	4,798,708	4,509,981	43,532,324
Fiji.....	73,809	73,099	217,896

Of the revenue of New South Wales £2,458,069 came from taxation, £1,953,348 from public lands, £4,599,706 from public services, and £298,146 from miscellaneous sources. Of the total expenditure £1,832,418 went to railways and tramways, £707,073 to posts and telegraphs, £2,285,100 to the service of the public debt, £738,546 to public instruction, and £3,767,422 to other public works and services. The average rate of interest on the debt is 3.71 per cent., including the new loan of £4,000,000 raised in October, 1895. Over four fifths of the debt was expended on the construction of railroads, telegraphs, waterworks, and sewerage, from which a net return of 3.15 per cent. is obtained.

Of the revenue of Victoria £1,733,672 came from customs, which average 13 per cent. on all imports; from excise, £297,030; from the land tax, £127,178; from estate duties, £148,432; from the bank-note duty, £19,317; from stamps, £162,500; from business licenses, £17,378; from tonnage dues, etc., £17,413; from the income tax, £168,088; from railways, £2,394,475; from posts and telegraphs, £516,566; from Crown lands, £411,467; from other sources, £445,165. Of the expenditures £1,893,363 went for interest and expenses of the debt, £1,418,893 for working expenses of the railways, £279,680 for other public works, £588,575 for posts and telegraphs, £160,241 for Crown lands, £571,036 for public instruction and the encouragement of science, £254,726 for charitable institutions, £154,155 for courts of law, £244,054 for police and jails, £94,639

for customs, harbors, etc., £52,620 for mining, £168,575 for defenses, and £659,625 for other purposes.

In Queensland £1,199,187 of the revenue came from customs, £71,676 from excise and export duties, £114,929 from the stamp duty, £57,318 from licenses, £57,234 from the dividend duty, £343,540 from pastoral rents, £170,899 from other rents and sales, £239,335 from posts and telegraphs, and £1,136,861 from railways. The Government still owns 97 per cent. of the total land in the colony, and for the portion already alienated has received £7,725,000, about 22 per cent. of the present assessed value. The principal branches of expenditure in 1897 were £1,263,659 for interest on the debt, £62,858 for endowments to municipalities and divisions, £232,733 for public instruction, £169,040 for the colonial Treasurer's department, £58,893 for the Secretary of Public Lands, £24,033 for the Agricultural Department, £682,646 for operating railroads, and £309,839 for posts and telegraphs. The sum of £1,148,341 was expended from loans, mostly for railroads and other public works.

Customs yielded £996,812 of the revenue of Western Australia in 1896, while the rest was derived mainly from railroads, the postal service, and leases of Crown lands. The income and expenditure have increased nearly threefold in two years.

Of the revenue of Tasmania 59 per cent. is derived from customs duties and taxes, 32 per cent. from railroads, telegraphs, and other services, and 9 per cent. from rents and sales of land; of the expenditure the public works consume 31 per cent. and interest on the debt 44 per cent. The customs revenue amounts to 27.6 per cent. of the total value of imports.

Of the New Zealand revenue £1,818,972 were raised by customs duties, £730,237 by stamps, including postage and telegraph receipts, £1,287,140 came from railways, £105,504 from the land tax, and £109,521 from sales of land. The chief branches of expenditure were £1,709,469 for the public debt, £776,748 for railways, £461,582 for education, £352,386 for the postal and telegraph service, and £189,143 for the constabulary and defense.

In Fiji half the revenue is raised by customs duties, and over a quarter by native taxes, and of the expenditure more than half is paid in salaries.

Commerce and Production.—The following table shows the foreign and intercolonial trade of the several colonies for 1896 :

COLONIES.	Imports.	Total exports.
New South Wales.....	£20,561,510	£23,010,349
Victoria.....	14,554,837	14,198,518
Queensland.....	5,433,231	9,163,726
South Australia.....	7,160,770	7,594,034
Western Australia...	6,493,557	1,650,226
Tasmania.....	1,192,410	1,473,429
New Zealand.....	7,137,320	9,321,105
Fiji.....	212,492	435,342

New South Wales collected import duties in 1896 amounting to £1,406,969, an average of 6.84 per cent. on all imports. The export of wool was 366,824,358 pounds, valued at £9,897,332. Other exports were coal for £900,264, preserved and frozen meat for £605,973, tallow for £509,666, and hides and skins for £638,398. The export of gold coin was £3,602,986. The production of gold for the year was 296,072 ounces, valued at £1,073,360. The value of silver-lead ore and metal raised was £1,758,933; of copper, £197,814; of tin, £126,000; of coal, £1,125,281. Of the total imports £7,190,115 came from Great Britain, £9,559,860 from Australasian colonies, £625,164 from other British possessions, £1,729,871 from the United States, and £1,456,500 from other foreign countries. Of the total exports £8,375,883 went to Great Britain, £8,374,826 to Australasian

colonies, £520,328 to other British possessions, £2,-064,964 to the United States, and £3,674,348 to other foreign countries. The overland trade in 1896 amounted to £3,125,671 for imports and £4,769,738 for exports. The land under tillage in 1897 was 1,659,717 acres, only four fifths of 1 per cent. of the total area of the colony. The total land alienated up to Jan. 1, 1897, was 45,257,468 acres, while 126,-307,790 acres were occupied under leases from the Government. The chief products of the soil are wheat, corn, barley, oats, hay, sugar, wine, brandy, and table fruit, mostly oranges. The live stock in 1897 consisted of 510,636 horses, 2,226,163 cattle, 48,318,790 sheep, and 214,581 pigs.

The exports of gold coin and bullion from Victoria in 1897 were £3,299,012 in value. The wool exports were 146,516,567 pounds, valued at £4,959,404, of which half was the product of other colonies, the imports being valued at £2,270,496. The exports of live stock, valued at £337,541, were less than the imports. Exports of breadstuffs were valued at £596,-168; refined sugar, £134,392; apparel, £151,127; tallow, £180,855. There are 2,838 manufacturing establishments, employing 42,332 hands. The quantity of gold produced by 32,123 miners in 1896 was 805,087 ounces of the value of £3,220,348. The cultivated area in 1897 was 3,093,000 acres, producing 7,076,000 bushels of wheat, 6,819,000 of oats, 824,000 of barley, 146,000 tons of potatoes, and 449,-000 tons of hay. The live stock in 1891 comprised 436,469 horses, 1,782,881 cattle, 12,692,843 sheep, and 282,457 pigs.

The chief exports from Queensland were gold for £2,104,257, silver for £59,192, tin for £46,779, copper for £32,401, wool for £2,984,210, sugar for £863,080, hides and skins for £449,265, tallow for £337,967, preserved and salted meat for £344,318, frozen meat for £491,850, meat extract for £52,758, green fruit for £67,013, and pearl shell for £94,865. Nearly 60 per cent. of the total area of the colony is leased in squatting runs, of which there are 3,218. Half the total area is covered with forests, but little has been done to develop forestry. Only 336,000 acres are cultivated. Water is easily obtained by boring artesian wells, some of which yield millions of gallons a day. There are several coal mines. The product of gold in 1896 was 640,386 ounces. There were 83,000 acres under sugar cane. The chief grain crop is corn.

The exports of wheat from South Australia were valued at £89,515; those of flour at £523,541; wool, £1,228,991; copper, £219,052. The area under tillage in 1897 was 2,584,395 acres, two thirds of it under wheat. The total area passed to private ownership is 9,147,783 acres. The product of wheat fell off from 14,261,000 bushels in 1880 to 2,804,000 in 1896. There were 1,473,216 gallons of wine made in 1897. The live stock numbers 177,078 horses, 337,225 cattle, and 6,323,993 sheep.

The export of gold from Western Australia increased from £421,385 in 1893 to £787,099 in 1894. £879,748 in 1895, and £1,068,808 in 1896. In 1897 there were 674,993 ounces exported, valued at £2,-564,976. There were 20,236 men employed in the mines in 1896. The number of mining leases was 8,141. Other exports in 1896 were: Pearl shell, £30,213; pearls, £20,000; sandalwood, £65,800; timber, £116,-420; wool, £267,506; skins, £18,111. Agriculture and stock-raising are rapidly increasing. The live stock in 1896 consisted of 57,527 horses, 199,793 cattle, and 2,248,976 sheep.

The chief exports from Tasmania were: Wool, £290,971; gold, £232,180; silver and silver ore, £222,948; green and preserved fruit, £169,705; tin, £159,038; timber and bark, £61,426; hops, £21,665.

The values of the principal exports from New Zealand were: Wool, £4,391,848; frozen meat, £1,-

251,993; gold, £1,041,428; Kauri gum, £431,323; butter and cheese, £411,882; grain and flour, £408,-405; hides, skins, and leather, £324,060; tallow, £208,821; timber, £183,511; grass seed, £81,175; preserved meat, £75,661; New Zealand hemp, £32,-985; specie, £21,198; bacon and hams, £18,367; live animals, £17,704. The quantity of wool was 129,151,624 pounds; of frozen meat, 1,103,362 hundredweight; of butter, 71,353 hundredweight; of cheese, 71,372 hundredweight; of gold, 263,364 ounces; of Kauri gum, 7,126 tons. The live stock in 1897 consisted of 249,732 horses, 1,138,572 cattle, 19,138,493 sheep, and 209,853 pigs.

Fiji has been a British possession only since 1874. The European settlers cultivate coconuts, sugar cane, bananas, and to a small extent pineapples, peanuts, rice, tea, cotton, and tobacco. They raise cattle and some sheep and Angora goats. The external trade is almost entirely with Australia and Great Britain. The sugar exported in 1896 was 27,334 tons, valued at £339,929; copra, 5,487 tons, valued at £48,950; value of bananas, etc., £18,490; of rum, £10,163.

There was a remarkable efflux of gold from the Australasian colonies in 1897. The total export, chiefly in sovereigns, was £13,500,000, and it was continued in 1898. This movement reduced the coin in the banks by £3,689,000. The imports showed an increase, but apart from gold, the export trade declined. The total production of gold in the seven colonies was 2,899,650 ounces, against 2,378,126 ounces in 1896.

Navigation.—The number of vessels and the tonnage entered and cleared at the ports of the several colonies during 1896 are given in the following table:

COLONIES.	ENTERED.		CLEARED.	
	No.	Tonnage.	No.	Tonnage.
New South Wales	3,224	3,080,751	3,208	3,109,009
Victoria	1,882	2,276,478	1,900	2,289,752
Queensland	649	562,759	645	531,289
South Australia	1,289	1,661,124	1,278	1,656,763
Western Australia	768	1,105,907	663	1,080,471
Tasmania	660	449,323	678	441,538
New Zealand	589	614,097	592	627,659
Fiji	132	115,470	131	115,586
New Guinea	259	15,026	224	13,678

The registered tonnage in New South Wales was 112,634; in Victoria, 95,760; in Queensland, 22,970; in South Australia, 40,477; in Western Australia, 8,113; in Tasmania, 18,871; in New Zealand, 76,556; in Fiji, 492.

Communications.—The number of miles of railroad opened to traffic in 1896 and the mileage of telegraph in the Australasian colonies are shown in the following table:

COLONIES.	Railroads.	TELEGRAPH.	
		Line.	Wire.
New South Wales	2,639	12,418	30,820
Victoria	3,123	6,947	14,441
Queensland	2,430	10,026	18,036
South Australia	1,948	5,865	14,280
Western Australia	1,160	5,429	6,985
Tasmania	475	1,813	3,455
New Zealand	2,185	6,285	16,471
Total	13,952	48,783	104,488

The number of telegrams sent in New South Wales in 1896 was 2,796,776; receipts, £431,762; net revenue, £159,741. In Queensland the number of messages was 1,035,601; receipts, £71,758. In Tasmania 208,784 internal and 107,669 cable messages were forwarded; net revenue, £19,111. The number of messages dispatched in Victoria was 1,872,649; revenue, £101,928. In Western Australia

997,500 messages were sent, yielding a revenue of £84,247.

In the mining districts of Western Australia railroad connections have been established with Kalgoorli, Kanowna, and Boulder. There is a continuous line of 1,000 miles from Albany, and one of 50 miles leading into the gold fields at Coolgardie. A new railroad from Coolgardie to Menzies was opened on March 22, 1898.

In New Zealand there were 2,285,001 private telegraph messages sent during the year ending March 31, 1897; net revenue, £129,635.

The postal traffic of most of the colonies for 1896 is shown in the following table:

COLONIES.	Letters.	Newspapers.	Packets.	Parcels.	Post cards.
New S. Wales.	69,288,395	45,558,340	15,603,639	506,111	1,013,480
Queensland.	17,590,710	11,655,336	4,996,370	172,571
S. Australia.	18,765,041	9,551,729	1,894,958
W. Australia.	10,097,678	6,293,040	2,035,750
Tasmania.	7,320,340	4,861,893	2,345,550	231,451
New Zealand.	29,787,763	13,216,521	12,833,882	1,886,125
Fiji.	391,966	310,470	43,925	899

In New South Wales £1,313,595 was paid on 402,677 money orders and £324,646 on postal notes in 1896:

In New Zealand 269,566 money orders were issued.

Defenses.—New South Wales maintains a military force of 621 regulars and 4,826 volunteers, with 2,021 riflemen in the reserve and 580 men in the naval force. The cost of defense in 1897, including the naval establishment and shore fortifications at Sydney, was £224,116. Sydney is a British first-class naval station and the headquarters of the British fleet in Australasia, numbering 12 vessels in 1897. An Australasian naval force of 5 fast cruisers and 2 torpedo gunboats of the most modern design have been built by the British Government, which under a ten years' agreement is maintained by the colonies, which pay also 5 per cent. interest on the cost of construction. The cruisers ("Katoomba," "Tauranga," "Ringarooma," "Mildura," and "Wallaroo") have each a displacement of 2,575 tons and 7,500 horse power. The torpedo gunboats ("Boomerang" and "Karakatta") are of 735 tons and 4,500 horse power. The annual expenditure of New South Wales on naval defense is £42,306; of Victoria, £45,287; of Queensland, £15,519; of South Australia, £6,180. The expenditure of the Imperial Government is £60,300. The land forces of Victoria number 5,015 men, of whom 379 are permanent, 2,987 militia, and 649 volunteers; the naval flotilla consists of the coast-defense cruiser "Cerberus," 5 gunboats, and some torpedo boats, and it is manned by a permanent force of 177 officers and men, with a reserve of 152. In Queensland, where every man is liable for service, a force of 2,800 has been trained, comprising 130 enlisted men, 2,000 militia, and 670 volunteers; the Government has a naval force of 2 gunboats and a torpedo boat and has drilled 5 naval brigades. In South Australia there is a military force of 974 militia and 385 volunteers, and a small cruiser for naval defense. Western Australia has 650 men armed with Martini-Metford rifles and spends £12,600 a year on defenses. Tasmania's volunteers number 499 and the rifle clubs 966. In New Zealand there has been a large local force since the Maori wars. The volunteers number 7,169, the artillery branch 186, the torpedo branch 80, and the police 495; the total available strength of the militia is 130,000.

Australian Federation.—A proposal for a general assembly to legislate on intercolonial questions was discussed as early as 1852. In more recent times the question was agitated until an intercolonial conference adopted a tentative scheme

and the Imperial Parliament passed a bill creating a federal council to which any of the colonies could send delegates for the discussion of intercolonial matters. It first met at Hobart in 1886, and was attended by delegates from Victoria, Queensland, Tasmania, Western Australia, and Fiji. At the next meeting South Australia also was represented. This body devised several measures that were ratified by the colonial legislatures, but its powers were merely deliberative and advisory. In February, 1890, a conference was held at Melbourne in which all the Australasian colonies were represented, and it was there decided to call a national Australasian convention to consider and report upon a scheme for a Federal constitution. This convention met at Sydney on March 2, 1891, and passed resolutions approving the principle of federation. It adopted a draft constitution for the commonwealth of Australasia which, however, proved unsatisfactory to several of the legislatures. A new conference was held by the Premiers of five colonies, who met at Hobart in January, 1895, and took steps resulting in a convention of all the colonies except Queensland, which met first at Adelaide in March, 1897. It was unanimously resolved to establish a Federal Parliament, to consist of a Federal Council, or Senate, and a House of Representatives; also a Federal High Court, which should have jurisdiction as a final court of appeal. The executive authority will reside in a governor-general appointed by the Crown, who shall be guided by his constitutional advisers. It was stipulated that the territory and the powers and privileges of the several states of the federation should remain intact except in so far as they might be surrendered by voluntary acts. The Federal Parliament would have power to impose and to collect and dispose of customs and excise duties, and should control the military and naval forces. Intercourse and trade between the federated states must be free. It was resolved to apply the principle of the popular referendum in the adoption of constitutional amendments. In the Senate all the states shall have equal representation, but this house shall have no power to amend money bills.

The Federal Convention, which met in Adelaide on March 22, 1897, adjourned a few months later to allow the Premiers of the colonies to take part in the festivities of the Queen's jubilee in England, met again in September at Sydney, and after a short session again adjourned at the request of the Queensland Government in order that opportunity be given for that colony to join in the deliberations, assembled for the third and final session at Melbourne on Jan. 20, 1898. It was found that Queensland was not yet able to take part in the framing of the commonwealth bill. Nevertheless it was resolved to complete the work without further adjournment, and after a thorough and animated discussion of the details of the measure, developing considerable friction, which threatened at times to result in rupture, during which the convention amended or rescinded some of its former decisions, the commonwealth bill was finally adopted on March 16, and on the following day the convention adjourned. The bill was based on the scheme that was drawn up in the Sydney convention of 1891, many of the members of which served a second time in this convention, though Sir Henry Parkes, Sir Samuel Griffiths, and other leaders of the early federation movement were absent. The modifications embodied in the resulting bill have been the subjects of constant discussion during the intervening seven years. The Sydney bill provided that members of the State Council, or upper house, should be elected by the parliaments of the several colonies. The new bill provides for the election of

both houses by popular suffrage. In colonies where female suffrage has been adopted women will be entitled to vote for the federal as well as for the colonial legislators. In the State Council each colony will have the same number of representatives, whatever its population, while in the lower house representation will be in proportion to population. Equal representation in the Senate was the condition on which the smaller colonies insisted before they would consent to enter into the federation. In return the larger colonies demanded that the upper house should have no power to amend money bills. As a compromise it was finally agreed that the Senate may suggest amendments to financial measures. The State Council, moreover, retains the power of veto. Another safeguard for the rights of the smaller states is that all powers that are not explicitly vested in the commonwealth shall be retained by the individual states, reversing the Canadian system of federation, which leaves to the Dominion all authority not definitely reserved to the individual colonies. One of the main difficulties encountered in the Federal Convention was to provide for the possibility of a deadlock caused by disagreement between the two houses of the Federal Legislature, a constitutional problem that has blocked the wheels of legislation and given rise to unpleasant conflicts in some of the colonies of Australia. After a long debate and a revision of the first conclusion it was in the end decided that in the event of a deadlock, after the lower house has passed a measure twice over the Senate's veto, both houses shall be dissolved simultaneously; in case the newly elected houses disagree they shall meet together in a joint session and vote on the bill in question, which shall be carried or rejected by a three-fifths majority of both houses voting together. The problem of federal finance was left for its final adjustment to be solved in the light of experience. It was generally agreed that the customs and excise revenue of the colonies was to be surrendered for the purposes of federal expenditure, and that the surplus remaining after all federal requirements were satisfied should be returned to the several colonies. The proportion in which each should share in this surplus presented practical difficulties. A motion to restrict federal expenditure to one fourth of the revenue collected was carried, but afterward was rescinded. To redistribute the surplus in proportion to population would be advantageous to Tasmania, and would disturb but little the finances of Victoria and South Australia, but would be most unjust to Western Australia, which raises by indirect taxation more than three times as much revenue *per capita* as the other colonies. Equal tariff rates would place an undue share of the burden on New South Wales. The question of determining what is the fair share to be paid by each colony and what the actual contribution obtained from it by the tariff involved the whole subject of the financial relations of the several colonies. It was referred to a special committee on finance, and the recommendations of the committee were, with slight modifications, incorporated in the bill. They are to the effect that a uniform tariff shall be established for the federated colonies within two years, and that within the limits of this tariff trade shall be absolutely free. A system of careful and detailed bookkeeping and statistics shall be maintained for five years, by means of which it is hoped that the just contribution of each of the colonies to the general trade and its just share in the general expenditure of the commonwealth will be ascertained, and the Federal Parliament will then be able to decide on the proportion of the surplus of the customs revenue that each state is entitled to receive. Many other points

were discussed, but the prevailing idea was that it would be unwise to load down the measure with specific legislation. The commonwealth bill dealt rather with constitutional principles and essential questions, and contained compromises and concessions in which the representatives of the small colonies and those of the large, the exponents of protection, and the free traders found it hard to acquiesce. There was a general understanding that in case of the commonwealth bill becoming law an arrangement would be made for the admission of Queensland to the federation. The parliamentary representatives of the central division of Queensland petitioned the Federal Convention to admit central and northern Queensland as separate states, irrespective of southern Queensland. It was not necessary to initiate the scheme that all the colonies should unite to form the federation. The enabling bill enacted by the British Parliament provided that three or more of the colonies might unite in a federation, which the other colonies might join from time to time as their interests should dictate and their people decide. The enabling bill left the final decision to the electors of the several colonies, and prescribed that in each colony a substantial minimum vote should be required so as to preclude the possibility of a misinterpretation of the popular desire or the possibility of a change except by a deliberate resolution of the people. This minimum was fixed in some of the colonies at so high a figure that the advocates of federation anticipated great difficulty in obtaining the prescribed majority. Thus, in Victoria a minimum vote of 50,000 was required among 252,000 qualified electors; in New South Wales, with a total of 293,000, the minimum was increased from 50,000 to 80,000 votes.

The question of referring legislation on old-age pensions to the Federal Parliament was at once decided in the negative by the convention. A spirited controversy between the representatives of South Australia and New South Wales grew out of the proposition to leave to the Federal Parliament the exclusive control of intercolonial rivers. The South Australian delegates, having special regard to the tributaries of the river Murray, contended that the navigation of the lower reaches of a river ought not to be impeded by the withdrawal of the upper waters for irrigation purposes. The Government of New South Wales conceded to the commonwealth the control of the navigation of the Murray, but claimed the free use of the water of the tributaries for irrigation purposes, having sold lands with the understanding that the water should be available to settlers. The rivers were regarded as the most valuable part of the colony, without the use of which for irrigation a large portion of the surface must remain a sheep run instead of being permanently settled. It was resolved that if Great Britain contributed a third of the cost of the projected Pacific cable, and Canada a third, then New South Wales, Victoria, Queensland, and Tasmania should find the remaining third. The convention gave the interests of navigation precedence over irrigation. It was decided against the protest of Queensland and Western Australia to give the federation exclusive power to legislate concerning aliens, the restriction of immigration to remain a question for the individual states until federal legislation shall have been enacted on the subject. It was resolved to pass an act similar to the law of Natal restricting the immigration of colored races. A clause was adopted declaring that the commonwealth shall not prohibit any religion nor impose any religious test for office. The federation, by a clause which was first made mandatory, then merely permissive, can assume and consolidate the debts of all the colonies. The convention could not see a way, in view of the

exigencies of colonial finance, to advise a reduction in the rates of postage to Great Britain in conformity with the recent action of the British Government. A uniform customs tariff is to be adopted within two years from the establishment of the commonwealth, with intercolonial free trade immediately thereafter, exception being made of goods imported into a free-trade colony before the imposition of the federal tariff, which must pay the federal duties if re-exported within two years to other colonies.

The Victorian delegates desired to preserve to the states the right to grant bonuses for the encouragement of their industries, but the convention confined such power to the commonwealth. Preferential treatment of the produce and manufactures of the United Kingdom was promised in a resolution and, in default of a federal tariff, recommended to the individual states. An interstate commission will be constituted to execute the provisions of the Constitution relating to trade and commerce. From New South Wales came a vigorous protest against empowering the Federal Parliament to prohibit differential railway rates, in consequence of which it was decided to give to an interstate railway commission the power to sanction special rates that may be deemed necessary for the development of territory. The powers of the Federal High Court include the decision of disputes between individual states and between a state and the commonwealth. It will also decide appeals from the state courts. It was at first decided that the Federal Parliament should alone have power to make exceptions and to allow appeals to the Privy Council in England, which should be sanctioned in cases where the interests of the commonwealth, or of one of the states, or of other parts of the Queen's dominions are concerned. The abolition of the private right to appeal to the highest imperial tribunal roused such opposition that the clause was amended so as to permit such appeal from the Supreme Court conditionally on obtaining the consent of the Privy Council itself. From the Federal High Court no appeal would be conceded. To enact an amendment to the Constitution an absolute majority of both houses of Parliament is requisite, and in addition to that a majority vote of the people of each state. It was resolved that all the colonies except South Australia should continue their contributions to the auxiliary squadron. Joint action of the colonies in supporting antarctic exploration was disapproved, also a joint exhibit at the Paris Exhibition. France was urged to prohibit the sale of arms in the New Hebrides; if this were not done, Great Britain ought to remove her prohibition. The last resolution adopted presented a request for permission to mint silver.

An exciting campaign for and against the bill was carried on in all the colonies. The referendum was taken on June 3 in three colonies. In Victoria there were 100,520 votes for and 22,099 against the bill; in Tasmania, 13,496 to 2,900. In New South Wales, where the contest was heated, 70,990 voters favored federation, while 65,619 opposed the scheme embodied in the bill. The majority thus fell short of the statutory minimum, and left the question to be decided by another election. In Western Australia a popular vote could not be taken until the colonial Parliament first voted to approve the bill as finally adopted in the convention. South Australia held its election on June 4, and decided in favor of the bill by 25,659 votes to 15,121.

G. H. Reid, the Premier of New South Wales, proposed a conference of Australian Premiers to consider a modification of the commonwealth bill, with a view of making it acceptable to New South Wales. Sir George Turner, of Victoria, agreed on

the understanding that the bill as amended must be accepted by the electors of New South Wales before being submitted to the people of the other colonies. Charles C. Kingston, in behalf of South Australia, and Sir E. Braddon, speaking for Tasmania, declined to go behind the backs of the people to alter the work which their vote had approved. The Queensland Premier accepted the invitation to a conference; Sir John Forrest, the Premier of Western Australia, declined. The New South Wales Government proposed to solve deadlocks by making a majority instead of three fifths effective in joint sessions of the Federal Parliament; to recast the financial proposals; to take from the Senate the power to amend money bills; to remodel appellate jurisdiction; to adopt the Canadian plan for the seat of government; and to establish safeguards for the territorial rights of the states, including definite provisions regarding internal waters.

New South Wales.—The Parliament consists of a Legislative Council of 65 members, who are appointed for life, and a Legislative Assembly of 125 members elected by universal male suffrage. The duration of Parliament is not more than three years. The Governor is Viscount Hampden. The Cabinet in the beginning of 1898 was as follows: Premier, Treasurer, and Minister for Railways, George Houston Reid; Chief Secretary, James Nixon Brunker; Attorney-General, John Henry Want; Secretary for Lands, Joseph Hector Carruthers; Secretary for Public Works, James Henry Young; Minister of Public Instruction and of Industry and Labor, Jacob Garrard; Minister of Justice, Albert John Gould; Postmaster-General, Joseph Cook; Secretary for Mines and Agriculture, Sydney Smith; Vice-President of the Executive Council and Representative of the Government in the Legislative Council, Andrew Garran.

The democratic Premier announced in January, 1898, a plan for reforming the Legislative Council by requiring a fifth of its members to retire every five years. Large areas have been withdrawn from pastoral lessees to make additional lands available for occupation by farmers. The early expiration of Parliament caused the ministry to limit its legislative programme to measures already in an advanced stage. Such were a bill for restricting immigration and one dealing with the value of improvements on Crown lands. Agricultural returns showed an increase in two years of 35 per cent. in the area under cultivation; in the wheat area, 66 per cent. In dairy farming the progress was not less astonishing, while in mining and manufacturing there was a marked expansion.

Parliament was prorogued on July 9 and new elections were held on July 27. The principal question was that of federation, which the leader of the Opposition, Mr. Barton, believed would be defeated by Mr. Reid's proposal of amendments to the federation bill that the other colonies were unlikely to accept, such as a simple majority decision in joint session or a national referendum in case of a deadlock between the houses, and a stipulation that the federal capital be located in New South Wales. The Protectionists joined the Barton party, while the Labor men coalesced with the Ministerialists. The elections gave 63 seats to the Ministerialists, 57 to the Federalists, and 5 to the Independents, who were allies of the Federalists. In the last Parliament the Government party numbered 81 and the Opposition 44. The Labor wing of the Ministerial party, which advocates the popular referendum and initiative, old-age pensions, a state bank, and local government on a residential instead of on a rate-paying basis, returned 30 members, the same as in the last house. Parliament was opened on Aug. 16. The defeat of Ministers Gould, Garrard, and Smith in

the elections left three vacancies in the Cabinet, which were filled by the appointment of Mr. Lee as Minister of Justice, Mr. Hague as Minister of Education, and Mr. Parker as Postmaster-General.

Victoria.—The Legislative Council is composed of 48 members, of whom one third retire every two years; they are elected by limited suffrage. The Legislative Assembly has 95 members, elected for three years by universal male suffrage.

The Governor is Lord Brassey, appointed in 1895. The Cabinet in the beginning of 1898 was composed as follows: Premier and Treasurer, Sir George Turner; Chief Secretary and Minister of Education, A. J. Peacock; Attorney-General, Isaac Isaacs; Solicitor-General, Sir Henry Cuthbert; Commissioner of Trade and Customs, President of the Board of Land and Works, and Commissioner of Crown Lands and Survey, R. W. Best; Postmaster-General, J. G. Duffy; Minister of Defense, W. McCulloch; Minister of Mines and Water Supply, H. Foster; Minister of Agriculture and Commissioner of Public Works, J. W. Taverner; Minister of Railways and Minister of Public Health, H. R. Williams; without portfolios, A. McLean and S. Williamson.

Abundant rains arrived in June, 1898, to end a drought in the south of Australia, which was accompanied by the severest heat felt in forty years, and by destructive bush fires in Victoria and Tasmania. The Victorian Government has plans for the irrigation of the country on a vast scale, for the erection of public cold-storage warehouses for meat and dairy products, and for subsidizing a company to develop the wine industry by establishing central vaults for blending and storing wines. British capitalists complain because they have to pay an income tax in Australia as well as in England on the interest derived from Australian investments. Sir George Turner replied that the colonial tax was legitimate, and that the English Government should cease to levy a double tax.

Queensland.—The Legislative Council consists of 41 nominated life members, the Legislative Assembly of 72 members elected for three years. The Governor is Lord Lamington, appointed in 1895. The Executive Council was composed in the beginning of 1898 as follows: Premier, Vice-President of the Executive Council, Chief Secretary, and Treasurer, Sir Hugh Muir Nelson; Secretary for Agriculture, A. J. Thynne; Minister for Lands, J. F. G. Foxton; Postmaster-General and Secretary for Railroads, J. R. Dickson; Secretary for Mines, Robert Philp; Secretary for Public Instruction and Secretary for Public Works, D. H. Dalrymple; Home Secretary, Sir H. Tozer; Attorney-General, T. J. Byrnes; without portfolio, W. H. Wilson and A. H. Barlow.

In Queensland agriculture is advancing rapidly. The acreage of sugar cane in the north is increasing, but grain cultivation in the temperate zone shows the most remarkable development. The acreage of wheat increased 50 per cent. in 1897. The Government in 1898 threw open for agricultural settlement 1,000,000 acres more of pastoral lands. Sir H. M. Nelson in March resigned the premiership to accept the presidency of the Legislative Council. The Cabinet was reorganized with Mr. Byrnes as Premier.

South Australia.—The Legislative Council has 24 members, a third of whom are replaced every three years by popular vote. The House of Assembly consists of 54 members elected for three years. In 1894 the franchise was extended to women. There were 138,344 registered voters in 1896.

The Governor is Sir Thomas Fowell Buxton, appointed in 1895. The ministry was composed at the beginning of 1898 as follows: Premier and Attorney-General, C. C. Kingston; Chief Secretary,

J. V. O'Loughlin; Treasurer, F. W. Holder; Commissioner of Crown Lands, L. O'Loughlin; Commissioner of Public Works, J. G. Jenkins; Minister of Education and of Agriculture, J. A. Cockburn.

Western Australia.—The Legislative Council consists of 24 members elected for six years. The Legislative Assembly has 44 members, who serve for four years. The Governor is Col. Sir Gerard Smith, appointed in 1895. The Cabinet in the beginning of 1898 was composed of the following members: Premier, Treasurer, and Colonial Secretary, Sir John Forrest; Minister for Mines, E. H. Wittenoom; Commissioner for Railways and Director of Public Works, F. H. Piesse; Commissioner of Lands, George Throssell; Minister of Education, Henry Bruce Lefroy; Attorney-General, Richard William Pennefather.

The water scheme for supplying the mines, which the energetic Premier is determined to carry out, will cost £2,250,000 and £300,000 yearly to keep up, but will pay for itself within twenty years. The gold production of the colony is already greater than that of Victoria and Queensland combined, and the annual trade amounts to £10,000,000. A decree of the Government prohibiting diggers from working alluvial deposits below 10 feet from the surface on land leased from mining companies created such indignation among the miners that they mobbed Sir John Forrest when he visited Kalgoorlie in March. Mr. Wittenoom resigned the Ministry of Mines to succeed Sir Malcolm Fraser as agent general in London, and Mr. Lefroy was transferred on April 29 to the vacant ministry, while George Randell became Minister of Education and Posts and Telegraphs and at the same time Colonial Secretary, relieving Sir John Forrest of the work of this office. The new post of Minister for the Aborigines was given to H. L. Prinsep. When the Legislature met on June 16 a bill was presented amending the tariff so as to give preferential treatment to British goods.

Tasmania.—There is an elective Legislative Council of 18 members. The House of Assembly has 37 members elected under a low property and income qualification for three years. The electors for the Council form 4.43 per cent. of the total population and those for the Assembly 18.26 per cent. The Governor at the beginning of 1898 was Viscount Gormanstown, appointed in 1893.

The ministry was composed in the beginning of 1898 of the following members: Premier, Sir E. N. C. Braddon; Chief Secretary, W. Moore; Treasurer, Sir P. O. Fysh; Attorney-General, D. C. Urquhart; Minister of Lands and Works, A. T. Pillinger; without portfolio, Thomas Reibey.

New Zealand.—The Legislative Council contains 46 members, nominated for life previous to Sept. 17, 1891, and since then for seven years, and the House of Representatives has 74 members, elected for the duration of Parliament by the votes of all citizens, male and female. The Maori community is represented by 4 members. The registered vote for the 70 European members in 1896 was 339,230, of which number 196,925 were men and 142,305 women, and for the native members 13,008 of both sexes.

The Governor is the Earl of Ranfurly, appointed Aug. 10, 1897. The Cabinet in the beginning of 1898 was composed as follows: Premier, Colonial Treasurer, Postmaster-General and Electric Telegraph Commissioner, Minister of Native Affairs, and Minister of Labor, R. J. Seddon; Acting Colonial Secretary, Commissioner of Stamp Duties, and Representative of the Native Race in the Executive Council, J. Carroll; Minister of Justice, Minister of Industry and Commerce, and Minister of Defense, T. Thompson; Minister of Lands, Minister of

Agriculture, Commissioner of Forests, and Minister in Charge of Advances to Settlers, J. Mackenzie; Minister of Public Works, Minister of Marine, and Minister in Charge of Public Printing Office, W. Hall-Jones; Minister of Railways and Minister of Mines, A. J. Cadman; Minister of Education and Immigration and Minister in Charge of Hospitals and Charitable Aid, W. C. Walker.

While the public finances of the Australian colonies show a gratifying recovery, achieved by the aid of strenuous retrenchments, the balance sheet of New Zealand is still more favorable. There was a large surplus at the end of the financial year 1898, and the Government contemplated, after long abstention from borrowing, the issue of a new loan of £2,000,000 to be expended on railroads and irrigation for the more speedy development of the country. Customs, stamps, railroads, post-office, land, income, excise, and territorial revenue all exceeded the estimates. The Government proposes to establish an accident and insurance department. Maori lands have lately been sold to whites by authority of the colonial Parliament, but the Premier in the session that began on June 24, 1898, carried a bill stopping the sales and permitting only leases granted by a board containing representatives of both races, the rent going to native owners, thereby preventing the Maoris from becoming destitute and landless. The imposition of a dog tax of 10s., designed to accustom the Maoris to direct taxation and reduce the number of dogs kept by them, which were a danger to sheep and cattle, occasioned an insurrection in the remote northern district of the Haussas. This was quickly suppressed in May by an artillery detachment with Maxims.

In the parliamentary session that began on June 24, 1898, the Government brought forward bills increasing the volunteer corps and providing them with magazine rifles and other improved armaments, establishing old-age pensions, putting the municipal franchise on a more equitable basis, abolishing life tenure in the Legislative Council, and remedying the electoral system. The old-age-pension scheme, which had failed to pass in the previous session, was approved by the House of Representatives in September.

Fiji.—The Governor, who is also High Commissioner for the Western Pacific, is Sir G. T. M. O'Brien. The Legislative Council consists of 6 official and 6 non-official nominated members. Twelve of the 16 provinces are administered by native chiefs and 3 of them and Rotuma by European commissioners.

British New Guinea.—The southeastern part of New Guinea, with the D'Entrecasteaux and Louisiade Islands, was annexed to the British Empire in 1887. The area is 88,460 square miles and the population, which includes 250 Europeans, about 350,000. The cost of administration, about £15,000 a year, is borne in equal shares by Queensland, Victoria, and New South Wales. The Lieutenant Governor is Sir William MacGregor. The revenue raised on the island, chiefly from customs duties, was £6,547 in 1896. The island is rich in cocoa and sago palms, sandalwood, ebony, gums, rattan, and other forest produce. Trepan, copra, pearl shell, pearls, sandalwood, and gold are the chief exports, the total value of which in 1896 was £19,401, exclusive of pearls and of gold, which is dug by about 60 Australian miners and numerous natives in Woodlark and the Louisiade Islands and on the coast.

The governments of Queensland, New South Wales, and Victoria agreed in January, 1898, to continue the present arrangement in regard to British New Guinea for four years longer, at the

end of which time the territory is expected to be self-supporting. The British Secretary of the Colonies contemplated departing from the policy of preserving all the land for the natives, which the discovery of gold makes it more difficult to pursue, when a group of English capitalists, the Somers-Vine-Lowles syndicate, applied for a concession of a tract containing 250,000 acres for the purpose of cultivating rubber and other products or for mining. When Mr. Chamberlain agreed to make the sale, subject to the approval of the Queensland Legislature, the Premiers of the three colonies that support the administration of New Guinea entered a protest, which blocked the transaction.

The action of the Queensland Government in approving the cession of land to the syndicate gave rise to serious objections on the part of the governments of New South Wales and Victoria. It gave incalculable advantages to a speculative syndicate of Englishmen with small capital and was likely to prove detrimental to Australian explorers and gold seekers. At a conference of colonial Premiers in August the British Government was requested to revoke the land grant, for which Sir William MacGregor assumed all the responsibility. The New South Wales and Victoria governments agreed to continue their contributions for the support of the administration of New Guinea only on condition that their representations regarding the concession should be heeded.

AUSTRIA-HUNGARY, a dual monarchy in central Europe, constituted by the fundamental law of Dec. 21, 1867, and composed of the Empire of Austria and the Kingdom of Hungary, two inseparable constitutional monarchies, declared to be hereditary in the male line of the house of Hapsburg and in the female line in default of male heirs. Legislative authority in matters common to both monarchies—viz., foreign affairs, the army and navy, common finances, indirect taxation, the coinage, railroads in which both monarchies are interested, and the administration of the occupied provinces of Turkey—is committed to the Delegations, elected from among their members by the legislative bodies of the two halves of the empire, composed of 20 members from the upper and 40 from the lower chamber of each parliament. The Delegations deliberate and vote separately on every question, and when they come to different decisions they reach a final conclusion by a joint ballot without debate.

The reigning Emperor of Austria and King of Hungary is Franz Josef I, born Aug. 18, 1830, and proclaimed Emperor on Dec. 2, 1848, upon the abdication of his uncle, Ferdinand I. He assumed the crown of St. Stephen upon the restoration of the Hungarian Constitution, June 8, 1867. The heir presumptive is Archduke Franz Ferdinand d'Este, born Dec. 18, 1863, son of the Archduke Karl Ludwig and nephew of the Emperor.

The common ministers, heads of the three executive departments for common affairs, were in the beginning of 1898: Minister of Foreign Affairs and of the Imperial House for the Whole Monarchy, Count Agenor Maria Adam Goluchowski; Minister of War, Gen. Edmund, Edler von Krieghammer; Minister of Common Finance, Benjamin de Kallay.

Area and Population.—The area of the Austro-Hungarian dominions, not including the occupied Turkish provinces of Bosnia and Herzegovina, is 240,942 square miles, and the total population on Dec. 31, 1890, was 41,358,886.

The area of Austria proper is 115,903 square miles, and the population at the last census was 23,895,413, consisting of 11,689,129 males and 12,206,284 females. Divided on the basis of language, there were 8,461,580 German Austrians, 5,472,871 Bohemians, Moravians, and Slovaks, 3,719,232

Poles, 3,105,221 Ruthenians, 1,176,672 Slovenes, 644,926 Servians and Croatians, 675,307 Italians and Ladins, 209,110 Roumanians, and 8,139 Magyars. There were 228,647 Hungarian citizens and 193,710 foreigners, of whom 103,433 were Germans, 46,312 Italians, 18,149 Russians, 6,777 Swiss, 2,726 French, 2,384 Turks, 2,261 British, and 1,729 Americans. The population of the Austrian dominions at the end of 1895 was estimated at 24,977,439, of whom 12,245,114 were of the male and 12,732,325 of the female sex. Vienna, the capital, had 1,364,548 inhabitants in 1890; Prague, 184,109; Trieste, 158,344.

The number of marriages in 1896 was 198,554; of births, 974,903; of deaths, 657,153; excess of births, 290,064.

Hungary has an area of 125,039 square miles, including Croatia and Slavonia. The population in 1890 was 17,463,473, consisting of 8,667,971 males and 8,795,502 females. In respect of race as indicated by language there were 7,426,730 Magyars, 2,604,260 Servians and Croatians, 2,591,905 Roumanians, 2,107,279 Germans, 1,910,279 Bohemians and Slovaks, 383,392 Ruthenians, 94,679 Slovenes, 82,256 gypsies, and 94,679 others. The population of Buda-Pesth, the Hungarian capital, was 506,384. The number of marriages in 1896 was 147,477; of births, 760,854; of deaths, 657,153; excess of births, 212,562.

The emigration from Austria-Hungary in 1895 was 66,101, of which number 50,951 went to North America, 10,511 to Brazil, 549 to the Argentine Republic, and 3,591 to other countries.

The Common Budget.—The budget for common affairs for the financial year 1898 makes the total expenditure 161,185,025 florins, of which 53,598,890 florins are derived from customs, 2,660,372 florins from the Army and Navy Department, and 138,905 florins from other departments, 71,883,785 florins are Austria's quota, 30,807,336 florins Hungary's quota, and 2,095,737 florins Hungary's 2 per cent. Of the expenditure 4,067,500 florins are for ordinary and 77,400 florins for extraordinary expenses of the Ministry of Foreign Affairs, 128,194,793 florins for ordinary and 11,980,407 florins for extraordinary expenses of the Ministry of War for the army, 10,663,060 florins for ordinary and 3,918,200 florins for extraordinary naval expenses of the Ministry of War, 2,134,307 florins for ordinary and 11,900 florins for extraordinary expenses of the Ministry of Finance, and 137,458 florins for the Board of Control.

The supplementary credits of the army and navy for 1898 amount to 30,646,030 florins. In the estimates for 1899 the expenditure for the Ministry of Foreign Affairs is reckoned at 4,274,000 florins; army, 143,685,251 florins; navy, 16,941,260 florins; Ministry of Finance and Pension fund, 2,137,184 florins; Board of Control, 138,045 florins. The total expenditure is set down at 167,175,940 florins, inclusive of 2,797,558 florins of departmental revenues. The receipts from customs are estimated at 59,589,530 florins; the surplus, after deducting expenses of the *régie*, 57,139,530 florins. The extraordinary credit for the military occupation of Bosnia is 3,479,000 florins. Deducting the customs receipts from the net expenditure of 164,378,382 florins, there remains the sum of 107,238,852 florins to be apportioned between Austria and Hungary in accordance with the quota to be fixed by law.

The Public Debt.—The general debt of the whole monarchy amounted in 1897 to 2,762,752,000 florins: the annual charge is 126,799,554 florins, of which Austria pays 96,488,601 and Hungary 30,310,953 florins. The common floating debt amounted on Jan. 1, 1897, to 138,949,109 florins. Austria's special debt amounted to 1,490,373,000 florins, costing 71,649,258 florins a year. Hungary has a separate debt amounting to 2,177,685 florins.

The Army.—Austrians and Hungarians are alike liable for service in the army, in which the term is three years of active service and seven years in the reserve. Those not drawn for the active army or navy are enrolled in the supplementary reserve or in the national Austrian or Hungarian Landwehr, in which the period of service is twelve years. Soldiers whose time has expired in the army are also inscribed for two years in the Landwehr, which in time of peace is only called out for drill and in war can not be mobilized without the express command of the Emperor-King. Young men who have received an academical education are required to serve a year only either in the army or in the Landwehr. The army is organized in 15 corps, mostly of 2 infantry divisions of 2 brigades, 1 brigade of cavalry and 1 of artillery. The annual contingent for the army is 60,389 Austrians and 42,711 Hungarians; for the Austrian Landwehr, 10,500; for the Hungarian Honved, 12,500.

The peace footing of the Austro-Hungarian army in 1897 was as follows: 3,738 officers and 3,843 men attached to the staff; 79 officers and 2,854 men in the sanitary troops; 1,536 officers and 7,680 men in the establishments; 9,454 officers and 177,109 men in the infantry; 1,874 officers and 45,506 men in the cavalry; 1,636 officers and 28,152 men in the field artillery; 412 officers and 7,760 men in the fortress artillery; 575 officers and 9,918 men in the pioneers; 393 officers and 3,253 men in the train; 2,168 infantry officers and 20,657 men and 196 cavalry officers and 1,899 men in the Austrian Landwehr; and 2,132 infantry officers and 21,232 men and 390 cavalry officers and 4,251 men in the Hungarian Honved; total, 24,583 officers and 334,114 men, 358,697 in all, with 47,149 horses and 1,048 field pieces.

The war footing is 45,238 officers and 1,826,940 men, with 281,886 horses and 1,864 field pieces. The army is kept in a state of readiness and high military efficiency. In 1898 an extensive acquisition of new arms and war material was begun.

The Navy.—The navy, designed mainly for coast defense, is kept in a high state of efficiency. It comprises 1 second-class and 8 third-class battleships, 8 vessels for port defense, including 4 monitors in the Danube, 3 second-class and 14 smaller cruisers, 12 gunboats, and of torpedo craft 26 of the first, 5 of the second, and 26 of the third class. A ram cruiser of 6,100 tons, with 10.6 feet of armor over the vital parts, 12,000 horse power, giving a speed of 20 knots, and an armament of 2 9.4-inch and 8 5.9-inch quick-firing guns, besides 18 smaller ones, not including machine guns, is nearly completed at Trieste, where also a torpedo cruiser has been built. The most modern of the effective vessels are the "Monarch," "Wien," and "Buda-Pesth," of 5,550 tons, 10.6-inch Harveyized armor, a speed of 17 knots, developed by engines of 8,500 horse power, carrying 4 9.4-inch guns in two turrets and 6 5.9-inch and 14 small quick firers.

Commerce and Production.—Austria in 1896 produced 15,507,000 hectolitres of wheat, 19,318,000 of barley, 36,727,000 of oats, 27,074,000 of rye, and 6,164,000 of corn, 88,180,000 quintals of potatoes, 59,348,000 of sugar beets and 24,426,000 of other beets, 3,485,000 hectolitres of wine, 66,000 quintals of tobacco, 100,000 of hops, 221,000 of hemp, and 85,000 of flax. Hungary produced 56,349,000 hectolitres of wheat, 21,448,000 of barley, 26,341,000 of oats, 18,120,000 of rye, and 51,620,000 of maize, and 35,644,000 quintals of potatoes, 15,469,000 of sugar beets and 31,159,000 of other beets. Of silk cocoons 1,499,845 kilogrammes were produced in Hungary and 2,027,423 in Austria in 1895. The values of the principal mineral products of Austria in 1895 were: Coal, 34,104,000 florins; lignite, 34,923,000 florins;

raw iron, 29,771,000 florins. The total value of mining products was 84,181,329 florins; that of furnace products, 35,262,727 florins. The chief mineral products of Hungary were coal valued at 5,640,000 florins, lignite valued at 11,218,000 florins, and iron valued at 12,490,000 florins.

The total value of the imports in the special commerce of the Austro-Hungarian customs union for 1896 was 705,800,000 florins, and of the exports 774,000,000 florins. The principal imports were cotton of the value of 57,389,000 florins; wool, 40,847,000 florins; coffee, 31,886,000 florins; coal, 31,391,000 florins; tobacco, 27,611,000 florins; woolen yarn, 23,612,000 florins; machinery, 21,342,000 florins; leather, 18,983,000 florins; hides and skins, 18,325,000 florins; metals, 17,087,000 florins; silk goods, 14,403,000 florins; eggs, 13,027,000 florins; wine, 11,763,000 florins; cereals, 11,684,000 florins; woolen goods, 11,303,000 florins; cotton yarn, 10,732,000 florins; cattle, 9,487,000 florins. The principal exports were sugar of the value of 75,137,000 florins; cereals, 41,977,000 florins; eggs, 39,902,000 florins; lumber, 31,515,000 florins; lignite, 24,321,000 florins; glassware, 24,294,000 florins; horses, 23,841,000 florins; cattle, 22,997,000 florins; leather gloves, 22,791,000 florins; timber, 21,996,000 florins; malt, 20,510,000 florins; woolen goods, 18,589,000 florins; hides and skins, 14,830,000 florins; barrel staves, 11,402,000 florins; feathers, 10,296,000 florins; shoes, 10,020,000 florins; beer, 7,981,000 florins; wine, 4,757,000 florins.

The imports of coin and bullion in 1896 were 68,806,845 florins in value, and the exports 42,534,439.

The extent of the trade of Austria-Hungary, with particular countries is shown in the following table, values being given in florins:

COUNTRIES.	Imports.	Exports.
Germany	257,446,000	402,361,000
Great Britain	73,492,000	73,617,000
Italy	47,178,000	60,116,000
Russia	44,124,000	27,633,000
United States	42,403,000	17,392,000
Switzerland	22,125,000	35,047,000
France	24,671,000	29,589,000
British India	42,732,000	6,901,000
Turkey	16,166,000	24,845,000
Roumania	10,570,000	26,270,000
Brazil	27,851,000	2,585,000
Servia	15,349,000	10,094,000
Belgium	12,815,000	7,915,000
Netherlands	10,200,000	9,657,000
Greece	9,242,000	4,148,000
Egypt	5,803,000	9,485,000

The imports of Hungary alone were valued in 1896 at 548,975,000 florins, and the exports from Hungary at 544,704,000. Of the imports 444,679,000 florins came from Austria, and of the exports 417,092,000 florins went to Austria. Germany furnished 29,042,000 florins of imports and took 53,905,000 florins of exports. The rest of the trade was with Servia, Great Britain, France, Italy, and Switzerland. Of the total value of the imports 79 per cent. consisted of manufactured articles, and of the exports 38 per cent. Some of the chief imports were cotton goods for 66,307,000 florins, woolen goods for 44,317,000 florins, clothing for 19,001,000 florins, silk goods for 13,273,000 florins, wine in casks for 14,543,000 florins, refined sugar for 10,655,000 florins, and cotton yarn for 8,506,000 florins. The chief exports were wheat, barley, and maize for 99,647,000 florins, flour for 81,596,000 florins, live animals for 69,902,000 florins, wine in casks for 19,588,000 florins, cask staves for 10,312,000 florins, eggs for 9,431,000 florins, and wool for 8,604,000 florins.

Communications.—The railroads of Austria in 1896 had a total length of 10,240 miles, the Hungarian lines a length of 8,375 miles, and in Bosnia

and Herzegovina there were 480 miles; total, 19,095 miles. The capital expended on 18,317 miles of Austro-Hungarian railroads up to 1895 was 2,628,344,000 florins. Of the Austrian lines 4,533 miles belong to the state, and of the companies' lines 933 miles were operated by the state and 4,774 miles by the companies. The total receipts from 106,443,000 passengers and 93,879,000 tons of freight carried in 1895 were 89,586,000 florins, and the operating expenses were 145,842,000 florins. In Hungary 9,299 miles were state lines, 3,051 miles companies' lines leased to the state, and 6,265 miles were both owned and operated by companies. The receipts from all the lines in 1893 were 102,591,000 florins, and working expenses 53,702,000 florins; the number of passengers carried 95,582,000; tons of freight, 24,460,000.

The Austrian postal traffic in 1896 was 740,904,060 letters and postal cards, 104,816,660 samples and books, and 87,592,600 newspapers; the receipts were 44,373,724 florins and expenses 41,742,829 florins. In the Hungarian post office 152,889,000 letters and postal cards, 31,283,000 samples and book packets, and 89,081,000 newspapers were forwarded in 1895; the receipts were 16,771,000 florins and expenses 12,153,000 florins.

The telegraphs of Austria in 1896 had 30,495 miles of posts and 89,100 miles of wire. In Hungary there were 13,604 miles of line and 39,828 miles of wire in 1895. The telegraphs constructed in Bosnia and Herzegovina have 2,002 miles of line and 3,311 miles of wire. There were 13,213,633 messages sent over the Austrian lines in 1896; in Hungary the number for 1895 was 6,969,643; and in Bosnia and Herzegovina in 1896 there were 547,046 messages transmitted.

Navigation.—There were 92,637 vessels, of 10,695,978 tons, entered at Austrian ports during 1895, and 92,566 vessels, of 10,692,058 tons, cleared. Of the total number 88 per cent., and of the tonnage 90 per cent., was Austrian, Italy, and then Greece, having the next largest proportion.

The Austro-Hungarian merchant navy in the beginning of 1896 consisted of 244 vessels, of 202,352 tons, engaged in foreign commerce, 1,746 coasting vessels, of 38,849 tons, and 9,922 fishing vessels and harbor craft, of 22,992 tons; total, 11,912 vessels, of 264,193 tons, having 33,023 men in their crews, and comprising 202 steamers, of 146,098 tons, and 11,710 sailing vessels, of 118,095 tons. Not included in these figures are 231 steamboats and 978 barges on the Danube and Elbe.

The Austro-Hungarian Ausgleich.—The negotiations for the renewal of the ten years' *Ausgleich* between Austria and Hungary were prolonged beyond the term of the treaty on account of the deadlock in the Austrian Reichsrath, caused by the conflict between the Government and the German minority over the language question. The position taken by the Hungarian Government was based on the Constitution of the kingdom, which did not admit of treating for the renewal of the *Ausgleich* otherwise than with the Austrian Parliament. The act passed by the Hungarian Parliament provided for the maintenance of the *status quo* only up to the end of the year. In case the Austrian Government failed to secure the co-operation of the Reichsrath in time to renew the decennial compromise before May 1, then the only alternative left for Hungary was to negotiate an ordinary treaty of commerce between the two countries as independent states. This would not affect the permanent, non-renewable parts of the *Ausgleich*, including the obligations of both states to provide for the common defense, which Hungary could discharge by contributing her share, both of men and of money, according to the Hungarian Constitution and laws, leaving

Austria to fulfill her part by constitutional agencies or otherwise. The question of the quota, or the respective contributions of the two halves of the monarchy to the common expenditures, which occasioned a long dispute in the beginning, was in a fair way to a settlement satisfactory to both governments. Hungary objected to paying on the basis of population on account of the backward condition of her industries and the poverty of the Slovaks and other elements of her population. Ultimately it was agreed that the contributions should be calculated on the same basis as in 1887. There was still a question as to the method of estimating the Hungarian share, the difference being a little over 3 per cent. The German peasantry of Styria, Tyrol, and other provinces whose representatives joined in the obstructive tactics that paralyzed the Austrian Parliament were actuated not solely by race feeling, but were desirous of defeating the *Ausgleich* and erecting a customs barrier between Austria and Hungary, as they attributed to Hungarian competition the agricultural distress that afflicted Austria. In Hungary too, if it were not for fears that a customs frontier would lead to the dissolution of the dual monarchy, the idea of protection against Austrian industry and of independent treaty arrangements with Germany and other customers for Hungarian produce would be very popular. As it was, the Hungarians stiffly maintained the position which they had taken as to the quota, but they were willing to prolong the *status quo* for one year more in case the parliamentary deadlock in Austria continued.

At a conference between the Austrian and Hungarian Premiers the latter agreed to an application of the emergency paragraph of the Austrian Constitution if after convening the Reichsrath once more it should be found impossible to secure the passage of the *Ausgleich* bills. In that case the Hungarian Government would submit measures to the Legislature at Buda-Pesth providing for the independent regulation of Hungary's customs and commercial relations with Austria. Austria would then be at liberty to provide corresponding regulations by ministerial decree. It was understood that the Hungarians would contribute 2 per cent. more to the common expenditure than their former quota and that the provisional *Ausgleich* would last till 1903. In accordance with this arrangement the Austrian Reichsrath was convened for Sept. 26 by an imperial rescript issued on Sept. 2.

Austria.—The Austrian Empire is composed of 16 provinces, each of which has its own diet with large powers of legislation in matters connected with local taxation, agriculture, education, charity, religion, and public works. The Austrian Reichsrath consists of the House of Lords, made up of 21 archdukes, 67 feudal lords, 17 prince bishops, archbishops, and cardinals, and 120 life members, and the House of Deputies, of 425 members, elected for six years, 129 by rural communes, 118 by towns, 21 by chambers of commerce, 85 by landed proprietors, and 72 under the law of June 14, 1896, by the whole body of electors.

The Council of Ministers, first constituted on Sept. 29, 1895, was composed as follows at the beginning of 1898: President of the Council and Minister of the Interior, Count Kasimir Badeni; Minister of Finance, Chevalier de Bilinski; Minister of Worship and Public Instruction, Baron Gautsch von Frankenthurn; Minister of National Defense, Graf Zeno von Welsersheimb; Minister of Agriculture, Graf J. von Ledebur-Wicheln; Minister of Justice, Graf Gleispach; Minister of Commerce, Baron Glanz von Eicha; Minister of Railroads, Ritter von Guttenberg; without portfolio, Dr. Rittner.

Finances.—The total revenue in 1895 was 827,394,000 florins, and the expenditure 809,385,000 florins. The estimates for the year 1898 make the revenue 719,900,282 florins, of which 518,889,842 florins are collected by the Ministry of Finance from taxes and duties, 118,829,800 florins come from the Ministry of Railroads, 52,452,150 florins from the Ministry of Commerce, 14,572,718 florins from the Ministry of Agriculture, 6,851,733 florins from the Ministry of Worship and Instruction, 1,575,597 florins from funds for pensions, subventions, etc., 1,379,996 florins from the Ministry of the Interior, 1,073,231 florins from the Ministry of Justice, 1,059,136 florins from the administration of the state debt, 791,300 florins from the Reichsrath and Council of Ministers, 408,679 florins from the Ministry of Defense, and 1,016,100 florins from various other sources. The total expenditures are estimated at 715,920,827 florins, apportioned as follow: State debt, 170,553,910 florins; contribution to the common expenditure, 122,656,440 florins; Ministry of Finance, 112,651,806 florins; Ministry of Railroads, 96,525,500 florins; Ministry of Commerce, 49,445,049 florins; pensions, subventions, etc., 29,348,305 florins; Ministry of Worship and Instruction, 29,177,140 florins; Ministry of Justice, 28,065,087 florins; Ministry of the Interior, 26,623,441 florins; Ministry of Defense, 24,072,680 florins; Ministry of Agriculture, 18,588,231 florins; Reichsrath and Council of Ministers, 2,636,283 florins; imperial household, 4,650,000 florins; management of debt, 650,190 florins; Board of Control, 176,600 florins; Imperial Cabinet Chancery, 76,864 florins; Supreme Court, 23,300 florins.

The Gautsch Ministry.—After the German party by noisy obstruction and dangerous violence had defeated all immediate prospect of the renewal of the *Ausgleich* with Hungary or of any useful legislation being accomplished in the autumn session of 1897, and even imperiled the peace of the empire, Count Badeni resigned in consequence of the passage of the *lex Falkenhayn*, a drastic measure for the suppression of obstruction, which permitted the intervention of the police in Parliament for the forcible expulsion of contumacious members. The legality of the new rule was called in question in a country where parliamentary freedom is regarded as a bulwark of popular rights, and the defection on this account of the Tyrolese Catholic People's party and of the German landed proprietors placed the Cabinet in a minority. Baron Gautsch then undertook the duties of Prime Minister and the Reichsrath was prorogued. The language conflict was thus transferred to the provincial diets, which sat early in 1898. The Germans, having almost abandoned their hopes of Germanizing the Slavs, were anxious to preserve their existing rights and erect legal barriers against further Slav encroachments. The Landtag of Lower Austria passed a resolution establishing German as the exclusive language to be used in the schools, but this the Czechs, seconded by the Social Democrats, denounced as unjust and oppressive to the Bohemian working classes in the province, numbering in Vienna alone not less than half a million people. A similar resolution was subsequently passed by the upper Austrian Landtag at Linz. In the Bohemian Diet the extreme Pan-Germanic Nationalists, with Herr Wolf and Herr Schönerer at their head, took the lead and effectually checked the efforts of the Conservative party of feudal landowners, which some of the moderate Germans were inclined to support, in the direction of a temporary compromise. The Germans, persisting in their demand for an unconditional abrogation of the language ordinances, threatened to withdraw from the Diet as well as from the Reichs-

rath. Baron Gautsch had only one object in view in accepting the post of Austrian Prime minister at this critical juncture. It was to effect some sort of compromise that would do away with obstruction in the Reichsrath and enable it to pass the *Ausgleich* measures. The mediation of the Gautsch ministry proved, however, as ineffective as the previous efforts of the Badeni Cabinet to bring about a conciliation between the warring nationalities. The Austrian Government proposed a modification of the language ordinances, offering as a counter-concession to the Czechs alterations in the curriculum of the Bohemian intermediate schools designed to promote the practical acquisition of the Czech language. While the two measures together were favorably received by the Czechs, the Germans protested against this last proposition as a second apple of discord. The proposed new language ordinance divided Bohemia into Czech, German, and mixed districts, in which respectively officials would be required to transact the business of public offices in Czech, in German, or in both languages, the object being to insure to each inhabitant of the kingdom, whether German or Czech, the right to transact his affairs with the officials in his own tongue. The parliamentary controversy over the question was attended by angry demonstration out of doors. German students were assailed in the streets of Prague for wearing their national badges, and when the police authorities prohibited societies from wearing their colors in public the senate of the German university resigned on Jan. 22 and the whole body of German students resolved to abstain from attending university lectures. The German students in the universities of Vienna, Brünn, Innsbrück, and in other Austrian high schools struck out of sympathy with their brothers of Prague, and refused to attend lectures until the obnoxious police regulation should be withdrawn. Their action gave occasion to the Slavs to demand for themselves separate educational facilities in the professional and technical schools. The disintegrating nationalist movement pervaded the entire empire of the Hapsburgs, gaining a fresh impetus with every new attempt at conciliation. The Poles, offended at the dismissal of Count Badeni, wavered in their fidelity to the alliance with the Czechs. The Ruthenians demanded in the Galician Diet that their language be used concurrently with Polish and a knowledge of it be made obligatory for all public officials in the districts of Austrian Poland inhabited by both nationalities. In the Styrian Diet the Slovenian minority threatened to withdraw from the deliberations unless their nationality were recognized. There was a renewal of the agitation among the southern Slavs in favor of combining to form a new nationality. Even in the land of the Hungarian Crown various nationalities leagued together to assert themselves in opposition to the strong centralizing tendency. The Saxons of Transylvania joined with Servians, Roumanians, and Slovaks in a protest against the substitution of Magyar names of places for those of other languages at present in use. In Carniola the Slovene majority in the Diet carried a motion in favor of establishing a Slovene university at Laibach. The Prime Minister threatened to visit pains and penalties upon the recalcitrant German students, but they were forgiven upon their conforming again to academic discipline, much to the disappointment of the clerical Slav supporters of the Government in the Reichsrath. When the Czechs in the Bohemian Diet, supported by the feudal aristocracy, insisted on inserting in a jubilee address to the Emperor an expression of their aspirations for a separate kingdom of Bohemia, including Moravia and Silesia, they provoked the

threatened rupture of the Germans, who on Feb. 26 left the house. The Diet was closed by imperial decree on March 2, and on March 4 the modified language ordinances were published. Before their effect could be seen Count Gautsch, who had long despaired of consolidating a working majority, and who now encountered fresh difficulties in the negotiations over the Austro-Hungarian *Ausgleich* with Baron Banffy, the Hungarian Premier desiring to treat the customs union and the charter of the Austro-Hungarian bank apart from the question of the quota, offered his resignation on March 5 in order to make way for Count Thun and a new ministerial combination.

Ministry of Count Thun.—The new ministry was constituted on March 7 as follows: President of the Council and Minister of the Interior, Graf Franz Thun-Hohenstein; Minister of Public Instruction and Ecclesiastical Affairs, Graf Bylandt-Reydt; Minister of Finance, Herr Kaitzl; Minister of Agriculture, Baron Kast; Minister of Commerce and National Economy, Dr. von Bärenreither; Minister of National Defense, Field-Marshal Graf Zeno Welser von Welsersheimb; Minister of Justice, Edler von Ruber; Minister of Railroads, Ritter von Wittek; without portfolio, Herr Jandrejevich. Count Thun, once known as a Czech patriot, afterward, when Governor of Bohemia before the advent of Count Badeni to power, the terror of the Young Czech agitators, against whom he applied the arbitrary powers of the state of siege, had made his peace with the Czechs before the close of the session of 1897. In the ministry the Young Czechs, the Poles, and the moderate section of the German Liberals were represented, as well as the Clerical and Feudalist Conservatives, of whom the Prime Minister was one. These heterogeneous elements were called into the Cabinet in the hope of conciliating the moderate members of the different parties so as to make it possible to carry the *Ausgleich*.

The Reichsrath reassembled on March 21. The German Nationalist group, numbering 5 members only, but exercising a dominating influence as the foremost champions of the Germanic cause, offered uncompromising opposition to the Government until the language ordinances were repealed and German confirmed as the state language. The German People's party, which numbered 39 members, hailing mostly from the Alpine provinces, decided to continue obstruction till the repeal of the *lex Falkenhayn* and the language ordinances, and the 49 members of the German Progressives, representing Bohemian and Moravian constituencies, adopted also a hostile attitude, while the German Feudalist group, numbering 26, reserved liberty of action. The Social Democrats, 14 in number, promised their support to any effort to drive out the representative of the aristocratic reactionaries. Count Thun stated the Government programme to be the restoration of normal conditions in the Reichsrath and of regular legislation and the conclusion of an arrangement with Hungary, and he appealed for the support of all who had the credit of the monarchy and the existence of parliamentary forms at heart to support the Cabinet, whose guiding principle would be justice to all the peoples and races of the country and whose aims embraced social reform, intellectual progress, improvement of the moral and material condition of the population, and the encouragement of industry and agriculture. The Reichsrath took a recess after organizing, reassembling on April 20. A motion to refer to a committee the impeachment of the former Prime Minister, Count Badeni, after a tumultuous debate was carried by a majority of 175 to 167 on April 26. The *lex Falkenhayn*, which was a resolution passed by the Reichsrath

without debate, under which 12 German National and Social Democratic members were evicted from the Chamber and were excluded from their seats for three days, was on the same day pronounced unconstitutional by the Supreme Court in an action brought by these members to recover from the Government their parliamentary allowance of 10 florins a day. Count Falkenhayn's motion, which was passed in the midst of riotous and scandalous proceedings that took place in November, 1898, empowered the president of the Chamber to exclude a member who has been guilty of grossly disorderly conduct from three sittings at his own discretion or with the assent of the house from thirty sittings. It also declared that the salaries of members should cease during the period of their suspension. The introduction of the motion caused such a tumult that it was put to the house in dumb show by the president, and was declared carried, and put in force on the following day, when the obstructionists after outrageous misconduct were ejected, struggling violently with the police. The court decided that the modification in the standing orders was illegal because the Constitution requires that any change of the kind should be submitted to a committee and subsequently discussed by the Reichsrath, whereas the *lex* Falkenhayn was sprung upon the house without these formalities.

Count Thun invited the Reichsrath to regulate the language question in a manner to protect the minorities, reduce national friction, and lay the foundations for a durable peace in the whole nationality struggle, promising to abrogate the Gautsch decree as soon as a committee of the Reichsrath, composed of representatives of all the parties, should arrive at an understanding on the subject. The prospect of peace between the nationalities was rendered more remote by incidents that occurred in Gratz, which caused fresh irritation. On the occasion of the last stormy sittings of the Reichsrath this university town was the scene of riotous disorders, ending in a collision between the populace and the Bosnian regiment stationed there. The municipality gave a public burial to a workman who was killed, and nearly 50 officers of the reserve took part in this demonstration against the Government for employing a Slav regiment to keep order in a German city. These officers the Government reduced to the ranks, transferring some of them to Slav and Magyar regiments, in which they were compelled to serve as common soldiers. After the band concerts had been omitted for several months the garrison allowed the music to be resumed, making a beginning with the band of the Bosnian regiment; but as soon as the bandmen began to play they were chased off the platform by a mob of students and Socialist workmen. The Minister of War, in answer to an interpellation in the Austrian Delegation, refused to consider the suggestion that he should remove the Bosnians from Gratz and restore the degraded reserve officers, and after the municipal council of Gratz on May 25 had passed resolutions reflecting on the Government it was dissolved and replaced by a Government commissioner. In Brünn, the Moravian capital, and in Prague collisions occurred between Czechs and Germans. The interference of the German Empire and its absorption of German Austria were openly invoked by the German Nationalists, while the Czechs vaunted the sympathy and protection of Russia and fraternized more than ever with the Pan Slavists. When the Reichsrath met again on June 1, after the Delegations were closed, the Cabinet had to face the reunited German Opposition. The German Nationalists were able to stop all business from being transacted or even discussed. When the Prime Minister rose on June 7 to read his

answer to an interpellation on Gratz, Herr Schönerer took possession of the floor to read interminable petitions for the adoption of German as the state language. Before the date of the next appointed sitting the Reichsrath was prorogued, leaving the Government of the country to be carried on under the fourteenth article of the Constitution, or virtually by a suspension of the Constitution. This article was intended to meet emergencies when the Reichsrath does not happen to be in session. Action taken under it by the Government has the force of law only under limitations, the most important of which is that the Government's decrees must be laid before the next Reichsrath within four weeks of its assembling. The breakdown of the parliamentary system was not contemplated, but the Emperor would not break the letter of the Constitution if he continued to govern by arbitrary decrees indefinitely without calling the Reichsrath together to render an account of his actions. The Government programme of railroad construction and a comprehensive scheme of public improvements, including the regulation of rivers, the sanitation of towns, etc., could not be carried out because a loan was necessary for these purposes, and for that, though not for the levying of taxes and the expenditure of public moneys, the assent of Parliament is necessary.

Anti-Semitism in Galicia.—The Polish peasantry, first ground down by their landlords, and then driven to the wall by the Jewish usurers from whom they had obtained temporary relief in their distress, stirred to hatred against their oppressors by Social Democratic agitators, and inflamed with religious antipathy to the Jews by false tales palmed on their ignorance by unscrupulous Anti-Semitic fanatics, found a vent for their desperate feeling and a relief to their famishing condition in a series of outrages and robberies begun in the spring of 1898. At first the poorer Jews were the objects of their fury, but later they attacked the rich Jews and burned and plundered the houses of the landowning nobility. The Government, when the movement took this latter form, proceeded with vigor against Social Democrats, not only those of the disturbed districts, but the leaders of the party and the trade unions in Vienna, whose papers and funds were confiscated contrary to law.

Hungary.—The Hungarian Parliament consists of two chambers. The Chamber of Magnates is made up of 19 archdukes, 181 hereditary peers paying 3,000 florins of annual land taxes, 84 life peers, 41 archbishops, bishops, and other prelates of the Roman and Greek churches, 11 representatives of the Protestant communions, 17 official members, and 3 delegates from Croatia and Slavonia. The House of Representatives contains 453 members, elected by all male citizens over the age of twenty who pay a certain minimum tax or have a specified small income. Of the members 413 represent the towns and rural districts of Hungary, including Transylvania, and 40 are from Croatia-Slavonia, which has a provincial Diet with power to legislate on internal religious, educational, and police affairs.

The ministry, which is individually and collectively responsible to Parliament, was in the beginning of 1898 made up as follows: President of the Council, Baron Desiderius Banffy; Minister of Finance, Dr. Ladislaus de Lucacs; Minister of National Defense, Baron Geza Fejervary; Minister of the Imperial Cabinet, Baron Ernest de Szamosujvar-Nemethi; Minister of the Interior, Desiderius Perczel; Minister of Education and Public Worship, Dr. Julius de Wlassics; Minister of Justice, Dr. Alexander Erdely; Minister of Agriculture, Dr. Ignatius Daranyi; Minister for Croatia-Slavonia and Dalmatia, Emerich de Josipovich.

Finances.—The ordinary revenue in 1896 amounted to 500,574,000 florins, and transitory and extraordinary revenue to 17,625,000 florins; total, 518,453,000 florins. The ordinary expenditures were 445,967,000 florins; transitory expenditures, 15,795,000 florins; investments, 47,261,000 florins; and extraordinary expenditures, 6,920,000 florins; total, 515,943,000 florins. The budget for 1898 makes the ordinary revenue 470,605,451 florins and the transitory revenue 27,710,840 florins; total, 498,316,291 florins. The sources of ordinary revenue are: Ministry of Finance, 308,841,770 florins; Ministry of Commerce, 138,325,269 florins; Ministry of Agriculture, 16,781,727 florins; state debts, 2,298,231 florins; Ministry of Public Worship, 1,706,795 florins; Ministry of the Interior, 1,487,855 florins; Ministry of Justice, 795,963 florins; Ministry of National Defense, 367,041 florins; ministry *ad latus*, 800 florins. The total ordinary expenditure is estimated at 449,094,228 florins, transitory expenditure at 14,086,378 florins, and investments at 35,069,964 florins; total, 498,240,570 florins. The items of ordinary expenditure are as follow: National debt, 129,192,798 florins; Ministry of Commerce, 97,326,100 florins; Ministry of Finance, 74,720,382 florins; contribution to common expenditure, 27,882,870 florins; Ministry of Agriculture, 18,470,464 florins; Ministry of the Interior, 17,053,907 florins; Ministry of Justice, 16,539,356 florins; Ministry of National Defense, 16,164,135 florins; debts of guaranteed railroads taken over by the Government, 13,671,287 florins; Ministry of Public Worship and Instruction, 13,118,716 florins; pensions, 8,687,457 florins; administration of Croatia, 8,307,881 florins; civil list, 4,650,000 florins; Parliament, 1,753,906 florins; minister presidency, 457,290 florins; guaranteed railroad interest, 438,508 florins; administration of courts, 264,118 florins; Accountant General's office, 150,343 florins; Cabinet Chancery, 76,864 florins; ministry *ad latus*, 74,478 florins; Ministry for Croatia, 43,908 florins; common pensions, 25,460 florins.

Agrarian Socialism.—After the harvest strike of agricultural laborers of the Alföld, the great plain of Hungary, which took place in 1897, the Government in the beginning of 1898 carried through Parliament a measure intended to prevent its recurrence. This Government bill delivers the laborer up to the arbitrary discretion of his employer, empowering the latter to put an end to the contract he has entered into and to withhold the wages he has agreed to pay if the laborer should, in his opinion, be a Socialist agitator. If the laborer, however, should fail to appear at the time and place appointed, the employer is entitled to call upon the authorities to enforce him to carry out his contract, and the laborer has no legal defense against such a proceeding. This remarkable piece of class legislation, branding a strike as an act of mutiny and insurrection, overshot the mark, stimulating rather than checking the agrarian movement. The liberty of speech and of public meeting was so restricted for the laborers by law that they could not hold political gatherings for the expression of their grievances. They therefore resorted to the stratagem of public balls, which were followed by acts of pillage in many places, the wrecking of public buildings, incendiary letters to landowners, and a refusal to pay taxes, necessitating the intervention of the military. In the neighborhood of Debreczin a peasant revolt was suppressed by a considerable military force, and in other districts encounters took place between starv-

ing laborers and the gendarmerie, accompanied by loss of life and acts of incendiarism. When a deputa-tion of landowners of the Szabolcs Comitatus asked for the energetic intervention of the Government, the Prime Minister promised military precautions on an extensive scale and even a law further restricting the freedom of the press. The authorities arrested and expelled agitators wherever found. Still the peasantry, whose ultimate demand was for a division of the soil among all the inhabitants, prepared for a new strike and combined to refuse to make contracts for the next harvest, so that employers were compelled to offer better terms than before in spite of the new labor law and the bitter distress among the laborers. The agricultural depression of recent times has not only lowered the standard of life and comfort among the landless laborers, but has reduced to their condition a large class of proud and independent peasant proprietors, who have been compelled to give up their small farms from which they could no longer extract a livelihood, and these properties have been swallowed up in the great estates. The Catholic People's party in Parliament supported a proposal to break up the huge entailed estates and other large domains which have grown enormously as a result of the present agrarian system. The Moderate and Conservative politicians as well as the Radicals condemned the methods pursued by the Government in dealing with the agricultural laborers, who, while denied the right of parliamentary representation, have the right of association also taken away from them and are placed under permanent police supervision. At the request of the Hungarian Minister of the Interior the Imperial Government sent a commissioner into the Szabolcs country, which was the center of the agitation, and arranged to replace with Bosnian and Croatian troops the Magyar regiments stationed in some of the disturbed districts, because these seemed to sympathize with the peasants. As the bulk of the Ministerial party belonged to the landowning class, the Liberal Cabinet could not deal with the agrarian problem independently. Nevertheless, the Minister of Agriculture promised remedial measures that would take into consideration the views of the laboring classes as well as those of their employers. Socialist leaders in Buda-Pesth were subjected to domiciliary visits and the books and funds of trade unions were confiscated, acts which were denounced by the Opposition as illegal. The Minister of the Interior affirmed that the wires of the peasant movement were pulled from the capital. He denied that there was distress in the Szabolcs, saying that wages there were high, the authorities offering half a florin a day for labor on public works. On March 31, near Temesvar, a mob armed with pitchforks and hatchets charged upon a force of gendarmes and put them to flight after being fired upon with fatal results. Baron Banffy accused the Ultramontane People's party, which had lately adopted Anti-Semitism and denounced the Government for succumbing to Jewish control, with seeking to foster this agrarian socialism, which dreamed of a Russian conquest of the Magyars and hoped for a subversion of all authority and a division of the land among the proletarians. The Magyarizing policy of the Government in Transylvania cost it the support of the Saxon representatives. The promised remedial measures to stem the agrarian discontent had not taken definite form when Parliament was prorogued on July 28.

B

BAPTISTS. Statistics.—The "American Baptist Yearbook" for 1898 gives statistics of the Baptist churches in the United States, of which the following is a summary: Number of associations, 1,609; of churches, 43,397; of ordained ministers, 27,355; of members of the church, 4,055,806; increase during the year by baptism, 198,432; number of Sunday schools, 22,529; of officers and teachers in the same, 172,082; of pupils, 1,628,971; of meeting houses, 12,708, with seating capacity for 2,621,300 persons; of parsonages, 1,475; value of church property, \$89,857,207. Amount of contributions: For church expenses, \$9,021,818; for Sunday-school expenses, \$422,540; for State missions, \$317,667; for home missions, \$306,931; for foreign missions, \$399,814; for education, \$108,205; miscellaneous contributions, \$1,417,094.

The "Yearbook" also gives as statistics of the Baptists of the world: In North America, including besides the United States, the provinces of Canada (925 churches, 573 ordained ministers, 5,252 baptisms, and 89,470 members), Central America, Mexico, and the West Indies, 44,593 churches, 28,066 ministers, 205,843 baptisms, and 4,190,031 members; South America (Argentine Republic, Brazil, and Patagonia), 23 churches, 14 ministers, 257 baptisms, and 1,150 members; Europe (including Great Britain, Austria-Hungary, Belgium, Denmark, Finland, France, Germany, Holland, Italy, Norway, Roumania and Bulgaria, Russia and Poland, Spain, Sweden, and Switzerland), 3,989 churches, 2,971 ministers, 23,239 baptisms, and 469,290 members; Asia (including Ceylon, China, India, Assam, Burmah, Japan, Orissa, and Palestine), 1,291 churches, 769 ministers, 5,405 baptisms, and 114,587 members; Africa, 96 churches, 79 ministers, 483 baptisms, and 5,977 members; Australasia, 230 churches, 153 ministers, 1,107 baptisms, and 18,089 members; total for the world, 50,222 churches, 32,052 ministers, 236,334 baptisms, and 4,799,124 members.

The "Yearbook" gives for the Baptist institutions of learning, comprising 7 theological seminaries, 94 universities and colleges, and 77 academies and seminaries, 2,215 instructors, 33,580 students, \$27,387,772 of property, and \$16,190,931 of endowment funds. Thirty-four Baptist charitable institutions (hospitals and orphan and other homes) return property valued at \$1,626,121.

Missionary and Benevolent Societies.—The annual meetings of the Northern Baptist societies were held in Rochester, N. Y., May 16 to 23. The meeting of the Woman's Baptist Home Mission Society was held May 16. The report showed that the society was free from debt, and had a small balance in the treasury. It had received \$70,506, while its disbursements and unpaid liabilities at the close of the year aggregated \$69,907, leaving a balance of \$668 with which to begin the new year. It had further distributed supplies to frontier missionaries, industrial schools, and other objects of its care, amounting in value, according to the estimates of the donors, to \$10,094. Of its funds, \$2,019 had been expended for the support of workers in schools of the American Baptist Home Mission Society and \$2,161 had been paid into the treasuries of State conventions in frontier missionary States. One hundred and twenty-six missionaries had been employed at 96 stations in 35 States and Territories in the United States and Mexico—viz., 15 in frontier work (including Utah), 6 among

the Chinese, 24 among Germans, 1 among Jews, 2 among Danes and Norwegians, 12 among Swedes, 14 among Indians, 8 among Mexicans, 46 among negroes, and 1 on detail service. Twenty-one students had been graduated from the training school.

Missionary Union.—The eighty-fourth annual meeting of the American Baptist Missionary Union was held May 17 and 18. The treasurer reported that the total receipts for the year had been \$849,477, of which sum \$287,355 were credited to donations, \$99,916 to the four woman's societies, \$151,267 as the gift of John D. Rockefeller toward the extinction of the debt, and \$142,561 to the contributions of the Church for that purpose. The donations from the churches, not including the contributions for the debt, were \$31,056 more than those of the year previous. The appropriations for the work of the year from Oct. 1, 1897, to Oct. 1, 1898, had been originally \$423,126, or \$114,271 less than those of the year before. To this sum \$57,859 had been added during the year. Applications for much more than the amount granted to the mission fields had been received, and the money could have been profitably employed, but the Executive Committee had felt the necessity of avoiding debt, and had reduced the scale of operations to an extent that could not be continued permanently without sacrificing precious interests. While it was represented that the European missions had never been more prosperous than during the past year, a special survey was given of the Asiatic missions. The pressing of the Chinese into Burmah, where they are becoming an important element of the population, was mentioned as a problem demanding particular consideration. The seminary at Rangoon was proving a very important agency for the supply of preachers and teachers for the several nationalities. The printing press and its work were becoming more and more important. The mission in Burmah, begun in 1873, had made a great return for the labor expended upon it, and gave large promise for the future. Of the races in the country, the Karens had been the most attractive, and had received the most attention, but the Burmans were by far the more important people. No mission had been more fruitful during the past few years than that in Assam. The hill tribes—the Garos, the Nagas, and others—had become to the society what the Karens in Burmah had been a few decades ago; but the importance of reaching the Assamese was insisted upon. The Telugus had become associated with the greatest triumph in the shape of revivals and the spread of Christian experience in the history of modern missions. The Chinese and Japanese missions were also referred to as making notable advances. Certain important points set forth in this paper were, first, the necessity of continuing the prominence given in the past to direct evangelistic work. "All other forms of work should be subsidiary to this. The ultimate aim of missions is to plant Christianity; its extension must be relegated to the native churches, and they must not depend upon the board for their own missionary extension." There should be at the first favorable moment the organization of individual believers into independent churches. Second, the Union must require of its missionaries a fluent command of the vernacular. Third, it is a wise policy to change at this time, or soon in the future, the method of conducting the schools, in some countries at least. There should be a concentration of schools, with a

fostering of secondary schools and a laying of foundations for theological training. Fourth, the time is ripe for the Union to take decisive steps for the introduction of industrial pursuits among native Christians. A resolution was passed by the meeting affirming that the settled aim and purpose of the Missionary Union "are nothing less and nothing else than the planting of Christianity as an abiding possession of the land in which its work is done, and that it regards as necessary to this end the forming of a strong and self-supporting Christian people, trained in all that pertains to intelligent thought and worthy living." A comparison was given in the report of the Executive Committee of the condition of the Union and its work in 1869 and 1898, summarized as follows:

ITEMS.	1869.	1898.
Missionaries	121	497
Appropriations	\$180,000	\$550,000
Receipts	196,000	488,000
Permanent funds	58,000	532,000
Annuity accounts	None.	300,000
Deficiency	30,000	68,000
Property owned by the Union abroad free from debt	None.	700,000

The twenty-seventh annual meeting of the Baptist Woman's Foreign Missionary Society of the West was held at Waterloo, Iowa, April 20 and 21. The treasurer's report showed that the receipts for the year had been \$58,607, and the expenditure \$57,299, leaving a balance in the treasury, including designated funds, of \$1,308.

The European missions (in Sweden, Germany, Russia, Finland, Denmark, Norway, France, and Spain) returned 1,518 preachers, 950 churches, 102,963 church members, 6,668 baptisms during the year, 79,321 pupils in Sunday schools, and contributions amounting to \$118,900; the missions to heathen (in Burmah, Assam, Telnguland, China, Japan, and Africa), 93 stations, 463 missionaries, 3,484 native helpers, 870 churches, 98,904 church members, 6,529 baptisms, 34,041 pupils in Sunday schools, \$71,849 of contributions; and a total of 31,226 pupils in, theological, boarding, and other schools.

Home Mission Society.—The sixty-sixth annual meeting of the American Baptist Home Mission Society was held May 19 and 20. The receipts for the year had been \$458,470, of which \$335,222 had come from the contributions of churches, schools, etc. The expenditure had been \$402,315, exceeding the income available for current work by about \$14,000. The permanent trust funds had been increased by about \$17,000, and \$60,000 had been added to the annuity funds, which now amounted to \$400,000. The growth of the work of the society had been rapid and substantial, especially in the far West. Missionary work among foreign populations was most prosperous and encouraging, especially among Italians, and there had been progress in spite of difficulties in Mexico and among the negroes. One thousand and thirty missionaries had been employed, of whom 113 had labored in the Central and New England States, 197 in the South, 688 in the West, 14 in Canada, and 18 in Mexico. Sixty-three of these had labored among the foreign populations. The missionaries had baptized 5,022 persons and received 3,938 others, and returned a total membership of 40,593, 150 churches organized, 985 Sunday schools under the care of missionaries, and benevolent contributions amounting to \$85,738. Important movements during the year had been the withdrawal of co-operation from Iowa, Wisconsin, and Minnesota, the extension of co-operation with the colored people of the South, and the beginning of larger participation in

city mission work. Ninety-five churches had been aided from the Church Edifice fund. From the educational department the total enrollment of pupils in all the schools was reported as being 5,396. More than \$259,000 had been spent during the year 1896-'97 on the colored schools.

Thirteen high schools and 13 secondary schools for colored people returned a total enrollment of 5,036 pupils (2,210 young men and 2,826 young women), with averages of 1,414 boarders and 1,685 day pupils, or a general average of 3,099. Of these numbers, 373 were studying for the ministry, 1,724 were preparing to teach, 29 were in the teachers' professional course, 25 in the missionary training course, 39 in the nurse's training course, and 1,787 had received systematic training in some line of industrial work. Three hundred and sixty pupils were enrolled in the schools for Indians, 2 of whom were studying for the ministry and 25 were preparing to teach. Two hundred and forty-seven teachers—120 white and 127 colored, 103 men and 144 women—were employed in the colored schools receiving help from the society; in the 10 schools wholly or partially managed by the society 112 white and 42 colored, and in those under the entire control and management of colored trustees 85 colored and 8 white teachers. The society had received in the shape of tuition fees, in payment for board, etc., \$118,032 from the colored people, and had contributed to the support of their schools, for buildings, etc., \$84,767, and the total amount of \$255,452 had been expended on them during the school year. The 16 schools under the entire control and management of negro boards of trustees included 3 holding college charters and 13 secondary or academic schools. The aggregate salaries of all the teachers in these schools were \$44,827, of which the society paid \$9,700, and the expenditure for board, school supplies, and all other current expenses was \$39,570, making a total expenditure for 1896-'97 of \$84,397. Chinese mission schools were sustained at various points in the Pacific States and Montana, and in New York city; and other schools in Utah, Mexico, and New Mexico.

Publication Society.—The seventy-fourth annual meeting of the American Baptist Publication Society was held May 21 and 23. The report mentioned as the great event in the year's history of the society the completion of its new building in Philadelphia, costing \$530,000, without cost to the missionary department of its work except that money had been borrowed from it. In the business department the aggregate of sales had been \$670,093, an increase of \$48,806 over the previous year. In the missionary department the receipts from invested funds, contributions, Children's Day, etc., had been \$115,433. The deficit in this department, \$11,374 at the beginning of the year, had been reduced to \$8,464. In addition to the ordinary missionary contributions \$41,850 had been received from bequests in the form of conditional gifts. The receipts in the Bible department had been \$12,419; and the entire amount, including Bible funds, coming into the missionary treasury through ordinary channels had been \$127,852. Very great enlargements had been made in the Bible work during the year. The society was no longer dependent upon any other society for Scriptures in the ordinary version, but had a list of its own, comprising text editions, teachers', family, pulpit, illustrated, and other Bibles. On the general list, 72 new publications had been issued. Ninety-four missionaries and workers had been employed during the year, who had baptized 533 persons and constituted 51 churches.

A "ladies' chapel car," built at a cost of \$8,000 entirely by contributions from women, was dedi-

ated during the meetings under the name of the "Messenger of Peace." It has a seating capacity for 175 persons.

Other Societies.—The Woman's American Baptist Missionary Society (New England) had raised \$37,000 dollars during the year, and had supported, in whole or in part, 55 teachers, most of whom had been selected and appointed by the Home Mission Society.

The report of the American Baptist Historical Society mentioned a revival of interest since the opening of its new rooms in the Baptist building in Philadelphia, and the gradual growth of the new collections which had been made to replace those which had been destroyed by fire. The Committee on Studies in Baptist History reported that arrangements had been made to begin immediately the publication of historical papers.

The Commission on Systematic Benevolence reported progress in its work of increasing the interest of the churches in the causes for which contributions are sought, and in systematizing the methods of giving. It had proceeded by means of meetings, the distribution of literature, and organization.

Young People's Union.—The annual convention of the Baptist Young People's Union of America was held at Buffalo, N. Y., July 14 to 17, and was attended by more than 10,000 members and visitors. The report of the Board of Managers emphasized the fact that the Union had completed the first seven years of its growth. The distinctive features were federation, education, and denomination. All these were needed, denomination to give control and direction to the other two. The report of the previous year at Chattanooga had placed emphasis on the extensive development of the work, in the extension of territory in the South, in the general expansion of the work, and in internal administration. The year just closed had been marked rather by intensive development. The work of State and provincial organization had been carried so far as to include nearly all the territory. The general secretary had traveled extensively during the year, and had addressed rallies, associational gatherings, or State conventions in 24 States, provinces, etc. The relations established with the Baptist Young People's Union auxiliary to the Southern Baptist Convention had been "harmonious and delightful." The development of the work in the South had been one of the salient features of the year. A review of the seven years' history of the Union was presented, which recited that after the organization of the Christian Endeavor Society numerous Baptist societies arose and various views were current. Some representative men wanted an exclusive denominational society. The Christian Endeavor Societies feared the withdrawal of the Baptist societies. A federative plan was suggested in Nebraska for the formation of young people's societies for which no form of constitution should be required, and for the federation of all societies, of whatever name or affiliation, into a State organization. This plan was practically accepted at a meeting for organization held at Chicago, Ill., in June, 1891, when the present name and constitution were adopted, and Chicago was made the headquarters of the Union. A proposition to make the meetings of the convention biennial instead of annual was submitted to the local unions for consideration. The Board of Managers announced that the designation Founding fund would be dropped from the financial reports, and contributions would hereafter be made to the debt. The sessions of the convention were occupied with conferences, addresses, reviews of progress in the Christian-culture courses, presentation of banners, and special meetings.

Meetings of the German Baptist Young People's Union were held during two days of the sessions of the convention.

Educational Society.—The American Baptist Educational Society, now ten years old, meeting alternately in the North and in the South, met in connection with the Southern Baptist Convention at Norfolk, Va. It had during its existence made 37 grants to schools—to 14 in the North, 10 in the South, and 13 in the West. It had granted \$452,600 to schools, of which \$259,991 had been paid, while the remainder had lapsed or was held for the institutions. The additions to schools as a result of this work had been \$1,150,187, exclusive of Mr. Rockefeller's grants to Chicago University. That university, with its holdings of more than \$12,000,000, might not have been a possibility, the report suggested, without this society.

Southern Baptist Convention.—The Southern Baptist Convention met at Norfolk, Va., May 6. The Hon. Jonathan Haralson, of Alabama, was chosen president. The report of the Home Mission Board showed that \$54,251 had been raised and expended on the field during the year, against \$45,672 in 1896; and that \$56,385 had been collected and expended in building houses of worship, against \$51,540 in 1896; making a total amount raised on the field of \$110,636, or \$13,424 more than in 1896. The whole amount of cash received by the board from all sources was \$86,827. Four hundred and sixty-seven missionaries had been employed, who returned 4,739 baptisms and 9,509 additions to the churches. In addition to the amount of money reported as raised on the field the board had invested more than \$10,000 in cash upon houses of worship. Nineteen hundred and sixty churches and stations had been supplied during the year, 103 churches constituted, 45 houses of worship built and 68 improved, \$59,629 expended on houses of worship, and 297 Sunday schools organized, representing 7,710 teachers and pupils. The co-operative work among the colored people had been attended with gratifying results, and successful institutes had been held among negro preachers. The Women's Missionary Societies had contributed \$35,636 to the cause represented by the board, or \$5,705 more than in 1896, and their work in forwarding supplies to frontier missions had been specially helpful.

The Board of Foreign Missions reported that while it had been burdened with an indebtedness of \$13,532 at the close of the previous year, it was now free from debt, and had a balance of \$2,976. The total contributions for the year had amounted to \$124,249 as against \$125,682 in the previous year. The Woman's Missionary Society, the tenth annual report of which was incorporated with the report of the board, returned total contributions of \$21,633. There were connected with the foreign work 76 missionaries and 117 native assistants, and 701 baptisms were returned. In China and Brazil "large numbers" had been added to the churches; in Japan, Africa, and Italy there had been steady progress; while less progress, but "good in some of the missions," had been made in Mexico.

The gross income of the Sunday-school Board had been \$64,000, and after promptly meeting all bills and expenses the treasurer returned nearly \$33,000 of assets, with practically no liabilities. Nearly \$13,000 had been expended in aid of the Home and Foreign Boards, Sunday-school missions, and other denominational interests, and in gifts of books, Bibles, tracts, and periodicals, and of boxes for Sunday-school missionaries. The reserve fund, which had been used in the previous year for the purchase of a house, had been started afresh and was held under safe investment for any emergency. The board asked to be allowed to publish books.

Certain expressions and acts of the Rev. Dr. W. H. Whitsitt, President of the Southern Baptist Theological Seminary, Louisville, Ky., has afforded matter of controversy among some of the members of the churches connected with the convention for several years. In historical articles written for "Johnson's Cyclopadia" and for the "Independent" newspaper, Dr. Whitsitt had affirmed as a fact that immersion was not practiced by the earlier English Baptists, nor down to a comparatively late date in their history. A demand was set up that he be disciplined and removed from his presidency on account of these publications and because of a discourtesy he was alleged to have shown toward one of the trustees in refusing to allow him informally to inspect his official books. The Board of Trustees had declined to entertain the complaint and the convention had refused to call their conduct into question. The trustees reported to the present meeting of the convention that they had received several communications respecting the management of the seminary, which they referred for consideration; "but, inasmuch as the communications refer only to issues which were settled by the trustees at their last meeting, it is proper to say that after twelve months of mature and prayerful reflection we can find no reason for modifying in any degree our statement made at that meeting; but, on the contrary, we feel constrained by our own convictions of duty to reaffirm our adherence to the action then taken." A motion to refer the matter to the several State organizations was lost by "an overwhelming majority"; and the motion to adopt the report of the Board of Trustees was carried by a vote of about 4 to 1. A motion asking for the Kentucky delegation to the convention the right hereafter to make nominations to fill Kentucky vacancies on the Board of Trustees; and a notice of a resolution to be made at the next meeting of the convention that "without expressing any opinion whatever concerning the seminary matters," "but in the interest of harmony it divests itself of responsibility in the management of the seminary by declining to nominate trustees for it, or to entertain motions or receive reports relating to it, were referred to a special committee to consider and report at the next session of the convention concerning the advisability of any change in the relations of that body to the seminary.

Subsequent to the meeting of the convention, Dr. Whitsitt resigned the presidency of the Theological Seminary.

The statistical secretary reported, of 687 associations whose minutes had been examined, while 27 had given no information, that there were associated with the convention 18,922 churches, with 1,568,906 members and 9,770 Sunday schools; that 98,984 baptisms had been reported for the past year; that the value of church property was \$18,681,227; and that the amount of contributions for all purposes was \$2,895,697. A resolution was adopted to petition the Government at Washington to use every effort toward securing religious liberty for every inhabitant of Cuba. The Home Mission Board was authorized to expend \$5,000 in the "mountain region" in aid of Baptist schools and in holding institutes for the ministers and laymen for biblical and theological instruction and qualification for religious work. Mormon missionaries were represented to be making formidable proselytizing efforts among these people. It was reported of the Cuban mission that while men missionaries had left the island, women had remained and worked in Sunday schools and day schools, while laymen carried on the Sunday meetings and prayer meetings. As a result, several converts were awaiting baptism.

The Baptist Young People's Union of America

is represented within the bounds of the Southern Baptist Convention by an aggregate membership approximating 60,000. It is represented to be difficult to obtain accurate statistics.

National Baptist Convention (Colored).—The National Baptist Convention (Colored) maintains a home-mission board, with a corresponding secretary having his office at Nashville, Tenn., and which publishes Sunday-school periodicals; a foreign-mission board, the receipts of which for 1896-'97 were \$4,337, and which sustains missions at Brewerville and Monrovia, Liberia; Cape Town, Queenstown, Ouanda, and four places in East Griqualand, South Africa; and an educational board, which reported an increase of interest in its work and improvement in the character and extent of the instruction given in denominational schools.

Reports of the statistician of the National Baptist Convention, the items of which are included in the tables of the "American Baptist Yearbook" and in the summaries at the beginning of this article, give the colored Baptist organizations in the Southern States 12,923 churches, 8,338 ministers, 1,470,876 members, and 285,806 pupils in Sunday schools. The members are distributed in the several States included in the showing as follow: In Alabama, 139,638; in Arkansas, 54,673; in Florida, 25,196; in Georgia, 211,660; in Kentucky, 71,328; in Louisiana, 71,845; in Mississippi, 198,654; in Missouri, 30,765; in North Carolina, 129,265; in South Carolina, 132,900; in Tennessee, 47,872; in Texas, 129,373; in Virginia, 223,778; in West Virginia, 3,929; total amount of contributions for all purposes, including benevolent objects and church expenses, \$677,662. The reports from which these data are derived are, many of them, very incomplete. The colored Baptists have regularly organized conventions in all the States named, with affiliated Sunday-school, educational, and missionary societies and women's organizations in several of them. The Colored Baptist University, at Selma, Ala., had at the end of 1897 been nearly freed from a large debt of fifteen years' standing, only \$500 remaining unprovided for. The State convention (white) of Arkansas employs a suitably qualified white minister to deliver weekly lectures to the ministerial students of Arkansas Baptist College for the education of colored people.

The Baptist Congress.—The sixteenth annual meeting of the Baptist Congress was held in Buffalo, N. Y., beginning Nov. 15. The congress is a voluntary meeting for discussion only, having no power to take definite action, and not even passing resolutions. The meeting was attended by about 50 brethren from the United States and Canada. The subjects were discussed of "Man's Fall and Redemption in the Light of Evolution," by President A. H. Strong, D. D., George Dana Boardman, D. D., H. Peabody, D. D., and L. C. Barnes, D. D.; "The Opportunity for Baptists in Present Religious Progress," by W. C. Biting, D. D., Prof. A. H. Newman, D. D., the Rev. Everett D. Burr and George E. Horr, D. D.; "On what Grounds shall we accept the Biblical Books as our Bible?" by George E. Merrill, D. D., Prof. B. O. True, D. D., and the Rev. George H. Ferris; "State Help vs. Self-Help, or Paternalism in Government," by Prof. W. Rauschenbush, Prof. Shailer Matthews, and George William Douglas; "How far can the Truths of Christianity be stated in Terms of Naturalism?" by Prof. George B. Foster, D. D., Prof. W. N. Clarke, D. D., Albert Foster, D. D., and Prof. D. B. Purinton, LL. D.; and "The Union of the Believer with Christ," by the Rev. Clarence A. Barbour.

The "Hard-Shell" Baptists.—Three kinds or branches of "Hard-Shell" Baptists are described

by the Rev. J. B. Cranfill, editor of the "Texas Baptist Herald," who was reared among members of this sect and believes himself familiar with their doctrines, polity, and modes of thought. One branch is represented as thoroughly antinomian in practice, with its theology as running into fatalism; another branch as having articles of faith in all respects like those of the regular Baptists, its declarations and practice differing from those of the latter chiefly in the matters of feet washing and missionary operations. A third branch is called United Baptists, and is made up of Missionary Baptists and Hard-Shell churches that have come together. It is not distinctly a missionary body, but holds the form of the orthodox teaching concerning the doctrines of grace which have been advocated by Baptists from the beginning. Hard-Shell Baptists of the second of the divisions mentioned hold the orthodox views concerning the plan of salvation, the atonement, regeneration, repentance, faith, human instrumentality, sinners' praying, and all the other doctrines that are commonly believed among Baptists. The division among Southern Baptists on the question of missions began less than three quarters of a century ago. The Georgia Baptist Convention was organized while the disintegration was going on, and when that body came into existence there was not a Missionary Baptist Church in the State. There were Missionary Baptists in many churches, but there was no church that could have unanimously passed a resolution approving the convention and its work. The original constitution of the convention therefore provided that the body should be made up not of messengers from churches, but of individuals who would each contribute a certain amount annually to the support of missionary enterprises.

Baptist Convention of Ontario and Quebec.

—The Baptist Convention of Ontario and Quebec met at Hamilton, Ontario, May 16. The Home-Mission Board reported that its income had been \$22,299 and its expenditures \$23,822. Twelve chapels had been built during the year, 8 churches organized, and 708 persons baptized under the direction of the missionaries. The women in Eastern Ontario were supporting missionaries in 7 fields and those of Western Ontario in 11 fields, besides contributing \$1,000 to the Grande Ligne Mission. Much evangelistic work was done by the co-operation of pastors and deacons. The receipts for church-edifice work had been \$1,851, and the disbursements \$1,346. The loans made during the year amounted to \$1,300. Several churches had paid off and others had reduced their indebtedness. The Grande Ligne (French Canadian) mission had an income of about \$18,000 a year, without counting the receipts from the pupils in the schools. The Feller Institute had 135 pupils, and had been obliged to refuse 50 for want of room. The school at Coaticook, with 63 pupils, had been closed a part of the year on account of illness. Two pastors were preparing to go among the French people, using both the French and English languages. McMaster University returned 173 students, 51 of them in theology; Woodstock Boys' College, 122, the manual training course, 51; and Moulton Ladies' College, 152 pupils. The Sunday schools returned 37,002 pupils, an average attendance of 25,390, and contributions of \$18,776, of which \$4,000 were for benevolences. The income of the Board of Foreign Missions had been \$32,537, exceeding that of the previous year by \$1,271, and the expenditure \$35,079. The missions, chiefly in India, returned 3,600 members, and 400 baptisms during the year, with village schools, boarding schools, etc., in excellent condition. A mission had been established in Bolivia, for which a second missionary had been ordained.

Baptists in the Maritime Provinces.—The fifty-third convention of the Baptists of the Maritime Provinces was held at Anherst, Nova Scotia, beginning Aug. 18. The Rev. J. C. Spurr was chosen president. Among the delegates were several women. An increase of about 800 members by baptism was reported. Efforts had been made to secure a subscription of \$60,000 for the endowment of Acadia College, upon the raising of which a further amount of \$15,000 was expected from Mr. J. D. Rockefeller. Toward this sum \$48,000 had been obtained. The convention, besides its own local work in home missions, aids the mission of Grande Ligne, Quebec, and in the Northwest and British Columbia. The reports from these fields indicated prosperity.

British Baptists.—The tables of the "American Baptist Year Book" give the Baptists in the United Kingdom, 3,037 churches, 2,006 ministers, 364,729 members, and 15,950 baptisms during the year. The annual meeting of the Baptist Union of Great Britain and Ireland was held in London, beginning April 25. The Rev. Samuel Vincent, of Plymouth, presided. The report of the council showed increase in the number of churches, chapels, members, Sunday-school teachers and scholars, pastors in charge (2,606 against 1,955 the previous year), and local preachers (5,021 against 4,838), but the number of baptisms had fallen from 16,113 to 15,950. The total receipts including contributions to the several funds and special contributions, had been £21,078. The association of Huntingdonshire, Cardiff College. 38 churches, and 28 persons had been received into membership during the year. The Board of Introduction had recommended ministers to pastorless churches in upward of sixty cases. The council had appointed a special committee charged with the duty of ascertaining whether candidates should be recognized by the Union as members of the Baptist denomination. A scheme for providing a course of biblical and theological reading for candidates for the pastorate was in course of preparation. A resolution was passed by the meeting declaring that "alike in the case of public elementary schools and of the proposed Roman Catholic university in Ireland there should be strenuous protest against the devotion of public funds to the support of denominational institutions. Baptists are therefore urged to use their utmost influence to prevent the creation and maintenance by Parliament of an Irish Roman Catholic university, and to secure the substitution of unsectarian primary schools controlled by representatives of householders, for denominational schools under clerical control in the villages and towns of England and Wales." Another resolution called on Baptists to give more earnest attention to the necessity for immediate, more general, and more energetic temperance work, and especially commended the discouragement of the traffic in strong drinks and the promotion of temperance principles and practice to the churches and Sunday schools.

The autumnal meetings of the Union, held at Nottingham in the latter days of September, were chiefly devoted to addresses and discussions. A resolution was adopted protesting against the necessity alleged to exist "in thousands of parishes" of nonconformist parents sending their children to day schools where the principles of the Church of England are taught, and demanding that Parliament cease to subsidize schools "in which clerical managers are free to teach, or to employ others to teach, salvation by sacraments, auricular confession to priests, and the sinfulness of attending nonconformist places of worship," and that, pending the establishment of a really national system of education, it take some action with a view to place an

unsectarian school within the reach of every family in the United Kingdom, and to abolish all theological and kindred tests in every elementary school and training college into which state grants of money are paid.

The annual report of the Baptist Missionary Society furnishes the following approximate statistics: "There are 148 missionaries and assistant missionaries wholly supported by the society, 9 supernumerated missionaries and 80 pastors of self-supporting churches, of whom 11 are in India and Ceylon and 69 in Jamaica, 843 evangelists and 13 evangelist pensioners. The number of stations is 1,035, and the number of members 53,365. The day schools include 726 teachers and 37,026 pupils, and the Sunday schools 3,428 teachers and 38,483 pupils. The total receipts of the society during the year were £137,709, including £46,932 in hand on account of the Centenary and other special funds, and £8,232 raised for missionary purposes at various stations.

The Zenana Mission had received £9,890 and expended £10,055. It had stations in India, in Bengal, the Northwestern Provinces, Orissa, and the city of Madras, and had maintained famine-relief work in Benares and Agra, and supported missionaries in China, where the mission house at Chouping and the boarding house and premises at Taing-Chu-Piu had been completed. Its present staff consisted of 62 missionaries in India and 7 in China, with more than 200 native Bible women and teachers.

The receipts for Baptist home missions had been £3,240 and the expenditure £3,699. The churches helped returned 4,413 communicants, with 159 baptized in 1897, an average attendance in congregations of from 5,719 at morning services to 9,728 in the evening, 7,581 young people in Sunday schools and 914 in Bible classes, sitting accommodation for 26,503 persons, and £7,550 raised by the mission churches for various purposes.

The income of the Tract and Book Society had been £1,490 and the expenditure about £160 less. An effort is to be made to obtain £2,000 as a capital fund.

The report of the Baptist Building fund showed that 41 churches had been assisted with loans amounting in the aggregate to £13,052, an increase of £1,042 of the previous year. The Capital fund amounted to £51,692. Applications for assistance amounting to £15,000 were waiting to be considered. Nineteen churches had this year been placed on the fund's "roll of honor," in which are entered the names of those churches which repay the sums granted them before the expiration of the time for which the loans are allowed.

Account was given at the meeting of the Bible Translation Society of a large amount of biblical revision which had been undertaken. It included the completion of the Bengali Bible by Dr. Rouse after four years' labor; progress with the Uriya version of the Old Testament; revision of the Cingalese New Testament; and the printing of a new edition of the Dwalla New Testament.

Reports were made to the meeting of the Baptist Total Abstinence Association that 1,627 Baptist ministers were pledged abstainers, an increase of 128 for the year; that 47 of the foreign missionaries had enrolled themselves; that 209 of the 211 students in the denominational colleges were abstainers; that 207 Bands of Hope had been formed, making the whole number of such bands in connection with the Baptist churches 1,556, and that the income had increased.

Baptists in Germany.—A yearbook called "Statistics" is published in Germany by the Baptist publishing house there. The volume for 1898

represents that the number of baptisms had been larger than during any previous year within the last decade, except one, being 2,121. The actual total increase was, however, relatively larger, and the Baptists in Germany now numbered 27,991, showing an increase of 8,982 in ten years. The work among the young was carried on by societies for young men and young women and in 397 Sunday schools. The Young Men's and Young Women's societies had each a monthly paper published in their interest. The contributions had greatly increased, amounting in 1897 to 18.55 marks, or \$4.50 *per capita*, against 16.29 marks, or \$4 *per capita* in 1892.

BELGIUM, a constitutional monarchy in western Europe. The legislative power is vested in a Senate of half the number of members in the other Chamber elected for eight years, partly by direct vote and partly by provincial councils, one half being renewed every four years, and a House of Deputies the members of which are elected for four years, one half being renewed every two years, by all citizens over twenty-five years of age, under a plural system of voting. An elector can cast a supplementary vote if he possesses freehold property, or if he is thirty-five years old, married, and a taxpayer, and if he has the diploma of an institution of the higher education, or has filled a public office requiring superior intelligence, he is entitled to two supplementary votes, but none may cast more than three votes in all. Failure to vote is a penal offense.

The reigning King is Leopold II, born April 9, 1835, who succeeded his father, Leopold I, the first King of the Belgians, on Dec. 10, 1865. The heir presumptive is his nephew, Prince Albert, born April 8, 1875, son of Philippe, Count of Flanders.

The Cabinet, reconstituted on Feb. 25, 1896, was composed in the beginning of 1898 of the following members: President of the Council and Minister of Finance, P. de Smet de Naeyer; Minister of Foreign Affairs, P. de Favereau; Minister of Justice, V. Begerem; Minister of Railroads, Posts, and Telegraphs and Minister of War *ad interim*, J. H. P. van den Peereboom; Minister of the Interior and of Public Instruction, M. Schollaert; Minister of Agriculture and of Public Works, L. de Bruyn; Minister of Industry and Labor, M. Nyssens.

Area and Population.—The area of the kingdom is 11,373 square miles, on which there was a population on Dec. 31, 1896, of 6,495,886, averaging 571 persons to the square mile. There were 3,241,423 males and 3,254,463 females. This population, almost the densest in Europe, is still increasing at the rate of about 1 per cent. per annum. The number of marriages in 1896 was 52,585; of births, 188,533; of deaths, 113,748; excess of births, 74,785. There is of late years a steady excess of immigration over emigration. In 1896 the net immigration was 4,739. The population of Brussels, the political capital, on Jan. 1, 1896, was 531,011, including suburbs; of Antwerp, 267,902; of Liège, 165,404; of Ghent, 159,218.

Finances.—The budget for 1898 makes the total ordinary revenue 388,298,598 francs, of which 25,456,000 francs are derived from property taxes, 20,085,000 francs from personal taxes, 7,400,000 francs from trade licenses, 600,000 francs from mines, 36,246,632 francs from customs, 52,420,297 francs from excise, 19,940,000 francs from succession duties, 19,900 francs from registration fees, 6,500,000 francs from stamps, 5,771,000 francs from various other indirect taxes, 154,000,000 francs from railroads, 6,880,000 francs from telegraphs, 1,590,000 francs from canal and river tolls, 13,160,020 francs from the post office, 1,430,000 francs from navigation dues, 2,718,000 francs from domains and forests, 10,051,900 francs from funds and securities, and 4,149,749 francs from repay-

ments. The total ordinary expenditure is estimated at 385,278,702 francs, of which 114,152,253 francs are for interest and sinking fund of the debt, 4,930,200 francs for the civil list and dotations, 21,517,990 francs for the Ministry of Justice, 2,797,065 francs for the Ministry of Foreign Affairs, 26,378,070 francs for the Ministry of the Interior and Public Instruction, 21,773,694 francs for the Ministry of Agriculture and Public Works, 116,337,880 francs for the Ministry of Railroads, Posts, and Telegraphs, 48,320,375 francs for the Ministry of War, 19,514,515 francs for the Ministry of Finance, 4,917,900 francs for the gendarmerie, 2,743,560 francs for the Ministry of Industry and Labor, and 1,896,000 francs for repayments.

The public debt amounts to the capital sum of 2,328,497,322 francs, 219,959,632 francs paying 2½ per cent., being Belgium's share of the old Netherlands debt, 20,000,000 francs of treasury bonds, and 2,088,537,690 francs raised for public improvements and bearing 3 per cent. interest, which is more than offset by the earnings of the railroads, for the construction of which the chief part of the debt was incurred.

The Army.—Although Belgium is perpetually neutral and inviolable under guarantee of Austria, Russia, Great Britain, and Prussia, signatories of the Treaty of London, concluded on Nov. 15, 1831, a standing army is maintained and formidable defensive works have been erected and are still being erected on the Meuse, besides fortresses on the French frontier and a ring of forts about Antwerp, the chief place of arms and central citadel. The army is raised mainly now by conscription, substitution being allowed. The annual recruit is 13,300 men. The peace footing in 1897 was 3,426 officers and 47,876 men, 51,302 in all, comprising 1,745 officers and 27,800 men in the infantry, 304 officers and 5,760 men in the cavalry, 534 officers and 8,235 men in the artillery, 146 officers and 1,860 men in the engineers, 66 officers and 2,782 men in the gendarmerie, and 631 officers and 1,449 men in the general staff, train, administrative services, military school, etc. There are 204 guns and 9,040 horses for the army, besides 1,845 horses used by the gendarmerie. The war strength of the army is 3,742 officers and 135,656 men, with 25,666 horses. This does not include the civic guards organized in the towns, numbering 42,827 men.

Commerce and Production.—Over 67 per cent. of the area of Belgium is farming land, 17 per cent. forest, 8 per cent. uncultivated, and the rest roads, marshes, rivers, etc. About 22 per cent. of the population is supported by agriculture. The production of wheat in 1896 was 7,238,595 hectolitres; of oats, 8,477,118; of rye, 7,422,135; of barley, 1,445,616; of potatoes, 31,679,940 quintals; of sugar beets, 9,374,551; of other beets, 9,814,386; of tobacco, 5,166,000 kilogrammes in 1895. The production of coal in 1895 was 20,451,000 tons, value 193,357,000 francs; of pig iron, 829,234 tons, value 40,207,000 francs; of manufactured iron, 445,899 tons, value 55,729,000 francs; of steel ingots, 407,634 tons, value 31,018,000 francs; of steel rails, 367,917 tons, value 42,419,000 francs. The value of zinc produced was 38,496,000 francs; of lead, 4,203,000 francs; of silver, 3,430,000 francs. The product of raw sugar was 182,178,000 kilogrammes; of refined sugar, 65,662,000 kilogrammes; of proof spirits, 628,340 hectolitres.

In the general commerce for 1896 the total imports were valued at 3,037,371,700 francs, and exports at 2,720,302,115 francs. The imports by sea were 1,444,331,105 francs and those coming by the land frontiers at 1,593,040,595 francs in value. The imports for home consumption amounted to 1,776,700,000 francs, and the exports of Belgian produce and manufactures to 1,467,900,000 francs. The transit

trade was 1,295,300,000 francs. The values of the principal special imports were: Cereals, 290,903,000 francs; chemicals and drugs, 110,309,000 francs; textile materials, 165,912,000 francs; timber, 89,807,000 francs; gums and resins, 81,102,000 francs; woolen, cotton, and silk fabrics, 63,681,000 francs; oil seeds, 55,532,000 francs; coffee, 52,260,000 francs; hides and skins, 49,743,000 francs; metals, 72,853,000 francs; animal products, 36,166,000 francs; live animals, 56,571,000 francs; dyes and colors, 27,660,000 francs; wine, 39,522,000 francs; coal and coke, 31,153,000 francs; linen, cotton, and woolen yarns, 29,629,000 francs; fertilizers, 18,203,000 francs; machinery, 21,659,000 francs; butter and margarine, 14,603,000 francs; tobacco, 10,012,000 francs. The principal exports of Belgian produce and manufactures were of the following values: Yarns, 103,712,000 francs; coal and coke, 88,255,000 francs; cereals, 65,505,000 francs; machinery and vehicles, 64,826,000 francs; chemicals and drugs, 63,334,000 francs; raw textiles, 81,781,000 francs; textile fabrics, 60,920,000 francs; steel, 62,325,000 francs; skins and leather, 55,829,000 francs; iron, 66,795,000 francs; glass, 78,344,000 francs; meat, 24,758,000 francs; sugar, 54,689,000 francs; animal products, 35,093,000 francs; zinc, 40,148,000 francs; fertilizers, 20,880,000 francs; oil seeds, 22,119,000 francs; minerals, 38,206,000 francs; horses, 31,287,000 francs; bitumen, 26,712,000 francs; colors and dyes, 24,256,000 francs.

The participation of the principal commercial nations in the special commerce of Belgium for 1896 is shown in the following table, giving values in francs:

COUNTRIES.	Imports.	Exports.
France.....	310,611,000	287,539,000
Germany.....	215,395,000	327,258,000
Great Britain.....	205,618,000	291,202,000
Netherlands.....	176,703,000	171,231,000
United States.....	173,650,000	48,912,000
Russia.....	110,047,000	31,267,000
Argentine Republic.....	92,698,000	19,096,000
British India.....	52,965,000	20,993,000
Roumania.....	128,582,000	7,915,000
Sweden and Norway.....	51,879,000	14,250,000
Brazil.....	41,521,000	37,469,000
Italy.....	25,323,000	22,464,000
Spain.....	22,643,000	25,006,000
Peru.....	6,476,000	908,000
Chili.....	42,708,000	7,688,000
Switzerland.....	5,918,000	26,233,000
Australia.....	28,449,000	7,965,000
Egypt.....	2,196,000	11,844,000

Navigation.—During 1896 there were 7,814 vessels, of 7,483,206 tons, entered and 7,812, of 7,487,976 tons, cleared at Belgian ports. Of the total number entered, 4,259, of 2,807,683 tons, arrived from English and 274, of 715,465 tons, from American ports.

The commercial marine of Belgium in 1896 consisted of 5 sailing vessels, of 917 tons, and 53 steamers, of 84,822 tons.

Communications.—There were 2,839 miles of railroad in operation on Jan. 1, 1896, of which 2,044 miles were operated by the Government and 795 by companies. The number of passengers carried in 1895 was 76,937,198 on the state railroads and 22,662,735 on the other lines. The gross receipts of the state railroads were 154,467,350 francs, and operating expenses 90,436,312 francs; the receipts of the companies were 42,167,600 francs; and expenses 20,054,337 francs. The total sum invested in the state railroads was 1,413,057,543 francs.

The Government telegraph lines in 1896 had a total length of 3,955 miles, with 39,000 miles of wire. The number of dispatches in 1896 was 8,668,177; receipts, 6,580,763 francs; expenses, 5,872,298 francs.

The postal traffic in 1896 was 110,566,990 private

letters, 20,597,401 official letters, 45,376,318 postal cards, 91,274,339 packets of printed matter, and 101,513,576 newspapers.

Internal Affairs.—The Catholic Conservative party held its position in the general elections which occurred in May, 1898. The Catholic majority in the Chamber was increased from 70 to 72, and in the Senate the former majority of 36 remained unaltered. The new Chamber was composed of 112 Catholics, 28 Socialists, 6 Liberals, and 6 Radicals. The Flemings, gathering strength with each successive election under the amended Constitution of 1893, carried through the Senate a bill requiring public announcements to be printed in both Flemish and French, and according to their language a larger recognition in court proceedings. The Socialists, who gained in strength by the election, had been very active in strikes and public demonstrations, and in the former Chamber very aggressive. M. Demblon, who on Jan. 21 attacked the president of the Chamber, ex-Premier Beernaert, in the debate over a bill amending the law of mutual-benefit societies, provoked a vote of expulsion. When he declined to withdraw the sitting was suspended, and when he was prevented from entering by the military guard before the door at the next meeting of the House a fracas ensued, in which Socialist Deputies were roughly handled. An order of the day condemning the measures taken by the officers of the House was rejected by 86 votes to 29, with 9 abstentions. The Deputies Roger and Brenez were in the month following condemned to terms of imprisonment for insulting and assailing the burgomaster of Houtrage in a labor conflict.

The Sugar Conference.—The Belgian Government, at the instance of Germany and Austria and with the encouragement of the British Government, invited the governments which were represented in the Sugar Conference at London in 1887 to a new international conference to consider the question of abolishing or reducing by mutual agreement the bounties paid on the export or production of sugar. Since alarm was first aroused in 1884 as to the possible effects of the bounty system the world's production of sugar has doubled, the average cost of production has been halved, and the average price of refined sugar has fallen one half. The increase has been wholly in bounty-fed beet sugar, while the production of cane sugar, to which no bounty is given, has actually declined. The sugar-producing communities in the tropics, especially the West Indian islands, have been threatened with ruin as a result of the Continental bounty system, until the British Government has at last given some slight assistance to its West Indian colonies in the form of grants of money. The British sugar-refining industry at Greenock, London, and Bristol is likewise menaced with extinction. On the other hand the British consumers and the manufactures in which sugar is an important material have greatly benefited, such as jam manufacturing, confectionery and candy making. The statesmen of Belgium, Germany, Austria, and Holland had changed their views as to the economic benefits of bounties, while the French statesmen in control of affairs still clung to the system of export bounties and high internal taxes, the effect of which was to make sugar twice as dear or more in France as in England. Those who advocated the abolition of bounties held that it would be necessary to abolish the excise duty at the same time, believing that the increased demand would supply a natural stimulus to production and offer the natural outlet of an expanding market for the supply produced, since at present, owing to the high price of sugar, the consumption on the Continent is one third what it

is in Great Britain. The governments of Germany, Austria, and Belgium, supported with reservations by Holland, were willing to abandon or greatly modify the bounty system, which cost heavy sums annually to the government treasuries and imposed a heavy tax on the bulk of the population in order to confer a fitful and uncertain benefit on a single class of producers. They could not see their way to carry out this fiscal reform, however, unless France would agree to renounce bounties also, or unless Great Britain would sustain them by imposing a countervailing duty on bounty-fed sugar; otherwise their product would be driven out of the British market and French sugar secure a monopoly of this trade on which all Continental producers largely depend. The Belgian Government decided to reduce to 15 francs a quintal the excise duties on refined sugar from Oct. 1, 1899.

The International Conference on Sugar Bounties met in Brussels on June 7, 1898, under the presidency of the Belgian Premier, M. de Smet de Naeyer. All the delegates were instructed to consider the question on the basis of a total abolition of bounties. The French Government, while ready to abandon direct premiums, made reservations as to the internal regulations of the excise in France.

The president stated that Belgium was ready to adopt the principle of refining under Government supervision as a step that might facilitate a general understanding. The German and Austro-Hungarian delegates declared that their governments were in favor of a complete suppression of the bounties. The Netherlands delegate proposed a gradual suppression. The British delegate declared that the British Government desired the abolition of bounties and was prepared to receive favorably any proposals tending in that direction. The Swedish delegate stated that Sweden was not an exporting country; hence no question of export bounties arose. The French delegate explained that, although France was prepared to consider the suppression of the direct bounty on export granted under the French law of 1897, it had entered the conference under the express reservation that the internal law of 1884, which granted indirect bounties on exports, should remain outside of the scope of the discussions. The Russian delegate made a similar reservation, stating that Russia had accepted the invitation on the express understanding that her internal laws were not to be discussed. When questioned as to the views entertained by Great Britain in regard to a penal clause for the imposition of countervailing duties on bounty-fed sugar, the British delegate maintained an attitude of reserve, stating that the decision of the British Government could not be taken until it was in possession of some definite project of agreement and was in a position to know which powers were willing to become parties to it. The Russian delegate stated categorically that his Government had no intention of altering its existing system, which was pronounced by the Austro-Hungarian representative as equivalent to a bounty on exportation. The French delegate made a statement showing the necessity felt by France for retaining the law of 1884. The Belgian and Dutch delegations proposed two alternative solutions: one that France should abolish the direct export bounty and reduce by one fourth the indirect bounty in each year in which the average export of 235,000 tons should be exceeded, until the bounty entirely disappeared; the other that she should abolish the direct bounty and levy a duty on exported sugar in excess of 50,000 tons equal to the bounty on production. Should France accept either of these suggestions in principle it was contemplated to suggest a similar compromise to Russia. The French delegate, however,

declined to discuss either proposal in the conference, suggesting that the Belgian Government would have a better prospect of effecting a compromise by means of diplomatic correspondence with his Government. The Russian delegate having expressed similar views, it became evident that a prolongation of the conference at the moment would not lead to any general understanding. The final meeting was held on June 25, and it was agreed that the Belgian Government should pursue the subject through the diplomatic channel, and that, if a satisfactory result could be obtained, the conference should be convoked again later. In accepting this proposal the British delegate reserved for his Government entire liberty of action in regard to any measures which the development of the sugar question might render necessary.

The proceedings of the conference showed that Austria-Hungary, Germany, Belgium, and the Netherlands desired a complete abolition of the bounties, and that no opposition to an arrangement to this effect was to be apprehended from Spain and Sweden. France, however, while willing to abolish the direct bounty on export, wished to retain the advantage of the indirect bounty created by her internal law; and Russia declined even to discuss whether her existing system amounts to a bounty on export or not. Germany grants only a direct export bounty, which is about equal to the direct bounty given by the French law of 1897, and, although producing sugar more cheaply than France, she could not be expected to abolish the whole of her bounty while France retains that created by the law of 1884, which is about three times as much as the direct export bounty granted under the law of 1897. Austria-Hungary contended that the Russian system amounted to a bounty, and, unless Russia, her principal competitor in the markets of Italy and the Levant, consented to modify that system, the Austro-Hungarian Government was not prepared to give up its bounties. If no satisfactory modifications or limitations in the French and Russian systems could be obtained, another method of securing the suppression of the bounty system was by a convention between a certain number of sugar-producing states providing for the suppression of their own bounties and engaging that they will impose countervailing duties on bounty-fed sugar or will prohibit its entry altogether. The United States market is already rendered unprofitable by this means, and the sugar-producing states of the Continent of Europe reserve their home markets to their own producers by means of customs duties and internal regulations. The English, and to a rapidly increasing extent the Indian, market has become essential for the surplus sugar production of European countries. It rests therefore in the power of Great Britain, by taking measures to exclude bounty-fed sugar, to bring about the speedy abolition of the bounty system. The indefinite adjournment of the conference caused consternation in the British West Indies, whose sugar industry, Mr. Chamberlain had promised, would not be allowed to be ruined by the operation of hostile bounties, which, according to the report of the British Sugar Commission, were largely contributing to the extinction of this industry.

BISMARCK-SCHÖNHAUSEN, OTTO EDUARD LEOPOLD, von, Prince, a German statesman, born in Schönhausen, April 1, 1815; died in Friedrichsruh, July 30, 1898. He was descended from a noble Brandenburg family, whose members had aided the fortunes of the house of Hohenzollern as soldiers and diplomatists. His own father lived quietly on the hereditary estates at Schönhausen and in Pomerania, and the force and gen-

ius of the son seemed to come from his mother, Luise von Menken, an earnestly religious and highly educated daughter of a statesman. Otto was placed at the age of six in a private school in Berlin, and at twelve entered the Friedrich Wilhelm Gymnasium there. His mother looked after his early education, and had him learn French and English well, having marked him for a diplomatist already. His father inured him to hardy field sports and stimulated a vigorous and healthy physical development and a love of Nature. As a schoolboy he was dutiful and studious. The hardest lessons cost him no great effort, and in no degree damped his redundant vitality. From the Berlin gymnasium he went to the University of Göttingen, where his exuberant animal spirits flourished in the congenial nidus of the aristocratic student corps. Tall and powerfully built, with a constitution of iron, he plunged gayly and recklessly into the excesses of student life, and became the deepest drinker, the readiest swordsman, so wild in his behavior, the author of such extravagant pranks, that he earned for himself the sobriquet of "mad Bismarek." This rollicking, carousing, fighting manner of living did not, however, half fill up the measure of his academic existence at Göttingen and afterward at Berlin. He was a companion of the serious and intellectual students as well as of the careless spendthrifts of the nobility. With the American Motley, for instance, he formed a lifelong friendship. He attended lectures and applied himself to the routine studies well enough to pass a creditable examination, and he delved deep in the study of history and developed into a political thinker of independent views strongly held. At the age of twenty he obtained his degree in jurisprudence and was sworn in as *Aussultator*, or examiner, in the Berlin law courts. The future German Emperor, then Prince Wilhelm, remarked his stalwart form, the picture of a guardsman, when he was presented at the palace. An example of his audacious wit was relished by other young subordinates of the judicial hierarchy. When the trial judge rebuked him for infringing on his own authority by threatening to pitch out a recalcitrant witness, he retorted a few minutes later by telling the same witness that if he did not answer properly he would have the judge pitch him out.

The wearisome drudgery and routine, the rigid formalities and humble subservience of Prussian officialism could not fetter long his restless spirit. He learned to detest the town and all the conditions of official life. In the barracks of the *Jäger* guards, with whom he performed his military duties, he was more at home, and most of all among the hunting, fighting, drinking nobility of the Alt Mark and Pomerania, who at least led a fresh, untrammelled existence. In sportsmanship and daring and in dissipation and wild escapades he outlived them all, and he was glad enough to quit his petty office in 1839 and take up the free and unsophisticated life of a country nobleman and agriculturist. His help was needed at home, as his father had been a careless financier and a poor farmer, and was in sadly embarrassed circumstances. Young Bismarek applied himself faithfully to the task before him, developed the shrewd business tact and knowledge of men that worked his success later as a diplomatist, the provident calculation and discriminating enterprise that enabled him to control the finances of a nation, the habit of organizing, schooling, and commanding others that gave him his unquestioned and self-reliant authority as the chief of a government. Withal, he acquired a practical knowledge of farming, of soils and crops, planting, fertilizing, draining, which in time, after

the Schönhausen property had fallen to his share by inheritance, in 1845, freed the estate from debt and gave him a comfortable income. When his cares were lifted and the people whom he had trained could manage without his watchful supervision his restless spirit once more preyed upon itself, and to escape weariness he plunged into dissipation, sought an anodyne in deep potations of brown beer and champagne, tried violent athletic exercises as a relief from *ennui*, and indulged to the full in the pleasures and society of the roistering young nobles of the Mark, galloping from castle to castle in tumult of mind like the Wild Huntsman. His torrential passions suddenly turned into their right channel again, and his impetuous yearnings found a rightful object when he fell in love with the accomplished and pious Johanna von Puttkamer. Her parents had no intention or desire to bestow her on the "mad Bismarck," but when he had wrung from her a confession of love he went to them with dauntless assurance, and, clasping his beloved in his arms, announced solemnly that whom God has joined no man should put asunder. Journeying through Switzerland and Italy on the wedding trip, in the autumn of 1847, the young Brandenburg happened in Venice at the same time as his hereditary liege, Friedrich Wilhelm IV, who asked him to dinner, and was much impressed with the political views and theories that he boldly and wittily expounded. The young officers and squires, his former boon companions, had been dreadfully bored by such political monologues over the bottle, but the King of Prussia formed a high opinion of the talents revealed in Bismarck's conversation, and thus by haphazard he was a man marked out for his sovereign's favor before he had set his foot on the political ladder.

Soon after he brought his bride to Kniephoff, the family *Schloss* in Pomerania, his neighbors, sent him to represent them in the United Diet. There seemed to be no political future for this most bigoted and impracticable of Prussian *Junkers*. The whole Liberal movement of the century, with which kings and princes had for thirty years sought to make their peace, was the object of his scorn and reproach. Blind reaction he had elevated into a political philosophy, and absolutism was to him a dogma. Liberal ideas were popular then in Prussia because all Germany looked to Prussian headship for emancipation from the stifling *régime* of Metternich. When Bismarck first entered the Assembly, an appreciative house was listening to a Liberal orator who expounded the ideal of the German nation united by a free Constitution which had inspired the people in the war of liberation. The new Deputy leaped up to reply, and with untrained invective and unpolished satire derided and scoffed the popular hope in constitutionalism. In many such speeches and in the columns of the "Krenz-Zeitung," which he helped to found, he scouted the idea of a Liberal Constitution and popular parliamentary government. Sovereigns wear their crown, he said, free from all conditions, by the grace of God, not by the will of the people. When the revolution triumphed in 1848, and the King himself granted the new Constitution, he retired to the country anathematizing the great cities of Europe, which he thought ought to be razed to the ground, as they were the nurseries of democracy and hotbeds of revolution. An adaptable politician even then, he took his seat in the new Prussian Chamber in 1849 to fight the fight of Conservatism for what could still be conserved after "the Crown itself had scattered ashes on the coffin" of the buried past. The Prussian nobility, who bent the knee to the Czar Nicholas and were willing to accept the dictation of Austria and Russia regarding the internal govern-

ment of the German states, in the hope of checking the German people who offered the imperial crown to the King of Prussia, found in Bismarck their fiercest champion, a positive, convinced, fearless, and enthusiastic advocate, who stood up for what he conceived to be the fundamental principles of the Prussian state, not the mere class interests and social privileges of his order. A parliamentary government of the English pattern appeared to him a chimera when applied to Prussian conditions, in which the throne was the foundation stone of the state and the nobility were the born functionaries of the Government and officers of the army, whose exclusive position could not be impaired without undermining civil order and military discipline. He spurned the thought that a Hohenzollern could accept the imperial crown from the Frankfort Parliament at the cost of introducing into Prussia the entering wedge of parliamentarism by sacrificing a jot of the royal prerogative. He was not a political leader, not in any sense a practical politician, for he was so inflamed by passion when he contemplated the rising tide of democracy, so filled with the arrogant pride of caste, so scornful of parliamentarism in any form, that he disregarded the tactics of his party, and as a free lance trampled upon all the comities of debate, distributed gross insults right and left, and leveled ferocious diatribes against all who gainsaid his irresponsible utterances. All Berlin was astonished therefore when this untamable *Junker* was selected by the King and Premier von Manteuffel in 1851 for the most important and most delicate and political of the diplomatic posts, that of Prussian Minister to the Germanic Confederation.

No sooner had Bismarck taken muster of the Frankfort Diet, whose consequential members he described in a private letter as caricatures of periwigged diplomatists, than the relations of Prussia to Austria, of the Prussian military power to Germany and Europe, appeared in a new light. The conviction grew upon him that Prussia would be able to humble Austria in a victorious war and wrest from her the primacy in Germany, and would have to do so in order to take her fitting place as a great power. When the horizon of international politics spread itself out before his eyes the constitutional difficulties and social interests affecting the internal situation of Prussia were dwarfed into insignificance. From the beginning he lost no opportunity to challenge, either in high questions of politics or in small matters of precedence, the authority and prestige of the Austrian President, then Count Thun. In the polished circles of the old diplomacy his brusque effrontery was as much a novelty as it was in parliamentary life, but he could be complaisant and charming when he would. His ability to drink the other diplomats under the table was the least of his social accomplishments or of his diplomatic arts. His bluff exterior was the foil of insinuating graces, his affected candor of artful reticences and wily schemes that overmatched the diplomacy of Metternich and Schwarzenberg. He scoffed at the ideas of German union and a German policy in the same language that he had used as a Deputy, but with a far different thought and hidden meaning. Austria had many allies in the Germanic Confederation, Prussia but few. In the ripeness of time, by shaping the economic, military, and foreign policy of Prussia to that end, by promoting the expansion of Austrian interests on the Danube and awaiting the psychological moment arising from the Oriental or Italian entanglements, Prussia would be ready for the mortal struggle for the extinction of Austria as a German state and the assertion of the supremacy of Prussia. Hence Bismarck worked to perpetuate the weakness and

confusion of the Confederation, which must eventually "be ended, not amended." Hence he gave years to the task of detaching the friends of Austria one by one and set his face resolutely against every attempt to involve the Germanic Confederation in Austria's external complications. When Austria proposed to make the decisions of the majority of the Diet binding upon the minority with a view of giving the Germanic Confederation greater weight in the councils of Europe, Bismarck upheld the rights of the separate states with the same energy and success as in later times he crushed those rights.

Prussia's obligations to the Confederation were a source of weakness which one day would have to be cured, he foretold, *ferro et igne*. The dreamy politics of word and pen disgusted many men of all political schools, and this explains the success of the man of will and deed when he arose. The Bismarckian method violated every principle of German ideal politics. Making "might before right" his motto, the man of blood and iron set all scruples, consistency, political obligations, at defiance, nor refrained from deception, treachery, or Machiavelian intrigue to advance the interests of Prussia and reach the practical aims he had in view. Traveling back and forth between Frankfurt and Berlin, he impressed his views upon the King and Manteuffel with such force that he dictated the whole foreign policy of the Government, and when the Prime Minister demurred, regardless of that official discipline which he mercilessly enforced when he became chief, he went behind the latter's back to the King. He made the rounds of the German courts and gradually gained a like ascendancy over princes and their ministers, gaining one after another over to the policy he had prescribed for Prussia. Russia's friendship he desired Prussia to preserve and cultivate as her chief external buttress, as an alliance that would cost the least, for the eyes of Russia were turned toward the East. He even dallied with Napoleon III, the man of December, whom Berlin Conservatives regarded as the child of the Revolution. In the Crimean War he drove a wedge between Austria and Germany by holding the Confederation entirely aloof. When Wilhelm, the future Emperor, assumed the reins of government in 1858 as Prince Regent and installed a more Liberal Cabinet under Baron von Schleinitz, the latter, who had his own foreign policy, banished Bismarck in 1859 to the St. Petersburg embassy. The new era, however, could not submerge him, nor would he let his aims be forgotten, for he wrote a long memorandum to the Prince Regent, suggesting that Austria be led on to a violation of the articles of confederation so as to prejudice her position before the German states. In the Italian war the cleft between Austria and Germany was opened wider.

In 1862 Bismarck was transferred to the legation at Paris, but only remained long enough to take the measure of Napoleon III and insidiously encourage his dangerous ambition. Gen. von Roon was then at work forging the instrument of Prussia's greatness. He had completed his vast scheme of army reorganization, but the people would not pay the blood tax. Expecting Parliament to refuse supplies, Wilhelm, who had become King, and in opening the Diet had laid down the doctrine that the Prussian monarchy was founded on divine right, and that constitutions were acts of royal grace, in the first conflict with Parliament over the military budget was ready to abdicate. He had thought of Bismarck as the man of the hour, but was afraid of the wrath of the people. The Minister of War, who was in constant communication, had telegraphed to him to come, and when the strong man appeared the vacillating monarch

committed his fortunes into his keeping. On Sept. 28, 1862, Bismarck was appointed Prime Minister and Minister of Foreign Affairs.

When the former champion of absolutism confronted the Chamber as Prussian Premier he provoked a storm that shook the edifice of state. The Moderate Liberals flocked over to the Progressives. The Government had few faithful friends even among the Conservatives, many of whom still relied on the guidance of Austria to rescue Germany from the democratic revolution. Bismarck no longer lived in terror of parliaments and the democracy. Long before he had proposed to win over the middle classes by concessions. He was now a constitutionalist, so far as he was anything. He had long freed himself from dogma, was an opportunist, to whom political doctrines, parties, passions were the armory from which to select his weapons. To make Prussia strong for the coming conflicts had been the aim of his diplomacy, and it was the object for which he was made minister. He did not begin his ministry of combat with rash defiance, although he had promised the King to govern, if necessary, without Parliament and without a budget, and he had no hope of winning over a majority. Still he took great pains to explain the situation and to disclaim all reactionary motives. The ambitious object of the armaments he revealed to Parliament and the world with that audacious frankness for which he became famous. If the Diet would not vote the money he said he would take it where he could get it. For four years the budgetless Government braved the storm of national indignation and weathered crisis after crisis while bringing the army up to a strength and degree of efficiency of modern training and equipment, excelling any army in the world. For the Liberals the principle of representative government was at stake. Bismarck, while overriding the Constitution, made light of the constitutional question. It was the question of Prussia's growth and destiny; and not by speeches and majorities, but by blood and iron, would this have to be settled.

In 1864 Bismarck made the first move in his bold, aggressive game by precipitating the dormant Schleswig-Holstein question upon the startled world. This disarmed the Prussian opposition when it was growing strong and angry enough to hurl him from power, perhaps to doom him to death on the scaffold, which was sometimes as honorable, he said, as on the battlefield. The Danish duchies were a bait to draw Austria into conflict with the Diet and into antagonism toward German interests. To escape the snare the Austrian Government most unwillingly joined in the military occupation, becoming more deeply entangled and placing herself more hopelessly in the wrong thereby. The war was so suddenly begun and so quickly ended that France and England were dumfounded. Napoleon had been lulled by overtures of a Prussian alliance, and Palmerston was just beginning to bluster when the campaign was over and the deed accomplished.

With Austria no compromise was possible after the refusal of King Wilhelm, which Bismarck wrung from him by the sweat of his brow, to join in the Congress of Princes convoked by Austria at Frankfurt in the autumn of 1863 for the purpose of considering a comprehensive scheme for reorganizing the Confederation. The Elbe duchies were kept as a convenient apple of discord which would give a *casus belli* at any desired moment while Bismarck during the next two years laid his plans for the final struggle not over the fate of the duchies, about which the Austrians cared nothing, but over the German hegemony and the very existence of Austria as a German state. Many times the rupture was staved off because Bismarck had

not yet made sure of the neutrality of France, whose hopes of expansion in Belgium and Luxemburg he artfully fed: of the friendship of Russia, which had obtained from Prussia a convention for common action against the Poles, and had even suggested a league against Austria and France; of the alliance with Italy, eager to strike from her limbs the last of the Austrian shackles.

In the spring of 1866 Bismarck presented his scheme of reforms for the Germanic Confederation, which was nothing but an ultimatum, an anticipation of the fruits of victory. To substitute for the old Confederation a North German Confederation and a South German Confederation and to exclude Austria from German councils altogether was a solution in which neither she nor her German allies could be expected to acquiesce except by force of arms. On the eve of the war Bismarck had to fight for his own position, threatened by court intrigues, the "feminine undercurrents," which he complained of as embittering his existence and endangering his work on various occasions. The English Crown Princess and the Queen both sought to stay King Wilhelm's hand until the minister carried the day by presenting the alternative of war with him at the helm or peace without him. On June 14, 1866, Austria passed in the Frankfort Diet a motion to mobilize the forces of the Confederation against Prussia.

From the beginning of the Schleswig-Holstein entanglement the Hapsburg Government had floundered helplessly in the toils, while Bismarck, every wire in hand, had planned the political *dénouement* to coincide exactly with the Prussian military preparations. In two days Prussian forces occupied Hanover, Hesse, and Saxony; in three weeks the Prussian army confronted the main Austrian army in Bohemia. The King and Bismarck left Berlin for the seat of war on June 23, and on July 3 they watched the timely arrival of the Crown Prince's troops and the final rout of the brave Austrians at Sadowa.

The North German Confederation thus came into being by blood and iron, and Bismarck, who had received the title of *Graf* after the Danish campaign, became its Chancellor. He was tenderly considerate of the feelings of the vanquished Austrians and Saxons, forgiving and solicitous toward the South German States, but to Hanover, Hesse-Cassel, Nassau, and the free city of Frankfurt, which, with Schleswig-Holstein, were annexed to Prussia, he was relentlessly severe and inexorable. In the Reichstag of the North German Confederation, which came together in the spring of 1867, the Chancellor broke away from all his earlier political associations to seek the support of the popular National Liberal party, first stipulating that he should have liberty to keep up the strength of the army. He was even willing to compromise on this point, and accepted a vote for five years instead of ten.

The Austrian war was only the first skirmish in the action which Bismarck had foreseen and prearranged, the issue of which was to be the consolidation of the German nation. A victorious war with France he regarded as even more essential, and at one time he had proposed that Austria and Prussia should compose their differences and join together in wresting Alsace from France so as to make it, as of old, the outpost of the German Empire. After the Austrian campaign it was the French Emperor who was restless and disturbed, and who demanded compensation for the aggrandizement of Prussia. To secure his neutrality Bismarck had promised him the duchy of Luxemburg, probably knowing that Germany would never acquiesce in this arrangement. Every year the

growth of the Prussian army made him more uneasy. And all the time while the army was being augmented, organized, trained, and armed Graf Bismarck was playing his diplomatic game to ensnare France as he had Austria, to place her in the wrong, to catch her when his plans were ripe without allies, without friends or sympathizers. He made secret treaties of alliance with the South German states, fostered friendly relations with Russia, made sure of the neutrality of Austria, cemented the understanding with Italy, and held back for publication at the right moment Napoleon's secret agreement with the King of Holland for the partition of Belgium, which would be sure to alienate the sympathies of England. The *casus belli*, the candidature of a German prince, a Hohenzollern, for the Spanish throne, he held in hand, so that he could draw from France the provocation and the declaration of war as well. When the affair came to a head King Wilhelm almost defeated his scheme. By the Chancellor's advice he had induced the Hohenzollern to withdraw his candidature, but had declined to sign a letter undertaking that it should never be renewed. Then of his own motion he had given some reassuring explanations to Count Benedetti, the French envoy, but refused to discuss matters further in the absence of his minister. A telegram was sent, first telling how the King had declined to pledge himself that the Hohenzollern candidacy should not be revived, then recounting the audiences and explanations that Benedetti thankfully accepted for the consideration of his Government, and last the denial of a further interview. Bismarck asked Molke if the army was strong enough, and on receiving the answer that Prussia never had a better instrument, he struck out of the dispatch all the account of interviews, explanations, and pacificatory assurances, leaving only the head and the tail, that the King refused to give a pledge and that he declined to receive the French envoy again and had him informed through an adjutant that he had nothing further to communicate to him. The publication of this dispatch stung the people of Paris to madness and drew from France an immediate declaration of war.

The German armies had crossed the Rhine before the Cabinets of Europe had time to deliberate on the situation. The victorious advance was so rapid that there was no opportunity for a European coalition against Germany to be arranged. The Chancellor, in his *Jäger* uniform, accompanied the King to the field, directed the Government from the moving camp, and finally established himself in the palace of Versailles, where on Jan. 18, 1871, the German Empire was proclaimed, and where he dictated to Thiers the hard terms of peace, obdurate to the intercession of the neutral powers.

The imperial union of North and South Germany was an idea of the Crown Prince, but the Crown Prince was not allowed to have anything to do with it. All was Bismarck's work—the negotiations, the terms and conditions, the political constitution. The French republic was also in a sense his work, for he nursed and encouraged this form of Government as repellent to monarchical powers, and hence the least dangerous to Germany. He was astounded and disappointed at witnessing the economic and military recovery of France after the payment of the indemnity of five milliards. Count Arnim, who intrigued with the Clericals and Royalists of France and sought behind Bismarck's back to enlist the sympathies of the Berlin court for the Bourbon cause, the Iron Chancellor crushed without compunction. The founder of the German Empire was made its Chancellor, all-powerful in external and internal affairs. He also received the

Spindler

title of *Fürst*, or Prince of the Empire, and the princely estates of Friedrichsruh and Varzin as the gift of a grateful nation.

The danger of a coalition of powers against the newly founded empire was ever present to Prince Bismarck's mind. To avert this he brought about the Drei Kaiser Bund, the league of the Emperors of Austria, Germany, and Russia, ostensibly against the forces of revolution. The policy of Germany was henceforth peace. She did not want another inch of territory. To keep France completely isolated was the chief object of his machinations, and to have the German army always stronger than the French was the policy accepted by the nation. When the spirit of revenge was stimulated by the Boulangist agitators in France Bismarck contemplated another war, but feared to outrage the sentiment of Europe. He egged Russia on to the Turkish war, and then ostentatiously asserted the neutrality of Germany, declaring that the whole Eastern question was not worth the bones of a Pomeranian grenadier. Yet the Congress of Berlin witnessed the zenith of his power and of German influence in Europe. It was as an "honest broker" that he assumed to dispose of the fortunes of nations. The triple alliance of Austria, Germany, and Italy succeeded the league of the three Emperors, and was founded on more real interests. If France attacked Germany or Italy, if Russia attacked Austria or Germany, the combined military forces of the league were bound to repel the aggression. Yet, unknown to the Austrian Government, Prince Bismarck came to a secret understanding with the Czar, binding Germany to neutrality in case Austria began war against Russia in return for Russia's neutrality in case France should attack Germany. This agreement lasted from 1884 to 1890, lapsing when France and Russia began to arrange a counter-alliance against the allied powers of central Europe.

In the first session of the German Reichstag the *Reichskanzler* declared war on the Roman Catholic Church. If in foreign politics he was always earnest, prudent, prescient, if he made use of the most questionable expedients and the most trivial instrumentalities always with a serious purpose and a stern sense of responsibility, in internal politics he seemed to rejoice in the combat rather than in the victory, to fritter away valuable forces in seeking momentary tactical advantages, to confound the great and the small, the lasting and the fleeting. In the consolidation of the national spirit, the unification of laws, education, commerce, etc., the bulk of the nation and the majority of its best intellects worked with him, and the friction, the delays, and the failures were partly due to his methods. He used up the men and dissipated the parties who supported him, while those whom he assailed gained strength. He was too masterful and arbitrary by nature, too aristocratic in principle, too ingrained with the traditions of the old absolutist *régime* to accommodate himself to the constitutional system of representative government and either lead or follow the popular will, too loyal and upright to violate or pervert the laws to which he had set his hand or to attempt to corrupt, coerce, or defraud the electorate. He saw in the Roman Catholic hierarchy an *imperium in imperio*, a stronghold of particularism, and by reason of its vested rights and privileges the chief obstacle in the way of a national system of education and unified administration. These rights and privileges were swept away by the May laws, and the *Kulturkampf* was begun. In the next Reichstag the Clericals returned in double the numbers. He had so wide an acquaintance with the world's political and social forces that he was not tempted to

trust too much in the Old Catholic movement, but the spirit of battle carried him away. The thorough enforcement of state control of primary education and the main lines of his policy were approved by a great majority of the people. The expulsion of the Jesuits was a popular demand. The retaliatory measures taken against individuals degenerated into persecution and provoked needless hostility and resistance. Cardinal Ledochowski and numberless less important prelates and clergy were thrown into prison. Newspapers were suppressed, theological professors dismissed, religious services interdicted, church revenues impounded, schools shut, marriages and burials stopped, and the Roman Catholic districts plunged into chaos. When Pius IX declined to receive Cardinal Hohenlohe as German ambassador to the Vatican, Prince Bismarck uttered his defiance, "We will not go to Canossa." He tried to fasten on the Clericals the blame for Kullmann's attempt upon his life in 1874, and made it the pretext for more relentless persecutions. The Pope rejoined with the declaration that the Prussian anti-Catholic laws were null and void. Bismarck retorted with the "bread-basket" law, stopping the stipends of recalcitrant priests. The Centrum grew to be the most numerous party in the Reichstag. First the Progressists, then the Conservatives, and at length, in 1877, the National Liberals demanded the repeal of the Falk laws. In 1878, on the succession of Pope Leo XIII, began his long journey to Canossa, first opening negotiations with the new Pope; then, in 1879, forming a coalition with Dr. Windhorst and the Clericals, dismissing Dr. Falk and calling to his place Herr von Puttkamer to carry out a conciliatory policy; next passing a law in 1880 allowing a partial suspension of the anti-Catholic laws; afterward sending an ambassador to the Vatican in 1882, and in 1883 modifying the May laws; and finally, in 1887, striking from the statute book the last vestige of hostile legislation.

Bismarck's struggle with the Social Democrats was even more ruthless and bitter, and scarcely more successful in its outcome. After the attempts on the Emperor's and his own life in 1878 he carried through the first rigorous anti-Socialist law, provoking the excitable element of the party to take the subversive and revolutionary attitude that he ascribed to the whole. Persecution only attracted interest and sympathy, so that the Social Democrats, denied the rights of free speech and association, gained new adherents constantly by the quiet propaganda that they carried on within the law. He was in the end compelled to relax and finally repeal the exceptional legislation. He even tried to make peace with the Social Democrats, adopted Socialist doctrines himself, and worked out the elaborate system of state insurance against sickness, accidents, and old age. The colonial policy that he adopted and prosecuted with energy in 1884 and subsequent years—establishing protectorates in West, Southwest, and East Africa and in the south seas—was one which he had previously opposed. After embarking in these enterprises, which incurred the antagonism of England, he conducted them with his unrivaled diplomatic skill, and eventually turned British hostility into friendship and support. His system of high protection for German manufactures and agriculture, which encountered the strong opposition of the commercial classes, was almost the only part of his domestic policy that gathered strength, excepting the political and military measures for the protection and consolidation of the German Empire, for which he bent all his efforts to gain a majority. On this ground his step was sure, his perception unerring, but his methods of attaining his end were calculated to de-

feat it. His parliamentary conflicts revolved not about the question of keeping up or strengthening the army, for which Parliament was never disposed long to withhold the means, but about the control of the public purse. He wanted septennates or other votes for long terms of years in advance, and to gain this he shifted his majority, made deals and concessions, and usually had to be satisfied with a compromise or brought the Reichstag to submission, as had done his sovereign, by threatening to resign. His most mischievous and unscrupulous device for winning consent to an increase in the army was to stir up dangerous foreign complications or troublous questions in order to produce a war scare. In the organization and direction of the Prussian and imperial administrations Prince Bismarck's executive genius and power of accomplishing work brought the system founded by his predecessors up to a degree of perfection excelled by no other governmental machinery on earth.

Bismarck's "old master," whom he had served and loved with the devotion of a feudal retainer, died on March 9, 1888. The relations between the old Emperor and his minister were singular. Wilhelm, who had an obstinate pride in his own judgment and a sense of duty and responsibility which compelled him to weigh and decide every question in his own mind, and who was controlled in an excessive degree by the women of his family, all keen politicians and hostile to Bismarck, suffered every important decision of his reign to be overborne and reversed by his Chancellor, but only after a conflict of wills so earnest and exciting that both were usually verging on a state of nervous collapse when Bismarck at last clinched his exhortations and arguments by threatening to resign. Thus he compelled the King to give up twice his intention of abdicating, to tear up a list of Liberal concessions, to refuse to attend the Congress of Princes at Frankfurt, to intervene in Schleswig-Holstein, to agree to the Austrian alliance against Russia. All the three wars were brought about against the will and desire of the King, who was willing to make concessions to preserve peace when his minister was plotting war. In the Spanish-throne question and all the incidents leading to the French war he was circumvented by Bismarck at every step.

Friedrich, who had seen all the hopes and ambitions of his life thwarted by the Iron Chancellor, felt bound by patriotic duty during his brief invalid reign to trust everything to the guidance of his old enemy, even the matter of his daughter's marriage. Wilhelm II succeeded to the throne on June 15, 1888, when not yet thirty years old. He had been Bismarck's pupil in state affairs, and the old Chancellor thought his place secure with his young master, who at first deferred to him in everything. The younger Wilhelm, however, felt himself a king by divine right, one of the ancient kind, whose will is the highest law, and with a more masterful will than his grandfather, he was equally determined to know all about every question of state and to decide it himself. He found that Bismarck had concealed from him the action to be taken against Geffcken for publishing his own father's diary. He could not get him to tell what steps he intended to take in important matters of foreign policy. He was nettled at Bismarck's interference with his schemes of social legislation and his revision of the labor rescripts. Quarrels occurred between the two, and the Chancellor's stock threat of resigning failed of its usual effect. In 1890 Prince Bismarck found himself confronted with a hostile majority in the Reichstag. His political star was sinking. He held a conference with his old enemy, Dr. Windhorst, being ready to bargain for the support of the Centrum. The Emperor demanded an explanation of

these negotiations, which Bismarck refused to give. The Emperor discovered that there was a secret *entente* with Russia, one repugnant to his candid nature. He insisted on having all the secrets of the Bismarckian diplomacy unfolded to him and was determined henceforth to direct foreign affairs himself. The inexperienced and impulsive young monarch was the last person whom the veteran arbiter of European affairs would trust to decide momentous state questions. Another difference between them was in regard to Wilhelm's consulting with the Prussian ministers regarding the business of their several departments. Prince Bismarck pointed out that this was unconstitutional and insisted on the strict observance of the Cabinet order of 1852, directing ministers to report to the Crown only through the President of the Ministry of State, who was responsible for the entire policy of the Cabinet. After a final breach on a question of German policy in the East, Prince Bismarck made this constitutional question the ground of his resignation of his offices of Imperial Chancellor and President of the Prussian Council of State, explaining that the two could not be separated, and adding that if they could, he could not carry out the Emperor's views of foreign policy without imperiling all the successes of importance that had been achieved in the relations with Russia. His letter of resignation was sent on March 18, 1890, and was accepted by the Emperor with protestations of regret, gratitude, and praise, and the bestowal of the title of Duke of Lauenburg and the rank of general of cavalry.

The fallen Chancellor spent the remaining years of his life at Friedrichsruh and Varzin, not in dignified quiet, but in a state of anger toward the Emperor and his new Chancellor, with which he endeavored to inflame the country, which was indignant at his summary dismissal. He denounced the policy of the Government to the thousands who flocked to pay him homage wherever he went. In his organ the "Hamburger Nachrichten" and in other newspapers inspired by him he criticised and belittled the new Government and the men who composed it, and published the secret treaty with Russia at the risk of being prosecuted for revealing state secrets. He constantly dwelt on the necessity of a good understanding with Russia for the future security of Germany. He lent his name and influence to Agrarian agitators and other malcontents. When he went to Vienna in 1892 to attend his son's wedding the Emperor Franz Josef denied him an audience, and the German ambassador ignored him. In 1896 a formal reconciliation took place between him and Wilhelm II. After his death Dr. Moritz Busch published a volume of his table talk containing many frank disclosures. He left manuscript memoirs of his life.

BOLIVIA, a republic in South America. The legislative power is vested in the Congress, composed of a Senate of 18 members, elected for six years, and a House of Representatives containing 64 members, elected for four years by all adult male Bolivian citizens who can read and write. The President is elected for four years by the direct vote of the people. Severo Fernandez Alonso was inaugurated as President on Aug. 15, 1896. His Cabinet at the beginning of 1898 was composed as follows: Foreign Relations and Worship, Dr. Manuel M. Gomez; Finance, L. Gutierrez; Interior and Justice, Macario Pinilla; Public Instruction, Colonization, Public Works, and Industry, Dr. J. V. Ochoa; War, G. Sanjines.

Area and Population.—The area of the republic is 567,360 square miles and the population, according to an official enumeration, is 2,019,549, not including the uncivilized Indians, numbering about

250,000. The department of the Littoral, containing the ports of Antofagasta and Arica, embracing 29,910 square miles, was retained as a pledge by Chili in 1880, after the war in which Peru and Bolivia were defeated, with a provision for its redemption after ten years.

Finances.—The revenue for the financial year 1897 was estimated in the budget at 6,963,124 bolivianos, and the expenditure at 6,785,596 bolivianos. The foreign debt amounts to 2,000,000 bolivianos, or dollars, the funded internal debt to 4,382,000 bolivianos, and the floating debt to about 3,000,000 bo-

3,200,000 ounces in 1896. About 4,000 tons of tin concentrates, 2,000 tons of tin bars, and 3,000 tons of barilla are exported annually. The total value of the imports in 1894 was estimated at 6,800,000 bolivianos, the principal articles being provisions, hardware, wine and spirits, textile fabrics, and clothing. The value of the exports was estimated at 30,000,000 bolivianos. The export of silver through the port of Antofagasta was valued at £1,914,500 sterling; that of tin at £433,900. The export of rubber is increasing. Other exports are copper, hides and skins, cinchona, coca, and gold.

PALACE OF CONGRESS AT LA PAZ.

livianos. Of the expenditures of 1897 the sum of 1,748,697 bolivianos was devoted to the army, consisting of a standing force of 1,500 men and the National Guard, in which all citizens are bound to serve under the conscription law of 1892.

Commerce and Production.—Agriculture and communications are still very primitive. Wheat, corn, potatoes, and other food products are raised in sufficient quantities to feed the people, and large numbers of sheep and llamas, from whose wool the garments of the common people are made. Some coffee is exported. The silver mines produced 14,500,000 ounces in 1894, but the product fell off to

Communications.—A railroad from Antofagasta extends for 500 miles in Bolivian territory from Ascotan to Ururi. A railroad is projected to connect La Paz with the Peruvian line that runs from Lake Titicaca to the seaport of Mollendo, another to join a line traversing the Argentine Republic, and concessions have been granted for lines running from Ururi to the mining districts of Cochabamba and Potosi.

The length of telegraph lines in the republic is 2,980 miles. The post office in 1896 carried 1,847,000 internal and 528,088 foreign letters, post cards, and journals.

BRAZIL, a federal republic in South America, proclaimed by the Constitutional Assembly on Feb. 25, 1891, at the end of the civil war which followed after the fall of the Emperor Dom Pedro II, who abdicated on Nov. 15, 1889. The legislative power is vested in the Congress, consisting of a Senate of 63 members, representing the different States and the Federal District, and a Chamber of Deputies containing 212 members, elected for three years by the direct suffrage of all adult male Brazilian citizens able to read and write, or paying taxes, or exercising a trade or profession. The President and Vice-President, who, as well as the Senators, are also elected by direct popular suffrage, hold office for four years.

The President of the republic is Prudente de Moraes Barros, who succeeded Marshal Floriano Peixoto on Nov. 15, 1894. Manoel Vitorino Pereira was elected Vice-President. The Cabinet at the beginning of 1898 consisted of the following members: Minister of Foreign Affairs, Gen. Dionysio E. de Castro Cerqueira; Minister of Finance, Dr. Bernar-

extraordinary credits to the amount of 60,000,000 milreis because Congress at the last moment refused to agree to proposals for an income tax. In the provisional budget for 1898 the receipts are estimated at 344,197,000 milreis, of which 250,000,000 milreis come from customs duties, 34,000,000 milreis from railroads, 9,000,000 milreis from stamps, 7,700,000 milreis from railroads, 2,000,000 milreis from duties on tobacco, 1,500,000 milreis from lottery taxes, 1,200,000 milreis from the Rio de Janeiro water-works, and 38,797,000 milreis from other sources. The total ordinary expenditures for 1898 are reckoned at 324,570,264 milreis, of which 15,946,378 milreis are allocated to the Ministry of the Interior and Justice, 2,101,812 milreis to the Ministry of Foreign Affairs, 26,873,358 milreis to the navy, 52,374,106 milreis to the army, 88,211,707 milreis to the Ministry of Industry, and 139,062,923 milreis to the Ministry of Finance.

The public debt consisted on Jan. 1, 1897, of a foreign debt of £35,261,700 sterling, equal to 313,447,333 milreis, internal debts payable in gold or

THE PORT OF PERNAMBUCO, BRAZIL.

dino de Campos; Minister of Industry, Dr. Joaquim Duarte Murinho; Minister of the Interior and Justice, Dr. Amaro Cavalcanti; Minister of Marine, Rear-Admiral Manoel J. Alves Barbosa.

Area and Population.—The area of Brazil is 3,209,878 square miles, and the population in 1890, according to the census returns, still incomplete, was 14,332,530. The population of Rio de Janeiro in 1892 was 522,651; that of Bahia is about 200,000, while Pernambuco has 190,000 and São Paulo 100,000. The number of immigrants in 1896 was 157,948, of whom 96,324 were Italians, 24,154 Portuguese, 11,366 Austro-Hungarians, and 1,070 Germans.

Finances.—The revenue for 1896 was estimated in the budget at 354,634,000 milreis, compared with 270,198,000 in 1895, and the expenditure at 343,536,210, compared with 275,691,671. The budget for 1897 makes the total receipts 339,307,000 milreis and the expenditures 313,196,700 milreis. The actual receipts were about 312,000,000 milreis, and the expenditure 315,444,000 milreis. The Executive opened

currency amounting to 635,698,500 milreis, 371,641,023 milreis of paper money in circulation, 340,714,370 milreis of guaranteed bank notes, 274,278,081 milreis of floating debt, and 6,893,500 milreis of guaranteed railroad bonds, making the total obligations of the Government 1,942,672,807 milreis, paying interest at 4 and $4\frac{1}{2}$ per cent. on the foreign loans and from 4 to 6 per cent. on the internal debt. The States had debts amounting in 1895 to 91,706,736 milreis. The Brazilian Government has reduced its foreign liabilities by the forcible conversion of the 4-per-cent. gold loan of 1890, amounting to 124,655,000 milreis, into 5-per-cent. currency bonds. Holders received a 25-per-cent. bonus with the new bonds, which they were obliged to accept or to receive the face value of their bonds in currency.

The Army and Navy.—The army consisted in 1897 of 4,000 officers and 24,160 men, besides 20,000 gendarmes. Service in the army is obligatory for three years in the line and three in the reserve.

The navy in the beginning of 1898 consisted of

the "Riachuelo" and "24 de Maio," third-class battle ships; 6 monitors and coast-defense vessels; the first-class cruiser "Nichteroy," since sold to the United States; 3 second-class and 2 third-class cruisers and 10 small cruisers and gunboats; and 8 first-class and 6 third-class torpedo boats. A first-class cruiser, 2 port-defense armor clads, 6 cruisers, 8 destroyers, 6 first-class torpedo boats, and 2 Goubet submarine boats were being built for the navy.

Commerce and Production.—The staple commercial product of Brazil is coffee, of which about 8,000,000 bags of 60 kilogrammes each are produced yearly. In 1898 the Rio crop was 3,000,000 and the Santos crop 4,000,000 bags. In Rio Grande do Sul there were 320,000 cattle slaughtered in 1897. Fruit preserving, tanning, and brewing are also carried on in this State, which is largely peopled by German, Italian, and other immigrants. Pernambuco produces 185,000,000 kilogrammes of sugar a year. Rum and alcohol are distilled in increasing quantities. Cotton is grown in several States, and there are many cotton and woolen mills. Gold mines are worked in Minas Geraes, and in Bahia this metal and silver-lead ore, copper, zinc, manganese, and mercury are found. Diamonds are also mined. Iron exists in many places in vast quantities, but there are no coal mines except in Rio Grande do Sul. The forests of Brazil are of enormous extent and full of valuable products which are not yet accessible, except rubber, of which the Amazon region has been much depleted.

The total value of the imports in 1896 was 481,000,000 milreis; of the exports, 480,000,000 milreis. There were 2,763,720 bags of coffee shipped from Rio de Janeiro in 1895, 4,157,971 from Santos in 1896, and 540,000 from Victoria, Bahia, and Ceará; 7,770 tons of cacao from Bahia; 164,925 tons of sugar from Pernambuco; 12,239 tons of cotton from Pernambuco; and 15,230 tons of rubber from Pará and 6,599 tons from Manaus. From Rio Grande do Sul 9,433,325 kilogrammes of dried beef and 1,141,362 of tallow and 336,773 hides were exported. Other exports are yerba maté, tobacco, timber, and nuts. The principal imports are cotton and woolen cloths, iron and machinery, coal, flour, cattle, beef, rice, codfish, pork, lard, butter, corn, olive oil, macaroni, tea, candles, salt, kerosene, timber, wines, and spirits.

Navigation.—The arrivals at Rio de Janeiro in 1896 were 1,535 vessels engaged in the foreign trade, of 2,469,628 tons; at Pernambuco, 947 vessels, of 1,181,247 tons; at Ceará, 308 vessels, of 236,091 tons; at Maranhão, 174 vessels, of 223,647 tons; at Rio Grande do Norte, 207 vessels, of 51,890 tons.

The merchant marine in 1895 comprised 285 sailing vessels, of 65,575 tons, and 189 steamers, of 75,283 tons.

Communications.—There were 8,086 miles of railroad in operation in 1896, and 5,403 miles were building, 4,670 miles in addition were laid out, and 8,440 miles more were projected. The Federal Government owned 1,832 miles and paid subventions to 2,259 miles, while 3,000 miles were owned or subsidized by States and 995 miles received no subventions. Of the lines under construction the Federal Government was building 667 miles and assisting 3,390 miles, the States were building 961 miles, and 385 miles were being built without subventions. The subventioned lines usually have 6 or 7 per cent. interest on their capital guaranteed by the Government. The total cost of the Government railroads up to 1895 was 257,674,937 milreis. The deficit made up by the Government in 1894 was 11,118,481 milreis. A law was passed in December, 1896, which authorizes the leasing of the Government lines.

The telegraph lines in 1895 had a total of 10,143 miles, with 21,936 miles of wire, all belonging to the

Government. The number of dispatches was 1,283,695. The receipts for 1897 were estimated at 3,600,000 milreis and expenses at 9,844,722 milreis.

The post office in 1893 carried 33,441,000 letters and postal cards and 37,674,000 packets and samples.

Political Affairs.—At the beginning of 1898 financial depression affected the people and the Government and the country was still under martial law, which was extended till Feb. 23, the unrest that followed upon the conspiracy against the Government still continuing. The man who attempted to assassinate President Moraes and mortally wounded the Minister of War, killed himself in prison, hiding the secrets that he might have revealed. Dr. Manoel Pereira, the Vice-President, denying any complicity in the attempted murder of the President, nevertheless refused to appear before the High Court, invoking his parliamentary immunities. The presidential election was held on March 1. Dr. de Campos Saller, of São Paulo, was elected President of the republic and Rosa Silva, of Pernambuco, Vice-President for the term beginning on Nov. 15, 1898. Their majority was very large. In Rio de Janeiro the Opposition abstained from voting. Congressmen who were imprisoned in the penal establishment on the island of Noronha, charged with being implicated in the plot against the President's life, were on April 17 released by order of the Supreme Court, their detention there having been unconstitutional. The Brazilian Congress was opened on May 3. The President hoped to settle the dispute with France regarding the Guiana boundary without resorting to arbitration. The reciprocity treaty with the United States he refused to renew, on account of the great loss caused thereby to the revenue. The President declared the foreign payments of the Government had been kept up with scrupulous fidelity, but only at the cost of enormous sacrifices because of the fall in exchange, the decline in the price of coffee, and the political and international agitation. The deficit for 1897 amounted to 41,526 contos of reis. An arrangement was made with the Rothschilds and London banks for the extrication of the Government from its immediate financial peril by a compromise with the bondholders. The Minister of Finance proposed to collect all import duties in gold at the exchange rate of 20 milreis to the pound sterling. He also suggested an income tax. In the budget for 1899 revenue and expenditure were made to balance at 346,000 contos. Of the revenue 222,000 contos are from customs. Of the expenditures 68,768 are assigned to the army and navy and 166,000 contos to the Ministry of Finance, including 63,000 contos for loss of exchange and 58,000 contos for the service of loans. The ratifications of an arbitration treaty with France relative to the boundary dispute were exchanged on Aug. 6.

BRITISH COLUMBIA, the westernmost province of the Dominion of Canada.

Politics and Government.—The years 1897-'98 were most important ones in the history of this province. Politics were unusually interesting, and the excitement over general mining, railway, and business development reached high-water mark. The policy and methods of the Hon. J. H. Turner's Government—composed of D. M. Eberts, G. B. Martin, James Baker, and himself as Premier—were objects of severe criticism. The fourth and last session of the seventh Legislature of British Columbia was duly opened at Victoria on Feb. 10, 1898, by Lieut.-Gov. T. R. McInnes, who in 1897 was appointed to this post in succession to the Hon. E. Dewdney. The speech from the throne, outlining the policy of the Government for the ensuing session, contained the following significant passages:

"I am gratified to find that the revenue of the country is expanding to such dimensions as to indicate the rapid development of our undoubted resources in minerals and other natural products. The vast discoveries of gold in the Yukon region will give a great stimulus to commercial enterprise throughout the province, and in view of the urgent necessity of securing an all-Canadian route to the Yukon a measure will be laid before you for furthering that object as expeditiously as possible. The widespread discoveries of mineral wealth in the province indicates the importance of affording increased transportation facilities for their development, and I commend for your careful consideration certain measures which will be introduced tending to that desirable end.

"I have much pleasure in informing you that the efforts you made on former occasions to assist the Crow's Nest Railway have, in conjunction with aid from the Dominion Government, resulted in the active construction of that railway, and there is every prospect of its completion as far as Nelson during the present year. By this means the exten-

sion to Vancouver island, of which Victoria is the capital, and of some jealousy on the mainland, of which Vancouver is the great commercial and business center. The old buildings, which were now replaced, dated from 1859, and were certainly not worthy of the province.

With the opening of the Legislature the political fight began. C. A. Semlin was Leader of the Opposition, and his chief assistant was F. Carter-Cotton. Though Conservatives in Federal politics, they were given during this session and in the ensuing elections the full support of the local Liberal party, led by Hewitt Bertock, M. P. The Hon. D. W. Higgins was re-elected Speaker, however, and much important legislation passed. Of this the loan bill and the redistribution-of-seats bill were the chief items. The former measure, dealing with railway development in the province, was the most important of the kind since 1883. The amount to be borrowed was \$5,000,000. The bill involved the construction of an all-Canadian railway route to the Yukon from the coast to Teslin lake, an estimated distance of 400 miles; from Vancouver and

THE NEW GOVERNMENT BUILDING, VICTORIA.

sive coal fields in the Crow's Nest pass will be made available, and the importance to the mining industry of a good and cheap fuel can not be exaggerated. I am happy to inform you that negotiations are in progress for insuring the early construction of the Victoria, Vancouver and Eastern Railway, which will open up the rich mining camps and agricultural lands.

"It is satisfactory to learn that the abundant harvest of last year has relieved the depression which formerly existed in our agricultural industry. In view of the adaptability of our province for dairy farming, steps will be taken for promoting its development. Our fisheries have maintained their high reputation, and offer a wide range for further expansion. The timber industry has shown marked improvement during the past year.

"The revision of the statutes has been completed, and legislation will be introduced to give effect to the work of the commissioners."

The formal opening of the new Parliament buildings, erected at a cost of \$900,000, took place on this occasion, and was the cause of much congratulation.

English Bluff, via the Fraser river valley and Chilliwack to Penticton, 230 miles; from Penticton to Boundary, 100 miles; from Boundary creek to Robson, 80 miles; and from Bute inlet to Quesnelle, 230 miles, being a grand total of 1,040 miles, all of which projected lines were on the mainland. The railway subsidy act of 1898 provided for a loan of \$5,000,000, half of which had been authorized by the public works aid act of last year, out of which the proposed railways from English Bluff and Vancouver to Boundary creek via Penticton, and from Bute inlet to Quesnelle, were to be subsidized. The new act, which was in amendment of that of last year, continued these subsidies and added to them \$4,000 a mile for a railway from Boundary creek to Robson, 80 miles, and a like amount for a railway from the coast of British Columbia to Teslin lake, 400 miles, which at a subsidy of \$4,000 a mile called for \$4,160,000. The remainder of the contemplated loan will be subject to the control of the House. The measure was vigorously opposed on the ground of increasing public liabilities, but eventually passed by a fair majority.

On April 14 the redistribution bill was introduced. It increased the number of members of the House from 33 to 38, gave Vancouver the same number as Victoria, and distributed the representation in other localities to suit the changing and increasing population. About this time also the provincial Government was advised by the Federal authorities that the alien labor bill, passed in the preceding session and held for the Governor-General's approval, would not be put in operation, as it "seriously interfered with international relations and Federal interests." The House was prorogued in May, and dissolved soon afterward.

The elections took place on July 9 and resulted in the return of 19 Government supporters and 19 Oppositionists. A curious complication in the contest was the active participation of the Hon. Joseph Martin, formerly Attorney-General of Manitoba, a new resident in the province. He was elected for Vancouver and at once took a place as one of the Opposition leaders. The Turner Government thus lost its previous majority of 9, and on Aug. 8 the province was startled by the statement that Lieut.-Gov. McInnes had dismissed his ministry and called upon the Hon. Robert Beaven, a member of the Opposition who had been defeated in the elections, to form a new Government. A prolonged constitutional controversy followed. The following extracts from letters written by the Lieutenant Governor to Mr. Turner explain his position in the matter and his reasons for calling in Mr. Beaven instead of Mr. Martin or Mr. Cotton. On July 14, five days after the election, he wrote: "I can not look on the result of the general elections in this province, held on the 9th instant, as other than adverse to your administration and an expression of want of confidence on the part of the people." On Aug. 8 he repeated this opinion, and added that the result of the single Cassiar election "would not reverse the verdict of the electorate," and he expressly declared that in calling for the resignation of his ministers he was "acting on what I consider the verdict of the electorate." Later in the same letter he says: "For, as I would not feel justified in granting you another dissolution and appeal to the electorate, and as, after a careful consideration of the situation, I am convinced that you could not command a majority of the Assembly, I shall not put the province to the delay or to the expense of a special session of the Legislature merely for the purpose of formally demonstrating to you what has already been sufficiently demonstrated to me by the general election." Writing to Mr. Semlin, the Lieutenant Governor said: "From the best information I could obtain, it was made to appear to me that there was no recognized leader of the party since the general election on the 9th ultimo, it being divided into two factions supporting respectively the claims of yourself and Mr. Martin to leadership."

Eventually Mr. Semlin was sent for and formed a ministry as follows: Hon. C. A. Semlin, Premier and Commissioner of Lands and Works; Hon.

Joseph Martin, Attorney-General; Hon. F. Carter-Cotton, Minister of Finance and Agriculture; Hon. J. Frederick Hume, Provincial Secretary; Hon. R. E. McKechnie, M. D., without portfolio.

The new Government has entered upon its duties at an auspicious time. Financially, the province is in a good condition. The revenue has grown from \$821,000 in 1893-'94 to \$1,383,000 in 1897-'98, and out of this all ordinary expenditures have been made and more than \$1,000,000 expended on permanent public works. An indication of the expansion in this direction is seen in the Kootenay district, where a revenue of \$30,000 has grown to one of \$230,000.

Mines and Minerals.—In 1897 the value of the product of British Columbia mines was \$10,455,268, almost exactly \$3,000,000 more than in 1896. To show what strides have been made since 1890 the value of the output for that year—namely, \$2,608,803—must be mentioned. This progress is by no means all to be credited to gold, or even to the two precious metals exclusively, though they did contribute much the greatest part of it, but it is practically all to be set down to gold and silver mining, that is, the whole gain made within the past seven years has been derived from mines yielding mainly gold and silver, but in addition thereto copper and lead. Of the gold output, lode and placer, the value in 1897 was \$2,636,340, against \$1,788,206 in 1896; and of silver \$3,272,836, against \$2,100,689 in 1896; making the total yield of the two precious metals \$5,909,170 in 1897, against \$3,888,895 in 1896. In addition to this increase in the gold and silver constituent of the ores, there is an increase of about \$750,000 to be put down to the lead and copper extracted from the same ores. The whole of this advance springs from the mines of a single district—West Kootenay; and mostly from two divisions of that district—the Slocan and the Trail or Rossland divisions. West Kootenay's yield, which amounted to \$4,002,735 in 1896, rose to \$6,765,703 in 1897. It will serve to emphasize the latter figures to note the fact that as late as 1892 the total output of West Kootenay's mines had not passed \$100,000. Properly to appreciate this growth, we have to take into account the remoteness, almost inaccessibility, of the wilderness in which it has taken place. Of course, the isolation of the Kootenay miners is now a thing of the past, and more perfect connections with the outside world are being developed. An early realization of the wealth there led to the extension thither of the Spokane Falls and Northern Railway, one branch of that road, the Nelson and Fort Sheppard, being pushed into the silver country; another, the Red Mountain Railway, being thrown out to Rossland. The desire for an early entrance into the same promising market impelled the important mercantile interests of Eastern Canada to call for the construction of the Crow's Nest Pass Railway, which is now completed as far as the Columbia river. The following table shows the mineral production in two recent years:

PRODUCTS.	1896.		1897.	
	Amount.	Value.	Amount.	Value.
Gold, placer, ounces.....	27,201	\$544,026	25,676	\$513,520
Gold, lode, ounces.....	62,259	1,244,180	106,141	2,122,820
Silver, ounces.....	3,135,343	2,100,689	5,472,971	3,272,836
Copper, pounds.....	3,818,556	190,926	5,325,180	266,258
Lead, pounds.....	24,199,977	721,384	38,841,135	1,390,517
Coal, tons (2,240 pounds).....	894,882	2,688,666	882,854	2,648,562
Coke, tons (2,240 pounds).....	615	3,075	17,832	89,155
Other materials.....		15,000		151,600
		\$7,507,946		\$10,455,268

Education.—The twenty-sixth annual report on the condition of the public schools of the province was laid before the Legislature on Jan. 16, 1898. It covered the year ending June 30, 1897. There were 244 schools in operation—4 high, 22 graded, 213 common, and 5 ward. There were 384 monitors and teachers employed, 34 more than in the previous year. The whole number of pupils enrolled was 15,798, an increase of 1,338 over 1895-'96. The actual daily attendance was 9,999.61, an increase of 745.36. The percentage of average daily attendance in the city districts was 71.06, in rural districts 58.81, and for the entire province 63.29. The expenditure from the provincial treasury for education proper during the year was as follows: Teachers' salaries, \$150,949.22; *per capita* grants, cities, \$49,687.80; incidentals, rural districts, \$10,157.28; education office, \$10,016.08; total, \$220,810.38. The cost of each pupil, based on the total enrollment, was \$13.97, and based on the actual daily attendance, was \$22.08. The expenditure by the Lands and Works Department for the construction of schoolhouses, furniture, repairs, and improvements to school property was as follows: Schoolhouses in rural districts, \$10,923.19; furniture, repairs, etc., \$4,947.75; total, \$15,870.94. The total expenditure by the provincial Government during the fiscal year for all purposes of education was as follows: Education, \$220,810.38; Lands and Works Department, \$15,870.94; total, \$236,681.32.

Fisheries.—The yield of the fisheries of British Columbia in 1896 was as follows: Salmon, \$3,142,732; halibut (fresh), \$113,827; fur seal skins, \$501,093; miscellaneous, \$426,347; total, \$4,183,999. The capital invested was \$2,614,578, and the men employed numbered 15,925.

BULGARIA, a principality in eastern Europe, tributary to Turkey, created out of a former Turkish province by the Treaty of Berlin, signed July 13, 1878, giving effect to the independence achieved for Bulgaria through the armed intervention of Russia. Eastern Roumelia, which was made an autonomous province by the same treaty, expelled the Turkish officials in 1885 by the aid of Bulgarians of the principality, and the union of the two Bulgarias was proclaimed. The Sultan on April 6, 1886, signified his acquiescence in the *fait accompli* by a firman confiding the government of the province to the Prince of Bulgaria under the title of Governor General.

The legislative power is vested by the Constitution of 1879 in the *Sobranje*, a single Chamber containing 1 representative for every 20,000 of population, elected by universal adult male suffrage. The reigning Prince is Ferdinand I, son of Prince August of Saxe-Coburg-Gotha, born Feb. 26, 1861, elected by the Great *Sobranje* on July 7, 1887, after the abdication of Alexander of Battenberg, and confirmed by the Porte and the powers in March, 1896.

The ministry constituted on Sept. 7, 1897, was composed as follows: President of the Council and Minister of Foreign Affairs and of Public Worship, Dr. C. Stoiloff; Minister of Finance, T. Theodoroff; Minister of Justice, G. Zgonreff; Minister of the Interior, N. Beneff; Minister of War, Col. N. Iynoff; Minister of Public Works and Communications, J. Madjaroff; Minister of Commerce and Agriculture, C. Velitchoff.

Area and Population.—The area of the principality proper is 24,360 square miles; of South Bulgaria, or Eastern Roumelia, 13,500 square miles, with a population on Jan. 1, 1893, of 992,386. The population of the whole country on that date was 3,309,816, of whom 2,504,336 were Bulgars, 569,728 Turks, 60,018 Greeks, 51,754 gypsies, 27,531 Jews, 3,620 Germans, 1,379 Russians, and 91,450 of other

nationalities. Sofia, the capital, has 47,000 inhabitants. The number of marriages in 1894 was 26,640; of births, 127,516; of deaths, 92,037; excess of births, 35,479.

Finances.—The revenue for 1897 was estimated at 83,425,019 lei, or francs, and the expenditure at 83,422,659 lei. The receipts from direct taxes were reckoned at 33,731,145 lei, and customs and excise receipts at 31,080,000 lei. Of the expenditures 18,267,992 lei were for the service of the debt, 22,104,000 lei for the army, 9,188,560 lei for public instruction, 8,380,876 lei for the interior, and 4,991,940 lei for finance. For 1898 the total revenue is estimated at 84,516,000 lei, and expenditure at 84,462,000 lei.

The debts consist of 42,063,500 lei of the loan contracted in 1886 for the purchase of the Varna and Rustehuk Railroad, 27,440,000 lei raised in 1888 and 1889, 83,141,000 lei borrowed under the act of 1892, a balance of 11,918,296 lei due to the Russian Government on account of the occupation, and 6,785,204 lei due to the Ottoman Government; total, 171,348,000 lei, besides the tribute of Eastern Roumelia, which never has been paid since the union was consummated, and the Bulgarian share of the Ottoman debt and annual tribute, which have remained in abeyance, the powers having omitted to fix the amounts in accordance with the treaty of Berlin.

The Army and Navy.—About 16,000 of the 40,000 young men who reach the age of twenty each year are drawn by lot to serve in the army for two years in the infantry or three years in the cavalry or artillery. The infantry are armed with Mannlicher repeating rifles, and the cavalry with carbines of 8 millimetres caliber, the artillery mostly with Krupp guns. The nominal peace strength for 1897 was 2,807 officers and 40,234 men, with 7,937 horses; war strength, 126,970 men in the first line and 81,996 in the reserve, or 208,966 in all, with 38,788 animals and 43 guns.

The naval force consists of an armed yacht, 4 gunboats, 7 sloop gunboats, and 3 torpedo boats.

Commerce and Production.—The Bulgarian peasants own their small farms of 1 to 6 acres, with common rights in the woods and pasture lands. They pay tithes of their crops to the Government, still mostly in kind, as under Turkish rule. Wheat is the main crop and the chief export, besides which tobacco, flax, and silk are raised, and sheep and goats are kept, furnishing wool, tallow, butter, cheese, and skins for domestic use and for export. The foreign trade is conducted to a large extent by Greek, Austrian, and Roumanian merchants. The leading imports in 1896 were textile manufactures for 26,457,000 lei, colonial goods for 6,575,000 lei, metals for 8,788,000 lei, timber and furniture for 4,124,000 lei, and machinery for 2,611,000 lei. The exports of grain were valued at 94,089,000 lei; of live animals, 4,247,000 lei. The amount of trade with different countries in 1896 is shown in the following table, giving values in lei:

COUNTRIES.	Imports.	Exports.
Great Britain.....	18,209,007	32,831,582
Turkey.....	9,923,618	22,086,997
Germany.....	8,589,563	20,453,746
Austria-Hungary.....	22,393,989	2,720,863
France.....	3,358,315	13,984,220
Belgium.....	2,226,030	8,516,208
Russia.....	4,299,775	73,839
Italy.....	2,640,683	1,885,354
Roumania.....	2,252,907	415,569
Servia.....	1,043,910	89,916
Switzerland.....	752,793
Greece.....	355,691	283,617
United States.....	210,377
Other countries.....	273,320	5,298,016
Total.....	76,530,278	108,739,977

Communications.—There were 600 miles of railroads in 1897. The state telegraph lines had a length of 3,164 miles, with 6,500 miles of wire. The number of dispatches in 1895 was 1,282,525. The post office in that year carried 18,385,000 pieces of mail matter. The postal and telegraph receipts amounted to 2,720,399 lei; expenses, 2,929,791 lei.

Political Affairs.—The understanding between Austria and Russia served to avert any serious disturbance in Macedonia when the Greco-Turkish war afforded an opportunity to the Balkan states to seek to achieve their ambitions. Yet, however correct the attitude of the Bulgarian Government, the party of expansion at Sofia was restless, and became bolder and more excited when the war was over and the Turkish provincial authorities dealt severely with Macedonian revolutionists and Pan-Bulgarian agents who had stirred them to futile sporadic action. The gradual massing of an immense Ottoman military force in Thrace and Macedonia checked the smuggling of arms and seditious publications into Macedonia, discouraged fresh incursions of Bulgaro-Macedonian bands, and effectually restrained the Bulgarian party of action. The diplomatic relations between Sofia and Constantinople were not outwardly ruffled. On Jan. 31, 1898, the Grand Vizier replied to a memorandum of M. Markoff, the Bulgarian diplomatic agent, promising that all persons arrested on mere suspicion in the vilayet of Uskub would be released, that the *vali* would be held responsible for any further acts of violence, and that a military court would investigate. In the vilayets of Kossovo and Monastir also all imprisoned Bulgarians were set free except those who were known to have been implicated in revolutionary designs. After the commission of officers sent to inquire into cases of murder and outrage alleged to have been committed by Turkish soldiers, principally in the vilayet of Kossovo, had begun its investigation a secretary of the British embassy made a tour of inspection in Uskub and found evidences that some of the imprisoned Bulgarians had been horribly tortured, but they had been released before the arrival of the commission and threatened with death in the event of their giving evidence that they had been ill treated. The Porte's apprehensions concerning Bulgaria were allayed by the assurance that the Government would not provoke nor promote any Macedonian movement. Nevertheless the Turkish forces in the adjoining vilayets

continued to be strengthened. The military activity excited in the neighboring Balkan kingdoms by the Bulgarian intrigues in the Turkish provinces acted also as a check on the movement. Roumania began moving troops down to the Danube. Diplomatic relations with Serbia were strained. Meanwhile the tension that had existed between the courts of Vienna and Sofia since the reception of Prince Boris, the Bulgarian heir apparent, into the Orthodox Church was relieved to such an extent that the Emperor Franz Josef received Prince Ferdinand on March 7. Austria-Hungary continued to observe the truce with Russia in regard to Balkan affairs. The influence of Great Britain, which was long so powerful, in conjunction with the former policy of Austria, as to keep the Bulgarians estranged from their Russian liberators, had been completely extinguished. The warm and effusive New Year's congratulations exchanged between Prince Ferdinand and Prince Nicholas of Montenegro, long the only protégé of the Czar in the Balkans, was a sign of the changed relations between Bulgaria and Russia. The complete and triumphant subordination of the Bulgarian Government to Russian influence was proved by the return of the refugee Bulgarian officers who had been forced to fly the country because of the part they had taken in the various pro-Russian conspiracies against Prince Alexander and the regency and later against Prince Ferdinand and his ministers. One after another these officers, upon whom the death penalty would have been inflicted by former governments, were welcomed back to Bulgaria and reinstated in the army and advanced in rank on account of their service in the Russian army over the heads of those who had remained steadily loyal to the Government and impervious to the temptations held out by the insidious agents of Russian diplomatic intrigue. Excessive military and other expenditures created financial embarrassments for the Government, which were temporarily bridged over by a loan of 10,000,000 francs obtained from a French syndicate. Large retrenchments in the military expenditure are promised. In July the Czar signalized the return of cordial relations with Bulgaria by entertaining Prince Ferdinand with the Princess and their son, Prince Boris, at Peterhof. After his return from Russia, Prince Ferdinand visited the Czar's other protégé, Prince Nicholas of Montenegro.

C

CALIFORNIA, a Pacific coast State, admitted to the Union Sept. 9, 1850; area, 158,360 square miles. The population, according to each decennial census since admission, was 92,597 in 1850; 379,994 in 1860; 560,247 in 1870; 864,694 in 1880; and 1,208,130 in 1890. Capital, Sacramento.

Government.—The following were the State officers during the year: Governor, James H. Budd, Democrat; Lieutenant Governor, William T. Jeter, Democrat; Secretary of State, Lewis H. Brown, Republican; Treasurer, Levi Radcliffe, Republican, until his death, April 21, when the Governor appointed W. S. Green, Democrat, to succeed him; Attorney-General, William F. Fitzgerald, Republican; Comptroller, E. P. Colgan, Republican; Superintendent of Instruction, Samuel T. Black, Republican; Surveyor-General, Martin J. Wright, Republican; Superintendent of Printing, A. J. Johnson, Republican; Insurance Commissioner, Andrew J. Clunie; Adjutant General, A. W. Barrett; Chief Justice of the Supreme Court, W. H.

Beatty, Republican; Associate Justices, T. B. McFarland, C. H. Garoutte, R. C. Harrison, W. C. VanFleet, F. W. Henshaw, Republicans, and Jackson Temple, Democrat.

Finances.—The assessment roll was fixed, Sept. 1, at \$1,085,904,868 for all property other than railroads. Railroads were assessed at \$44,457,473, making the total roll \$1,130,362,341. The amount to be raised was \$2,553,602 for the general fund, \$2,314,963 for the school fund, \$141,435 for the interest and sinking fund, and 2 cents on each \$100 for the State University. This requires a tax levy of 48.8 cents.

In San Francisco the amount of taxable property was \$351,784,094, an increase over the assessment of 1897 of \$3,829,264. The assessment of personal property is \$68,695,110, and of real estate \$283,088,984. Of the latter sum \$189,559,834 represents the assessment of land and \$93,529,150 of improvements. The figures show an increase in real-estate valuations of \$4,931,119 and a decrease in personal property assessments of \$1,101,855.

The University of California has \$558,960 loaned on mortgage and has real property valued at \$456,430, making a total of \$1,025,390, which has been withdrawn from assessment.

The franchises of all corporations having special privileges, such as water, gas, electric light, telephone and street railroad companies, are assessed at \$11,026,400.

Banks.—The report of the Bank Commissioners gives the following summary of the condition of the commercial, savings, national, and private banks in the State Aug. 31, 1898: Resources—bank premises, \$7,105,034.31; real estate for debt, \$17,594,326.88; invested in bonds, \$52,340,237.14; loans on real estate, \$111,283,350.18; loans on stocks and bonds, \$19,041,115.21; loans on other securities, \$7,295,105.59; loans on personal security, \$57,815,271.76;

HENRY T. GAGE, GOVERNOR OF CALIFORNIA.

money on hand, \$31,242,296.76; due from banks, \$23,451,148.01; other assets, \$3,724,645.74; total, \$330,892,531.58. Liabilities—capital paid in coin, \$50,870,258.21; reserve fund, \$28,296,584.14; due depositors, \$232,709,284.16; due banks, \$12,380,739.94; public money, \$177,718.29; other liabilities, \$6,457,946.84; total, \$330,892,531.58. Compared with the figures in the report of July 31, 1897, it shows an increase of assets and liabilities for all the banks of \$28,477,075.96.

Loan Associations.—The annual report of these associations comes down to May 31, 1898. There were through the year 148 in the State; besides these, 5 ceased business and 4 began within the year. Three of the 5 are in course of voluntary liquidation, and 2 are in the hands of receivers. The number of members in all the associations is 37,690, of which 11,074 are borrowers. The report on the 148 associations was as follow: Assets—loans, \$17,627,375.63; arrearages, \$506,122.17; real estate, \$1,761,625.87; cash in hand, \$610,612.71; other assets, \$264,990.34; total, \$20,771,226.72. Liabilities—dues, installment stock, \$13,107,176.69; paid up and prepaid stock, \$1,231,121.75; earnings apportioned, \$4,342,436.79; advance payments, \$65,592.29; reserve and undivided profits, \$450,209.63; unearned premiums, \$234,075.63; overdrafts and bills payable, \$938,895.74; other liabilities, \$401,718.20; total, \$20,771,226.72.

The net profits were \$1,306,575.74, equivalent to 7.28 per cent. of the average amount of loans in force during the year. In 1894 the percentage was 7.77, in 1895 it was 7.19, in 1896 it was 7.11, and in 1897 it was 7.20. Mortgage loans to the number of 2,584, and stock loans to the number of 1,802 were made during the year, the amount represented being \$3,521,824.06, which is 19.97 per cent. of all the loans outstanding. The loans repaid amounted to

\$4,156,450.66, or 19.08 per cent. of all the loans in force.

Education.—The annual apportionment of school money in July distributed \$1,071,637.39 on the basis of the census enumeration of 340,952 children.

In the report of the San José Normal School it was shown that 93 per cent. of the graduates of the preceding year had taught in the public schools of the State. The enrollment for the year was 592.

The University of California received in September a gift valued at \$2,000,000 from Miss Cora Jane Flood, consisting of the Flood residence and tract of about 540 acres, near Menlo Park, Cal., one half interest in about 2,400 acres of marsh land adjacent to the residence tract, and four fifths of the capital stock of the Bear Creek Water Company. The only conditions made by the giver were that the residence and a reasonable area about it, including the present ornamental grounds, shall be kept in good order for fifty years, and that the net income from the property and its proceeds shall be devoted to some branch of commercial education.

The new building for the medical department, one of the affiliated colleges for which buildings have been erected on a hill south of Golden Gate Park, was formally opened in October.

More than 200 students were graduated at the University May 18. Small classes were graduated in December.

At the commencement of Stanford University, May 25, a class of 161 students received degrees. A department of metallurgy and mining engineering has been added to the university. Heretofore the little work done on these lines has been in connection with the department of geology. It is announced that the Stanford residence (see "Annual Cyclopædia" for 1897, page 98) is to become "The Stanford Academy of History, Economics, and Social Science." It is to be the center of the extension work of the university; courses of lectures will be given on the subjects named, and provision will be made for post-graduate study.

Convicts.—The annual report of the warden of the prison at San Quentin for the forty-ninth fiscal year, published in July, shows that the cost of maintaining each prisoner during the year averaged \$10.76 a month. Deducting the earnings of the prisoner from the gross expenses, the net cost of maintenance was \$9.06 *per capita*, or 30 cents a day. The monthly average of prisoners was 1,335 against 1,329 for the previous year. During the twelve months 37 deaths were recorded, of which 5 were executions and 1 a suicide.

The Insane.—At a session of the State Commission of Lunacy, July 19, a committee was empowered to enter into negotiations with the Chinese Six Companies and some steamship company to deport all the insane Chinese now in the State asylums. It was said that there are between 400 and 500 of these insane, and that their exportation to China would save the State annually \$60,000.

The Chinese companies offered to give \$25 a head toward the cost of transportation. As they are obliged to send to China the bones of every dead Chinaman, the shipment of which costs a material sum, the companies are in favor of transporting the insane as a business measure.

Insurance.—The Insurance Commissioner made a written demand, in January, on each of the 34 European fire insurance companies doing business in California for unpaid license fees aggregating \$279,530.98. In the majority of cases the claims ran back twelve years. They are based upon section 1 of the act of March 3, 1885, requiring foreign insurance companies to pay annually 1 per cent on their premiums to the treasurer of every county or

city and county in the State for the use and benefit of the Firemen's Relief fund. The law has been a dead letter because of a decision obtained from the State Supreme Court soon after its enactment. Later the commissioner issued an order revoking the bonds of fire insurance companies outside the State, and the controversy over these matters continued till July, when a compromise was effected by which 25 companies signed a letter in which they agreed to pay to the State a sum equal to 1 per cent of their net premiums collected on risks taken on property within the State during the year 1897, and a similar sum during January of each succeeding year, estimated on the net California business for the preceding twelve months.

Railroads.—During the year ending June 30 a little more than 19 miles of new road were built in California by the Southern Pacific, which completed several branch lines.

The Southern California Railway Company has a capital stock, issued and outstanding, of \$12,824,000, and a total of 471.14 miles of track in operation. It produced a net income of \$341,196 during the year.

The Valley road, with its 277.34 miles of main line and its total length of 318 miles of track, recorded a net income for the year of \$128,753.94. The construction of this road was continued, and in October it had 345 miles of track, when control of it was acquired by the Atchison, Topeka and Santa Fé, giving that road the connecting link to San Francisco.

The California Northwestern Railway Company was incorporated in March. The road is to be built to the redwood forests of Humboldt and Mendocino Counties.

Military.—The records showed that there were in August 5,653 volunteers in Californian regiments at Manila.

In consequence of a quarrel over some trifling matter in a saloon in San Francisco, a mob of several hundred Tennessee volunteers attempted, on Aug. 15, to lynch a young negro crab fisher. They wrecked his mother's home and injured the boy, whose life was saved by the arrival of the major of the regiment, who threatened to shoot the first man that touched the negro, and succeeded in quelling the disturbance with the help of a squad of mounted men from the Fourth Cavalry.

Minerals.—In regard to the gold product of the State, the San Francisco "Chronicle" says: "For the year 1897 the returns of the Director of the Mint showed a material falling off in the gold product compared with the yield of 1896, the total being placed at about \$17,000,000, whereas conservative estimates made by mining men familiar with the yield of the mining counties, and based upon the computed products of each county by its own newspapers, placed the total yield at \$3,000,000 more, that is, at \$20,000,000 in round numbers. Recently the United States Mint Statistician published his estimate for 1897. This places the grand total of gold and silver produced that year at \$16,324,190, or \$1,310,161 less than the year 1896. No one who kept track of the State's mining operations during last year has been willing to accept such a statement as an approximately fair return of the State's output." According to the figures published, the gold product was \$15,871,401 and the silver \$452,789.

The aggregate value of all mineral products in the State in 1897 is given as \$25,142,441, distributed as follows:

Antimony, 25 tons, \$3,500; asphalt, 22,697 tons, \$404,350; bituminous rock, 45,470 tons, \$128,173; borax, 8,000 tons, \$1,080,000; cement, 18,000 barrels, \$66,000; brick, 97,468,000, \$563,240; pottery,

24,592 tons, \$30,290; coal, 87,449 tons, \$196,255; copper, 13,638,626 pounds, \$1,540,666; gold, \$15,871,401; granite, 339,288 cubic feet, \$188,024; gypsum, 2,200 tons, \$19,250; infusorial earth, 5 tons, \$200; lead, 596,000 pounds, \$20,264; lime, 287,800 barrels, \$252,900; limestone, 36,796 tons, \$38,556; macadam, 487,911 tons, \$313,087; magnesite, 1,143 tons, \$13,671; manganese, 504 tons, \$4,080; marble, 4,102 cubic feet, \$7,280; mineral paint, 1,115,280 pounds, \$8,165; mineral waters, 1,508,192 gallons, \$345,863; natural gas, 63,920,000 cubic feet, \$62,657; paving blocks, 1,711,000, \$35,235; platinum, 150 ounces, \$900; petroleum, 1,911,569 barrels, \$1,918,269; quicksilver, 26,648 flasks, \$993,445; rubble, 333,212 tons, \$287,025; salt, 67,851 tons, \$157,520; sandstone, 77,000 cubic feet, \$24,086; serpentine, 2,500 cubic feet, \$2,500; silver, \$452,789; slate, 400 squares, \$2,800; soda, 5,000 tons, \$110,000.

In 1896 the total value of the mineral product of the State was \$24,291,398, and in 1895 it was \$22,844,664.

Wines.—The following figures showing the extent of the wine industry in the State are from the "Hotel and Wine Gazette": "There are 157,000 acres planted to grapes, of which 75,000 acres are devoted to wine grapes, 72,000 acres to raisin grapes, and 10,000 acres to table grapes. The total value of the California viticultural interests, including land, coopeage, cellars, packing houses, etc., is placed at \$85,000,000. The product of sweet wine for 1897 is placed at 5,000,000 gallons against 3,477,200 in 1896, and the 1897 vintage of dry wine at 25,750,000 gallons, the largest in the history of the State. The brandy product was estimated at 2,000,000 gallons; but by the crop summary published in December, the total wine and brandy product was placed at 35,442,468 gallons.

Agriculture.—The farm and orchard products in 1897 were estimated before the jubilee as follows: Wheat, 32,333,000 bushels; barley, 26,309,325 bushels; corn, 2,753,000 bushels; oats, 3,670,590 bushels; wool, 31,500,000 pounds; hops, 8,325,000 pounds; butter, 32,500,000 pounds; cheese, 6,500,000 pounds; beans, 87,462,500 pounds.

The crop summary at the close of the year gives the following statistics of the output of dried fruits and other products, which is in excess of the estimate in almost every instance: Prunes, 97,780,000 pounds; raisins, 93,704,000 pounds; beet sugar, 70,740,000 pounds; fresh-fruit shipments overland, 145,250,000 pounds; cured fruit, not including prunes, 79,100,000 pounds; almonds and walnuts, 12,720,000 pounds; hops, 8,100,000 pounds; honey, 7,878,000 pounds; canned fruit, 1,942,982 cases; tomatoes, packed, 318,553 cases; orange and lemon shipments overland, 15,400 car loads; vegetable shipments by land and sea, 94,704,000 pounds.

The Golden Jubilee.—The fiftieth anniversary of the discovery of gold in the State was celebrated Jan. 24, and was followed by a mining fair at San Francisco. The day was proclaimed a legal holiday by the Governor, and was observed by a great parade, in which were pioneers, native sons, United States soldiers, and various organizations, with floats representing scenes in the history of the State—the aborigines, a ship of the early Spanish navigators, the first Mission church, the raising of the flag, the historic Sutter's mill, early mining processes, old and recent fire apparatus contrasted, the various industries, and others suggestive of the progress of the State and the development of its resources.

The Mining Fair was opened Jan. 29 by the President, who pressed the telegraph key at Washington which applied the force at San Francisco. The fair was open till March 5. Ores from all the principal mines were exhibited, and the successive

modes of separating the metal from the ore were illustrated, from the primitive method of fifty years ago to the improved methods of the present day.

Public Lands.—The receipts of the Land Office in 1897 were nearly \$16,000. This includes the fees on original entries as well as on final proof of claims. Most of the original entries in 1897 were from Monterey County. Mendocino was next in order, and San Luis Obispo third. There are in the San Francisco district about 4,000,000 acres of land as yet unclaimed and open to entry. Of the land open to entry nearly 1,000,000 acres lie in Monterey County. Mendocino County has about 800,000 acres, much of which is available for grazing, and some has valuable redwood timber.

The Yosemite Park.—Report was made to the Secretary of the Interior in July that special forest agents have ejected more than 85,000 sheep from the Yosemite Park, California. The Secretary has heretofore requested a detail of troops to the several national parks in California, but the soldiers so assigned were removed in order to accompany the Philippine expedition. The Secretary of War has detailed an officer and ten men of the Utah Volunteer Cavalry to patrol Yosemite, Sequoia, and General Grant National Parks.

Earthquakes.—San Francisco and the neighboring part of the State were shaken by an earthquake March 30. The water in the bay rose in a wave two feet high, but almost immediately subsided. The shock lasted thirty to forty seconds. The greatest damage was done at Mare Island Navy Yard, where it amounted to \$340,000. That at Vallejo was estimated at \$50,000. A series of shocks were felt at Mendocino and in its vicinity, April 14, and much damage was caused.

Court Decisions.—The primary election law, passed at the last session of the Legislature, providing for holding all primary elections on the same day, and for a special test for voters, and other safeguards, was declared unconstitutional by the State Supreme Court in March.

A case involving the enforcement of the Federal eight-hour law was decided in June, the court holding that the fact that the Government work on which the labor was done was upon land over which the State holds political jurisdiction does not set aside the application of the Federal law.

A decision of the Supreme Court in the appeal of a newspaper from the sentence for contempt passed upon its editor by a judge, affirmed the principle that a newspaper may criticize a judge without danger of a summons by him for such punishment as he is authorized to inflict upon a man who is disrespectful to him in court. The judge had pronounced the paper's report of testimony in a case before him as a "fabrication." The newspaper defended it, and rebuked its accuser, whereupon the justice had the editor brought to the bar and sentenced him, without benefit of jury or of a defense, to a term in jail. The Supreme Court held, among other principles, that a person who is not a party or participant in a case on trial has a right to defend himself against the aspersions of the bench.

By a decision of the Supreme Court in August it was ruled that the nephews and nieces of Leland Stanford, legatees under his will and residents of States other than California, are entitled to the same exemption from collateral inheritance tax as the State Legislature conferred upon nephews and nieces of the millionaire living in California.

San Francisco.—A vote was taken in May on the adoption of the proposed new charter, resulting in 14,386 for and 12,025 against its adoption.

Political.—The earliest State convention of the year was held by the People's party at Sacramento, July 12. Plans for fusion with the Democrats and

Silver Republicans had been proposed and met with favor from a majority of the delegates, who nominated James G. Maguire, a Democrat, for Governor, and agreed to divide the other offices with the other parties. The minority, consisting of those opposed to fusion, withdrew, repudiated the action of the convention, nominated a straight Populist ticket, with T. W. H. Shanahan as candidate for Governor, and issued an address in which they said: "When fusionists speak of success they can mean nothing, except that they may succeed in getting some offices and the emoluments thereof. The People's party was not born for such a purpose and can not survive by such methods. Fusion simply places the party in the hands of Democratic political opponents, and they gain complete control of the fusion organization."

At a meeting of the Democratic State Central Committee in April, a resolution had been adopted providing for a committee "to confer with representatives of the Populist and Silver Republican parties with a view to obtaining concert of action as to the time and place of holding the State conventions of said parties."

The convention met at Sacramento, Aug. 16. The chairman of the "Fusion Committee" read a report, which was adopted, showing how the places on the ticket had been distributed—viz.: To the Silver Republicans, one justice of the Supreme Court and clerk of the Supreme Court; Populists, Lieutenant Governor, controller, Superintendent of Public Instruction, member of the Board of Railroad Commissioners from the Third District; Democrats, Governor, Secretary of State, Treasurer, Attorney-General, Surveyor General, State printer, one justice of the Supreme Court, Railroad Commissioners from the First and Second Districts, members of the Board of Equalization from all four districts. The Populists were given the nominations for Congress in the First, Sixth, and Seventh Districts, and the Democrats took these in the Second, Third, Fourth, and Fifth Districts. The platform declared in favor of free coinage, approved the war with Spain, rejoiced in the obliteration of sectional lines, condemned the war-revenue measure, and praised the war vessels built in California, "insisting that further similar work shall be done here." It favored the "immediate construction of the Nicaragua ship canal by the United States Government, and its ownership, operation, and permanent control by the Government"; urged the State's representatives in Congress to work for liberal appropriations for improving the water ways of the State, and said: "We denounce the persistent and long-continued efforts of the present Secretary of War to prevent the improvement of the public harbor of San Pedro and his persistent efforts to divert the sums of money appropriated by Congress for that purpose to the improvement of the private harbor of the Southern Pacific Company at Santa Monica."

An amendment to the Federal Constitution making Senators elective by the people was recommended, the revival of hydraulic mining when not detrimental to other interests was favored, unwarranted interference of the Federal judiciary was deprecated, the general use of the label of the Allied Printing Trades Council and other union labels was recommended, also the extension of the contract labor laws to Hawaii and all other annexed territory, road improvement, regulation of primary elections by the Australian law, pure food laws, continuance of the existing State text-book system, abolition of the State poll tax, and the constitutional amendment giving self-government to the counties. With reference to railroads the platform said: "We denounce the measure recently adopted by the Fifty-fifth Congress, providing for refunding the

debts of the Central Pacific Railroad Company to the United States Government as an unusual and vicious act of favoritism to a powerful corporation, the effect of which will be to extend for a long period the Southern Pacific Company's monopoly of railroad transportation in California. We also denounce the proposition to further extend the period of payment of said debts. We reiterate the position repeatedly asserted by the Democratic party that in the limitation of freight and fare charges by the State Railroad Commission no allowance should be made for interest on any fictitious capitalization of any railroad companies."

The administration of Gov. Budd was approved, and it was declared that "although the tax levies of the three last years of his administration aggregated over \$1,300,000, under the pledges of the platform upon which he was elected the rate of taxation for 1896 was the lowest in the history of the State, and the rates for 1897 and 1898 would have been still lower, had not the assessed valuation of property been decreased."

Opposition was declared to the surrender of any territory acquired by the war, and to the assumption of any part of the Spanish-Cuban debt.

The ticket, on which the offices were distributed according to the plan given above, follows: For Governor, James G. Maguire; Lieutenant Governor, E. L. Hutchinson; Secretary of State, Robert A. Thompson; Treasurer, William S. Green; Controller, T. W. Maples; Attorney-General, H. P. Andrews; Surveyor General, Irving M. Mulholland; Clerk of the Supreme Court, H. A. McCrancy; Justices of the Supreme Court, Walter S. Van Dyke, William M. Conley; Superintendent of Public Instruction, Christian Runckel; Superintendent of State Printing, Everett I. Woodman; Railroad Commissioners, First District, H. M. La Rue; Second District, W. M. Hinton; Third District, J. L. Dryden. Board of Equalization, First District, John P. Dunn; Second District, Thomas Scott; Third District, R. H. Beamer; Fourth District, Thomas O. Toland.

The Secretary of State refused to recognize the fusion of parties on the ballot, but the matter was carried to the Supreme Court, which decided against him. Mr. Shanahan then came out with an address to his party, advising them to vote for Mr. Gage, since, by the action of the fusionists and the decision of the court, the People's party had been put out of existence, for at the next State election it will be impossible to show that it polled as much as 3 per cent. of the vote at this election.

The State convention of Republicans met at Sacramento Aug. 23. The number of delegates apportioned by the call was 789, of whom 57 were to be at large. Among the measures advocated in the platform were the following: Increase of the American navy; the retention of Porto Rico and the Philippines; construction of the Nicaragua Canal; enforcement of the law for the collection of the indebtedness due from the Central and Western Pacific Railroads to the Government; amendment of the immigration laws so as to "prohibit absolutely the filling of the marts of labor in America with laborers from foreign lands" and "the enactment of such legislation regarding Hawaii, Porto Rico, and such other territory as may be acquired by the United States as will protect American workmen against contract Chinese, Japanese, and other contract labor found therein, and will prevent any further influx or extension thereof; and also an exclusion act prohibiting further Japanese and coolie immigration, that such exclusion act prohibit both the Japanese and Chinese now located in the Hawaiian islands from entering the United States"; economy in State government; generous

treatment of war veterans; improvement and protection of river navigation in the State; construction of storage reservoirs for purposes of irrigation by the General Government; laws for preservation of the forests; protection of the dairy interests by laws against imitations; good roads; State aid to district fairs; the use of the Allied Trades printing label on all printing as a guarantee that the work has been done by competent craftsmen under fair conditions; protection against competition by convict labor; the employment of convicts upon the public highways; and "the passage of a law by Congress confining the sale of goods, wares, and merchandise manufactured by convict labor to the State or Territory in which they are produced"; "a law regulating the primary elections of all political parties, to the end that the same protection that was extended by the Australian system to general elections be now extended to primary elections"; liberal support for the State University; legislation in behalf of the mining industry; and the creation of a national executive department of mines and mining. The soldiers and sailors were praised and thanked, the President's policy approved, the nation congratulated on the disappearance of sectional feeling, the Administration commended for its efforts to secure an international monetary agreement, and the refusal to consider the assumption of the Spanish-Cuban debt, the war revenue measure approved, and attention called to "the fact that since the return of the Republican party to power the balance of trade has changed from more than \$400,000,000 against the United States to about \$880,000,000 in our favor." The platform further opposed the doctrine of the single tax, deprecated "the attempt by the Democratic-Populistic fusion party of California to stir up hatred of the judiciary and contempt of laws," condemned "the action of the Democratic Senator of this State, and the present Democratic nominee for Governor, then in Congress, for opposing the annexation of Hawaii and wholly failing to represent the interests or wishes of the people of this State in that regard"; and denounced "the action of the present Governor in vetoing the appropriation for the support of the State printing office as unwise, unnecessary, contrary to the spirit of the law, and injurious to the interests of the State," the inevitable result of which "has been to cripple our splendid State schoolbook system and the common schools themselves."

The ticket follows: Governor, Henry T. Gage; Lieutenant Governor, Jacob H. Neff; Secretary of State, Charles F. Curry; Controller, E. P. Colgan; Treasurer, Truman Reeves; Attorney-General, Tiley L. Ford; Clerk of the Supreme Court, George W. Root; Justices of the Supreme Court, W. C. Van Fleet, T. B. McFarland; Surveyor General, M. J. Wright; Superintendent of Public Instruction, Thomas J. Kirk; Superintendent of State Printing, A. J. Johnston; Railroad Commissioners—First District, F. B. Edson; Third District, N. Blackstock; Board of Equalization—Second District, Alexander Brown; Third District, H. O. Purington; Fourth District, George Arnold.

The following were candidates of the Prohibitionists: For Governor, J. E. McComas; Lieutenant Governor, Robert Summers; Secretary of State, J. W. Webb; Controller, T. L. Hierlihy; Treasurer, C. B. Williams; Attorney-General, J. H. Blanchard; Surveyor General, Green Spurrier; Clerk of the Supreme Court, W. P. Fassett; Superintendent of Instruction, Fanny M. Pugh; Superintendent of Printing, Leroy S. Atwood; Associate Justices of the Supreme Court, T. M. Stewart, Robert Thompson.

The Socialist-Labor ticket was: For Governor,

Job Harriman; Lieutenant Governor, James Andrew; Secretary of State, Emil Liess; Controller, John Robertson; Treasurer, E. M. Dewey; Attorney-General, A. F. Strawn-Hamilton; Surveyor General, J. George Smith; Clerk of the Supreme Court, Lemuel D. Biddle; Superintendent of Instruction, Jane A. Roulston; Superintendent of Printing, A. Conte.

The election in November resulted in the success of almost the entire Republican ticket; but Walter Van Dyke, fusion, was elected Justice of the Supreme Court over Justice Van Fleet. All but one of the Republican candidates for Congress were elected. The Senate will probably stand 27 to 13, and the Assembly 60 to 22 in favor of the Republicans.

Seven constitutional amendments were submitted, and also a proposition for calling a convention to revise the Constitution. The official figures are not at hand, but it appears as if the convention and the first proposed amendment were defeated. Amendment No. 1 was to exempt certain just claims against San Francisco from the operation of that provision of the Constitution requiring such claims to be paid from the revenue of the years in which they were incurred. Amendment No. 2 was intended to change the method of prescribing county governments by classification as at present. Amendment No. 3 was to establish a court of claims. Amendment No. 4 concerned San Francisco only and was designed to do away with the conflict in certain particulars between the new city charter and the State Constitution. Amendment No. 5 provided for the succession, in case of a vacancy in the office of Governor or his absence from the State, placing the president *pro tempore* of the Senate in the line of succession next to the Lieutenant Governor, and the Speaker of the Assembly next. Amendment No. 6 was to revise the school system of the State. Amendment No. 7 was to extend the session of the Legislature to seventy-five days and divide it into two parts.

CANADA, DOMINION OF, a federated group of British provinces in North America.

Parliament and Politics.—The third session of the eighth Parliament of Canada was opened in state by Lord Aberdeen, the Governor General, on Feb. 3, 1898, with a speech from the throne, in which he said:

"I have observed with great pleasure the remarkable advance in the political importance and material prosperity of Canada during the year which has just closed. The loan recently effected has shown that the credit of Canada has never stood so high in European markets, and affords reasonable grounds for expecting that the burdens of the people will in the near future be materially reduced by the substitution of a much lower rate of interest on our indebtedness than that which now exists. The action of the Imperial Government in denouncing the treaties with Germany and Belgium affords most satisfactory evidence of their desire to facilitate your efforts to promote the closest possible commercial relations between Canada and the remainder of the empire, and will, I trust, contribute materially to the development of imperial trade. A contract has been entered into, subject to your approval, for the completion at the earliest possible moment of a system of rail and river communication through Canadian territory with the Klondike and principal gold fields, which it is expected will secure to Canada the larger portion of the lucrative traffic of that country. The bountiful harvest with which we have been favored by a benevolent Providence has contributed greatly to the increase of our prosperity, and I am glad to note that the trade and commerce of the Dominion, and more

especially the amount and values of her principal exports, have increased greatly during the past eighteen months. I observe with pleasure that certain Government contracts recently let contain provisions calculated to suppress the evils of the sweating system."

Three new members of the House, all Liberals, were formally introduced, and then the usual debate on the address in reply to the Governor's speech took place. By an act passed June 13 the following legislation regarding the new imperial preferential tariff came into operation on Aug. 1, in accordance with the Government's policy by which in 1897 a preference was given to British goods in the Canadian market of 12½ per cent. and was to be increased in 1898 to 25 per cent.:

"1. That all articles except wines, malt liquors, spirits, spirituous liquors, liquid medicines and articles containing alcohol, tobacco, cigars, and cigarettes which are the growth, produce, or manufacture of any of the following countries, and are declared to be dutiable upon importation into Canada, may, when imported direct into Canada from any of such countries, be entered for duty or taken out of warehouse for consumption in Canada, on and after the 1st day of August, 1898, at a reduction of one fourth from the general tariff rates of duty: (a) The United Kingdom of Great Britain and Ireland. (b) The British colony of Bermuda. (c) The British colonies commonly called the British West Indies, including the following: the Bahamas, Jamaica, Turk's island and the Caicos Islands, the Leeward Islands (Antigua, St. Christopher, Nevis, Dominica, Montserrat, and the Virgin Islands), the Windward Islands (Grenada, St. Vincent, and St. Lucia), Barbadoes, Trinidad, and Tobago. (d) British Guiana. (e) Any other British colony or possession the customs tariff of which, on the whole, is as favorable to Canada as the British preferential tariff is to such colony or possession.

"2. That manufactured articles to be admitted under such preferential tariff shall be *bona fide* the manufactures of a country or countries entitled to the benefits of such tariff, and that such benefits shall not extend to the importation of articles into the production of which there has not entered a substantial portion of the labor of such countries. Any question that may arise as to any articles being entitled to such benefits shall be decided by the Minister of Customs, whose decision shall be final.

"3. That raw sugar, including sugar drainings or pumpings drained in transit, melado or concentrated melado, tank bottoms, and sugar concrete, the produce of any British colony or possession, may, when imported direct from any British colony or possession, be entered for duty or taken out of warehouse for consumption in Canada at the reduced rate of duty provided in the British preferential tariff.

"4. That the reduction under the preferential tariff shall only apply to refined sugars when evidence satisfactory to the Minister of Customs is furnished that such refined sugar has been manufactured wholly from raw sugar produced in the British colonies or possessions.

"5. That the Minister of Customs, with the approval of the Governor in Council, shall determine what British colonies or possessions shall be entitled to the benefits of the said preferential tariff under clause e of paragraph 1 of this memorandum.

"6. That the Minister of Customs may, with the approval of the Governor in Council, make such regulations as may be deemed necessary for carrying out the intention of the act."

The Minister of Customs, under the power vested in him by the said act, and with the approval of the Governor in Council, has determined that the

following British colonies and possessions are entitled to the benefits of the preferential tariff, viz., British India, Ceylon, Straits Settlements, New South Wales.

Unless these regulations be complied with in every respect, the articles will be subject to payment of the general tariff rates of duty upon importations into Canada.

Sir Wilfrid Laurier, the Premier, in one of the most eloquent speeches ever made in the House of Commons, submitted the following resolution regarding the death of Mr. Gladstone:

"Resolved, That the House of Commons of Canada desire to record their profound sense of the loss the empire has sustained in the death of the Right Hon. William Ewart Gladstone. For a period of more than half a century Mr. Gladstone has been one of the most conspicuous figures in the Parliament of Great Britain. Four times Premier for the United Kingdom, his tenure of office was distinguished by the inauguration of sound fiscal and political reforms, of the greatest and most far-reaching character, and he passes away full of years and honor, among a nation's tears, the most illustrious man of his generation. The people of the empire are his mourners, and the House of Commons of Canada lays reverently on his bier this tribute in testimony of the respect and affection with which they regard the great statesman who has departed."

The motion was seconded in a short speech by Sir Charles Tupper, and was passed unanimously.

The franchise bill, by which it was proposed to make the Dominion or Federal franchise similar in each province to that of the local provincial franchise, was vigorously opposed by the Conservatives, mainly on the ground that it would complicate an already complex matter and would place the practical control of the Federal franchise in the hands of the provincial legislatures. The measure passed by a party vote, and, after long discussion in the Senate, where there is a Conservative majority, finally passed there also. So with the bill for a plebiscite or national ballot on the question of prohibition. On June 13 the House adjourned after the Governor General had formally assented, in behalf of the Queen, to a large number of bills, of which the following were the most important:

Respecting the Lake Erie and Detroit River Railway Company.

Respecting the Hudson's Bay and Pacific Railway Company.

Respecting the Ontario and Rainy River Railway Company.

To incorporate the Victoria-Montreal Fire Insurance Company.

Respecting the Columbia and Western Railway Company.

Respecting the British Columbia Southern Railway Company.

Respecting the Queenston Heights Bridge Company.

Respecting the Canadian Pacific Railway Company.

Respecting the Calgary and Edmonton Railway Company.

Respecting the inspection of steamboats and examination and licensing of engineers employed on them.

Respecting the Edmonton District Railway Company.

To incorporate the Cowichan Valley Railway Company.

Respecting the Brandon and Southwestern Railway Company.

To incorporate the Miles Cañon and Lewes River Tramway Company.

Respecting the Hamilton and Lake Erie Power Company.

To incorporate the Klondike and Peace River Gold-Mining Land and Transportation Company (Limited).

To incorporate the Central Canada Loan and Savings Company.

To incorporate the Montreal and James Bay Railway Company.

Respecting the Lake Manitoba Railway and Canal Company.

To incorporate the Miles Cañon and White Horse Tramway Company.

Respecting the Ottawa and New York Railway Company.

To incorporate the London and Lake Huron Railway Company.

Respecting the Vancouver, Victoria and Eastern Railway and Navigation Company.

Respecting the Canada Atlantic Railway Company.

To incorporate the Timagami Railway Company.

To incorporate the Canada Atlantic Transit Company.

To incorporate the Canadian Mining Institute.

Respecting the Nakusp and Slocan Railway Company.

Respecting the Kingston and Pembroke Railway Company.

To incorporate the Windsor and Detroit Union Bridge Company.

Respecting the harbor of the city of St. John, New Brunswick.

To amend the act respecting the protection of navigable waters.

To incorporate the British American Light and Power Company.

Respecting the Montreal American Light and Power Company.

To incorporate the Klondike and Dawson City Bank.

To incorporate the Toronto and Hudson Bay Railway Company.

Further to amend the militia act.

To incorporate the subsidiary high court of the Ancient Order of Foresters.

To provide for the government of the Yukon district.

To incorporate the Dawson City and Victoria Telegraph Company (Limited).

To amend the Indian act.

To amend the acts respecting the Northwest Territories.

To incorporate the Lake Bennett and Klondike Railway and Tramway Company.

To amend the Dominion lands act.

To amend the post-office act.

Respecting the identification of criminals.

To amend chapter xi of the Statutes of 1897, entitled "An Act to restrict the importation and employment of aliens."

To authorize certain contracts with steamship companies for cold-storage accommodation.

Respecting the Saskatchewan Railway and Mining Company.

Respecting the Intercolonial Radial Railway Company.

Respecting the transport contract between her Majesty and the Winnipeg Great Northern Railway Company.

To amend the act to provide for bounties on iron and steel made in Canada.

To provide for abolition of the civil-service superannuation act, and for the retirement of members of the civil service.

To incorporate the Dawson City Electric Lighting and Tramway Company (Limited).

Further to protect the customs and fisheries.
Incorporating the Western Alberta Railway Company.

Further to amend the railway act.

To incorporate the Northern Commercial Telegraph Company (Limited).

To incorporate the Lake Champlain and St. Lawrence Ship Canal Company.

Respecting the Manitoba debt account.

Respecting payment of grants in aid of the construction of public works.

Respecting the northwestern, northern, and north-eastern boundaries for the province of Quebec.

Respecting the prohibition of importation, manufacture, and sale of intoxicating liquors.

Respecting the Montreal, Ottawa and Georgian Bay Canal Company.

Further to amend the weights and measures act.

To repeal the electoral franchise act, and further to amend the Dominion elections act.

To amend and consolidate the Northwest irrigation acts of 1894 and 1895.

Respecting the Great Northwest Central Railway Company.

To incorporate the Three Rivers and North Shore Electric Railway Company.

To amend the customs tariff, 1897.

Further to amend the inland revenue act.

The Governor General.—One of the last acts of the House of Commons was to present the following farewell address to Lord Aberdeen on June 8: "May it please your Excellency, we, her Majesty's dutiful and loyal subjects, the House of Commons of Canada, in Parliament assembled, on the occasion of the approaching termination of your Excellency's connection with this country, hasten to assure you, the representative of her most gracious Majesty, of the unswerving loyalty and devotion of the Canadian people to the Crown and Empire of Great Britain, and to express the hope that you will in person convey these assurances to our beloved Queen. It is our pleasant duty to assure your Excellency of the high appreciation by the people of Canada of the unfailing courtesy and assiduous care with which you have presided over the affairs of the Dominion for the last five years—a period which, it must be no small gratification to your Excellency to know, has been characterized by a marked growth of progress and prosperity; and to testify to the generous and kindly interest which you have displayed in all that pertains to the welfare and advancement of the people, irrespective of distinctions of class or creed. We are also highly sensible of the great degree in which the literature, science, and art of the Dominion have benefited from the deep and practical interest which your Excellency has taken therein. The important services which your Excellency has rendered to this country have been heightened by the zealous co-operation of her Excellency the Countess of Aberdeen, whose untiring efforts to promote the social and moral welfare of our people have endeared her to all classes of the community. We beg to convey the assurance that your Excellency and your distinguished consort will bear from our shores our profound respect and esteem, coupled with our warm wishes for your future welfare and happiness, and we indulge the hope that this country may continue to have in your Excellency a friend and advocate in the councils of the empire."

Lord and Lady Aberdeen sailed from Canada on Nov. 12, after being entertained in Ottawa, Toronto, Montreal, and Quebec. His Excellency was succeeded by the Earl of Minto, who as Lord Melgund and chief of staff to Gen. Middleton had served in Canada during the rebellion of 1885 among the half-breeds and Indians of the Northwest, and who

had previously distinguished himself in the British army in other parts of the world.

Finances.—On April 5 Mr. W. S. Fielding delivered his third annual budget speech. It set forth the existence of a surplus, evidences of expanding trade, and the promised completion of the British preferential-trade policy. The main features of the speech were the announcement of the preferential schedule; the advance of the duty on raw sugar from 50 cents a hundred pounds to 62½ cents, on refined yellow sugar from \$1 a hundred pounds to \$1.08, and the increase on granulated from \$1 to \$1.24 a half hundredweight; and the reduction of the interest on Government savings-bank deposits from 3 to 2½ per cent. The estimate of the revenue for 1897-'98 was \$39,300,000, and of the expenditure \$38,750,000. The minister was able to speak of deposits in the chartered banks as having increased \$19,000,000 in 1897 over the total of 1896, and in Government savings banks more than \$2,000,000. The note circulation of the banks and the Government had also increased by more than \$8,000,000, and the bank clearings by \$126,000,000. The revenue for 1895-'96 had been \$36,618,590, the expenditure \$36,949,142, against a revenue in 1896-'97 of \$37,829,778 and an expenditure of \$38,349,759. The ultimate surplus for 1897-'98 was more than \$1,000,000. The Hon. E. G. Foster, in behalf of the Opposition, criticised the whole statement very strongly, and charged extravagance, chiefly in connection with railway matters, the administration of the Yukon, and the addition to the national debt. The amount voted for administering the Yukon was \$685,576.

Transportation.—During the year the Canadian Pacific Railway, aided by a bonus from the Dominion Government of \$11,000 a mile, practically completed a branch line through the Rocky mountains, 340 miles from Lethbridge, Northwest Territory, into and over the Crow's Nest pass to Nelson, British Columbia, thus opening up the great Kootenay mining district, and providing cheap coal for its smelters. Arrangements were also announced, in the president's speech at the annual meeting, for a hundred-mile extension into the Boundary creek district. In connection with this latter mineral region, lying along the international border, Mr. Corbin proposed to build a line from the American side in order to tap its wealth. A prolonged contest took place at Ottawa between his friends and the Canadian Pacific Railway interests, but the latter eventually won, and the Corbin road was not chartered. The Ontario and Rainy River Railway is to run from a point near Port Arthur through the Lake of the Woods gold region, to connect with the Manitoba and Southeast Railway from Winnipeg. About 2,200 miles of railway were projected, with every probability of success. But the central railway question of the year was that of an all-Canadian route to the Klondike or Yukon. The problem was, to make such arrangements as to obtain a fair share for Canadian merchants and cities of the immense trade which was developed with that far-away and inaccessible region—a trade at first chiefly in American hands. Accordingly, and without consulting Parliament, under the belief that great haste was essential, the Government accepted a contract with Messrs. Mackenzie & Mann by which a line is to be built from navigable waters of the Stickeen river in British Columbia, at or near the mouth of Telegraph creek, Glenora, or the mouth of Clear Water river, thence running northward to the navigable waters of Teslin lake, about 150 miles, on or before Sept. 1, 1898; provided that the said railway shall be the property of the contractors, but shall be subject to inspection and approval by an engineer to be named by the

Minister of Railways and Canals before being accepted as complete by the Government; and provided that the grant of land shall not be made upon a larger mileage than the Minister of Railways considers reasonably necessary for traversing the distance between the terminal points. On its part the Government gave the company a monopoly for five years, a preference for ten years in the construction of other lines, freedom from taxation for ten years, and 25,000 selected acres of land in the district traversed for every mile built. Mr. Blair, Minister of Railways, introduced the measure on Feb. 8, and after much stormy discussion it passed the House; but it was finally rejected by the Senate on the ground of granting too much in monopoly and in valuable lands.

The Canadian Pacific Railway in 1897 earned \$20,822,974, of which \$4,941,486 was from passengers, \$13,036,790 from freight, and \$2,844,698 from express. The Grand Trunk earned \$16,977,313—\$4,856,333 from passengers, \$11,167,317 from freight, and \$953,663 from express. The total earnings of all Canadian railways were \$52,353,277, and the total expenses \$35,168,666. The expenses of the Canadian Pacific Railway were \$12,198,992, and its train mileage 14,364,299. The expenses of the Grand Trunk Railway were \$11,363,369, and its train mileage 16,237,314. The capital invested in Canadian railways was \$921,858,232, an increase of \$22,000,000 in the year. The mileage in operation at the end of 1897 was 16,550. During the year 807 persons were injured by accidents, and 213 were killed. The increase in Government and municipal railway bonuses in 1897 was \$3,131,830.

The following particulars indicate the work of the Government lines during the year, including the Intercolonial, the Prince Edward Island Railway, and the Windsor branch of the Intercolonial. These lines have a total length of 1,388 miles. On the Intercolonial 1,145 miles were in operation, earning \$2,866,028.02, with working expenses of \$2,925,968.67. During the year there was an addition of \$149,112.62 to the capital account expenditure, making a total chargeable to capital on the whole road as amalgamated of \$55,416,157.15. For increased accommodation at Halifax there was \$22,274.97; for the branch from Windsor Junction to Dartmouth, \$37,206.44; for increased accommodation at Moncton, \$29,877.32; and for rolling stock, \$14,996.04. Passenger traffic earnings were \$979,005.57, an increase of \$7,579.31; freight traffic, \$1,687,050.42, a decrease of \$101,762.76; mail and express produced \$199,972.03, an increase of \$2,571.37. The earnings per mile were \$2,503.08, a decrease of \$86.80. The Windsor branch, 32 miles, extending from Windsor Junction to Windsor, Nova Scotia, is operated by the Dominion Atlantic Railway Company, which pays all charges to traffic workings, being allowed two thirds of the gross earnings, the Government taking the remaining third and assuming all cost of maintenance. This agreement was made in December, 1892, and extends for a further term of twenty-one years. The Government earnings amounted to \$40,603.23, an increase of \$4,041.40. Maintenance expenses amounted to \$10,821.04, a decrease of \$5,655.42, leaving a balance of profit of \$29,782.19 in favor of the Government.

Prince Edward Island Railway is 211 miles long. The total cost of road and equipment chargeable to capital account was \$3,750,565.38. The gross earnings for the year amounted to \$153,443.13, an increase of \$6,996.50. The working expenses were \$240,489.90, the overexpenditure being \$87,046.77. The Prince Edward Island Railway carried 121,498 passengers, a decrease of 1,088. The freight carried was 52,151 tons, an increase of 5,756. Passenger receipts were \$62,695.07; freight, \$69,872.66; mails,

express, etc., \$20,875.40. The Government also operated the Baie des Chaleurs Railway in Quebec during the winter of 1896-'97, the results from December to May showing an expenditure of \$18,679.97; and gross earnings of \$6,725.08. The road was transferred back to the company on May 31, 1897.

Militia and Defense.—The total expenditure of this department for the year ending Dec. 31, 1897, was \$2,407,050. Of this total, the chief items were as follow: Pay of staff, permanent corps and active militia, including allowances, \$358,397; annual drill of the militia, \$430,165; salaries and wages of civil employees, \$67,868; military properties, works, and buildings, \$108,092; warlike and other stores, \$39,666; clothing and necessaries, \$232,166; provisions, supplies, and remounts, \$115,899; transport and freight, \$43,998; grants in aid of artillery and rifle associations, and bands and military institutes, \$34,950; Royal Military College of Canada, \$59,616; Dominion cartridge factory, including free ammunition for rifle-league competitions, \$58,492; defenses, Esquimaux, British Columbia, Dominion contribution toward capital expenditure for works and buildings, and pay and allowances of a detachment of Royal Marine Artillery or Royal Engineers, \$45,119; capital account—arms, ammunition, and defenses, \$745,964.

During the year Lee-Enfield rifles were issued to all the city battalions, and also to the rural battalions as they were able to provide suitable armories. A representative contingent of 200 men of the militia was sent to England to represent the force at the Queen's diamond jubilee, and medals were granted by the Imperial Government to those who took part in quelling the Fenian raid troubles of 1866 and in the Red river expedition of 1870. Another important step was taken in the arrangement by the Imperial and Canadian governments for the interchange between England and Canada of some companies of the regular army forces respectively—an experiment which was found to be successful and is to be extended. Lieut.-Gen. A. G. Montgomery-Moore was succeeded in command of the imperial forces in Canada by Lieut.-Gen. Lord William Seymour, and Major-Gen. Gascoigne in command of the militia by Major-Gen. E. T. H. Hutton, C. B. In August, by arrangement between the Imperial and colonial governments, a royal commission, composed of Major-Gen. Leech, C. B., Lieut.-Col. Dalton, Royal Engineers, Capt. White, R. N., and Col. Lake, Quartermaster General of Canada, was appointed to inquire and report upon the defenses of Canada, and as to what might be done to improve the position of affairs locally, and bring about a closer connection between the British and Canadian forces.

Postal Service.—The progress in this department of the Government during the years 1897-'98 was very pronounced under the new Postmaster-General, the Hon. William Mulock. When he took office, July 13, 1896, the Post Office Department was conducted at an annual loss of \$781,152. In the first year of his administration he reduced the deficit to \$586,539, and now but \$46,000 of it remains, so that there has been a total reduction in less than two years of \$734,513. New offices have been opened, many of them in remote parts of the country, and in other places a more frequent service has been given. The railway mail service has been reorganized and placed under a controller. The public interest has been served by the decentralization of the dead-letter office, a measure which also enabled the staff to be reduced by 14. A postal-note system has recently gone into operation. The number of miles of daily travel in June, 1897, was 312 greater than in June, 1896, while the cost was less. During the year ending June 30, 1897, mail con-

tracts which had been costing \$381,237 were put up to tender, and new contracts were obtained for the performance of the same service for a period of four years at an annual cost of \$277,300. But the most noteworthy achievement was the arrangement, after long discussions between the British Postmaster-General, the Duke of Norfolk, and Mr. Mulock, of an imperial penny-postage system, which in time is intended to apply to all the countries of the British Empire, and will go into operation as between Canada and Great Britain on Christmas Day, 1898.

Trade and Commerce.—The total trade of Canada for the fiscal year 1897-'98 was \$304,091,720, against \$257,168,862 in the preceding year. The exports were \$159,485,770, and the imports \$140,305,950. The dutiable goods imported were \$84,126,000, and the free goods \$56,178,000. The duty collected was \$21,956,059, an increase of \$2,000,000 in the year. From Great Britain \$32,827,000 worth was purchased, or \$3,500,000 more than in 1897; and to Great Britain products were sent valued at \$104,787,000. To the United States \$41,122,000 worth was exported, and from the republic the imports amounted to \$86,587,000. The following table gives the total Canadian exports by countries in 1897-'98:

PRODUCTS.	Great Britain.	United States.	Other countries.
Mines	\$215,402	\$14,052,191	\$426,461
Fisheries	4,824,270	2,992,538	3,157,169
Forest	16,167,106	9,350,174	1,525,803
Animals	41,056,243	4,057,966	420,929
Agriculture	37,441,768	1,331,083	4,954,917
Manufactures	5,016,671	3,745,681	3,060,410
Miscellaneous	65,055	369,913	20,971
Coin and bullion	39	4,623,010	

The ensuing table shows the total trade between Canada and the United States in certain recent years, according to the returns of the United States Bureau of Statistics:

YEARS.	From Canada to the United States.	From the United States to Canada.
1893	\$37,777,463	\$46,794,331
1894	36,790,916	56,664,004
1895	36,574,327	52,854,760
1896	49,787,565	59,687,921
1897	40,309,371	64,928,821

Agriculture.—In December, 1896, the Hon. Sydney Fisher, Dominion Minister of Agriculture, visited Washington, and early in 1897 a clear and definite arrangement was made between Canada and the United States regarding mutual quarantine regulations affecting animals and live stock. The following summarizes the arrangement: "Each country to accept the veterinary certificates of the other, but only from inspectors who are regular graduates of recognized veterinary colleges. The chief of the Bureau of Animal Industry and the chief inspector of stock for Canada will inform one another of any outbreak of contagious diseases in either country. They will also inform one another of the discovery of any disease in animals imported from either country. A quarantine of ninety days shall be enforced by both countries upon all cattle imported from Europe or from any country in which contagious pleuro-pneumonia is known to exist; a quarantine of fifteen days shall be enforced upon all ruminants and swine imported from countries in which foot-and-mouth disease has existed during the six months preceding such importation; and a quarantine of fifteen days shall be enforced upon all swine imported from all countries other than the United States and Canada. Animals shipped to either country for exportation

or other purposes shall be subject to all the local regulations applying to the animals of that country."

In 1897 the agricultural products exported by Canada amounted to \$17,982,646, and animals and their products to \$39,245,252. In the ten months ending April 30, 1898, the exports of agricultural products were \$28,774,048, and of animals, etc., \$38,910,596, showing an enormous increase over the preceding year. The crops were good all over Canada in the summer of 1898.

Prohibition and Temperance.—In accordance with the promise of the Premier in the elections of 1896, a vote was taken throughout the Dominion on the question of the total prohibition of the manufacture and sale of spirits and intoxicants. The vote took place on Sept. 29, 1898, and resulted in a comparatively small total majority for prohibition in a small popular vote. Quebec gave a very large majority (90,000) against, while all the other provinces gave small majorities in favor of it. Sir W. Laurier declared soon afterward that the result left the situation much as it was before the vote was taken. The popular opinion seems to be that the total majority was not sufficient to warrant the Government in proposing or enacting special legislation. The vote polled was 542,956 out of 1,233,637 available voters. For prohibition there were 278,434, against 264,522. Some years ago the Royal Commission on Prohibition calculated the drink bill of Canada, on the average retail prices, at \$39,879,854 per annum. This does not allow for the weakening of spirits by water, which, the commissioners say, it is well understood is largely done. They reported, therefore, that the actual drink bill would be undoubtedly in excess of the sum named, or, to put it in round figures, something more than \$40,000,000 a year. The calculation was made on the basis of the consumption of 1893. The first cost is placed at \$15,030,064, including the duty, leaving \$25,000,000 to pay for its distribution and yield a profit to all who handle it. The commission found that more than 21,600,000 gallons of stimulants were consumed by Canadians, costing as follows: Spirits, 3,809,596 gallons, \$8,728,563; malt liquors, 17,355,487 gallons, \$8,368,145; wine, 511,626 gallons, \$933,356; total, \$18,030,064. It was estimated that of this \$11,158,683 represented domestic liquors, and \$3,871,381 imported. A more recent calculation, which, however, agrees in the main with the foregoing, has been made by George Johnson, the Government statistician. His calculation, which is based on the consumption of 1896, places the drink bill for that year at \$35,393,064, or \$6.90 per head for every man, woman, and child in Canada. He places the drink bill for 1896 at the following figures: Spirits, \$15,716,374; wine, \$1,370,886; beer, \$18,305,064. By applying Mr. Johnson's method to the official returns for 1897, the last year reported upon, it is seen that the drink bill went up considerably and kept pace with the estimated growth of population.

The liquor taken out of bond for consumption in 1897 represented, when retailed, \$7.73 a head for every man, woman, and child in Canada. But an unusually large quantity of spirits was ex-warehoused on account of the prospect of increased duties. The figures computed by the Inland Revenue Department show that since Confederation (1867) the consumption of spirits and wine has steadily declined in Canada, whereas the people have taken more freely to beer drinking.

Relations with the United States.—The war with Spain brought about a very general expression from the press and public men in Canada of sympathy with the American position and policy. This was proved practically by the issue in the Carranza

and Du Bose matter, when the Spanish envoys who proposed to make their residence in Canada during the war were ordered by the Canadian Government to leave the country. A letter from the Premier to the legal adviser of the Spaniards in Montreal indicated the line of action taken. He said: "The Secretary of State of the United States of America has given communication to Sir Julian Pauncefote, her Majesty's ambassador at Washington, of the original letter addressed by Señor Carranza from Montreal, on the 26th day of May last, to the Spanish Minister of Marine, and placed in his hands a photographic copy of the same, which Sir Julian Pauncefote has transmitted to the Canadian Government. The letter of Señor Carranza unequivocally states that he has been left in Canada to receive and send telegrams, and to look after the spy service, which service he was then establishing. The action of Señor Carranza is a violation of the laws of the land, and I have therefore to request Señor Carranza to leave this country. I have to make the same request of Señor Du Bose, who, from evidence in our hands, is an accomplice in the establishment of the spy service which was organized by Señor Carranza. I have now to ask you to be good enough to convey yourself this request to your clients. I am anxious that they should not be subjected to any unnecessary inconvenience, but I must insist on their departure."

There were many expressions in Canada during the year in favor of an Anglo-American alliance or definite international arrangement. On May 19 the matter came up in the House of Commons in connection with a discussion of the alien labor law, and the Liberal Premier and the Conservative leader each expressed favorable views. Sir Wilfrid Laurier spoke as follows: "I have only this to say to Mr. McCleary, even if the law is deficient and if it had to be amended, I would ask Parliament not to choose the present moment to amend it. I would deprecate, and I think everybody ought to deprecate, that at this moment, when our neighbors are engaged in war, any action should be taken by this Parliament which, ever so remotely, would look as hostile to them. For my part, I would rather submit to some inconvenience, to seeing the law a little deficient, even if it were deficient in my own judgment, than to change it at this moment, when it is possible that the mother country and the American nation may assume more friendly relations than they have ever assumed before."

The appropriation by Congress of \$474,151 to pay the Bering Sea award was received with satisfaction in Canada, as was also the announcement of the proposed international conference to discuss and attempt to settle all the questions at issue between the two countries. This important meeting opened at Quebec on Aug. 23, 1898, with the following-named delegates: Great Britain—Lord Herschell, chairman of conference. Canada—Sir Wilfrid Laurier, Prime Minister; Sir R. Cartwright, Minister of Trade and Commerce; Sir Louis Davies, Minister of Marine; John Charlton, M. P. Newfoundland—Sir James Winter, Prime Minister; Hon. A. B. Morine, Receiver General. United States—Gen. John W. Foster; Hon. George Gray, United States Senator; Hon. C. W. Fairbanks, United States Senator; Hon. John A. Kasson; Hon. Nelson Dingley, M. C.; T. Jefferson Coolidge.

The following questions were to be discussed: Reciprocity of trade; fur seals in Bering Sea and the north Pacific Ocean; Atlantic and Pacific coast fisheries and fisheries in inland waters contiguous to the frontier; mining rights of citizens of one country within the territory of another; alien labor laws; war vessels on the lakes; delimitation of the Alaska-Canadian boundary; transportation of mer-

chandise in bond through the United States and Canada; the conveyance of persons in custody of officers of one country through the territory of the other.

After several meetings in Quebec, and various festivities in honor of the visitors, the conference adjourned and met again in Washington early in November.

Miscellaneous.—In May, 1898, the MacCord claim against Peru, which had assumed international importance through the United States taking up the matter, was referred to arbitration, and Sir Henry Strong, Chief Justice of Canada, was chosen as arbitrator. In July Lord Strathcona, of Mount Royal (Donald A. Smith, of Montreal), Canadian High Commissioner in London, took his first active share in imperial legislation by moving and carrying in the House of Lords a bill legalizing colonial marriages with a deceased wife's sister. An important meeting of the Royal Society of Canada was held in Quebec, May 25-27, presided over by the Hon. F. G. Marchand, Premier of Quebec. Many valuable papers were read, and the Hon. J. W. Longley, of Halifax, and Dr. G. R. Parkin, C. M. G., of Toronto, were elected fellows.

CAPE COLONY AND SOUTH AFRICA. The British colony of the Cape of Good Hope and the neighboring colony of Natal, together with the independent Boer republics—the Orange Free State and the South African Republic—occupy the temperate part of South Africa south of the Orange and Limpopo rivers. Between this region and the Zambesi are the British protectorates of Bechuanaland and British South Africa, or Rhodesia, occupying the elevated central region, generally fertile, salubrious, and rich in minerals, while the coast region in the east from the Zambesi river to the Zululand Reserve forms the southern part of Portuguese East Africa, and in the west German Southwest Africa occupies the poorly watered plains of Damaraland and Namaqualand, extending from the Orange river to the Portuguese colony of Angola. The territories of the British South Africa Company include the region known as British Central Africa, extending north of the Zambesi to the borders of the Congo Free State, and to the east of this undeveloped region the British Central African Protectorate, otherwise called Nyassaland, is projected between Portuguese territories on the Zambesi and Mozambique.

Cape Colony.—The Cape Parliament is composed of a Legislative Council elected for seven years and a House of Assembly elected for five years. All male citizens earning £50 a year or occupying a house or a lodging and able to write their names and addresses possess the franchise. The Governor of the Cape of Good Hope and High Commissioner for South Africa is Sir Alfred Milner, appointed in 1897. The ministry in the beginning of 1898 consisted of the following members: Prime Minister, Treasurer, and Secretary for Native Affairs, Sir J. Gordon Sprigg; Colonial Secretary, Dr. T. N. G. Te Water; Attorney-General, Sir Thomas Upington; Commissioner of Public Works, Sir James Sivewright; Secretary for Agriculture, Sir P. H. Faure.

Area and Population.—The area of Cape Colony, including Griqualand West, East Griqualand, Tembuland, the Transkeian territory, Walfisch Bay, Pondoland, and British Bechuanaland, is 276,925 square miles, and the population in 1891 was 1,389,053, of whom 382,198 were white and 1,383,762 colored. Excluding Pondoland and the Crown colony of British Bechuanaland, annexed in 1894 and 1895, the population was 1,527,224, of whom 331,950 were Afrikanders, 38,497 British-born, 6,540 Germans, 13,907 Malays, 1,265,511 native Hottentots,

Fingoes, Kaffirs, Bechuanas, etc., and 247,806 of mixed race. Of the total, 767,327 were males and 759,897 females. The population of Cape Town, the capital, was 83,718, including suburbs. The number of marriages registered in 1895 was 7,356; of births, 14,757 among the Europeans and 31,409 others; of deaths, 6,660 among the Europeans and 24,919 others. The number of arrivals by sea in 1896 was 38,669, and of departures 17,695.

Finances.—The revenue for the year ending June 30, 1896, was £6,803,802, of which £2,418,024 came from taxation, £3,927,267 from services, £375,145 from the colonial estate, and £83,366 from fines, stores issued, etc. The total expenditure was £6,360,404, of which £1,243,803 went for the public debt, £1,780,176 for railroads, £190,135 for defense, £350,109 for police and jails, £149,798 for civil establishments, and £709,079 under loan acts. The public debt on Jan. 1, 1897, was £27,396,805.

Defense.—The military forces of the colony consist of 817 mounted riflemen and 6,535 volunteers, besides 1,413 mounted police. The Imperial Government maintains detachments of British troops in the fortresses that line the coast at a cost in 1896 of £211,264, and has a squadron of 15 war vessels on the Cape and African station.

Commerce and Production.—Cape Colony in 1897 produced 1,954,373 bushels of wheat, 1,002,327 bushels of mealies, and 753,048 bushels of barley, besides oats, rye, and Kaffir corn; also 6,146,055 pounds of tobacco, 4,219,952 gallons of wine, 1,397,880 gallons of brandy, and 2,019,251 pounds of raisins. There are many sheep farms, owned for the most part by the wool growers, of from 3,000 to 15,000 acres. There were 2,231,370 cattle, 357,960 horses, 75,112 mules and asses, 14,049,076 sheep, 5,033,183 Angora and other goats, and 237,960 ostriches. The quantity of wool produced in 1897 was 43,311,884 pounds; of mohair, 8,193,796 pounds; of ostrich feathers, 258,768 pounds.

The total value of imports for the year ending June 30, 1898, was £16,916,315; of exports, £23,652,822, including £13,306,179 of gold. The total value of imports in 1897 was £17,997,789; of exports, £21,660,210. The exports of gold, mostly from the Transvaal, were £11,991,926; of diamonds, £4,450,376; of other products of the colony, £3,729,759. In 1896 the gold exports were £8,252,543 in value; diamonds, £4,646,487; wool, £1,874,555; Angora hair, £572,230; ostrich feathers, £519,539; hides and skins, £396,216; copper ore, £218,422; wine, £21,412; cereals, £11,244. The total value of imports in 1896 was £18,771,371; of exports, £16,970,168, of which £16,700,102 were colonial products. The imports from Great Britain were returned as £12,807,332; exports to Great Britain, £16,404,464; imports from British possessions, £811,171; exports to British possessions, £86,636; imports from foreign countries, £4,316,536; exports to foreign countries, £460,738.

Navigation.—The number of vessels entered from foreign ports during 1896 was 1,031, of 2,430,240 tons, and coastwise 1,353, of 3,598,857 tons; cleared for foreign ports, 1,020, of 2,437,479 tons, and coastwise, 1,341, of 3,575,138 tons.

The merchant navy of the colony on Jan. 1, 1897, was composed of 8 sailing vessels, of 598 tons, and 24 steamers, of 2,974 tons.

Communications.—The railroads belonging to the Government had a total length on Jan. 1, 1897, of 2,253 miles, and 96 miles were under construction. There were besides 254 miles of private railroads. The gross receipts of the Government railroads in 1896 were £4,078,561, and the expenses £1,921,809. There were transported 7,978,652 passengers and 1,378,345 tons of goods. In 1897 the railroads yielded 6 per cent. on the cost of construction. A

new junction railroad from Graaf Reinet to Middelburg was opened on March 3, 1898.

The telegraph lines had a total length on Jan. 1, 1897, of 6,405 miles. The number of dispatches in 1896 was 2,229,663. The number of letters carried in the mails was 17,579,300; of postal cards, 565,799; of newspapers, 8,184,480; of book packets and samples, 1,798,320; of parcels, 412,700. The receipts from posts were £375,423 and from telegraphs £128,323; total expenses, £373,342.

Political Affairs.—The Progressive party, headed by Cecil Rhodes, advocated the removal of import duties on meat and grain, the imposition of an excise tax on brandy, a seab act, a compulsory education bill, restriction of the sale of drink to natives, railroad development, and a contribution to the imperial navy. The other party, containing most of the Dutch voters and led by Mr. Hofmeyr and Mr. Merriman, represented the ideas of the Afrikaner Bond as against the imperialism of Mr. Rhodes, Dutch sentiment as opposed to English, agricultural rural interests in so far as they conflicted with commercial and industrial, the country against the towns. Mr. Rhodes himself was identified with the policy of the South African League, which he had first propounded: Imperial union and a colonial federation of Cape Colony, Natal, Rhodesia, and ultimately, when the Uitlanders gain the ascendancy, the Transvaal also and the Orange Free State. In the elections for the Legislative Council, which took place in March, the Progressive party won the victory, obtaining a majority of 2 in a body of 24 members and reducing the representatives of the Afrikaner Bond from 18 to 10.

The population of Cape Colony having of late years largely increased, while the number of representatives in the Assembly remained the same, all parties were agreed that an increase in the number of members was required, but there was a wide divergence of views as to the manner in which such increased representation should be distributed. A committee which sat under the presidency of the Prime Minister and was composed of leading men of all the parties was appointed in December, 1897, to consider this question. The bill resulting from its deliberations proposed the distribution of 12 new members among the present constituencies in proportion to their growth and the creation of 3 new ones, bringing the numbers in the Assembly from the existing total of 79 up to 94. The increase in the number of registered voters between 1891 and 1897 was from 74,000 to 110,000, notwithstanding the introduction of an educational test and a property qualification by the franchise bill of 1892 tending to the restriction of the right of voting. There were 76 members in the Assembly before 1895, when 3 new ones were added. A minority report of the committee, signed by the ministerial members, representing English sentiment, proposed to increase the Assembly to 97 members, in order to give the urban constituencies as great a proportionate increase of representation as was given in the bill to some of the smaller Dutch electoral divisions. Mr. Te Water, who disagreed with the views of his colleagues on this question and their hostility to the Afrikaner Bond, resigned the post of Colonial Secretary on May 16, and Dr. T. W. Smartt was appointed provisionally in his place. The session of the Legislature was opened on May 19. Besides the redistribution bill, the measures proposed by the Government dealt with irrigation, the arming of the forces, the ratification of the customs convention, and education. The customs convention was elaborated at a Customs Conference which met at Cape Town April 12. Cape Colony, Natal, and the Orange Free State were represented. The South African Republic and Portuguese East Africa

PORT ELIZABETH, CAPE COLONY.

declined an invitation to attend. On June 1 Sir J. Gordon Sprigg moved the second reading of the redistribution bill, making its acceptance a Cabinet question. The day before Mr. Schreiner had given notice of a motion of censure on the ground that Sir J. Gordon Sprigg had misrepresented the people in a letter to Mr. Chamberlain praising Mr. Rhodes and condoning his acts. After the redistribution bill had passed the second reading by a vote of 42 to 35, although its features were objectionable to the Dutch, the motion of want of confidence was carried on June 22 by 41 votes to 36. On June 28 the Legislature was prorogued. The House of Assembly was dissolved, and elections took place in August. The principle for which Sir Gordon Sprigg and the Progressives contended in the campaign was British supremacy, such supremacy as would make the British Government the judge in its dispute with the South African Republic as to the meaning of the convention of 1884. Cecil Rhodes was the central figure in the contest, and his policy of British rule, leading to imperial expansion throughout Africa from Cairo to the Cape, *versus* what he called Krügerism, was the question at issue. Electoral and fiscal reforms, compulsory education, irrigation, and the other items in the ministerial programme were thrust into the background and the race struggle was boldly challenged by the British partisans, although the Afrikaner party, led by Englishmen like Mr. Schreiner and Mr. Merriman, declared its loyalty to the British connection, and had the co-operation of Mr. Rose-Innes and his Independent Progressives in its opposition to Rhodes and his methods. In raising the race cry and in justifying menace and interference in the affairs of the Transvaal under the guidance of Mr. Rhodes the Government party miscalculated its strength. When the returns were all in it was found that the Afrikaner Bond had a majority in the new Assembly.

Basutoland.—The country of the Basutos, who raise wool, wheat, mealies, and Kaffir corn, and possess immense herds of cattle in the fertile plateau lying between Cape Colony, Natal, and the Orange Free State, which has an area of 10,293 square miles and a population of about 250,000, is a Crown colony, administered by a Resident Commissioner, Sir G. Y. Lagden. The imports in 1896 were valued at £135,560, and the exports at £160,277. The revenue was £45,867; expenditure, £45,768.

The chief Masupha having resisted the police who attempted to arrest his son Moiketsi on the charge of assault and jail-breaking, the paramount chief Lerothodi marched with 10,000 men against his unruly vassal, who, after a siege and severe skirmishing, surrendered on Jan. 18, 1898.

Bechuanaland.—The Bechuanaland protectorate comprises the country of Khama, chief of the Bamangwato, and the Bakhatla and Bangwaketse countries under the chiefs Lenchwe and Bathoen, containing in all 213,000 square miles, extending north of the Molopo from the South African Republic and Matabeleland on the east to German Southwest Africa on the west. The sale of intoxicants is forbidden in the protectorate, which is governed by the chiefs under the control of a Resident Commissioner, F. J. Newton, answerable to the High Commissioner. The natives are peaceful agriculturists and graziers, and they pay a hut tax for the support of the British administration. The Bechuana who were found in the Langberg at the close of the rebellion of 1897 and were deported to the number of nearly 2,000 to Cape Colony and indentured to farmers for the period of five years, having been given the option of going as servants or standing their trial for treason, were placed with good masters and made good servants, according to the report of the Government inspectors.

Natal.—The legislative powers are vested by the charter of 1893 in a Legislative Council of 11 members appointed for ten years and a Legislative Assembly of 37 members elected for four years by male citizens possessing or occupying immovable property or having an income of £96, of whom there were 9,208 in 1896. The Governor is Sir Walter Francis Hely-Hutchinson, appointed in 1893. The ministry constituted on Oct. 4, 1897, was composed as follows: Premier and Colonial Secretary, H. Binns; Attorney-General and Minister of Education, H. Bale; Colonial Treasurer, Mr. Arbuckle; Minister of Native Affairs, J. L. Hulett; Minister of Public Works, Mr. Hime; Minister of Agriculture, E. Ryley.

Area and Population.—The area is estimated at 20,461 square miles. The population in 1891 was 543,913, comprising 46,788 whites, 41,142 East Indians, and 455,983 Kaffirs. This does not include Zululand and British Amatoŋaland, which were incorporated in the colony in December, 1897. The area of Zululand is about 12,500 square miles, and the population 180,370, including 1,100 whites.

Finances.—The revenue for the year ending June 30, 1896, was £1,457,338, of which £745,703 were railroad receipts, £265,369 customs revenue, £19,612 excise duties, £37,556 receipts from sales of land, £45,945 post-office receipts, £22,080 telegraph receipts, £28,123 stamps and license dues, and £76,847 the native hut tax. The expenditures amounted to £1,282,484, of which £745,703 were for operating the railroads, £66,929 for public works, and £107,150 for defense. The expenditure from loans, not included in the above, was £232,652. The debt on June 30, 1896, amounted to £8,054,343. The armed forces consist of 490 mounted police and 1,391 volunteers, not including the naval corps of 90 men.

Commerce and Production.—Maize, wheat, and green crops are grown for home consumption, and sugar and tea for export. The country is rich in coal and iron. The total value of the imports in 1896 was £5,437,863, and of the exports £1,785,375. The principal exports were wool for £590,605, gold for £102,624, coal for £88,334, hides and skins for £42,730, Angora hair for £24,925, and bark for £16,450.

Navigation.—There were 740 vessels, of 1,071,196 tons, entered and 727, of 1,063,797 tons, cleared in 1896. The colony possessed 13 sailing vessels, of 675 tons, and 14 steamers, of 2,050 tons.

Railroads.—The Government railroads in 1897 had a total length of 402 miles, built at a cost of £6,117,211. The receipts in 1896 were £1,136,213, and expenditures £421,989, giving a profit of 11½ per cent. on the capital.

Legislation.—The farmers of Natal have not hitherto exercised such influence as to obtain protective duties as they have in Cape Colony. A duty was imposed, however, on imported mealies at a previous session, and on Jan. 7 the Government carried a bill placing one of 2d. a pound on frozen meats by 25 to 11 votes. By a majority almost as large the Legislature on June 10 ratified the Cape Town convention uniting the colonies in a customs union. This increases the duty on coal 1s. per 100 pounds, and reduces the duty on frozen beef 1d. per pound, and on flour 6d. per 100 pounds.

Orange Free State.—The legislative power is vested in the Volksraad, a single Chamber of 58 members elected for four years by the votes of all adult male whites, one half being renewed every two years. The President of the republic, who is elected by all the burghers for the term of five years, is M. T. Steyn, elected Feb. 21, 1896.

Area and Population.—The Free State has an area of 48,326 square miles, with a population in

1890 of 77,716 whites, divided into 40,571 males and 37,145 females, and 129,787 natives, divided into 67,791 males and 61,996 females; total, 207,503. There is considerable immigration from Germany, Great Britain, and Holland.

Finances.—The revenue for 1896 was £374,774, and the expenditure £381,861. Of the revenue, £138,247 was derived from customs duties on imports, £57,431 from stamp duties, £35,694 from posts and telegraphs, £30,845 from transfer duties, £16,410 from the native poll tax, and £15,301 from quit rents. Of the expenditures, £50,236 went for salaries, £48,077 for public works, £47,163 for education, £30,320 for posts and telegraphs, £12,454 for police, and £7,145 for the artillery. In 1897 the revenue reached the total of £1,072,519. There are 2 batteries of artillery at Bloemfontein, the capital, manned by 80 officers and men, with a reserve of 350 trained gunners. The number of burghers subject to be called out for service by the field cornets is 17,381.

Commerce and Production.—There are 6,000 farms averaging 4,000 acres each, but only 250,000 acres are under cultivation. The number of horses at the last census was 248,878; of cattle, 895,099; of sheep, 6,619,992; of goats, 853,155; of ostriches, 1,461. The production of diamonds increased from 99,255 carats in 1890, valued at £223,960, to 282,598 carats in 1894, valued at £428,039. There are large coal deposits, and gold has been found. The value of the imports in 1896 was £1,186,457, of which £345,812 came from Cape Colony, £224,440 from Natal, and £116,205 from Basutoland; value of exports, £1,744,484, of which £612,313 went to Cape Colony, £116,961 to Natal, £75,751 to Basutoland, and £941,459 to the South African Republic. There are 1,590 miles of telegraphs, connecting Bloemfontein with the Transvaal, Natal, and the Cape, and 330 miles of railroad traversing the republic from the Orange river to the Vaal, joining those of Cape Colony and the South African Republic.

Political Affairs.—A conference of delegates to discuss the basis of a Federal Union between the Orange Free State and the South African Republic was held at Pretoria in January, 1893. The Volksraad, which was opened on April 4, voted to grant concessions for railroads to Kimberley and to Ladybrand.

South African Republic.—The legislative power is vested in two Volksraads, each consisting of 27 members elected for four years. Bills passed by the Second Volksraad to become law must be ratified by the First Volksraad, whose members are elected by the first-class burghers, comprising the male whites who were resident in the republic previous to 1876 or who have borne arms in the war of independence of 1831, the Malaboch war, or the Swaziland expedition in 1894, or in the operations against the Jameson raiders in 1896. The Second Volksraad is elected by burghers of both classes. Second-class burghers are adult male whites who obtain naturalization after two years of residence by taking the oath of allegiance, registering themselves in the books of the field cornet, and paying a fee of £2. Only first-class burghers can vote in the election of the President or the Commandant General. The State President, whose term is five years, is S. J. Paulus Krüger, elected for the third time in 1893. The Vice-President and Commandant General is Gen. P. J. Joubert, elected in 1896. The Executive Council was composed in 1898 of the Vice-President; Dr. W. J. Leyds, the State Secretary, elected in 1897 for the third time; P. A. Cronje, Superintendent of Natives; J. H. M. Kock, Keeper of the Minutes; and J. M. A. Wolmarans and S. W. Burger, non-official members.

The Transvaal was occupied and annexed by

Great Britain in 1877, but revolted in 1880, and in the treaty of peace, signed on March 21, 1881, was recognized as independent once more in all internal affairs, though subject to the suzerainty of Great Britain, which assumed the control and management of external affairs and appointed a British resident. On Feb. 27, 1884, a new convention was signed, from which the clause relating to suzerainty was omitted. A diplomatic agent replaced the British resident under this convention, but all treaties with foreign powers, save the Orange Free State, or with native tribes to the north or west of the Transvaal, were required to be submitted to the British Government, which has six months in which to approve or reject them. In token of its regained independence the Republic, previously known as the Transvaal, was recognized under the new title of the South African Republic.

Area and Population.—The area of the Republic is 119,139 square miles, and the white population, according to the census of 1896, is 245,397, of whom 137,947 are males and 107,450 females. The native population is estimated at 622,500. The white population of Pretoria, the capital, is about 10,000. The total population of Johannesburg, the mining center, on July 15, 1896, was 102,078, divided into 79,315 males and 22,763 females, and consisting of 50,907 whites, 5,759 Indian coolies, Chinese, and Malays, 2,879 of mixed races, and 42,533 Kaffirs.

Finances.—The revenue for 1896 was £4,807,513, and the expenditure £4,671,393. For six months of 1897 the revenue was £1,805,226, and the expenditure £1,865,714, against £1,734,728 for the whole year 1894. The provisional estimates for the whole year 1897 made the revenue £4,886,499, and the expenditure £4,702,028, including large extraordinary expenditures, as £1,054,028 for public works, £527,300 for armaments, £500,000 for explosives, and £150,000 for prevention of the spread of the rinderpest. There was an unexpended balance of £591,118 on June 30, 1897. The chief part of the revenue is derived from the gold fields in the shape of mining licenses and royalties, duties on imports destined for the mining regions, railroad revenue, receipts from the dynamite monopoly, etc., land sales, quit rents, the hut tax, stamps, transport dues, and customs produce the rest of the revenue. The revenue collected from the mines in 1895 was £1,848,571. The gold fields at Barberton are on lands belonging to the Government. The import duties collected in 1896 amounted to £1,355,486. The amount of the public debt in 1897 was £2,673,690.

Defense.—All able-bodied citizens belong to the militia and can be mustered, all armed and mounted, for active service at any time. The only standing force is the artillery, numbering 32 officers and 368 men. Since the Jameson raid the Government has paid part of the expenses of 3 volunteer corps of infantry and 6 of cavalry, numbering 2,000 men.

Commerce and Production.—One third of the inhabitants of the Republic are engaged in agriculture, but stock raising is the principal industry. There are 12,245 farms, of which 3,636 belong to the Government, 1,612 to absent owners and companies, and 6,997 to resident owners. The gold mines employed 9,375 whites and 64,012 natives in 1896. The claims cover an area of 442,000 acres. There are 200 mining companies, having a nominal capital of £57,000,000 and £21,000,000 of invested capital. The total production of gold from the first discovery in 1884 to the end of 1896 was £42,334,248. The output for 1896 was £8,603,821, compared with £8,569,555 in 1895, £7,667,152 in 1894, £5,480,498 in 1893, £4,541,071 in 1892, £2,924,305 in 1891, and £1,869,645 in 1890.

The coal mines in the eastern part of the Trans-

vaal are being developed rapidly, and the deposits in the Witwatersrand produce a steady output of excellent coal. The total quantity raised in 1896 was 1,437,297 tons, valued at £612,561.

The total value of dutiable imports in 1896 was £14,088,130, of which £9,264,378 came from over sea and £4,823,752 from neighboring countries. The total value in 1895 was £9,816,304, and in 1894 it was £6,440,215. The extent of the gold exports is seen in the Cape Colony returns. Other chief exports are wool, cattle, hides, grain, ostrich feathers, ivory, tin from Swaziland, and coal.

Communications.—The continuation of the railroad crossing the Orange Free State to Pretoria by the construction of 78 miles from the Vaal river places the Boer capital in direct communication with Cape Town, 1,040 miles distant. The Delagoa Bay line to Pretoria, 295 miles long, has been in operation since the beginning of 1895. A line from Natal enters the Transvaal and has its present terminus at Charlestown. A line to Selatie, 191 miles in length, is approaching completion. The total length of railroads within the Transvaal was 716 miles in September, 1897, when there were 270 miles additional partly constructed and 252 miles more projected.

The telegraphs within the Transvaal have a total length of 1,952 miles, connecting with all the telegraphs and cables of South Africa.

Political Affairs.—Cecil Rhodes, who, when Prime Minister of Cape Colony, was the originator and prime mover in the conspiracy for the overthrow of the Transvaal Government that was rendered abortive by the vigilance and decision of the Boer authorities, by resuming his political activity in South Africa strengthened the position of President Krüger and made the Boers more determined and unyielding in their resistance to the demands of the Uitlanders. What still more aroused the fears of the Boers and excited their jealous love of independence was Mr. Chamberlain's dispatch of Oct. 16, 1897, roughly asserting the continuance of British suzerainty. Before the presidential election several hundred Uitlanders, who had volunteered to fight the Jameson raiders and the Johannesburg revolutionists, were admitted to full burgher rights. The English Government intervened in behalf of Indian Banyans, who were required to live and to trade outside of towns, but only to secure an interpretation of the law, since these British subjects were placed under similar disabilities in Natal and lately in Rhodesia. On Jan. 19, in accepting one of the new forts round Pretoria, the President said that readiness for war was the best guarantee of peace. The popular vote for President, which was given near the end of January, resulted in the triumphant re-election of Stephanus Johannes Paulus Krüger, who received 12,858 votes, to 3,753 for Schalk Burger and 2,001 for Gen. Joubert. About two thirds of the electorate voted.

A constitutional conflict between the President and Chief-Justice Kotze began in September, 1895, when the case was pending of Brown, an American citizen, who had been ousted by operation of this resolution from a mining claim and had brought suit for damages against the State Secretary. The High Court having given judgment for Brown on Jan. 22, 1897, denying the validity of a resolution of the Volksraad rescinding the proclamation on which Brown based his claim, the Volksraad as soon as it met passed Law 1, 1897, declaring that the testing power does not exist and never did exist; requiring the judges of the High Court to take oath that they will carry out all laws and resolutions of the Volksraad and not presume to test them by the *Grundwet*, or Constitution; and furthermore

empowering them to dismiss any judge from office who in answer to formal interrogatories will not undertake to observe Volksraad laws and resolutions. By a written agreement made on March 22, 1897, through the mediation of Sir Henry de Villiers, Chief Justice of Cape Colony, the judges promised not to exercise the testing power, and the President undertook to introduce a draft constitutional law providing that the *Grundwet* can be altered only by special legislation and safeguarding the independence of the judiciary. He promised in his negotiations with Sir Henry Villiers to have a commission appointed, but Mr. Kotze assumed that a bill was to be introduced forthwith, and when the commission protracted its deliberations, and the session of 1897 passed without any action being taken by the Volksraad in the matter, he wrote to President Krüger on Feb. 5, 1898, that he considered the understanding between them as having lapsed and no longer existing. The President held that he was not bound to carry through such legislation as the judges demanded, but that they had engaged themselves not to test acts of the Volksraad. He regarded Chief-Justice Kotze's letter as a virtual refusal to answer or an insufficient answer to the question that he had put to him on March 4, 1897, under the law passed by the Volksraad, and accordingly on Feb. 16, 1898, he dismissed him from office in accordance with a decision of the Executive Council. Mr. Kotze replied that Law 1, 1897, was no law, and claimed that he was still Chief Justice, having been appointed for life, and not being liable to removal under the *Grundwet* except on charges of grave misdemeanor. He assumed to adjourn the court but Judge Gregorowski was appointed acting Chief Justice and opened court immediately. Mr. Kotze addressed a manifesto to the people of the Republic, and afterward went to England and appealed to the British Government to interfere as suzerain to prevent the property rights and liberty of Uitlanders being overridden by the Boer oligarchy. He had been appointed Chief Justice for life by the British when they were in occupation of the Transvaal. Justice Ameshoff, who had stood by the ex-Chief Justice in all his contentions, and who looked for the succession to the presidency of the court, resigned his office. Judge Gregorowski was sworn in as Chief Justice on March 31.

The session of 1898 was opened on May 2. A proposal to raise a state loan of £6,000,000 to build railroads and extensive irrigation works was postponed to be considered at the next session. President Krüger was sworn in for the new term on May 12. He proposed to withdraw the licenses from banks that oppressed poor people and increased the existing depression, and suggested, for the prevention of spurious mining companies, that a certificate from a Government engineer be required before a company can be floated. Of the draft laws submitted one provides for the infliction of one to six years' imprisonment upon officials revealing the contents of documents which in the interest of the state should remain secret. The alien's expulsion law, to which the British Government objected, was amended in compliance with Mr. Chamberlain's demand, so that an Uitlander accused of acts endangering the security of the state, and therefore liable to expulsion by executive order under the act as it stood, must first be placed by the Government in a position to bring forward his interests. Another bill enabled the executive authority to decide what is a dishonoring sentence. A third virtually prohibits any alien not a burgher of the Orange Free State from bringing firearms into the Transvaal without a permit from the State Secretary. There was a bill authorizing the Gov-

ernment to give £100 to any needy burgher having twelve sons living. A bill was passed establishing a school of mines at Pretoria; another provides for technical schools in all districts, open only to burghers' sons. Another bill extends the municipal franchise to non-resident owners of property worth £100, and at the same time disqualifies Uitlanders for the office of municipal councillor, unless a separate law allows them the privilege, as in Johannesburg. The discovery of a diamond mine near Pretoria of similar formation to the Kimberley deposits led to the adoption of a bill limiting ownership to 40 claims 30 feet square and prohibiting the leasing and amalgamation of claims. Subsidies to Uitlander schools were continued for three years more, the condition of receiving a subsidy being that South African history is taught, and Dutch up to a certain standard.

Dr. Leyds resigned in May the State Secretaryship and went to Europe as diplomatic representative of the South African Republic to Berlin, the Hague, Paris, Lisbon, Rome, and St. Petersburg. Judge Reitz, formerly President of the Orange Free State, was chosen to succeed him as State Secretary.

Controversy regarding Suzerainty.—When the British withdrew from the Transvaal after their defeat at Majuba Hill they restored complete self-government to the inhabitants subject to the suzerainty of the Queen, as was set forth in the preamble of the convention of Pretoria of 1881. The term suzerainty was chosen to describe superiority of a state possessing independent rights of government subject to reservations with reference to certain specified matters. The most material of the reserved rights of England in the Transvaal was the control of the external relations of the reconstituted Transvaal state, including the conclusion of treaties and the conduct of diplomatic intercourse with foreign powers. In 1883 a deputation was sent to London to secure the abolition of British suzerainty and the stipulations in regard thereto. This deputation negotiated a new convention in 1884, from which the word suzerainty was removed and the reserved rights of England were foregone, save that all treaties concluded with foreign powers, except the Orange Free State, or with native tribes beyond the borders, can be vetoed by the British Government at any time within six months of their conclusion. In the draft of the London convention Lord Derby expunged every reference to suzerain rights contained in the convention of Pretoria. The preamble of 1884 expressly acknowledges a new state, the South African Republic, in the place of the Transvaal territory, subject to the suzerainty of her Majesty.

The right of British suzerainty was first asserted anew by Mr. Chamberlain in his dispatch of Oct. 16, 1897. He had contended that the alien law as first passed by the Volksraad in 1896 was a breach of the London convention. The Transvaal Government demurred to this and refused to revoke the law or suspend its operation, holding that every state has the right to restrain foreign elements that are dangerous to the peace and safety of its inhabitants; refused also the invitation to discuss the question with the British agent, but offered to submit it to arbitration. Notwithstanding this declaration, the law was revoked, with a view to legislation being introduced anew. Mr. Chamberlain in his answer on Oct. 16, 1897, maintained the claim of the British Government to be consulted before legislation is introduced restricting the entrance of aliens other than natives. The rights invoked from the general principles of international law were dismissed as not applying in this case, which was "not that of a treaty between two states on an equal

footing, but a declaration by the Queen of Great Britain and Ireland of the conditions upon which she accorded complete self-government to the South African Republic, subject to her suzerainty." He contended that the preamble of the convention of 1881 was not replaced by the preamble of the new convention, but was still in force, though the articles of the latter were substituted for the articles of the Pretoria convention. In his view, under the two conventions, the Queen held toward the South African Republic the relation of a suzerain who had accorded to the people of that Republic self-government upon certain conditions, and he held it to be incompatible with that position to submit to arbitration the construction of the conditions on which she accorded self-government to the Republic. Dr. Leyds replied to this dispatch on April 16, 1898, recounting the negotiations, with Lord Derby's explanations and elisions, showing that not only by its terms, but in its intent, the convention of 1884 put an end to British suzerainty. Lord Derby said that by the omission of those articles of the convention of Pretoria which assigned to her Majesty and to the British resident certain specific powers and functions connected with the internal government and foreign relations of the Transvaal State, the Government of the South African Republic would be left free to govern the country without interference and to conduct its diplomatic intercourse and shape its foreign policy, subject only to the requirement embodied in the fourth article of the new draft, that any treaty with a foreign state shall not have effect without the approval of the Queen. The report of the deputation that the obnoxious provisions of the Pretoria convention were revoked, on the strength of which it was ratified by the Volksraad, had never been challenged on the part of the British Government until now by Mr. Chamberlain. Dr. Leyds pointed out that the two preambles were in direct opposition to each other, and could not be both in force at the same time. Lord Derby in his letter covering the draft of the new convention said that this was proposed in substitution for the convention of Pretoria. Dr. Leyds proposed that the question of suzerainty be arbitrated by a friendly third power. The present independence of the South African Republic derives its formal acknowledgment, but in no sense its real origin, he held, from an international agreement, acknowledged as equally binding on both parties. Great Britain had acknowledged the international character of the convention by agreeing to refer the first article to a friendly power, and could not contend that the interpretation of agreements between powers not on the same footing is not to be referred in case of disagreement to international law in the same manner as treaties between powers of the same standing, since there is no other law to which it can be referred; otherwise the British Government would constitute itself the sole judge of a document to which it is a party.

In a dispatch dated May 7, 1897, the State Secretary had proposed the abrogation of the convention of London, arguing that Great Britain had violated it by the armed incursion of Dr. Jameson. Mr. Chamberlain, in his dispatch, asserted that the raid was the act of private individuals, for which the British Government was in no wise responsible. Dr. Leyds, in his reply, pointed out that the troops which raided the territory of the Republic were British troops, serving under the British flag, enlisted, armed, and equipped in British territory under the orders of the Administrator, who derived his authority from the British Crown, commanded by officers holding her Britannic Majesty's commissions, and that the raid was prepared with the aid and advice of Cecil Rhodes, who was Prime

Minister of Cape Colony, with the connivance of Sir Graham Bower, imperial secretary to the High Commissioner for South Africa.

Mr. Chamberlain complained that an extradition treaty negotiated with Portugal in 1893 had not been submitted to the British Government in accordance with the fourth article of the London convention, requiring treaties on their completion to be submitted to the approval of the Queen. The Portuguese Cortes did not ratify the treaty, being unwilling to offend the British Government, and Dr. Leyds seized upon this fact to justify the attempted evasion of the convention, arguing that a treaty is not completed until it is ratified. In the beginning of March, 1898, the Volksraad passed a resolution empowering the Government to hand over any fugitive demanded by any state with which no regular extradition treaty exists, the Government to decide whether his extradition is *prima facie* justifiable. By this act and a reciprocal one on the part of the Portuguese Government the necessity of a treaty of extradition was avoided, but since the proceedings were formally correct the British Government raised no objections. The Government declined to enter into a treaty of extradition with Rhodesia. In June the British military authorities restored to their former rank the thirteen subordinate officers who took part in the Jameson raid and who had been allowed to resign their commissions after their trial and conviction. They had been led to believe that their leaders had the secret sanction of the Imperial Government for the expedition. Sir John Willoughby and Col. Frank Rhodes, who were deeply involved in the planning and execution of the raid and were in confidential relations with its authors, were not reinstated in the army.

Swaziland.—The native territory on the east of the Transvaal inhabited by the Swazis, an offshoot of the Zulu nation, was recognized as independent in the London convention of 1884, but the convention of 1890 vested the Government of the increasing white population in a government committee, and a new convention concluded between the South African Republic and Great Britain on Dec. 10, 1894, placed Swaziland under the protection and administration of the Republic. The area of this territory is about 8,500 square miles, with a population of about 50,000 Kaffirs and 1,000 whites, Boer graziers for the most part, with some British traders and miners. The natives are ruled by their paramount chief, Bunu, otherwise called Ngwane, born in 1877, who has an army of 18,000 warriors. Tin of the value of £11,500 and £4,344 worth of gold were produced in 1896. The Transvaal authorities, who were not allowed to impose a native hut tax till 1898, have collected not over £3,000 annual revenue, while the deficit of about £47,000 a year has been paid out of the treasury of the Republic.

The three years' grace fixed by the Swaziland convention having expired, the Transvaal Government in the beginning of 1898 made arrangements to collect a hut tax from the natives. Bunu, the king, at first evaded notice by running away into the mountains, but in March he held an *indaba*, at which he announced that he would collect the tax, if it were insisted upon, and hand it over to the Government. In May a burgher force marched into Swaziland to bring to terms the Swazi king, who had killed his head *induna*. Bunu, who was summoned to attend a judicial inquiry on July 5, fled over the Natal border. An *indaba* was held on July 14, at which the chiefs and the Transvaal commissioner agreed temporarily to recognize the queen mother as regent. The British authorities delivered up Bunu for trial. The collection of the hut tax was begun on Aug. 1.

British South Africa.—The total area of the territories committed in 1891 to the administration and commercial exploitation of the British South Africa Company, including British Central Africa, or North Rhodesia, is about 600,000 square miles. The part south of the Zambesi, known as South Rhodesia, is 350,000 square miles in extent. The pioneers of the company in 1890 settled in Mashonaland, then a province of Matabeleland, by permission of Lobengula, the Matabele chief, having built 400 miles of roads through Bechuanaland to reach this country, which was reputed to be rich in gold. In 1893 the colonists ousted the Matabeles, and the company took possession of their country also. Matabeleland has an area of about 61,000 square miles, with an estimated population of 240,000, while Mashonaland is 80,000 square miles in extent and its population is about 210,000. The gold regions are believed to cover 5,250 square miles, but their development is slow and their actual value uncertain. There were 5,708 white persons in the country at the time of the Matabele rising in 1896.

Silver, copper, tin, antimony, arsenic, lead, coal, and other minerals have also been found. The British and Boer volunteers who aided in the conquest of the Matabeles were allowed to peg out 1,070 farms of 6,000 acres each. In Mashonaland about 5,000 square miles have been surveyed. The capital of Rhodesia is Salisbury. Other towns are Buluwayo, the old Matabele capital, Umtali, Victoria, Gwelo, Enkeldoorn, and Melsetter. Telegraphs connect these places with Mafeking and Cape Colony, and the line has been extended north of the Zambesi to Blantyre, in Nyassaland. This extension, establishing telegraphic communication between Cape Town and Blantyre, a distance of 2,000 miles, was opened on April 20, 1898. A further extension was built to Kotakota, 263 miles north of Blantyre, and is being carried through to Lake Tanganyika. The company's telegraph system on Sept. 30, 1897, consisted of 1,856 miles of line, with 2,538 miles of wire. The railroad built by the company from Kimberley to Vryburg in British Bechuanaland, 126 miles in length, has been transferred to the Cape Government, and the line has been extended to Buluwayo, 453 miles. The whole cost of the railroad, 579 miles in length, was £2,000,000. Another railroad company has constructed a railroad from Beira, on the east coast, to Chimoio and Umtali. It was expected to reach Salisbury in the beginning of February, 1899, giving a total length of 1,086 miles of railroads established by the British South Africa Company. To the Bechuanaland Railroad the Imperial Government gives a subsidy of £20,000 a year for ten years and the Chartered Company gives £10,000 a year.

The capital of the British South Africa Company, originally £1,000,000, was increased in 1895 to £2,500,000, and in November, 1896, to £3,500,000. There is also a 5-per-cent. debenture debt of £1,250,000. The company derives its revenue from mining, trading, and professional licenses, the sale of stands for business in the towns, and the postal and telegraph services.

The revenue for the year ending March 31, 1895, was £118,883, of which £53,047 were derived from the sale of stands. In 1896 the total receipts were £399,090, including £211,676 from the sale of stands. The receipts exceeded the expenditure by £69,650, but in 1897, owing to native disturbances and the rinderpest, the revenue fell away to £122,542, while the expenditure on account of the rebellion alone was £2,266,976. The Mashonaland uprising was not finally quelled before September, 1897. The rebellion of the Matabele and Mashonas cost £3,000,000, including the cost of the local volunteer forces and of the imperial troops, £360,000 paid in

compensation to settlers and the cost of food distributed among the natives after the war was over. The casualties among the 'whites' numbered 639, about 10 per cent. of the whole population, including 264 murdered or missing, 187 who lost their lives through wounds or other causes, and 188 wounded. The revenue for 1898, exclusive of stand sales, amounted to £196,653, the highest figure yet reached. After all the expenses connected with suppressing the rebellion were paid out of the new capital raised in London, a balance of £500,000 remained to meet the ordinary expenses of the company. The suspense account, consisting of money spent on the Jameson raid which Mr. Rhodes and his associates have promised to repay, amounted to £91,000. At the meeting of the shareholders in April, 1898, it was decided to increase the capital to £5,000,000, issuing for the present only 250,000 shares to the shareholders *pro rata* at £2 a share and reserving 1,250,000 shares to be issued from time to time when additional capital is needed to promote the commercial interests of the company. When the shares were offered, instead of £500,000 the public subscribed £1,250,000. Cecil J. Rhodes, Alfred Beit, and Rochfort Maguire, who retired from the directorate in 1897 on account of their connection with the Jameson raid into the Transvaal, were re-elected in 1898. In anticipation of the erection of South Rhodesia into a self-governing colony, it was decided to keep separate accounts of the commercial business of the company and the amounts received and expended by it in discharge of its duties as a government, with a view to having the aggregate deficits assumed by the people as a public debt when they assume full responsibility for the administration of the country. The accumulated annual deficits in the ordinary budget up to March, 1897, amounted to £1,145,000, to which must be added the cost of suppressing the native insurrections and of combating the rinderpest, railroad guarantees and deficits, and other items.

The British Government after the Jameson raid transferred the control of the military forces to the High Commissioner and decided to divest the company of a great part of its political and administrative responsibilities and privileges, the directors having already, in 1895, suggested that a voice in the administration be given to the inhabitants as a step toward full responsible government. The plan adopted by the Secretary of State for the colonies was announced in January, 1898. The High Commissioner before had control over legislation and administration, but it was not exercised. In the future all legislation will be passed locally by the Legislative Council of South Rhodesia, comprising 2 elective members for Mashonaland, 2 for Matabeleland, and 5 members nominated by the company, insuring it a majority so long as it remains responsible for the finances. Ordinances passed by the Legislative Council may be disallowed within a year by the Colonial Secretary, either of his own motion or at the request of the board of directors of the Chartered Company in London. All orders or resolutions of the board must be submitted to the Secretary of State for his approval. He will have power, moreover, to remove any director or official of the company in London. Administrators are appointed, one for Matabeleland and one for Mashonaland, each having an executive council and each being a member and one of them president of the Legislative Council. An imperial officer will be appointed and paid by the Crown, styled the Resident Commissioner, who will control the employment of the armed forces, but have no power to deal directly with the officials of the administration. He has a seat and a voice in the Legislative Council, but no right to vote. On information furnished by him the High

Commissioner will act in disallowing ordinances and in giving or withholding his approval of appointments and removals from office. In extraordinary cases the High Commissioner shall have power to legislate by proclamation. The commandant of the forces is appointed and paid by the Crown. In employing the forces for police purposes, including the suppression of internal disorder, he shall ordinarily be guided by the wishes of the administrator and his subordinates, referring to the Resident Commissioner for instruction in cases when he thinks it undesirable to comply with their requirements, and in no case undertaking military operations without his authority.

After Cecil Rhodes and his companions, J. W. Colenbrander, Dr. Hans Sauer, Mr. Stent, and John Grootboom, went to the rebellious Matabele in the Matoppo hills and secured their final submission, they surrendered an enormous number of arms and have since remained perfectly loyal. Native commissioners were brought from Natal. Salaried *indunas* exercise a limited control in the different districts. Natives indentured to white landowners are protected by the native commissioners from wrong, and for the remainder of the native population a reserve of tillable land has been set apart in each district. The pegging of farms has been prohibited within the limits of the reservations. Local government had its first trial in the establishment of municipalities at Salisbury and Buluwayo in virtue of regulations that came into operation in September, 1897.

The establishment of railroad communication with the seaboard in both directions has enabled the mining companies to carry out development work on some of the properties which Mr. Hammond pronounced to be true fissure veins and to import machinery and begin crushing. Six quartz mills were started in 1898. There were 156,235 registered mining claims on Jan. 31, 1898, covering 4,438 miles of reef, exclusive of claims abandoned after registration. The South Africa Company has decided to take a more active part in the development of minerals. Under the peculiar mining law adopted for this country a prospector is not restricted to a single claim, but is allowed to stake out twenty, on which no monthly license or other tax or royalty is paid until the mine is developed. Instead of this, when a company is floated to work the mine, the Chartered Company receives 50 per cent. of the purchase money. In arrangements with companies already started the company has reduced its share of the vendor's scrip. In order to hasten the development of the gold mines the South Africa Company will appoint engineers to examine promising claims, and on the starting of a new company will subscribe a part of the working capital. The total amount of capital raised in England, first and last, by the Chartered Company is about £6,000,000, including debenture bonds, but not including £2,000,000 guarantee for the Bechuanaland Railroad, the cost of telegraph lines and of the Mashonaland and Beira railroads, and other items which would bring the total amount of capital invested up to £10,000,000. This £6,000,000 Cecil Rhodes proposes to shift to the colonists of Rhodesia in the form of a public debt, leaving the company in possession of its commercial privileges and its right to half the minerals. The British South Africa Company in 1895 offered to incorporate in the Rhodesian Constitution a provision to give preferential tariff rates to British goods, but the proposal was rejected by the Liberal Cabinet, which wished to have the provision cover imported goods from any country. In 1898 it was renewed and was accepted by Lord Salisbury's Government, the provision being that the duty to be charged on British goods shall never

exceed the duty at present levied by Cape Colony, which is a tariff for revenue only, averaging about 9 per cent.

The administrators appointed under the new charter are Mr. Milton at Bulwago and Capt. Lawley at Salisbury. Sir Marshall Clarke was appointed Resident Commissioner.

British Central Africa.—The territory north of the Zambesi that was given over to the administration of the British South Africa Company in 1891 has an area of about 250,000 square miles, with an estimated population of 650,000. There are now over 350 Europeans in this region, which has lately been invaded by East Indian traders. Settlements under British administration have been established in the Tanganyika district, on Lake Mweru, and near Bangweolo on the Luapula river. The territory includes the populous Barotsse kingdom. The boundary on the west between the British sphere and the Portuguese territory is to be determined by an Anglo-Portuguese commission appointed under a provisional agreement terminating in July, 1898. The head of the administration and representative of the Chartered Company is Major P. Forbes.

British Central African Protectorate.—Nyassaland was declared a British protectorate in May, 1891. The British commissioner and consul general is Alfred Sharpe. The area of the protectorate is about 38,000 square miles. The population in 1897 numbered 300 Europeans, 263 Indian traders, and 844,995 natives. Blantyre, in the Shire Highlands, the chief town, has a population of 6,000 natives and 100 Europeans. In this district the settlers have coffee plantations, producing 850,000 pounds in 1897. They also grow rice, wheat, oats, and barley, and raise sheep and ponies. The imports were valued in 1896 at £82,760, and exports at £19,670; imports in 1897 at £80,054, and exports at £23,299. Steamboats convey goods between the river and lake ports and the British concession in Chinde, at the mouth of the Zambesi. There are 5 English gunboats kept on the Shire and Zambesi rivers. The armed force employed in the protectorate to preserve order and check the slave trade consists of 185 Sikhs and 800 native troops, besides 200 police. A telegraph line connects Blantyre with Zomba, Tete, Fort Salisbury, and the Cape system.

The Angoni Zulus, who number about 40,000 fighting men and inhabit the country on the borders of British Central Africa, Portuguese East Africa, and Northern Rhodesia, under their King, Mpseni, lived in peace with the white settlers in their country until at the beginning of 1898 the warlike ardor of the young men could no longer be restrained by the old King. The British Central Africa rifles and a force of Sikhs relieved Fort Jameson, whence Capt. Brake, setting out on Jan. 18, with 300 Atonga riflemen and 50 Sikhs, marched to the aid of Mr. Wiese, who was besieged at Loangweni, in the heart of the Angoni country. After a skirmish Capt. Brake occupied Loangweni, and remained there until nearly 1,000 troops, under Col. Manning, regular Sikhs and natives, with field guns and Maxims, were concentrated in the territory. Dividing into four columns, the force devastated the country, capturing all the cattle and destroying the villages and cultivated spots. After Singu, their leader, was taken prisoner the Angonis gave up the contest, having made but a feeble resistance. Mpseni surrendered on Feb. 9. After this campaign, in which only two whites lost their lives, Europeans settled freely on the land of the Angonis within the Nyassaland limits and in the neighboring Charterland. In April the southern Angonis of the Domwe district of North Rhodesia,

who had remained quiet since their subjugation in 1896, assembled to the number of 6,000 to resist the occupation of their country by white immigrants. Troops were sent from Zomba to punish them.

German Southwest Africa.—The German protectorate has a total area of 322,450 square miles, with a population of about 200,000 Hottentots, Damaras, Bushmen, and Kaffirs. The whites in June, 1897, numbered 2,628. Of the male population, 1,221 were Germans and 333 British and Boers. The local revenue in 1895 was 27,740 marks, and the Imperial Government appropriated 1,000,000 marks, leaving still a deficit of 1,429,840 marks, for the expenditure was 2,457,580 marks. The local revenue for 1898 was estimated at 790,200 marks, to which the Imperial Government added a contribution of 3,015,000 marks to meet the estimated expenditure of 3,805,200 marks. The imports through the British port of Walvisch Bay, hitherto the only available seaport in this part of the country, were valued at 944,695 marks in 1894, and the exports at 106,833 marks. The trade overland is much greater. The Germans have planned to build a harbor at Swakopmund and are building a railroad to connect it with Windhoek, the seat of the administration, which is 180 miles inland. The natives of Damara-land rear cattle in great herds. Goats of the native breed are raised, and sheep have been introduced from Cape Colony. The country is comparatively barren and waterless except in the north, where an Anglo-German company has obtained a concession. In December, 1897, the Zwartberg Hottentots in the northern part of the territory, where the Germans have undertaken to rear cattle, attacked the whites and were dispersed by the troops after a fight in which one German was killed and Capt. von Estorf, the commander, and another were wounded.

Portuguese Possessions.—Portuguese East Africa is the coast region north and south of the Zambesi lying east of British Central Africa and British South Africa. It is divided into the provinces of Mozambique, Zambesia, and Lourenço Marques, the military district of Gaza, and the districts of Inhambane, Manica, and Sofala. The two last have been committed to the administration of the Mozambique Company, which received in 1891 a royal charter granting sovereign power for fifty years. The country between Lake Nyassa, the Rovuma, and the Lurio is administered under a royal charter by the Nyassa Company. The Zambesia Company is authorized to carry on industrial, commercial, agricultural, and mining operations. Another company has sugar plantations on the lower Zambesi.

The revenue of the colony for 1898 was estimated at 3,952,820 milreis, and the expenditure at 3,700,040 milreis. The imports at the port of Mozambique were £87,760 and the exports £59,418 in value in 1896; imports at Quillimane in 1894 were valued at £94,537, and exports at £76,344; imports at Beira amounted to £160,570, exports to £17,950, and the transit trade to £142,960; and at Lourenço Marques in 1896 the imports amounted to £638,410, exports to £17,857, and the transit trade to £1,518,970. The number of vessels that called at Mozambique in 1896 was 101, of 204,834 tons, and at Lourenço Marques 391, of 559,646 tons. Englishmen and others have located 1,325 claims for gold mining in Manicaland, but have not developed them, owing to lack of means of communication. The Delagoa Bay Railroad runs 57 miles to the Transvaal border, whence it is continued for 290 miles to Pretoria. The Beira Railroad has been completed from Fontesvilla to Massikosse, 118 miles, and the end sections from Beira to Fontesvilla and from Massikosse to Untali and Salisbury are under construction. There are 950 miles of

telegraph lines within the colony. In January, 1898, the Portuguese force in Gasaland had a conflict with the natives on the Limpopo, who had captured a party of soldiers that was sent to arrest an unruly chief. Major Mousinho de Albuquerque was succeeded as Governor by Col. Ferreira in the autumn. Arrangements were made for the sale of Delagoa Bay to Great Britain in order to relieve the Portuguese colony from financial embarrassment. Germany recognized the British right of pre-emption, having come to a general understanding with England in regard to the African question. The impending decision of the Swiss arbitrators in the matter of the seizure by the Portuguese Government of the Delagoa Bay Railroad made the sale of the port and railroad almost a necessity, the arbitrators being expected to award over £1,000,000 to the American claimant, the widow of Col. Edward McMurdo, the original promoter and chief owner of the railroad.

CHEMISTRY. Chemical Theory.—In 1888, Mr. William Crookes, presenting a theory of the generation of the elements (in accordance with the periodical system) by successive evolutions, devised a graphic representation of the process, in which he supposed the space projection of the scheme to be spiral. In this figure the elements were placed along the spiral line in the order of their atomic weights, and so fitted themselves that the successive members of each group fell, as they should, one beneath another, in the line of an ordinate drawn vertically across the spiral. In order to find places for the new elements, argon, helium, and krypton, Mr. Crookes has modified his figure and made it, instead of a plain spiral, to run in the form of a succession of figure 8s. Such a figure will result from three very simple simultaneous motions (of the supposed primal matter): an oscillation to and fro (suppose east and west); an oscillation at right angles to the former (suppose north and south); and a motion at right angles to these two (suppose downward), which, in its simplest form, would be with unvarying velocity. "Let me suppose," he says, "that at the birth of the elements, as we now know them, the action of the *vis generatrix* might be diagrammatically represented by a journey to and fro in cycles along a figure-of-eight path, while, simultaneously, time is flying on, and some circumstance by which the element-forming cause is conditioned (e. g., temperature) is declining (variations which I have endeavored to represent by the downward slope). The result of the first cycle may be represented in the diagram by supposing that the unknown formative cause has scattered along its journey the groupings now called hydrogen, lithium, glucinum, boron, carbon, nitrogen, oxygen, fluorine, sodium, magnesium, aluminum, silicon, phosphorus, sulphur, and chlorine. But the swing of the pendulum is not arrested at the end of the first round. It still proceeds on its journey, and had the conditions remained constant, the next elementary grouping generated would again be lithium, and the original cycle would eternally reappear, and again the same fourteen elements. But the conditions are not quite the same. Those represented by the two neutrally rectangular horizontal components of the motion (say chemical and electrical energy) are not materially modified; that to which the vertical component corresponds has lessened, and so, instead of lithium being repeated by lithium, the grouping which forms the commencement of the second cycle is not lithium, but its lineal descendant, potassium. It is seen that each coil of the lemniscate track crosses the neutral line (the vertical joining the central points of the 8s) at lower and lower points. This line is neutral as to electricity, and neutral as to chemical action.

Electro-positive elements are generated on the northerly or retreating half of the swing, and electro-negative elements on the southerly or approaching half. Chemical atomicity is governed by distance from the central point of neutrality, monatomic elements being one remove from it, diatomic elements two removes," etc. The newly discovered inert elements, according to this scheme, fall into places as they stand on the neutral line: "Helium, with an atomic weight of 4, fits into the neutral position between hydrogen and lithium; argon, with an atomic weight of about 40, naturally falls into the neutral position between chlorine and potassium; while krypton, with an atomic weight of about 80, will find a place between bromine and rubidium. Of the later discovered elements, neon, with an atomic weight of about 22, may fall into the neutral position between fluorine and sodium; while metargon, with an atomic weight of about 40, may share the third neutral position with argon.

An attempt has been made by W. L. T. Addison to deduce atom forms from the crystalline modifications of the elements. Mitscherlich had observed that similar chemical compounds had the same forms, and could intercrystallize in the same crystals. Thus, calcium, magnesium, manganese, ferrous and zinc carbonates crystallize and intercrystallize in rhombohedra of apparently the same proportions. Form is thus consequent on chemical grouping and is a function of the groups of atoms. There is in the carbonate group, the author affirms, a central atom, carbon, about which the other atoms are grouped; and these outer atoms are the outer portions of the molecule, or those of easiest and first contact. The grouping is at four attractive places, and the form of the crystal being constant, the form of the molecule and the position of those areas of attraction must also be constant. The author discusses in considerable detail the form properties of the carbon crystal, and also those of the crystals of a number of other substances, drawing therefrom illustrations of his theory; and infers that malleability has a coincidence with atomic forms, permitting of interatomic mobility in their arrangement. Thus the atoms of carbon are of regular tetrahedral form, and any loose solid angle is as an apex to a tripod of equal limbs. Hence the stability of form and the rigidity of the diamond. If one angle of an aluminum atom becomes free, it may, unless checked by some other atom, rotate circularly about a line joining the two remaining angles. Thus aluminum shows a marked interatomic mobility by its malleability and its tendency to a variable crystalline form. If, in an atom of an element in Group II, Mendeleff's table, one of its areas of attraction be free, it may, unless checked by some other atom, rotate spherically about its stationary area of attraction. The interatomic mobility of such elements is shown by their increase of malleability over the elements of Group III. The interatomic mobility and malleability of the elements of Group I are increased over those of Group II by a joint in their rod form. Another factor in interatomic mobility is intensity of attraction. If chemical and crystal attractions be different manifestations of the same attraction, then, with the decrease of chemical affinity, there will be a decrease of rigidity and stability of form, with an increase of interatomic mobility and malleability. The relations described are well shown in the following comparisons: The diamond, very crystalline and hard; tin, malleable, breaking with crystalline structure; lead, soft and malleable; iron, nickel, and cobalt, brittle as compared with platinum; magnesium, zinc, cadmium, and mercury, increasing in softness with increase of atomic weight and decrease of

chemical activity; copper, silver, and gold, increasing in malleability with increasing atomic weight and decreasing chemical activity. Thus is given a set of relations evidencing the unity of chemical and crystal attractions.

In an address concerning his investigations with regard to the elements thorium, praseodymium, and neodymium, his revision of the atomic weights of the latter elements, and their probable positions in the periodic table, Prof. B. Brauner drew attention to the scientific importance of further investigation among rare earths, a field of research which promised results of the highest value. Prof. Ramsay, following, pointed out that the work described by Prof. Brauner was a monument of careful experiment and extraordinary industry. Although it might appear to many that an enormous amount of labor has been expended on an obscure corner of chemistry, it must be remembered that it was precisely such work which bore upon the whole of chemical theory, and indeed which might be expected to influence chemical manufactures at a future date.

Writing on the kinetic theory of gases, Prof. Ramsay shows how the observation by Lord Rayleigh of a discrepancy in the density of atmospheric nitrogen "has resulted in the discovery of a new constituent of air, argon; its discovery has led to that of a constituent of the solar atmosphere, helium; speculations on the ultimate nature and motion of the particles of which it is believed that gases consist have provoked the consideration of the conditions necessary in order that planets and satellites may retain an atmosphere, and of the nature of that atmosphere; the necessary existence of an undiscovered element was foreseen, owing to the usual regularity in the distribution of the atomic weights of elements not being attained in the case of helium and argon; and the source of neon was therefore indicated. This source, atmospheric air, was investigated, and the missing element was discovered."

Reviewing a number of experiments in which nascent hydrogen was concerned, D. Tommasi observed that if the properties exhibited by the substance were incident to an allotropic state of the gas, we ought always to obtain the same reactions, whereas the experiments prove that the reducing power of nascent hydrogen varies according to the reaction which has produced it. "And if this gas in the nascent state possesses a greater affinity than in the ordinary state, that is caused simply by the fact that the hydrogen at the moment of being set free is accompanied with all the heat which is produced while it is being set free. Consequently, nascent hydrogen is synonymous with $H + cal.$, and the differences that we observe between hydrogen produced by different chemical reactions have their reason in that these reactions do not all give off the same quantity of heat."

J. J. Van Laar attempts to explain a discrepancy in the operation of the law discovered by Ostwald for weak electrolytes—in that it does not hold for substances which, like HCl , are to a great extent dissociated in aqueous solution—by an assumption supported by several arguments, that the electrical conductivity of a good electrolyte is not an exact measure of its degree of dissociation. He believes that the degree of dissociation of a good electrolyte is modified by the passage of the current, the temperature of its ions and molecules being much higher than that of the surrounding medium.

Chemical Physics. Liquefaction of Hydrogen and Helium.—Prof. Dewar communicated his success in liquefying hydrogen to the Royal Society May 12, and to the Chemical Society May 19, 1898. He had already, in 1895, contrived an apparatus for

the production of a jet of hydrogen containing liquid, and shown how such a jet could be used to cool bodies below the temperature that could be reached with liquid air; but all attempts to collect the liquid hydrogen had failed. So far, no investigator had improved upon the results then described. He had constructed a larger apparatus on a similar type with the one then used, and on May 10 of the present year hydrogen was liquefied by allowing the gas, cooled down to $205^{\circ} C.$ and under a pressure of 180 atmospheres, to escape continuously at the rate of from 10 to 15 cubic feet per minute from the nozzle of a coil of pipe in a double silvered vacuum vessel of special construction surrounded with a space kept below $-200^{\circ} C.$ Liquid hydrogen began to drop from this vacuum vessel into another doubly isolated by being surrounded with a third. On this occasion 20 cubic centimetres of liquid hydrogen were collected in about five minutes; and on May 12, 50 cubic centimetres were obtained before the hydrogen jet froze up from the solidification of air in the pipes. The yield of liquid was about 1 per cent. of the gas. Hydrogen in the liquid condition is clear and colorless, showing no absorption spectrum, and the meniscus is as well defined as in the case of liquid air. The liquid is supposed to have a relatively high refractive index and dispersion, and the density appears to be in excess of the theoretical value, 0.18 to 0.12, deduced respectively from the atomic volumes of organic compounds and from the limiting density found by Amagat for hydrogen gas under infinite compression.

Helium was placed in liquid hydrogen, and a distinct liquid was seen to condense. A similar experiment made with the same helium tube in liquid air under exhaustion instead of in liquid hydrogen gave no condensation. It would thus appear that there can not be any great difference in the boiling points of helium and hydrogen. All known gases have now been condensed into liquids which can be manipulated at their boiling points under atmospheric pressure in suitably arranged vacuum vessels. With hydrogen as a cooling agent, it will be possible to get within 20° or 30° of the zero of absolute temperature, and its use will open up an entirely new field of scientific inquiry.

The study of fluorine has until recently been embarrassed by its intense chemical activity, which has proved destructive to the vessels in which the manipulation of it was attempted. It has been found, however, that chemical affinities are suspended at extremely low temperatures, and this encouraged the hope, which has been verified, that a means might thus be found for examining this substance in glass vessels. The earlier experiments proceeded on the supposition that fluorine approached hydrogen in volatility. Later investigations give it a critical value only a few degrees lower than that of oxygen, and a position as to volatility somewhere between that of oxygen and that of nitrogen. In the experiments of M. Moissan and Mr. Dewar, performed at the Royal Institution, in liquefying fluorine, the apparatus being cooled down to the temperature of boiling liquid oxygen ($-183^{\circ} C.$), the current of fluorine gas passed through without becoming liquid. It had, however, lost its chemical activity at this low temperature, and no longer attacked the glass. On lowering the temperature of the liquid oxygen by exhaustion, a yellow liquid was seen collecting, while gas no longer escaped from the apparatus. At this moment the tube by which the gas had been escaping was stopped, so as to prevent air from entering and liquefying, and the glass bulb soon became full of a clear, yellow liquid, possessed of great mobility. The color of this liquid was the same as that of

fluorine gas when examined in a stratum one metre thick. Fluorine thus becomes liquid, according to this experiment, at about -185°C . When the bulb containing the liquid fluorine was lifted above the surface of the liquid oxygen, the yellow liquid began to boil with an abundant disengagement of gas having all the energetic reactions of fluorine. Silicon, boron, carbon, sulphur, phosphorus, and reduced iron, cooled in liquid oxygen and then placed in an atmosphere of fluorine, did not become incandescent. At this low temperature fluorine did not displace iodine from iodides. The chemical energy, however, was still sufficiently great to decompose benzene or oil of turpentine with incandescence. A current of fluorine gas passed into liquid oxygen was observed on some occasions to give a flocculent white precipitate, which quickly settled to the bottom. It possessed the curious property of deflagrating with violence upon any rise of temperature. With freshly prepared liquid air instead of oxygen, fluorine easily became liquid at -190°C . With liquid oxygen as a refrigerant, the liquefaction took place at a temperature corresponding to the evaporation of the oxygen under a pressure of 437 millimetres of mercury. From these experiments it results that the boiling point of fluorine is very close to -187°C , a number identical with Olszewski's boiling point of argon. By causing the liquid oxygen serving as a refrigerant to boil rapidly, a temperature of -210° was reached, at which temperature the liquid fluorine showed no sign of solidification. Some air which was accidentally admitted was immediately liquefied. In a few moments two distinct layers of liquid were seen; the upper, colorless layer, consisted of liquid air; the lower one, of a pale-yellow color, was fluorine. The density of the liquid was determined at 1.14; its capillarity was less than that of liquid oxygen; it was found to have no absorption spectrum, and is not magnetic.

The results of three experiments by J. H. Kastle and W. A. Beatty go to prove that light causes the combination of hydrogen and bromine at 196°C ., with an amount of change proportional to the time of exposure. In the dark at 196°C . the combination of the two gases is exceedingly slow, whereas in the sunlight the change is fairly rapid. Certain results that have been obtained would, moreover, seem to indicate that light causes the combination of the two elements even at 100°C .; but further experiments will be necessary to establish this point fully. The results seem to strengthen the analogy existing between chlorine and bromine. The difference in the temperatures necessary to enable the light to cause the combination of these elements with hydrogen is regarded as simply another rough measure of their relative affinities.

Experiments by W. J. Russell have shown that certain metals have the property of giving off, even at ordinary temperatures, vapor which affects the sensitive photographic plate, that this vapor can be carried along by a current of air, and that it has the power of passing through thin sheets of such bodies as gelatin, celluloid, collodion, etc.; in fact, so transparent are these bodies to the vapor that, even after it has passed through them, it is capable of producing clear pictures of the surface of the metal from which it came. Curiously, the most active metals are not the most volatile, and this and other facts make it evident that much still remains to be discovered on this subject. The experiments have been extended to active organic substances, and very interesting and various results have been obtained with oils, essential oils, mineral oils, liquors, etc.

The fact that the luminosity of phosphorus in air is increased by certain gases and inhibited by others

was investigated by Thomas Graham and later by Joubert, who demonstrated that luminosity and oxidation go hand in hand, and that inhibited phosphorescence could be, as in the case of pure oxygen, resuscitated by a reduction of pressure. The investigation has been extended by Herr Centnerzwer to embrace a large number of organic substances; and it has been found that the specific influence of the substances admits of certain general conclusions. Thus it increases in a homologous series as the number of carbon atoms increases; it is approximately the same for isomers; it is increased by a double linkage of carbon atoms; it is not generally affected by the substitution of chlorine or bromine for hydrogen; but is increased in a high degree by the replacement of hydrogen by iodine. The results have, however, not given any clear idea of the mechanism of the process by which the oxidation is suspended.

In his investigations of the thermal properties of gases and liquids, Prof. Sydney Young determined the vapor pressures and specific volumes of a number of substances both as liquids and as saturated vapor, from low temperatures to their critical points. Twenty-six substances were examined, including paraffin, benzene and its haloid derivatives, esters, alcohols, and acetic acid, and the data obtained allow of a simple classification in respect to their physical constants. Among other points of interest results show that the molecules of the alcohols at moderate temperatures are polymerized in the liquid state but not in the gaseous, while there is polymerization in both states in the case of acetic acid; also that the molecules of the alcohols and acetic acid appear to be polymerized to a considerable extent at the critical point. Ample proof was obtained in the course of the investigations that the views of Andrews regarding the behavior of a substance in the neighborhood of the critical point are correct, and also that the vapor pressure of a pure substance is independent of the relative volumes of liquid and vapor.

Having already found that nitrogen and oxygen gases, properly purified, form clear, transparent liquids, Prof. Dewar devised an apparatus for ascertaining the proportion of any gas in air that is not condensable at -210° , under atmospheric pressure or is not soluble in liquid air under the same conditions. It was found that 1 part of hydrogen in 1,000 of air was just detectable by his method. Ordinary air, containing 4 parts of carbonic acid per 11,000 parts, gave a turbid liquid from the solidification of the carbonic acid, and oxygen containing traces of chlorine behaved in a similar manner.

It is observed by A. Liversidge that when solid carbon dioxide is examined under the microscope it presents along its edges projecting wirelike crystals which have branching filaments issuing from them, apparently at right angles, resembling somewhat the groups of minute crystals seen in crystallized iron, gold, and ammonium chloride. The rapidity with which the carbon dioxide evaporates makes it difficult to catch the form of the crystals, either by photography or other means.

The property of producing a beautiful red coloration with nitro-prussiate of sodium and potash, either with or without the subsequent addition of acetic acid, is shared, Louis Simon has shown, by ordinary ethylic aldehyde with a large number of aldehydic and ketonic bodies; the addition of a few drops of aqueous methylamine and a few drops of dilute nitro-prussiate to a weak solution of ordinary ethylic aldehyde gives a beautiful characteristic blue color.

In a series of experiments made simultaneously by M. and Mme. Vallot at Chamounix (altitude

3,559 feet) and at Montanvert (altitude 6,256 feet) considerably more decomposition of oxalic acid by sunlight took place at the higher station, the mean difference being 2.1 to 1 for a difference of level of 2,697 feet. The result of the experiments shows that temperature plays a more considerable part than was suspected, but that in the combined action of the two the greatest influence is exercised by light.

In an experiment described by H. Pillat, a small iron ring was laid directly on the sensitive surface of a bromo-gelatin plate; at its side another similar ring was placed, but separated from the sensitive surface by a very thin sheet of microscopic cover glass. The latter was covered by a bell jar fastened to the plate with paraffin. The whole was left in the dark for four months. After developing the plate it was found that the iron ring under the jar had made no impression, but that the ring placed directly on the sensitive film had produced an image slightly larger than the ring itself, and therefore extending beyond the line of contact. The experiment is interpreted as showing that the phenomenon is not due to radiation but to a volatile body produced by the iron.

Experiments by T. Wiborgh for determination of the reducibility of iron ore indicate that every mineral giving a degree of oxidation of 77.8 at a low temperature will be easily reducible—that is, can be transformed into metallic iron by the ordinary furnace gas. This degree of oxidation corresponds to a particular and definite molecular condition, by reason of which no metallic iron is formed till it has been reached; but as soon as it has been reached the reduction proceeds very rapidly and the degree of oxidation diminishes.

New Substances.—M. Henri Moissan has obtained by the direct union of calcium and hydrogen a transparent crystalline hydride, with the formula CaH_2 . The hydride is stable at a high temperature, and is an energetic reducing agent. By its violent decomposition in contact with cold water it strongly resembles the definite crystallized carbide of calcium prepared by the author in the electric furnace. In this compound the hydrogen is comparable to the metalloids (carbon or phosphorus), and not to the metals. Even the appearance of the hydride distinguishes it from the hydrides of MM. Troost and Hautefeuille and the hydrogenized palladium of Graham. The author finds that there are in reality two series of hydrides, some in which the hydrogen seems to be in solution in the metals, and the others forming at a more or less elevated temperature, and presenting all the characteristics of definite chemical compounds.

Besides its curious action on water, M. Henri Moissan says, carbide of calcium acts as a powerful reducing agent, and, by virtue of this property, can furnish a number of new compounds by double reaction, but only when in contact with the body in a liquid state, or in a state of fusion at a sufficiently high temperature. In a state of fusion it acts energetically on the oxides, and if the metal will not unite with carbon—as is the case with lead, tin, and bismuth—it is set at liberty and can be separated or combined with other bodies, according to the condition of the experiment. If the metal or metalloid is capable of being carburized, a double decomposition takes place according to the formula $\text{RO} + \text{CaC}_2 = \text{RnC} + \text{CaO}$, in which R represents a metal and n a variable number of atoms of carbon. By this method definite crystallized carbides of aluminum, manganese, chromium, molybdenum, silicon, etc., have been prepared.

Carbide of sodium is obtained by Camille Matignon in the form of a white powder, with a density at 15° C. of 1.575, and appearing quite insoluble.

Dry air and oxygen have no effect on it at ordinary temperatures, but on gently heating combustion takes place, leaving a residue of CO_2Na_2 . In the presence of chlorine gas it becomes incandescent, and with bromine the reaction is almost of explosive violence. Iodine has a more moderate action, and C_2I_4 , melting at 185° C., can be obtained. Hydrogen has no action. When thrown into water, carbide of sodium explodes violently, giving a deposit of carbon. It also becomes incandescent in contact with CO_2 and SO_2 . It acts in the cold on a large number of organic substances. The primary and secondary alcohols give off acetylene, giving rise at the same time to a corresponding alcoholate.

Among other compounds of glucinum prepared by M. P. Lebeau is anhydrous fluoride, which is found in the form of a vitreous, transparent mass, or as a sublimate consisting of very small deliquescent crystals, melting in a similar manner to glass, but becoming very fluid and notably volatile at 800° C; an oxyfluoride of practically constant composition, an almost transparent white body, completely soluble in water, and a borocarbide, which occurs in brilliant crystals with a metallic luster and a density of about 2.4, which does not change in the air at the ordinary temperature, but oxidizes superficially when heated to redness. The author was not able, in the reduction of glucina by boron in the electric furnace, to obtain any compound free from carbon.

By the action of hydriodic acid on carbide of glucinum, F. Lebeau has obtained an iodide of the formula GII_2 in beautiful transparent crystals. The new iodide reacts on a large number of bodies, and serves for the easy preparation of new compounds of glucinum, such as the phosphide, the sulphide, and the cyanide. It also readily unites with organic compounds.

Heating emerald in a carbon tube in the electric furnace for a few minutes, M. P. Lebeau found that the greater part of the silica distilled off, leaving a melted mass having a metallic luster; this consisted of a mixture of carbide of aluminum, carbide of glucinum, silicide of iron, and silicide of carbon. It is attacked by dilute acids, giving a solution containing glucina and alumina. By using hydrofluoric acid a fairly pure solution of fluoride of glucinum can be obtained at once, fluoride of aluminum being insoluble. If half its weight of carbon is added to the emerald a complete reduction is soon arrived at; the silica is completely eliminated either by volatilization or the formation of silicide of carbon, a body almost as unassailable as diamond.

A double iodide of potassium and lead, PbI_2KI , has been observed by F. C. H. Brooks, of Queensland, Australia, to be formed by the addition of an excess of potassium iodide to a lead salt. It occurs in silky, acicular, almost white crystals, and possesses the property of being decomposed by water, with the formation of iodide of lead and potassium iodide. This property makes it a most delicate test for water. It even begins to decompose, losing its white color and becoming distinctly yellow, when exposed to the air of a room for a few minutes. It also becomes yellow when gently heated, but assumes its original color on cooling. Heated more strongly, it is partially decomposed, with the appearance of iodine vapors. While pure water decomposes this compound, a strong solution of potassium iodide dissolves it.

Among the subjects referred to by Dr. Charles Symes in his presidential address at the British Pharmaceutical Conference was the production of sympathetic esters and odoriferous substances closely related to the odors of flowers, plants, and animal matters. Besides artificial musk, vanillin, and the amyl, butyl, and ethyl compounds resembling fruit

flavors, with which the public have become familiar, there have been introduced heliotropine (resembling heliotrope), ionine and iraldine (violet), eumarine (new-mown hay), terpineol (lilac), bergamot (linalyl acetate (bergamotte), nerolin (neroly), jasmin oil, anesic aldehyde (hawthorn), geranol (rose geranium), carvol (caraway oil), safrol (oil of sassafras), etc. These products are used for toilet soaps, and also enter largely into the composition of the essences named after the flowers. They are more persistent than the natural odors. While these artificial scents may deceive the public and even be preferred by them, those who are accustomed to handling delicate perfumes have not much difficulty in distinguishing between the artificial and the real; and "it still taxes the skill of the chemist and the art of the perfumer to obtain that subtle delicacy of fragrance manufactured and elaborated in Nature's own laboratory."

Prof. Ramsay, who was assisted in his experiments by Morris W. Travers, communicated to the French Academy of Sciences June 6 and to the Royal Society June 9 the discovery of a fifth gas in the atmosphere, krypton. Having been furnished by Dr. Hampson with about 750 cubic centimetres of liquid air and having allowed all but 10 cubic centimetres to evaporate away slowly, on collecting the gas from that small residue in a gasholder, the authors obtained, after removal of oxygen with metallic copper and of nitrogen with a mixture of pure lime and magnesium dust, followed by exposure to electric sparks in presence of oxygen and caustic soda, 26.2 cubic centimetres of a gas showing the argon spectrum feebly, and, in addition, a spectrum which, they believed, had not been seen before. This spectrum was characterized by two very brilliant lines, one almost identical in position with D_2 and almost rivaling it in brilliancy. There was also a green line, comparable with the green helium line in intensity, and a somewhat weaker green. With these and other data of the spectrum given in their communication, the authors felt justified in characterizing the gas as a new one. Its density was determined at from 22.47 to 22.51 as a minimum, with a probable density of 40. The authors concluded from these and their other observations that the atmosphere contained a hitherto undiscovered gas with a characteristic spectrum, heavier than argon and less volatile than nitrogen, oxygen, and argon, monatomic, and therefore an element. The name krypton, or "concealed," was given to it, with the symbol Kr. Its atomic weight was calculated to be about 80, and it is placed in the helium series.

The authors continued these experiments in the search for gases in the atmosphere of a higher density than ammonia, as supposed by Dr. Johnstone Stoney. On June 16 they communicated to the Royal Society the results of experiments in fractionation of liquid argon. When the argon was separated as a liquid from liquid air, a considerable quantity of a solid was observed to separate partially round the sides of the tube and partially below the surface of the liquid. The liquid was evaporated slowly and the solid was volatilized. Two fractions of gas were collected from the liquid, the spectrum of the first of which was found to be characterized by a number of bright-red lines, among which one was particularly brilliant, and a brilliant yellow line, while the green and blue lines were numerous but comparatively inconspicuous. The wave length of the yellow line was found to be different from that of those of sodium, helium, and krypton, all of which equaled it in intensity. A new gas was therefore indicated which was named neon or "new." Its density was estimated at 14.67, a figure approaching

what the authors had hoped to obtain (10 or 11) to bring it into its position in the periodic table. The density has in fact been reduced by continued purification. Unlike helium, argon, and krypton, neon is rapidly absorbed by the aluminum electrodes of a vacuum tube, and the appearance of the tube changes, as pressure falls, from a fiery red to a most brilliant orange, which is seen in no other gas. With a density of 9.6 and consequent atomic weight of 19.2, neon would follow fluorine and precede sodium in the periodic table. The gas obtained by the volatilization of the white solid that remained after the liquid had boiled away, showed, when introduced into the vacuum tube, a very complex spectrum, totally differing from that of argon, while resembling it in general character. The density of this gas was determined to be 19.87, and it was found to be monatomic. The name metargon was given to it, and it was regarded as a distinct elementary substance, holding apparently the position toward argon that nickel does toward cobalt, having approximately the same atomic weight, yet different properties.

In a paper read before the British Association, Prof. Ramsay described still another gas as found in the last fractions of liquefied argon—a heavier gas than the others, which it was proposed to name xenon. It is very easily separated, for it possesses a much higher boiling point, and remains behind after the other gases have evaporated. This gas, which has been obtained comparatively free from krypton, argon, and metargon, possesses a spectrum analogous in character to that of argon, but differing entirely in the position of the lines. All the gases described are present only in very small amount.

Prof. Charles F. Brush described to the American Association experiments with a supposed new gas, a constituent of the atmosphere, for which he proposed the name of etherion. He had discovered it a year and a half previously while looking for occluded hydrogen in glass, and after many months of experiment had effected a partial separation of it from the air by diffusion. Its chief characteristic, as thus far determined, is its enormous heat conductivity at low pressure, which, even when it is mixed with a large excess of other gases, is about a hundred times that of hydrogen, the best gaseous conductor hitherto known. Evidence was cited by the author in his paper to show that etherion is a mixture of at least two different gases. Prof. Brush believes that it is related to the cosmic ether, whence the name he has given it. Sir William Crookes has remarked that the properties attributed by Prof. Brush to etherion are similar to those presented by the vapor of water under certain conditions.

In his presidential address at the British Association, Sir William Crookes described a new element, monium, as discovered by him among what he called the "waste heaps of the mineral elements." In the course of his spectroscopic researches with the raw earths he found a group of lines high up in the ultra-violet, faint at first, but which grew stronger with further purification, while the other lines of yttrium, samarium, ytterbium, etc., became fainter and "at last practically vanishing, left the sought-for group strong and solitary." As the group of lines that betrayed its existence stood almost at the extreme end of the ultra-violet spectrum, the author proposed to name the new element monium, from the Greek *μόνος*, alone. It offers a direct contrast to the recently discovered gaseous elements by having a strongly marked individuality, and exhibiting readiness to combine. Sir William Crookes estimates the atomic weight of monium as being not far from 118—greater than

that accepted for yttrium, and less than that for lanthanum.

A new compound described by J. H. Aherson in the "Berichte" of the German Chemical Society as occurring in many species of *Crassulaceae* has the chemical composition and molecular weight of malic acid, $C_4H_6O_5$, but differs from it to a very marked degree in behavior when heated. Ordinary malic acid under such circumstances yields water and fumaric acid or maleic anhydride, whereas the new isomeride is converted into a volatile double anhydride or malide, $C_8H_6O_8$, formed from two molecules of the acid, while small quantities of fumaric and maleic acids and other products are also formed. The new acid is, moreover, more strongly dextro-rotatory than ordinary malic acid, and yields salts that differ considerably from the malates. The author considers that the new compound is geometrically isomeric with ordinary dextro-malic acid, but that in it the free rotation of the two carbon atoms has in some way been arrested, so that the atoms and groups attached to them are not in that "most favored," position by the aid of which Wislicenus has been able to formulate the production of fumaric and maleic acids from the ordinary acid.

Compounds analogous to those formed by the combination of the green sulphate of chromium with sulphuric acid, but combined with chromic acid and the chromates, are described by A. Reoura. The existence of these compounds can easily be shown by adding a solution containing one molecule of the salt to a solution containing one molecule of chromic acid or chromate of potash. The combination takes place immediately, and that the sulphuric and chromic acids are both assimilated is proved by the fact that neither chloride of barium nor nitrate of silver will give a precipitate. The same combination of the green sulphate can be shown with two molecules of chromic acid or chromate of potassium; and the chromo-sulpho-dichromate of potassium, when dried at $150^\circ C.$, is, like the monochromate, insoluble in water. In a similar manner chromo-sulpho-trichromic acid can be obtained; but the combination stops here, for if four molecules be added a precipitate is obtained by nitrate of silver, when all the other conditions are exactly the same as before.

Adding a solution of carbonate of sodium in boiled water to well-washed and still moist chromous acetate, G. Baugh finds that the acetate immediately goes into solution and a reddish-brown body is precipitated. This is chromous sodic carbonate, and it forms two hydrates—one containing ten molecules of water and the other only one. The former, when examined under the microscope, appears in the form of little reddish-brown lozenges, either isolated or grouped together like the leaves of a book. It is very effervescent and is an energetic reducing agent. It decomposes water below $100^\circ C.$, with the disengagement of hydrogen, and is soluble in cold water, but its solubility decreases on keeping. The salt containing one molecule of water is a yellow powder which changes to brown when heated in a vacuum or in a current of hydrogen, and regains its yellow color on cooling. It decomposes at about $300^\circ C.$ into green chromium sesquioxide and carbonate of sodium. Heated in the air, it quickly oxidizes, forming chromate of sodium. Cold boiled water gradually transforms this salt into the one containing ten molecules of water.

By exhausting ordinary white bedding feathers with warm ether and leaving the etherized extract to cool, M. E. Drechsel has obtained a substance, fusible at $52^\circ C.$, easily soluble in chloroform, very slightly soluble in alcohol, and soluble in ether. On

analysis it gave figures corresponding to the formula $Si(OC_{24}H_{49}O)_4$. This substance may therefore be the orthosilicic ether of a bivalent alcohol, $C_{24}H_{49}O_2$, a homologue of cholesterol. The author has tried to procure a homologue ether from a solution of chloride of silicon in chloroform and cholesterol; he obtained a body with analogous properties, melting at $59^\circ C.$

It has already been shown that aniline and its derivatives, such as the bases of the pyridic series, were able, like ammonia, to combine with the haloid salts of zinc and cadmium and give well-crystallized bodies, the compositions and proportions of which have been described by D. Tombeck. This author has now found that compounds analogous to those used before give corresponding compounds with nickel, cobalt, magnesium, and manganese salts under conditions only slightly different. Aniline again, like ammonia, combines with several oxygenated salts. The general method for the preparation of the compounds formed in this case consists in pouring an excess of aniline into a solution of the metallic oxygenated salt; on agitation the crystalline precipitate is formed.

It is observed by W. Colebrook Reynolds that when the salts of certain other metals are added to a concentrated solution of potassium carbonate double salts are formed which are sometimes, as in the case of iron, copper, nickel, and cobalt, soluble in the solution, instead of the normal or basic carbonates which are formed when a dilute solution is employed. These double salts and their solutions are decomposed by pure water. To obtain them, the chloride, nitrate, or preferably the acetate, is added to a concentrated solution of potassium carbonate, and the liquid is left to crystallize.

A number of new cyclic ketones are obtained from the heavy oils distilled from Stockholm tar, by A. Behal, by first treating them with alkalis for removal of the acids, phenols, etc. The supernatant oil, after washing with distilled water, is shaken up with hydrochloric acid in proportions variable according to experience, until when diluted and adulterated with carbonate of soda, none remains unacted upon. Treating this solution two or three times with a current of steam, a slightly yellow liquid, smelling of menthol, remains. The ketones are separated from this liquid by means of hydrochloric acid. Pure ketones are very numerous and belong for the most part to the series of benzenic tetrahydrides.

Prof. Nasini, of Padua, and Signori Anderlini and Salvadori have been occupied for a considerable time with a study of the gases emanating from the earth in various parts of Italy, with the object of detecting the presence of argon and helium, and possibly of other elements they may contain. They reported to the French Academy of Sciences in July that they had observed in the spectrum of the vapors of the Solfatara di Pozzuoli, which contain argon, a bright line with a wave length corresponding to that of corona 1474 K, attributed to coronium, an element never before observed in terrestrial products, which should be lighter than hydrogen. Other lines were discovered in the spectra of various vapors, showing coincidences or proximity only, with some unimportant lines of various elements, which open further fields for investigation.

M. and Madame Curie, having observed that certain uranium and thorium minerals, such as pitchblende, chalcocite, and uranite, emit the Becquerel rays even more actively than the metals themselves, inferred that they contain some especially active unknown substance. Their chemical researches on the subject, as communicated to the French Academy of Sciences, Dec. 26, point to the presence of some body which they have been unable, indeed, to

isolate from bismuth, but which they call *polonium*. In experimenting with pitchblende they discovered a substance having still more than polonium the power of discharging electrified bodies at a distance by making the air a conductor, and of instantly impressing sensitive plates, and which has 900 times more active properties than uranium. The authors and M. Bémont, who has also studied this substance, have named it *radium*.

Hamilton P. Cady, of the University of Kansas, has obtained, by adding iodine to liquid ammonia, a dark, opaque liquid which changes to olive green and deposits a dark-green crystalline precipitate. This substance, dried over sulphuric acid, dissolves in ether, alcohol, and chloroform, but is insoluble in dilute acids, and is decomposed by them, generally with explosive violence. It is instantly decomposed by strong acids. Potassium-iodide solution dissolves the crystals, and they are decomposed and dissolved by hydrogen sulphide, sulphurous acid, and potassium hydroxide. The composition of the substance agrees well with the formula HN_3I , and the formation of the compound is supposed to take place according to the equation $11\text{NH}_3 + 9\text{I} = 11\text{N}_3\text{I} + 8\text{NH}_4\text{I}$.

In a third contribution to the Royal Society by R. T. Baker and H. G. Smith respecting the essential oils of the genus *Eucalyptus*, the species investigated are arranged according to their chemical, economic, and botanical affinities. It is shown that the essential oil of the red stringy bark *Eucalyptus macrorrhyncha*, besides containing a large percentage of edesmol (the stearoptene of eucalyptus oil), gives an oil of excellent quality, containing more than 50 per cent. of eucalyptol, and answering all the requirements of the British Pharmacopœia excepting that of specific gravity.

Well-burnt charcoal reacts readily, with considerable rise of temperature, with fuming nitric acid. When boiled for twenty-four hours with this acid, G. Dickson and T. H. Easterfield found that the charcoal passed entirely into solution and, on dilution with water, a black, amorphous substance was precipitated, while mellitic and non-crystalline acids remained in solution. The black, amorphous substance resembled the mellogen of Bartoli and Papasogli. It was easily soluble in alkali, and on oxidation by alkaline permanganate yielded oxalic and mellitic acids in about equal proportions. From charcoal 25 per cent. of its weight of crystalline ammonium mellitate can be obtained. Coal gives only a small yield of mellitic acid.

A new dyestuff is described by Mr. Henry G. Smith, of Australia, as obtained from the leaves of the "red stringy bark," *Eucalyptus macrorrhyncha*. This material, which in some respects is allied to aromadendrin, is described as belonging to the quercetin group of dyes. Myrticolorin, as this new dye is named by the author, is a glucoside of quercetin, and breaks up, on boiling with dilute sulphuric acid, into quercetin and a sugar.

New Processes.—A new process for the manufacture of salts of the higher oxides described by H. N. Warren consists in the conversion of such alloys as spiegeleisen, ferromanganese, chromeisen, etc., by the direct contact of aqueous solutions of the alkalis, aided by electric energy, into their corresponding salts, such as chromates, manganates, etc. The baths for the conversion of these alloys have so far been constructed of glass and partially covered with graphite plates, which constitute the negative electrolyte, while the alloy in question is attached to the positive.

In the electrolytic process for preparing potassium chlorate at Villers-sur-Hermès, in Switzerland, thin platinum-iridium anodes and iron cathodes are employed, and the solution is maintained, by the

heat evolved by the passage of the current, at a temperature of from 50° to 60° C. The electrolytic cell is divided by a diaphragm of porous earthenware into a smaller cathode and a larger anode compartment, in order to prevent as far as possible the reduction of the chlorate by the hydrogen evolved at the cathode. With the proper electric current, the caustic potash formed at the cathode is transferred to the anode compartment fast enough to absorb all the chlorine evolved. The potassium chlorate crystallizes out in the anode compartment, its solubility being diminished by the employment of a saturated solution of potassium chloride as electrolyte. The diaphragm may be dispensed with, according to Oertel, if the solution is alkaline, because in that case potassium chlorate is not reduced, to any appreciable extent, by nascent hydrogen.

In the manufacture of phosphorus in the electric furnace siliceous material is added to the naturally occurring phosphates which are used to furnish a readily fusible slag. The finely powdered mixture of these substances with carbon is fed in through a hopper at the top of a brick-lined trough, through opposite sides of which the carbon electrodes are introduced. The fused slag collects at the bottom of the furnace, whence it is run off from time to time the same as from a blast furnace, while the mixture of phosphorus vapor and carbonic oxide passes to the condensing apparatus through an opening placed near the top of the furnace. More than 80 per cent. of the phosphorus contained in the materials is obtained. The loss that occurs is largely due to the presence of iron, which combines with phosphorus to form a phosphide that remains in the slag.

It is observed by M. P. Yvon that when coarsely powdered carbide of calcium is brought into contact with concentrated alcohol (from 90 to 95 per cent.) the carbide is attacked with considerable vigor, and continues to give off acetylene as long as any water remains in the alcohol. When the latter is quite anhydrous the disengagement of gas ceases. The use of carbide of calcium, therefore, enables us to determine whether or not an alcohol is anhydrous. It also furnishes a method of preparing absolute alcohol, for which a quantity of alcohol of 90 or 95 per cent. strength is placed in a flask and one fourth its weight of powdered carbide of calcium is added. The disengagement of gas, at first very vigorous, soon calms down. The flask is next frequently shaken up during two or three hours, and afterward left alone for twelve hours. The mixture is then transferred to a distilling apparatus and the separation of the alcohol is proceeded with, the first portions collected being put aside, because they contain small quantities of acetylene in solution; or, all the alcohol may be collected in the same receptacle, and afterward shaken up with a small quantity of dried sulphate of copper, which takes up all the acetylene held in solution. A second distillation can then be proceeded with without separating the acetylides of copper which is formed.

In the electrolysis of potassium and sodium chlorides, to produce, according to the conditions employed, caustic alkalis and chlorine, hypochlorites or chlorates, it is necessary to keep the primary products of the decomposition separate, and this is accomplished either by the use of a porous diaphragm or by means of mercury. It is not easy to make a diaphragm that shall be sufficiently durable with a solution of caustic soda on one side of it and of chlorine on the other, but diaphragms are successfully used. A more serious drawback is the impossibility of separating the caustic alkali from the chloride, but this is avoided to a great extent

in a very ingenious way by a process devised by Hargreaves and Bird, and in another process by Hulin, which is similar to it. When mercury is employed as the cathode the diaphragm becomes unnecessary, the mercury taking up sodium in contact with the salt solution and giving it up to pure water in another vessel. Several devices have been contrived for causing the mercury to perform these functions alternately, among which one by Mr. Castner is described by Mr. Thomas Ewan as being the most effective. The caustic soda obtained in this way is practically pure. If instead of keeping the products of the electrolysis of a salt solution separate they are mixed together in the cold, a solution of hypochlorite is formed.

Of two methods described by M. Moissan by which crystalline calcium may be prepared containing less than 1 per cent. of impurities, one depends upon the property possessed by calcium of dissolving in liquid sodium at a dull-red heat and separating in crystals on cooling. By treating the mass cautiously with absolute alcohol the sodium is removed and the calcium is obtained in brilliant white hexagonal crystals. In the other method similar white crystals of calcium are obtained by the electrolysis of fused calcium iodide. Calcium has been described by previous workers as a yellow metal, but in the light of M. Moissan's experiments that color was probably communicated by impurities.

Considering the production of volatile fatty acids from the washing waters of wool as now of practical importance, A. and P. Buisine give an abstract of the method of procedure by which the acids are distilled and entangled with watery vapor and condensed by it. The waters are first allowed to ferment for eight days, then boiled to drive off the ammonia, then acidulated with sulphuric acid and distilled. The volatile fatty acids found in the largest quantities are acetic and propionic, but we also get a fair percentage of butyric, valerianic, caproic, and benzoic acids, with traces of formic and caprylic acids and phenol. Among other applications, this mixture of raw fatty acids is particularly suitable for the production of acetone, methyl-ethylacetone, and the higher acetones comprised by the mixture known as "oil of acetone."

In the commercial extraction of thorium by M. Wyrnoff and A. Verneuil the mineral is worked up by one of the usual methods as far as the production of the oxalates; these are precipitated by sodium carbonate and hydroxide, and the precipitate is dissolved in hydrochloric acid. This liquid is treated with small portions of barium peroxide until hydrogen peroxide no longer gives a precipitate. The deposit, which is of a reddish-orange color owing to the presence of cerium, contains all the thorium, together with from about 20 to 30 per cent. of impurities. Further treatment with hydrogen peroxide after a similar set of operations readily gives a very pure thorium. The method has been applied on the large scale, starting with five tons of monazite, with good results.

Hite's boiling-point apparatus is described by H. C. Jones as one in which the condensed solvent is not returned directly into the boiling solution. It consists of a tube about one fourth filled with glass beads, on which rests a platinum cylinder. The thermometer is immersed in the solvent inside the cylinder which serves to separate the condensed solvent and the boiling solution.

J. Hausser has found that of all the substances he has tried for the purification of water by filtration, the infusorial earth called *Kieselguhr* has given the best results. It is prepared by first finely sifting to remove all large particles, and then heating to about 800° or 1,000° C. On cooling, it must

be pulverized and levigated to obtain an impalpable powder—though this last operation is not necessary in the case of all the substances dealt with. To use it, the powder is mixed with a little water and thrown on a filter; as the liquid passes through, the powder remains, and forms a perfect layer for filtration and sterilization.

Having prepared cuprous iodide by one of the usual methods or by sprinkling iodoform in small quantities at a time upon a hot surface of copper, Bevan Lean and W. H. Wheatmough most conveniently separate iodine from it by heating in a stream of dry air at from 220° to 240° C. and condensing the vapors upon a cold surface. But although the greater proportion of the iodine in a given quantity of cuprous iodide is quickly expelled, it is not easy to expel the whole, and the authors are making further experiments upon this point. The action of air on cuprous iodide is shown not to be dependent upon the presence of moisture. Iodine liberated as described from cuprous iodide at 240° C. leaves no residue when volatilized at 75° C. If examined spectroscopically, no evidence of the presence of copper can be found. The melting point uncorrected is from 112.5° C. to 114° C.

In M. R. Metzner's process for preparing selenic acid with copper selenate, selenium is converted into selenious acid, and this is oxidized in solution with chlorine. Copper oxide is added to this liquid and evaporation gives fine prisms of copper selenate. Pure selenic acid is obtained from this by electrolysis.

Atomic Weights.—The variations in determinations of the atomic weights of nickel and cobalt have led to suggestions that these metals contained another new element, for which Krüss offered the name of gnomium. The results of analyses of the two metals by Richards and Cushman and by Richards and Baxter fail to confirm this supposition, and demonstrate that properly purified nickel and cobalt are homogeneous. Analyses of the bromides of the two substances gave as the identical values of their respective atomic weights, from 3 determinations each, for nickel, 58.69, and for cobalt, 58.99; $O = 16$.

A theory of valency is explained by Dr. Joachim Sperber which presumes the existence of elements that can not enter into chemical combination because their atoms have a prevailing tendency to transverse vibrations; there is, too, the author suggests, substantial proof of this, for the cosmic ether is without doubt such an element, since it does not enter into chemical combination, and its vibrations are transversal. Moreover, the chemically negative elements argon and helium have recently been discovered, and if they can not be made to enter into chemical combination—as up to the present time is the case—this, in accordance with the author's theory of valency, is to be attributed to a prevailing tendency on the part of their atoms to vibrate transversely. Julius Thomsen supposes that if the chemical character of the element is altogether a periodic function of the atomic weights, such a function must also obey their general laws. The periodic functions—the transition from negative to positive values, and inversely—must take place either by way of zero or of infinity; in the former case the transition is gradual, but in the latter case sudden. The former case corresponds to the gradual modification of the electrical character with the increasing atomic weight in the individual series of elements; but the latter case corresponds to that of the transit from one series to the next. Hence it may be supposed that the transit from one series of elements of the periodic system to the next takes place by way of an ele-

ment which is electrically indifferent. The valency of such an element would be null; it would, in this direction, form the transition between the two successive monovalent elements, the electro-negative and the electro-positive. Assuming that the transition between the various series of elements as the author has arranged them in his treatise on the systematic grouping of the elements is formed by such elements, it follows directly that their atomic weights expressed in whole numbers would be 4, 20, 36, 84, 132, 212, and 292, and the periodic system would then contain 7 series of elements. With such an arrangement of the elements the periodicity in their properties appears as a continuous function.

A determination of the atomic weights of praseodymium and neodymium by Harry C. Jones gave for the former substance 140.47 when $O = 16$, or 139.41 when $O = 15.88$; and for neodymium 143.6 when $O = 16$, or 142.52 when $O = 15.88$. The method of procedure adopted in the case of praseodymium consisted in reducing the superoxide to the sesquioxide in an atmosphere of hydrogen and converting the sesquioxide into the sulphate. For neodymium the oxalate was prepared from the double nitrate of neodymium and ammonium, and converted into the oxide by heating. Lanthanum, which was present in the salts of both the metals, was separated from them, but praseodymium in the neodymium salt could not be got rid of, and had to be calculated for. Absolute accuracy is not claimed for either of the determinations, because of the impossibility of effecting complete separations of the rare elements; but the author believes that his determinations do not vary more than 0.2 from the correct atomic weights. His determinations differ widely from those made by Von Welsbach, which give 143.6 for praseodymium and 140.8 for neodymium, O (presumably) $= 16$; but the author observes that if the values were reversed they would nearly correspond, and suggests that there may have been a typographical error in Von Welsbach's paper as published.

A. Rosenheim and P. Noge support the bivalence of glucinum, because it forms with the binoxalates compounds the preparation and properties of which they describe, and which are ordinary double salts. On the contrary, glucinum, like the bivalent metals, forms with the bitartrates complex compounds which are not double salts. The trivalent metals do not form the double salts. The molecular weight of chloride of glucinum, by the ebullition method, gives a number corresponding to the formula $GlCl_3$.

B. Branner has been led in the course of experiments upon fractional crystallization to conclude that cerium is associated with an element which possibly has an atomic weight of 110; another earth of lower atomic weight is perhaps present. From experiments made upon ammonium thoroxalate, a new salt which he describes, the same author deduces the atomic weight of thorium as $Th = 232.44$, a result agreeing with the number obtained by Krüss and Nilson. Prof. Branner has also contributed experimental data concerning praseodidymium and neodidymium, in the light of which he supposes that the eighth series of the periodic system may assume the form:

Cs	Ba	La	Ce	Pr	Nd
133	137.4	138.2	139.7	141	143.6.

Starting from the chloride and using the purest materials, F. P. Venable has calculated the atomic weight of zirconium— $H = 1.008$, $O = 16$, and $Cl = 34.45$ —in three equations, viz.: maximum, 91.12; mean, 90.78; minimum, 90.61. The atomic weight as determined by Bailey is 90.95. The mean value given in Clarke's recalculation is 90.40. The author

purposes repeating the determinations with the oxychloride.

The equivalent of cyanogen has been determined by G. Dean as 26.065; hence, if the atomic weight of carbon be 12.01, that of nitrogen is 14.055. Mr. Dean's method was by determining the amount of potassium bromide that will react with a known weight of silver cyanide dissolved in nitric acid.

The atomic weight of boron is calculated by F. P. Armitage, from determination of the water of crystallization of borax as 10.

The atomic weight of cobalt has been revised by T. W. Richards and E. P. Baxter, using the method of the analysis of cobaltous bromide, and determined by them at 58.99, oxygen $= 16$.

Chemical Analysis.—The principal difficulty in the analysis of silicates is the passage of the silica through the gelatinous state. The evaporation to dryness, to which recourse is ultimately had, tends to the partial entanglement of the bases in the residue. The analogies which exist between silicon, titanium, and tin would lead us to suppose that it is possible to obtain silica directly in the insoluble state by attacking a silicate, which would not become hydrated during its decomposition with sufficiently concentrated nitric acid. A. Leclère has shown that this result can be obtained by previously melting natural silicates with oxide of lead, a base which at a moderate temperature forms very fusible compounds with all the elements found as silicates, and retains the alkalies in a well-marked and characteristic manner. Porphyzied silicate is mixed with oxide of lead and is heated for half an hour or a little longer in a muffle at a reddish-orange heat to fusion as a liquid enamel, which is easily detached from the platinum of which the crucible is made if the bottom is cooled quickly. The enamel is decomposed by a mixture of not less than ten times its weight of equal parts of ordinary and of fuming nitric acid. By dilution with boiling water the lead is dissolved while the silica is collected on a filter. The insoluble hydrate obtained by this method retains about 10 per cent. of moisture when dried at $100^\circ C$. If we operate on pure silica and prepare the enamel in sufficiently thin sheets, so that there is no swelling under the action of the acid, we can obtain plates that show all the characteristic colors of the opal. The acid liquor containing the nitrates is concentrated to get rid of the excess of nitric acid, after which alcohol is added. On the addition of hydrochloric acid, slightly in excess, the lead precipitates immediately.

The application of Nessler's solution for the detection of ammonia gas in a gaseous atmosphere has been found defective when amines of the fatty series are present, since such substances deprive the mercurio-potassic iodide in alkaline solution of its special power. A more specific reaction for ammonia is recommended by S. Denigès, which consists in plunging the extremity of a glass stirring rod, wet with hypobromite of soda, into the gas to be tested. On contact with ammonia gas the wet part of the rod gives off a large number of small bubbles of nitrogen gas, so small that they appear as a white sheath round the extremity of the stirrer. At the same time the hypobromite loses its color. The property of behaving in this manner to hypobromite of soda belongs only to ammonia; the primary amines give a yellowish precipitate with this reagent, while the other fatty amines cause no notable phenomenon. M. Denigès describes two other reactions which are less characteristic than this one of the hypobromite of soda, but are interesting on account of their sensitiveness. But, like that of the mercurous nitrate, they belong as much to the fatty amines as to ammonia gas. One is the

invert reaction of formol, and is obtained by submitting a drop of commercial formol to the contact of ammoniacal vapors and then plunging it into a cubic centimetre of bromine water acidulated with a drop of acetic acid. In this manner a cloudiness or a yellow precipitate is obtained, which is produced by a bromine derivative of hexamethylene tetramine. Another reaction is based on the intense carmine coloration which one drop of an aqueous solution of hæmatoxyline or of extract of logwood takes in contact with even very small quantities of ammonia gas.

Finding that the numbers given by different investigators for the composition of the gases formed by the explosion of gun cotton are very variable, Christian Götting made a careful investigation of the solid and gaseous products arising from the explosion of a specimen having the composition, barium nitrate, 9.83 per cent.; nitrotoluol, 22.22 per cent.; and nitrocellulose, 67.96 per cent. The solid products consist of carbon, 9.51 per cent.; barium carbonate, 64.45 per cent.; and a residuum insoluble in acid, 26.05 per cent. The gaseous products consist of oxide of nitrogen, 10.75 per cent.; carbon dioxide, 27.48 per cent.; carbon monoxide, 36.02 per cent.; methane, 9.01 per cent.; hydrogen, 1.94 per cent.; and nitrogen, 14.8 per cent.

Oechsner de Coninek has given the results of experiments on the oxidation of some of the nitrified functions of the amides. Hydroxylamine is instantaneously decomposed with disengagement of nitrogen by solutions of hypochlorites of calcium, sodium, and potassium in an excess of alkali; acetaldoxime is easily decomposed in excess of the base. The diamines do not give off much nitrogen, but ammonia is separated. Carbonate of *guanidine* is immediately decomposed by the hypochlorites. The reaction is very distinct with the hydrazines, nitrogen beginning to come off at once and continuing to do so till cold. Cyanic and cyanuric acids are immediately destroyed by hypochlorites; but the results with most of the alkaloids, such as piperidine, nicotine, cocaine, etc., were negative. With antipyrine a certain quantity of nitrogen was given off.

A process for the decomposition of the bromides founded on the action of a mixture of permanganate and a soluble salt of copper has been devised by H. Baubigny and P. Rivals, and the authors have sought for a practical means of deciding if the decomposition is complete at any given moment. For this they use fluoresceine paper. Fluoresceine is prepared by heating for three hours the desired proportions of orthophthalic acid and resorcin to from 190° to 200° C. It is purified and treated with pure acetic acid at from 40° to 50° per cent. Paper is plunged into the filtered solution and allowed to dry. To use this paper it is moistened when the least trace of bromine gives a distinct rose color. Organic matter must be excluded.

For a simple qualitative research for small quantities of iodides or bromides in the presence of a large excess of an alkaline chloride, M. A. Carnot recommends the following procedure: Separate the iodine in a small quantity of the neutral solution by nitrous-sulphuric acid, and collect it in a few drops of sulphide of carbon. The violet or rose coloration is extremely sensitive. The iodine having been eliminated, add to the liquid a little of chromic and sulphuric acids; then heat to boiling, while keeping the flask covered with yellow fluoresceine paper. The very smallest quantities of bromine will be revealed by the characteristic rose color.

For the detection and estimation of carbonic oxide in the atmosphere, M. Armand Gautier passes air deprived of all dust, acid gases, and water,

through two tubes, one containing iodic anhydride, and the second pure powdered copper. The two tubes are so sealed together that they can both be placed in an air oven and heated to from 100° to 109° C.

Chemical Synthesis.—In the study by Losanitsch and Jovitschitsch of the action of the silent electric discharge in effecting chemical synthesis, the discharge being turned upon mixed gases led through the apparatus, carbon monoxide and water and carbon dioxide and hydrogen were condensed to formic acid; carbon dioxide and water yielded formic acid and free oxygen; carbon monoxide and hydrogen gave formaldehyde, which quickly polymerized; carbon dioxide and methane condensed to acetaldehyde, which soon formed aldol; nitrogen and water condensed directly to ammonium nitrite. Other interesting syntheses were obtained with sulphur compounds and with ammonia. In general, the reactions appeared to be the reverse of those produced by heat.

Another advance in the synthesis of albuminous substances has been made by Dr. Leo Lilienfeld, who, by means of the condensation of phenol and amidooxyacetic acid with phosphoric oxychloride, has succeeded in producing pepton, a substance which it had hitherto been believed could be obtained only from organic matters. The process was demonstrated by the author before the International Congress of Organic Chemistry.

Miscellaneous.—In a study on the sedimentation of turbulent liquids, M. W. Spring observes that water will sometimes hold finely divided matter of greater density than itself in suspension for an indefinite time, but that the presence of small quantities of salts in solution, or heating the liquid, will suffice to bring about precipitation. A medium formed of pure water containing finely divided silica or other non-electrolytic matter begins to clarify gradually as soon as two platinum electrodes are plunged into it and a current is passed through them. From this experiment the author proposes to develop a theory according to which the turbulent state is determined by a modification of the electric state of the finely divided particles, caused by the change in the energy of attraction of the matter forming them, consequent on disintegration. The presence of a dissolved salt or acid renders the liquid a conductor, and the discharge of electricity causes the particles to collect in flocculent masses, an explanation in accordance with Bodlander's view that only electrolytes are capable of producing clarification. Again, convection currents produced by warming the liquid give rise to electric currents which have the same effect. M. Spring proposes to explain the fall of rain accompanying thunderstorms on the same theory.

The results of a study by W. F. Hillebrand of the distribution and quantitative occurrence of vanadium and molybdenum in rocks of the United States indicate that vanadium occurs in quite appreciable amounts in the more basic igneous and metamorphic rocks, up to 0.08 per cent. or more of V_2O_5 , but seems to be absent, or nearly so, from the highly siliceous rocks. The limited evidence thus far obtained points to the heavy ferric aluminous sulphates as its source—the biotites, pyroxenes, and amphiboles. Limestones and sandstones seem to contain very small amounts of vanadium. From the few tests for molybdenum it appears as if this element were confined to the more siliceous rocks. It is present in no observed case in amount sufficient for quantitative measurement when operating on 5 grammes of material. The rocks examined were so selected as to represent many widely separated localities and numerous varieties.

In an investigation of the influence of certain inorganic salts on the rate of oxidation of sulphurous acid Mr. S. L. Bigelow observed that the oxidation of a sodium-sulphite solution by a current of air is hindered to a remarkable extent by the presence of a small quantity of alcohol. One part of alcohol in 10,000 of a one hundredth normal solution of sodium sulphite had a perceptible influence. In another case it was found that the admixture of mannitol with sodium sulphite in the proportion of one molecule to 800 diminished the rate of oxidation 50 per cent. Great difficulty was experienced in obtaining constant results, and it was found that the small quantities of impurity in the water used as solvent produced very large variations, and perfectly constant conditions could not be obtained.

Pure crystallized calcium, as prepared by M. Moissan, has a melting point at 760°C . The metal can be cut, but is much less malleable than sodium or potassium, as it can be broken and shows a crystalline fracture. When wholly free from iron nitride its color is brilliantly white, recalling that of silver. The density is about 1.85, and the metal is hard enough to scratch lead but not calcium carbonate. Neither chlorine, bromine, nor iodine attacks calcium in the cold, though the corresponding haloid salts are formed at higher temperatures. Calcium burns brilliantly in oxygen, and the temperature resulting from the combustion is so high that a part of the quicklime produced is melted and volatilized. When burned in air, the calcium unites with both of its constituents together and nitride and oxide are simultaneously formed. At a dull-red heat the metal combines with carbon with great energy, forming CaC_2 . The reducing power of calcium at high temperatures is remarkable, oxygen being readily removed by its action from sulphur dioxide, phosphoric anhydride, boron trioxide, silica, and the oxides of carbon.

Mr. Albert Granger has published an important research on the metallic phosphides, in which he reviews the different methods of preparing compounds of the metals with phosphorus and describes a number of them. He has found as general characteristics that phosphides are solid bodies, usually possessed of a metallic luster; that they are all more or less easily decomposable by heat, so that they almost all partly yield to heating in a current of gas. Chlorine and bromine attack them energetically and oxygen transforms them into phosphates. Some phosphides, such as the sesquiphosphides of iron, nickel, and cobalt, are oxidized with difficulty, and resist the action of aqua regia. Melted potash and bromide potash oxidize all the phosphides. The author attempted to prepare alkaline phosphides, but was stopped by the impossibility of separating the phosphide formed, either from the excess of phosphorus or the excess of metal. These impure phosphides, prepared by direct action, are brownish bodies, waxy in consistence, very inflammable, and decomposed by moisture. Electrolytic methods were used with success for the separation of phosphoric acid from the metals.

W. A. Shenstone and W. T. Evans have observed that when air is submitted to the silent electrical discharge it first contracts to a remarkable extent and then re-expands rapidly until it very nearly occupies its original volume. The residue contains a trace of nitric peroxide. Among the conclusions arrived at from the study of these phenomena are, that oxygen, when diluted in nitrogen, as in the air, yields a very large proportion of ozone; that from 80 to 85 per cent. of the oxygen present may readily be ozonized in the presence of moisture, and if great care be taken, as much as 98 per cent. of the oxygen may be converted into ozone. If the ozo-

nizing of the oxygen be not pressed too far, no nitric peroxide will be formed, but at a certain stage, which probably coincides or nearly coincides with the point at which the amount of ozone is at its greatest, that substance appears. In the presence of nitric peroxide, ozone is rapidly destroyed by the silent discharge, and its destruction is accompanied by a considerable destruction of nitric peroxide. The presence of watery vapor promotes the formation of ozone, but retards that of nitric peroxide. It was found to be impossible to ozonize the oxygen of air in the presence of a trace of nitric peroxide.

Carborundum, a compound of carbon and silicon in equal atomic proportions, having a hardness inferior only to that of the diamond, is prepared by electrically heating a mixture of powdered coke and sand, to which a little sawdust and salt are added to make the mass more porous, in a furnace through the end walls of which bundles of carbon rods are inserted and connected inside the furnace by a cylindrical core of small pieces of coke. The core is surrounded on all sides by the mixture of sand and coke. The passage of the current through the core gives rise, as Mr. Thomas Ewan describes it, to a cascade of small arcs between the pieces of coke, which soon raise the whole core to a very high temperature; and this is communicated to the surrounding charge. The carborundum is obtained in the form of steel gray to brownish green crystals, the coloration of which is due to iron. It is a valuable abrasive, cutting the hardest steel without destroying its temper, and is largely used in place of emery.

Prof. Noel Hartley and Mr. Hugh Ramage having found gallium to be a very widely distributed element in the earth, and to be present also in meteoric bodies, it was natural that they should inquire if it was also to be found in the sun. By the use of the photographic process and the radiating spectroscope they determined the wave length of the two principal lines and found it to correspond with that of two lines in Rowland's map of the solar spectrum, one of which had been recorded as an aluminum line. It is pointed out that gallium is present in every bauxite and shale examined by the authors, who therefore believe that this line in the spectrum of aluminum is really a gallium line. The two gallium lines are therefore regarded as identical with these two lines in the solar spectrum.

An account of the presence of titanic oxide in a cinderlike mass found near Monticello, Va., and in the soil was published by F. F. Dunnington in the "American Journal of Science" for December, 1891. The mass proved to contain 5.4 per cent. of titanic oxide, and subsequently, upon analysis, to be of identical composition with the soil upon which it was found; and the special formation of the mass was supposed to be the result of lightning. Other soil in the neighborhood was examined for titanic oxide, and it was found in all; and subsequently it was found in as many as eighty specimens of soil in different parts of the globe. Since the publication referred to, Mr. Dunnington has obtained samples of soil from parts of the earth's surface not then represented, and in them he has estimated the amounts of titanic oxide as a percentage of the original soil and also of the ignited soil, which latter figures should be compared with what is found in igneous rocks. Among these soils he specifies red and dark-gray loams from Brazil; gray sandy loam from Liberia; gray-brown loam from St. Helena; dark-gray and light-brown clays from Cerralco, Mexico; light-brown and white clays from Sydney, Australia; brown-yellow loam from Launceston, Tasmania; brown-gray loam from Auckland, New Zealand; light-yellow clay from Arako, and dark-gray loam

The Naval School.

THE HARBOR OF VALPARAISO.

from Kanaja, Japan; fine brown and green gravel from earthquake eruption, Nayaya, Japan; eleven specimens from different provinces of Canada; and drillings from the deep well at Wheeling, W. Va. The total averages of all the percentages found are 0.57 for air-dried, and 0.66 for ignited soils; or, omitting the estimation of the St. Helena specimen, which was exceptional, 0.515 and 0.588. These facts are regarded by the author as pointing very plainly to the universal distribution of titanite oxide over the earth's crust. It appears strange, he observes, that any body existing in so considerable an amount in the soil should have been overlooked in the numerous analyses of soils that have been made.

Prof. J. B. Farmer and Mr. W. G. Freeman have demonstrated the action of germinating peas, cress, and barley in causing the deoxidation of a watery solution of methylene blue to a colorless liquid on shaking up the latter with air, while on adding a drop of hydrogen peroxide the blue color was restored. Green plants placed in the solution acted in a manner precisely similar to the seedlings, though the action could be modified by assimilation in sufficient light.

Grains of maize were sterilized by Jules Laurent by being kept in a weak solution of bichloride of mercury for two hours, and were then cultivated in a solution containing nitrate of lime, chloride of potassium, sulphate of magnesia, mono-potassic phosphate, and a few drops of a dilute solution of perchloride of iron. The maize developed normally, even to the complete opening of the flowers. On adding to the solution a known weight of glucose, and again of inverted sugar, it was found that the quantity of sugar absorbed is in relation with the dry weight of the plant.

Contamination of water by zinc is not very frequent. An instance is cited by Percy A. E. Richards in the "Chemical News," in which water drawn from a Berkshire (England) district and after being stored in a reservoir, supplied to a private residence for drinking purposes by a galvanized-iron pipe about two miles long, developed, on being exposed to the air for about an hour, a distinct semm on the surface. On analysis this was found to contain 5.12 grains of zinc carbonate per gallon. The presence of the zinc was easily detected in the unconcentrated water by both the ammonium sulphide and potassium-ferrocyanide tests. Upon boiling the water a precipitation of carbonate of zinc took place.

Of the chemical modifications that take place in fruits during their growth M. C. Gerber finds that the acids disappear, giving off at the same time more carbonic-acid gas than they can borrow from atmospheric oxygen and forming hydrates of carbon. The tannins disappear when the respiratory quotient is below unity, and do not form hydrates of carbon. So long as the tannins exist the fruits will not soften. As soon as they have disappeared, softening begins. Then follows obstruction of the intercellular meats, alcoholic fermentation, and the formation of the perfumed ethers. At the same time the respiratory quotient becomes greater than unity.

CHILI, a republic in South America. The national Congress consists of a Senate and a House of Deputies, each elected by the votes of the male citizens able to read and write, the Senators by the provinces and the Deputies by the departments, in the proportions of one Deputy to 30,000 of population, and one Senator to three Deputies. The President of the republic is elected for five years by a college of electors. Federico Errazuriz was elected President for the term ending Sept. 18, 1901. His Cabinet at the beginning of 1898 was composed as follows: Premier and Minister of the Interior, An-

tonio Valdez Cuevas; Minister of Foreign Affairs, Worship, and Colonization, Raymundo Silva Cruz; Minister of Justice and Public Instruction, Domingo Amunátegui Rivera; Minister of Finance, Elias Fernandez Albano; Minister of War and Marine, Carlos Palacios Zapata; Minister of Industry and Public Works, Domingo Toro Herrera.

Area and Population.—The following table gives the area and population of the provinces and territories, according to the census taken on Nov. 28, 1895, compared with the population in 1885:

PROVINCES.	Square miles.	POPULATION.	
		1885.	1895.
Atacama.....	43,180	76,566	59,713
Coquimbo.....	12,905	176,344	160,898
Aconcagua.....	5,840	144,125	113,165
Valparaíso.....	1,637	203,320	230,756
Santiago.....	5,223	329,753	415,636
O'Higgins.....	2,624	87,641	85,277
Colchagua.....	3,795	155,657	157,566
Curicó.....	2,913	100,002	103,242
Talca.....	3,678	133,472	128,961
Linares.....	3,588	110,652	101,858
Maule.....	2,930	124,145	119,791
Nuble.....	3,556	149,871	152,935
Concepción.....	3,535	182,459	188,190
Bio-Bio.....	4,158	101,768	88,749
Malleco.....	2,856	59,492	98,032
Cautín.....	3,126	33,291	78,221
Arauco.....	4,248	73,658	59,237
Valdivia.....	8,315	50,998	60,687
Languihue.....	7,823	62,809	78,315
Chiloe.....	9,995	73,420	77,750
Magallanes territory.....	75,292	2,085	5,170
Antofagasta.....	60,968	21,213	44,085
Tarapacá.....	19,300	45,086	89,751
Tacna.....	8,685	29,523	24,160
Total.....	298,970	2,527,320	2,712,145

Antofagasta was ceded to Chili by Bolivia after the war with Peru and Bolivia, and Tarapacá by Peru, and Tacna also on condition that its inhabitants should decide by a majority vote at the end of ten years whether they should become citizens of Chili definitively, or whether the province should be retroceded to Peru on payment of an indemnity. When the term was past, Peru was unable to act, owing to political disturbances, and hence the question has remained undecided. Serious differences have existed between Chili and the Argentine Republic relative to the boundary line in Patagonia, and the arbitration of the British Queen has been invited.

The census of 1885 was notoriously imperfect, and that of 1895 probably understates the actual population by at least 15 per cent. The number of marriages in 1895 was 14,779; of births, 110,154; of deaths, 92,197; excess of births, 17,957. The immigrants do not average over 600 a year. In 1896 Congress appropriated 867,000 pesos for the encouragement of immigration.

Finances.—The total revenue in 1894 was 83,436,000 pesos, and the expenditure 78,482,000 pesos. For 1897 the revenue was estimated at 79,200,000 pesos, of which import duties were expected to produce 22,500,000 pesos, export duties on nitrates 38,600,000 pesos, export duties on iodine 250,000 pesos, railroads 14,000,000 pesos, posts and telegraphs 1,000,000 pesos, rentals and sales 1,900,000 pesos, stamps 550,000 pesos, and other sources 400,000 pesos. The expenditure for 1897 was set down as 79,155,971 pesos, of which 8,905,713 pesos were assigned to the interior, 2,442,396 pesos to foreign affairs, worship, and colonization, 9,348,000 pesos to justice and public instruction, 18,035,083 pesos to finance, 11,864,456 pesos to war, 8,546,983 pesos to marine, and 20,013,340 pesos to industry and public works. For 1898 the revenue was estimated at 76,250,000 pesos, and expenditure at 76,205,164 pesos.

The foreign debt on June 30, 1897, amounted to

£17,629,270 sterling, and the internal debt to 30,169,042 pesos. The interest charge on the foreign debt is 12,675,733 pesos.

The Army and Navy.—The standing army, in accordance with the law of Dec. 31, 1896, consists of 9 regiments of infantry, 8 of cavalry, 5 of artillery, and a corps of engineers, with a total strength not to exceed 9,000 men. The roster contains 10 generals and 613 officers of other grades. The National Guard, formerly a volunteer force, has since 1896 been reorganized. Every Chilean from twenty to forty years of age is required to serve, and about 25,000 receive military instruction every year, the total strength being 432,000 men.

The Chilean fleet contains the first-class cruiser "Esmeralda," of 7,020 tons, the powerful small battle ship "Capitan Prat," of 6,900 tons, the iron-clad "Almirante Cochrane," of 3,500 tons, the old "Huascar," the new armored cruiser "O'Higgins," of 8,500 tons, the fleet new "Blanco Encalada," of 4,400 tons, the second-class cruisers "Presidente Errazuriz" and "Presidente Pinto," of 2,080 tons, the recently launched "Ministro Zenteno," of 3,600 tons, 11 gunboats of various sizes, 4 new English-built destroyers of more than 30 knots, and 15 first-class and 4 second-class torpedo boats.

Commerce.—The total value of imports in 1896 was 74,082,805 pesos, and of exports 74,359,414 pesos. In 1895 the imports were valued at 69,206,552 pesos, and the exports at 72,919,882 pesos. The values of the chief exports were 45,528,000 pesos for nitrate, 4,918,000 pesos for silver, 4,881,000 pesos for copper, 3,599,000 pesos for cereals, 1,561,000 pesos for coal, 1,443,000 pesos for iodine, 1,022,000 pesos for leather, and 948,000 pesos for gold.

Navigation.—There were 2,021 vessels in the foreign trade, of 2,732,000 tons, entered and 1,919, of 2,969,000 tons, cleared at Chilean ports in 1895. The tonnage entered coastwise was 6,232,000.

The commercial navy on Jan. 1, 1896, numbered 42 steamers, of 29,931 tons, and 146 sailing vessels, of 75,711 tons.

Communications.—There were 2,504 miles of railroad in operation in 1896, of which the Government owned 1,075 miles. The capital expenditure on the Government railroads and 600 miles that will become Government property at the end of their concessions was 77,540,011 pesos. On the completion of 46 miles over the Andes, Chili will be connected by an international railroad between Mendoza and Santa Rosa, 18 miles having already been built on the Argentine side and 18 on the Chilean side.

The Government telegraph lines, on Jan. 1, 1896, had a length of 6,965 miles, with 8,330 miles of wire. The number of dispatches in 1895 was 1,159,553. There were 2,613 miles of lines belonging to railroad and telegraph companies.

The post office in 1895 carried 56,465,924 internal letters and newspapers and 4,977,598 in the foreign service. The postal receipts were 1,749,021 pesos, and expenses 1,930,935 pesos.

Financial Crisis.—The state of armed peace maintained for two years on account of the Patagonian boundary dispute was more trying to Chili than to the Argentine Republic, with its growing wealth and population. Hence the Chileans were anxious to have the conflict come soon if the question must be decided by arms. The decline of the nitrate industry and other causes of depression, in connection with the unsettled state of the currency, led to a financial crisis which grew more severe as the year advanced. A ministerial crisis occurred on March 22, when all the members of the Cabinet resigned. Several weeks were passed in negotiations before a new ministry was formed. It was constituted on April 15 as follows: Premier, Carlos

Walker Martinez; Minister of Foreign Affairs, Juan Latorre; Minister of Justice, Agusto Luco; Minister of Finance, Dario Zanartu; Minister of War, Patricio Alcalde; Minister of Industry and Public Works, Emilio Bello Codecido. In order to clear the way for developments in the Argentine dispute, the new Cabinet made haste to arrange the old difference with Peru in respect to the conquered provinces of Tacna and Arica, the inhabitants of which should have decided in 1894 by a plebiscite whether they would remain under Chilean administration or return to Peruvian allegiance. A protocol was signed in the beginning of May for the execution of the treaty of Ancon, any differences arising as to the conditions of voting to be settled by the arbitration of the Spanish Government. In the beginning of July a monetary panic resulted from the continued withdrawal and exportation of gold in large amounts. The Government, on July 7, closed all the banks until July 12, and meanwhile discussed the advisability of issuing a paper currency. A moratorium of thirty days was next declared. Congress empowered the President to issue \$50,000,000 of paper money, partially guaranteed on the import duties, to borrow £4,000,000 sterling for the purpose of redeeming the notes after three and a half years, and to lend \$20,000,000 at 4 per cent. to the banks on good security. This law soon made gold go up to a premium of 46 per cent. and over, and caused merchants to countermand their orders for goods from Europe. The Government parted with its hoard of gold. Its military expenditure had exhausted its resources and the balance of the conversion fund. The periodical advances from the state to the Bank of Chili, which never had been in a position to meet its liabilities since the establishment of conversion in June, 1895, had also contributed to the financial straits of the Government. The failure of conversion and the return to a depreciated paper currency caused such indignation in financial circles that the Minister of Finance resigned, and Rafael Sotomayor was appointed in his place. Although the income for 1899 was estimated at \$83,000,000, and the expenditure at only \$76,000,000, the Minister of Finance asked Congress to re-establish the inheritance and donation duties, and to impose taxes on foreign insurance companies, tobacco, matches, and alcohol. The Chilean and Argentinian boundary commissioners met at Santiago in August. Barros Arana, who had charge of the Chilean interest, took offense because President Errazuriz and Admiral Latorre insisted upon taking part in the conferences, and on Aug. 19 he resigned. His place was taken by Alberto Gonzales Errazuriz.

CHINA, an empire in eastern Asia. The Government, as defined in the collected regulations of the Tsing dynasty, is based on the Government of the family, and the Emperor exercises supreme paternal authority. The acts of the Government are largely regulated by precedents extending back thousands of years. The imperial administration is directed by a Cabinet composed of 2 Chinese and 2 Manchu members, advised by 2 delegates of the Hanlin College, who watch against any contravention of the dynastic regulations or Confucian precepts. The highest governing body is the Grand Council, which issues laws and regulations for the empire. Subordinate to the Cabinet are the boards of administration, presided over each by a Chinese and a Manchu. One board supervises the conduct and administration of the officials, another directs the finances, the third enforces the laws relating to the duties and ceremonies of the people, the fourth has charge of military matters, the fifth of public works, the sixth is the high court of criminal jurisdiction, and the seventh directs naval affairs. The Board of Censors, presided over by a Chinese and a

Manchu, watches over all the other bodies and reports to the Emperor shortcomings and delinquencies occurring in any branch of the public service. The Tsung-li-Yamen, or Foreign Office, is a modern body, which since 1861 has conducted all affairs with the Western nations and with the institutions directed by foreigners, such as the maritime customs and the Pekin University.

The present Emperor reigns under the name of Kwangsu, signifying "continuation of glory." He is the son of Prince Chun, the seventh son of the Emperor Taokwang, and was born on Aug. 2, 1872, succeeded his cousin Tsaichun on Jan. 12, 1875, under the regency of his aunt, the dowager Empress Tsu-Hsi, born Nov. 17, 1834, and assumed the Government on March 4, 1889.

Area and Population.—

The area of the 18 provinces of China proper is 1,336,841 square miles, with a population estimated at 386,000,000. The Chinese Empire, including besides these Manchuria, Mongolia, Tibet, Jungaria, and Eastern Turkestan, has a total area of 4,218,400 square miles, with 402,680,000 inhabitants.

The number of foreigners residing in the treaty ports on Jan. 1, 1897, was 10,855, of whom 4,362 were British subjects, 1,439 Americans, 933 French, 871 Portuguese, 870 Germans, 852 Japanese, 410 Spaniards, 407 Swedes and Norwegians, and 1,011 of other nationalities.

Finances.—The revenue and expenditure of the Pekin Government were previous to the Japanese war estimated at about 89,000,000 taels a year. The expenses of the imperial province, including the cost of the Manchu garrisons and of the imperial household, were 19,478,000 taels, the cost of the northern naval squadron 5,000,000 taels, contributions for the southern squadrons were 5,000,000 taels, the annual expenditure on forts and guns for coast defense 8,000,000 taels, the cost of garrisoning Manchuria was 1,848,000 taels, that of the defense of Kansu and the Central Asian districts 4,800,000 taels, contributions to the provinces of Yunnan and Kweichow were 1,655,000 taels, interest and repayments of foreign loans 2,500,000 taels, railroad construction cost 500,000 taels, the cost of river embankments and other public works was 1,500,000 taels, the expense of the customs administration, including lighthouses and revenue cruisers, was 2,478,000 taels, and 36,290,000 taels were distributed among the 18 provinces for administrative expenses and the maintenance of the troops.

The receipts of the board of maritime customs for 1896 were 7,669,640 taels from imports, 8,455,528 taels from exports, 1,306,346 taels from the coasting trade, 611,026 taels of tonnage dues, 617,067 of commuted *likin* taxes, and 3,919,759 taels of opium *likin*; total, 22,579,366 taels.

The public debt at the beginning of 1897 consisted of a loan of £627,675 obtained in 1874, a loan of £1,604,276 raised in 1878, a silver loan for £1,505,000 raised in 1886, a German loan of £250,000

contracted in 1887, another silver loan of £1,635,000 raised in 1894, a gold loan of £3,000,000 obtained in 1895, various other loans of that year amounting to £2,000,000, the Anglo-German loan of 1896 amounting to £16,000,000, bearing 6 per cent. interest, and

TEMPLE AND PRIESTS' DWELLING ON A ROCK IN THE YANGTSE-KIANG, NEAR HANKAU.

about £5,000,000 of internal loans contracted in 1895; total, £49,691,951 sterling.

Communications.—The railroad from Tientsin to Pekin, 73 miles, was opened on June 30, 1897. One 12 miles long has been built to connect Shanghai with Wusung. The railroad that brings coal down from the Kaiping mines to the Petang river has been continued through Taku to Tientsin and Linsi and is being carried through to Shanhaikwan.

Pekin has telegraphic communication with Europe by a connection with the Russian overland line in the Amur valley, as well as by the cables. The imperial system of telegraphs consists of lines joining the capital with Tientsin and the chief towns of Manchuria up to the Russian frontier, with Niuchwang, Chifoo, Shanghai, Yangchau, Suchau, all the ports on the Yangtse-Kiang, Canton, Wuchau, Lungchau, and the other principal cities of the empire, and, by the line running from Canton inland to the capital of Yunnan, with the Indian telegraph system, with which a connection is made at Manwyne, on the frontier of Burmah. From Shanghai a line runs to Amoy, Fuchau, Kashing, and Ningpo. Fuchau is also connected with Canton. From Taku a line runs through Port Arthur to the Korean capital.

Commerce.—The total value of imports in 1896 was 202,589,994 taels, and of exports 131,081,421 taels. The imports of cotton cloth were valued at 47,233,000 taels; cotton yarns, 32,010,000 taels; opium, 28,652,000 taels; rice, 15,022,000 taels; kerosene, 9,083,000 taels; sugar, 7,002,000 taels; woolen cloth, 5,080,000 taels; sea products, 4,988,428 taels; iron, 3,680,000 taels; coal, 3,540,000 taels; fish, 3,-

128,000 taels; tin, 2,357,000 taels; matches, 2,100,000 taels; machinery, 2,064,000 taels. The exports of raw silk amounted in value to 31,672,000 taels; tea, 30,157,000 taels; silk goods, 10,418,000 taels; cotton, 5,018,000 taels; hides and skins, 4,471,000 taels; straw goods, 3,907,000 taels; beans, 3,881,000 taels; clothing and shoes, 2,088,000 taels; paper, 1,858,000 taels; fireworks, 1,828,000 taels; pottery, 1,628,000 taels; sugar, 1,478,000 taels; wool, 1,448,000 taels; tobacco, 1,445,000 taels; oil, 1,422,000 taels. The exports of tea were 1,712,841 piculs, against 1,865,680 piculs in 1895.

The value in taels of the trade with different countries in 1896 is shown in the following table:

COUNTRIES.	Imports.	Exports.
Hong-Kong.....	91,357,000	54,053,000
Great Britain.....	44,571,000	11,282,000
Japan.....	17,390,000	11,379,000
Continent of Europe.....	9,432,000	18,078,000
India.....	23,027,000	2,176,000
Russia in Europe.....	2,032,000	4,266,000
Russia in Asia.....	197,000	10,641,000
United States.....	11,930,000	11,124,000
Macao.....	3,984,000	2,223,000
Straits Settlements.....	3,240,000	1,739,000
Other countries.....	4,463,000	4,120,000
Total.....	211,623,000	131,081,000

The imports include re-exports to the amount of 9,033,000 taels. In the figures for Japan are reckoned 5,821,000 taels of imports from and 666,050 taels of exports to Formosa, the former Chinese dependency, which was ceded to Japan in accordance with the treaty of peace and formally transferred on June 2, 1895.

Navigation.—There were 40,495 vessels, of 33,490,857 tons, entered and cleared at the ports of China during 1896. Of this number, 19,711, of 21,847,082 tons, were British; 15,969, of 7,251,292 tons, Chinese; 2,090, of 1,945,019 tons, German; 546, of 565,992 tons, Japanese; 427, of 434,415 tons, French; and 143, of 165,578 tons, American.

Lease of Kiauchau to Germany.—The Germans, who obtained settlements in Tientsin and Canton in October, 1895, have for years been in quest of a coaling-station on the China coast to serve as a *point d'appui* for their political influence and growing commercial interests, just as Hong-Kong had done for the English. Such a station had been offered in southern China, but it was not accepted for fear of offending English and French susceptibilities. At length Kiauchau, which would open to German enterprise the mineral and other resources of the Shantung peninsula, was selected as a central point where German activities would find a promising field without trenching upon the British sphere of interest that centers in Shanghai or on the recognized Russian sphere in the north. A missionary outrage opportunely afforded a pretext for action. Two German Roman Catholic missionaries in Yeng-tu were brutally murdered about Nov. 1, 1897. The outrage was charged to a gang of bandits by the Chinese, but the evidence of a missionary who had managed to escape proved the falseness of this explanation and the complicity of the authorities, who had been prompted by the anti-European expressions of Li-Ping-Heng, the Governor of Shantung province, just promoted to be Viceroy of Szechuan. The German flagship "Kaiser," with the "Prinzess Wilhelm" and "Arcona," on instructions from Berlin, proceeded to the north from Shanghai, and anchored in the harbor of Kiauchau. Admiral Diederichs sent word to the general commanding the garrison that he had come to obtain satisfaction for the murder of the missionaries and that he intended occupying the forts. These were hastily evacuated as the Germans lowered their boats for landing, and the general sent word that

he yielded to superior force. The Germans landed 600 marines on Nov. 24 and ran up their flag. The "Comoran" and "Irene" arrived later, and before the middle of November the crews of the German ships had built themselves warm quarters on the shore. The Germans had chosen Kiauchau for a permanent naval station and commercial *entrepôt* on account of its prospective value as a railroad terminus, as the rich coal fields of Shantung are easy of access and lines can be built at the least cost westward into Honan and the great coal fields of central China and northward to Peking. There is river and canal communication with the interior, and the harbor is safer and better than the Chifu roadstead, though the entrance has become silted and the whole coast is upheaving. Kiauchau was a flourishing seaport until first the completion of the Grand Canal and afterward the development of Chifu as a treaty port diverted its whole trade in other directions. Railroads, which from the configuration of the country can find no other outlet, are expected to make it again the chief port of the peninsula. Prince Heinrich of Prussia sailed for China with re-enforcements on the "Gefion" and "Deutschland," after a parting speech of the Emperor at Kiel vaunting achievements to be wrought with the "mailed fist." His ships were detained by accidents at Suez, and long before his arrival the Chinese Government acceded to the German demands. These were that Li-Ping-Heng be dismissed from office and never be employed again; that a Catholic church be built and an imperial tablet erected; that the murderers be punished, expiatory chapels be erected in memory of the murdered priests, and residences built for missionaries at seven new stations; that the Government promise that such attacks should never occur again; that, should railroads be established in any part of Shantung, Germans should be allowed to open coal mines; that German capitalists should have the privilege of building railroads and operating mines throughout the province; and that China should pay 1,000,000 taels expenses incurred in the settlement of the case. The Chinese Government demurred to this last demand and to the one for the degradation of Li-Ping-Heng, and agreed to all the other propositions. It consented to have a line of railroad built by a German syndicate from Kiauchau to Tsi-Nang-Fu, with the prospect of connecting it with the projected trunk line, both Germans and Chinese being at liberty to take shares in these lines. While the Chinese were pressing for the evacuation of the occupied fort fresh missionary outrages gave the Germans an excuse for continuing the occupation, while renewing their demand for the punishment of Li-Ping-Heng, which was in the end conceded. Meanwhile negotiations were going on both at Peking and at Berlin, looking to a cession of Kiauchau Bay and adjacent territory in return for the service performed by Germany, in conjunction with Russia and France, in securing the retrocession of Leatong by the Japanese. As a result of long discussions the Tsung-li-Yamen agreed to lease to Germany for ninety-nine years the Bay of Kiauchau and a strip of territory, the sovereignty to continue to vest in China. In the event of Germany thereafter being desirous to hand Kiauchau back to China, the latter country agreed to reimburse all moneys expended and to give Germany another suitable port. The treaty, which was signed at Peking on March 6 by Baron von Heyking, the German minister, and Li-Hung-Chang and Weng-Tung-Ho, gives the right of free passage to German troops throughout a zone of 50 kilometres surrounding Kiauchau Bay, in which zone the Emperor of China, while retaining all rights of sovereignty, will undertake no measures, issue no ordinances, nor station troops or undertake any

military act without the previous consent of the German Government. In particular he promises to oppose no obstacle to the regulation of the water courses. The lease embraces the territory on both sides of the entrance to the bay, where Germany undertakes to construct fortifications for the protection of the buildings to be erected for repairing and equipping ships and storing materials and supplies for them. Chinese ships of war and merchantmen will have the same facilities for entering and leaving Kiauchau Bay that may be extended to the shipping of other nations and will be subject only to the same dues. The delimitation of the customs boundary and the levying of customs were left to be arranged by future agreement in such manner as to preserve all the interests of China. In a secret agreement China granted commercial and industrial concessions and monopolies to Germany covering the whole peninsula of Shantung. Marines were brought on transports from Germany until the garrison numbered 3,000. The killing of a German sentry on Jan. 24 at Tsimo, in the neutral zone, 30 miles from Ching-Tau-Kau, the German headquarters, was made the ground for demanding another railroad concession. The administration of the Kiauchau territory was intrusted to the German Naval Department. The railroad concessions were for lines from Kiauchau to Tsi-Nang-Fu and to Ichau, near the border of Kiangsu, and for a third line connecting the two. These railroads, which will have a total length of 700 miles and will cost about 90,000,000 marks, are to be connected with the projected Chinese trunk line, and they will tap the Wei-Hsien and Poshan coal fields, the working of which is granted to Germans. In the province of Shansi a German syndicate had obtained concessions of coal and iron mines, petroleum, and tar deposits. Capt. Rosendahl was appointed Governor of Kiauchau and commander of the naval forces there.

In reply to the inquiries of the British ambassador, the German Minister of Foreign Affairs, Herr von Bülow, on Jan. 28 said that he was convinced that Kiauchau would be opened to the commerce of the world, that the German Government shared the English view of colonization and believed that system to be the best in the interests of the colonies themselves. This was interpreted by the English as an assurance that it would be made a free port like Hong-Kong. The English Government, just before occupying Wei-Hai-Wei, intimated that it had no intention of injuring or of calling in question German rights or interests in the province of Shantung, or of creating any difficulties for the German Government; that in particular it did not intend to lay down railroad communications with the interior from Wei-Hai-Wei. When Prince Heinrich of Prussia was received in audience he did not, like European princes and envoys heretofore, have to prostrate himself in humble *koutow* as a suppliant vassal, below eighteen rows of Chinese nobles and officials of descending ranks, before the Emperor, sitting aloft, veiled in clouds of incense, within the dim recesses of the gorgeous Hall of Harmony. He was received by Kwangsu and the dowager Empress in the Summer Palace on apparently equal terms.

Loan Negotiations.—China applied for financial advice and aid to the British, Russian, and other governments to enable her to raise the money to meet the last installment of the Japanese war indemnity and secure the evacuation of Wei-Hai-Wei, which the Japanese held as a pledge until the debt should be finally paid. Japan, on account of her own financial difficulties, pressed for a prompt payment of the balance.

The British Government offered to provide a loan

of £12,000,000 at par to run fifty years, at an annual rate of 4 per cent., including interest and sinking fund. The conditions attached to the loan were, besides a lien on the unpledged customs revenues and certain *likin* duties in the event of default, that all the rivers and inland waters of China be thrown open to free steam navigation; that Talienwan, Siang-Yin, or Yuen-Chau-Fu in Hunan, and Nanning should be opened as treaty ports; that the Chinese Government should enter into a covenant with Great Britain never to alienate any part of the Yangtse-Kiang valley to any other power. As the opening of Talienwan to foreign commerce would checkmate Russia's design to obtain possession of that port as the southern terminus of the Trans-Siberian Railroad, the British proposal aroused the most active opposition on the part of Russia. For similar political reasons France regarded the proposed opening of Nanning as designed to hem in the expansion of her influence in the south. It is close to the border of Tonquin, in the province of Kwangsi, on an important southern tributary of the Si-Kiang, or West river, the free navigation of which had been long resisted by the French Government in opposition to British demands. The Russian *chargé d'affaires*, M. Pavloff, threatened reprisals and the withdrawal of Russia's friendship and protection if China should make Talienwan an open port. The Japanese minister supported the British demands. M. Pavloff offered to provide a loan guaranteed by the Russian Government on terms as favorable as those offered by the British Government. He was supported by M. M. Dubail, French *chargé d'affaires*, and French banks offered to provide a part of the funds. The Chinese Government, deterred by Russian menaces and for fear of English resentment from accepting either offer, approached the two governments with the suggestion of a compromise whereby each power would provide one half of the loan on its own financial terms, the other conditions to be adjusted by agreement between the two powers. In their answer on Jan. 31 to Sir Claude MacDonald the Tsung-li-Yamen said that Russia had used such threats that they saw no way out of the difficulty but coming to an arrangement with Japan and borrowing neither from England nor Russia. They said that a promise of protection against Russia was the only thing that would help them. The proposal to divide the loan with Great Britain was rejected by Russia. The Chinese Government authorized an internal loan of 100,000,000 taels, which met with no response. Japan could not be induced to postpone the date of payment. At length, in the latter part of February, a loan of £16,000,000 was arranged with the Shanghai and Hong-Kong Banking Corporation and the German Asiatic Bank, to be taken at 90 and pay 4½ per cent. interest, redeemable in forty-five years by means of a sinking fund. It is secured on the unpledged customs, estimated at 3,000,000 taels a year, and on the *likin* of certain districts and ports of the Yangtse valley and the province of Chekiang and the salt *likin* of certain districts, which are placed under the control of the maritime customs. These *likin* revenues are estimated at 5,000,000 taels, making the total hypothecated revenue about 30 per cent. above the interest and sinking fund of the loan, amounting to £835,232 annually. The remaining portion of the Japanese indemnity, amounting to 73,000,000 taels, or 119,000,000 yen, was paid over on May 7 in a lump sum by the transfer in London and Berlin of £12,008,857, the value at the treaty rate of 39.48*d.* to the tael, the market rate having fallen meanwhile to 33*d.* The Japanese Government took £2,000,000 of the new loan.

Lease of Port Arthur and Talienwan to Russia.—Great Britain had refused to join Russia, France, and Germany in demanding the evacuation of Leatong at the close of the China-Japanese War, as it was contrary to her policy to alienate the rising naval power of Japan or to help Russia to obtain political control over Manchuria and access to the sea, which, it was known, was the object of the intervention. To keep Russia from obtaining an ice-free port in the Pacific has been the settled policy of England since the Russians first appeared on the Amur and began to push southward in order to get below the line of winter ice. This persistent Russian policy the English thought they had finally defeated when they seized Port Hamilton in 1886, and under threat of war compelled the Russians to evacuate Port Lazareff and give a pledge that they would not occupy Korean territory under any circumstances whatever. After the Siberian Railroad was seen to be a success and the military power of Russia in the far East had become formidable, the British opposition to a winter outlet for the railroad was continued with less hope of effectually barring the way. The Rosebery Cabinet shrank from an alliance with Japan to uphold the Shimonoseki treaty in defiance of the powers, whose intervention was ostensibly designed to protect the integrity and independence of China, but really to keep the door to the Pacific open for Russia. The Salisbury Cabinet, desiring Russian support in coercing the Sultan to introduce reforms in Armenia, directed its attention to the conciliation of Russia. Mr. Balfour declared in February, 1896, that, so far from regarding with fear and jealousy a commercial outlet for Russia in the Pacific Ocean which should not be icebound half the year, he would welcome such a result as a distinct advance in this far-distant region. Lord Salisbury scouted as a superstition of antiquated diplomacy the idea that there was any necessary antagonism between Russia and Great Britain.

When Kiauchau Bay, which the Russian minister at Peking had warned the Chinese Government to fortify lest it should fall into the hands of the Germans, was seized by them with the apparent acquiescence of Great Britain, Russia began to suspect a hostile Anglo-German alliance in the far East. When the British Government made the opening of Talienwan as a treaty port a condition of the proposed loan she found herself confronted once more by the danger that threatened her in the treaty of Shimonoseki, for Talienwan was the prospective terminus of the Manchurian Railroad, the only available harbor between the Yalu and Port Arthur.

While the loan negotiations were proceeding the Russian squadron, which the year before had wintered in Kiauchau Bay, now occupied by the Germans, was anchored at Port Arthur, having on Dec. 22, 1897, obtained permission to winter there and a prior right of anchorage from the Chinese Government. British men-of-war proceeded to that fortified harbor while the British minister, Sir Claude MacDonald, was pressing the British loan on the Chinese Government. Under the treaties foreign war ships had the right to enter any Chinese harbor. Nevertheless, the Russian ambassador at London complained on Jan. 12 of the presence of British ships at Port Arthur, and received the reply that they would soon move. On Jan. 19 Count Muravieff complained again, saying that the action of the British gunboats in entering Port Arthur was looked upon as so unfriendly as to set afloat rumors of war. The demands for the withdrawal of the ships were repeated, and on Jan. 26 the Russian ambassador in London was informed that the last gunboat had left. The British admiral had

acted in compliance with the assurance given to the Russian ambassador that the vessels were not likely to remain, so that Sir Claude MacDonald was able to assure the Chinese that the report that the ships had been ordered to leave on account of Russian representation was a pure invention.

In the previous October, when insisting on the replacement by Russian engineers of the Englishmen employed in building the northern Chinese railroads, M. Pavloff, in reply to a British remonstrance, stated that the Russian Government intended that the provinces of China bordering on the Russian frontier must not come under the influence of any nation except Russia. On Jan. 19 Count Muravieff said that if it were true that the opening of Talienwan as a treaty port was to be one of the conditions of the British loan he could not regard it as a friendly action. In consequence of the vigorous stand taken by Russia the claim that Talienwan should become a treaty port was waived on condition that Port Arthur, if retained by Russia, should be opened on the same conditions as Kiauchau, and finally, on Jan. 21, the demand was withdrawn on the understanding that it might be made a treaty port if the railroad was constructed down to the peninsula. Count Muravieff telegraphed an assurance on Jan. 27 that any port which Russia might obtain for the outlet of her trade in those regions would be an open port. Lord Salisbury, mistaking the character and the language of the communication, said in Parliament that he had the written assurance that Talienwan, when it came into Russian possession, would become a free port, which was better than a treaty port. M. de Staal, the Russian ambassador, wrote to correct him, stating that the assurance was verbal and that the Russian Government, in the event of its acquiring an outlet into Chinese waters, would be free to decide whether to establish a free port there or to assimilate the port in question to the treaty ports of the Chinese littoral.

The Chinese Government, anxious to preserve Manchuria, requested Great Britain to enter into friendly negotiations with a view of protecting China against foreign pressure. This was regarded by British statesmen as tantamount to a request that the British Government should guarantee the territory of China, which that Government was not prepared to undertake. On March 8, after the conclusion of the Anglo-German loan, Russia made a peremptory demand for the cession of Port Arthur and Talienwan on the same terms the Germans received in respect of Kiauchau, one of the reasons advanced being to assist in protecting Manchuria against the aggression of other powers. The Chinese ambassador at Berlin, Hsu-Ching-Cheng, was ordered to St. Petersburg to endeavor to obtain a withdrawal of the demand. The Russian Government allowed an extension of the time given for the answer until he could be heard. The Tsung-li-Yamen still looked to England for help, but received only an assurance that the British Government had no designs on Manchuria or on any part of China unless driven thereto by the aggression of other powers. On March 13 the British ambassador at St. Petersburg asked for an assurance that Port Arthur, equally with Talienwan, would be open to foreign commerce. Count Muravieff replied that the Czar had decided to regard Port Arthur as a strictly military port. The Russian minister explained that his Government did not in any way desire to abrogate the sovereignty of China over the ports, but only required a lease, considering that China owed this to Russia for the services rendered in the war with Japan. Later the Czar authorized his minister to give an assurance that the Russian Government had no intention

of infringing the rights and privileges guaranteed by existing treaties between China and foreign countries, and that both Port Arthur and Talienwan would be opened to foreign commerce. Lord Salisbury on March 22 expressed grave objections to the lease of Port Arthur, describing it as useless for commercial purposes, its whole importance being derived from its military strength and strategic position, the occupation of which would be considered in the East as a standing menace to Peking and a commencement of the partition of China. On March 24 M. de Staal explained to Mr. Balfour that Talienwan was the outlet to Russian commerce, but that it must be protected; therefore Port Arthur, which entirely dominated it, could not be left in the hands of another power. When Sir Nicholas O'Connor suggested that an understanding with England would secure the safety of the Russian fleet at Talienwan without Port Arthur, Count Muravieff complained that England alone of all the powers stood in the way of Russia and resented in any degree her proposed action. Why should not Russia, when every other great maritime power possessed a naval station in the China seas, have a safe harbor for her fleet that would not be at the mercy of the elements at Vladivostok or dependent upon the good will of the Japanese. On March 28 Mr. Balfour in a long dispatch embodied the British views on the Russian concessions, which were that a railroad under Russian management connecting ports on the Pacific with the Russian commercial and military system would revolutionize the political and economic state of Manchuria, but would not be regarded with dissatisfaction so long as the natural flow of trade was not obstructed nor diverted by fiscal or administrative regulations; that the occupation of Port Arthur, however, a naval base of great natural and artificial strength, dominating the Gulf of Pechili and menacing Peking, was likely to have political consequences of great international importance, and that it was unfortunate that it had been thought necessary by a great military power which is continuous for 4,000 miles with the land frontier of China, and never likely therefore to be without a due share of influence on the councils of that country, to obtain in addition control of a port which, if the rest of the Gulf of Pechili remained in hands as helpless as those of the sovereign power, commanded the maritime approaches to its capital. The British Government, its proposal to abstain from occupying a port in the Gulf of Pechili so long as other powers did the same having been rejected, retained entire liberty of action to take what steps it thought best to protect its interests and diminish the evil consequences that it anticipated. Abandoning the policy of the open door to which it was committed, the preponderant interest and priority of claim in China asserted by Mr. Curzon, the principle just declared by the House of Commons that it is of vital importance for British commerce and influence that the independence of Chinese territory shall be maintained, the British Government ended by claiming as its share the port of Wei-Hai-Wei.

The arrangement for the lease of Port Arthur and Talienwan, with the right to connect them with Pictuna, on the Trans-Manchurian Railroad, by way of Mukden, was signed on March 27. Great Britain made a great naval demonstration in the Gulf of Pechili, which did not deter the Tsung-li-Yamen from acceding to the Russian demands. The imperial ratification had previously been given, and the Russians immediately took possession of Port Arthur. The Emperor received the Russian *chargé d'affaires*, who as a novel mark of distinction was allowed to ascend the throne, and in his speech in answer to the Czar's message he spoke of

a treaty of alliance, lately concluded, that strengthened the cordial friendship existing since two centuries between the two states. The Russo-Chinese agreement, which was signed by M. Pavloff and by Li-Hung-Chang and Chang-Yin-Huan, provides that Port Arthur and a part of Talienwan shall be reserved as naval ports for the sole use of Russian and Chinese men-of-war. It left the delimitation and the railroad route to be settled with the Chinese envoy in St. Petersburg, Hsu-Ching-Cheng, who was Chinese director of the Eastern China or Trans-Manchurian Railroad. North of the leased territory a neutral zone was to be measured off, within which China should exercise jurisdiction, but not quarter troops without the consent of Russia. Within the Russian jurisdiction the Chinese inhabitants had the option of remaining, and any Chinese charged with a criminal offense must be handed over to the nearest Chinese official. The term of the lease was originally intended to be ninety-nine years, but was altered to conform to the German precedent. In the Russian lease it is provided that it may be extended further by common accord. The Russians reserved to themselves the right of collecting the customs duties at Talienwan, agreeing as a temporary arrangement to pay all moneys collected in excess of the cost of collection over to the Chinese Government, so that the imperial customs revenue shall not suffer loss when Talienwan supplants Niuchwang as the chief port of Manchuria.

On April 1 Count Muravieff, in answer to a request that his assurances should be recapitulated in writing, explained that the ideas confidentially expressed previous to the conclusion of the arrangements with China were not assurances. Now that concrete assurances could be given, he affirmed that Russia intended to maintain the rights of sovereignty of China and to respect existing treaties. The substitution of the usufruct of Russia for the possession of China had not impaired the interests of the other powers; on the contrary, by agreement with China, Talienwan would be made a treaty port. As regards all other points, the *status quo* would be scrupulously maintained, and Port Arthur would be open to English ships on the same conditions as it has always been, but Russia would not abuse the lease by transforming a closed and principally military port into a commercial port like any other. In April the leased territory at Talienwan was extended so as to include Kinchau Bay. Fortifications were added speedily to the works at Port Arthur, the strong forts built by German engineers. At Talienwan, the southern part of the port was laid out as a military harbor and closed to merchant vessels. The area taken under Russian administration embraces 800 square miles, including Kinchau and all the harbors between Port Arthur and Talienwan. The effective occupation of the leased territory was begun on March 28 by Rear-Admiral Dubasoff. The Russian garrison at the end of June was 5,000, and before the close of 1898 it was arranged to bring it up to 20,000 men, in addition to the 50,000 picked soldiers who will act as guards for the protection of the railroads. Japan was reconciled to the Russian occupation of Leao-tong when the Russian financial advisers and military instructors were withdrawn from Korea, where a political agitation against the Russians had hindered their work and the Korean Government had said that it could do without foreign assistance. The Russian Government gave warning that if the Koreans could not maintain order and preserve their independence it would take measures for the protection of the interests and rights of Russia. Subsequently Russia and Japan entered into an engagement to join in preventing

any foreign intrusion in Korea and not to impede the commerce and industry of each other's subjects in that country.

Lease of Wei-Hai-Wei to England.—In the early part of the year the British Government announced a policy of firm opposition to territorial occupation that would lead to the dismemberment of the Chinese Empire, and declared that it would defend, even at the cost of war, Sir Michael Hicks-Beach, the Chancellor of the Exchequer, said, the "open door" by which freedom of access for the commerce of Great Britain and other nations should be preserved in China under the Treaty of Tientsin. When Germany imposed on China the condition that German engineers should have the preference in building railroads and working mines in Shantung, Lord Salisbury demanded equality of treatment for British subjects under the treaties. On Feb. 25 Sir Claude MacDonald telegraphed that the Chinese Government was ready to lease Wei-Hai-Wei to Great Britain. Lord Salisbury answered that the policy pursued by the British Government at that time aimed at discouraging any alienation of Chinese territory, and that it was premature to discuss such a lease unless the existing position should be materially altered by the action of other powers. On March 25, after offering a pledge to Russia not to occupy any port in the Gulf of Pechili so long as other powers pursued the same policy, and after Russia, in defiance of its grave objections, persisted in demanding Port Arthur, as well as Talienwan, the British Government made a formal demand for the lease of the military harbor of Wei-Hai-Wei upon its evacuation by the Japanese. In order not to disturb the good relations with Germany, the spontaneous assurance was given that the interests of Germany in the Shantung peninsula would not be interfered with. On April 1 the Japanese Government expressed concurrence in the lease of Wei-Hai-Wei to Great Britain after evacuation. On April 2 the Tsung-li-Yamen consented to lease Wei-Hai-Wei to Great Britain on the terms on which Port Arthur was leased to Russia, the lease to continue until Russia should cease to occupy the Leaotung peninsula. The evacuation by the Japanese army of occupation was completed on May 23. The place was taken over by the Chinese, who on May 24 delivered the arsenal and fortress to the British. The territory leased comprises Liukung and the other islands of the bay and a belt of land, 10 miles broad, along its entire coast line. In addition, Great Britain has the right to erect fortifications, station troops, or take other measures necessary for defensive purposes at any points on or near the coast east of 120° 40' east of Greenwich, within which zone Chinese administration shall not be interfered with; also within the walled city of Wei-Hai-Wei Chinese jurisdiction continues unless it shall be superseded for military reasons. Chinese war vessels retain the right to use the leased waters.

Concessions to France.—In compensation for the advantages secured by Russia and other powers France presented the following demands, which the Chinese Government on April 13 conceded: The lease of a bay on the southern coast of China; the concession of a railroad connecting Tonquin with Yunnan-Fu by the Red river; an agreement by China not to alienate the territories of the Chinese provinces bordering on Tonquin; an engagement not to cede the island of Hainan to any other power; an arrangement for placing the Chinese postal service under the direction of a Frenchman. The bay chosen by France for a naval station was that of Kwangchan, in the Leichan peninsula. Great Britain opposed no obstacle to the railroad concession, assuming the right to continue the

Burmese Railroad when it reaches the frontier, into Yunnan by virtue of the declaration signed by M. Courcel and Lord Salisbury on Jan. 15, 1896, whereby all privileges or advantages obtained by either France or Great Britain in Yunnan or Szechuan shall be extended and rendered common to both powers. China had already promised France by the convention of June 12, 1897, never to give up Hainan to any other power. The Bay of Kwangchau-Wan was occupied by Admiral de la Bedollière on April 22. The lease was of the same kind as that of Kiauchau to Germany. The concession for a railroad from Lao-Kai to the city of Yunnan was on the same general terms as the one for the Trans-Manchurian Railroad, with accompanying exclusive mining privileges throughout the area traversed. The provinces which China promised never to alienate, offering to enter into the same engagement with England in regard to them, are Kwangtung, Kwangsi, and Yunnan.

Concessions to Japan.—The integrity of the whole of China proper was assured, so far as the present Pekin Government can do so by promises, when Japan in April demanded and obtained the non-alienation of the province of Fokien, opposite Formosa, fearing that the French might secure a foothold there. Asserting the rights which she secured by the protocol of October, 1896, Japan notified China that she required settlements to be established for the exclusive use of the Japanese at Fuchau, Wusung, Shasi, Fauning, Yochau, and Ching-Wan-Tao, but agreed to the postponement of her claims in Fuchau, and also assented to the contention of China that in ports voluntarily opened, such as Wusung, there should be a common settlement for foreigners, which shall remain under Chinese control.

Extension of Hong-Kong.—To balance the French occupation of Kwangchau-Wan as a coaling station, Great Britain demanded and obtained the extension of British territory at Kaulung, opposite Hong-Kong, which military experts had been urging for a long time as necessary to the safety of the British arsenal and military harbor from the land side. An extension was needed also for the industrial expansion of the colony. The Tsung-li-Yamen acceded to the British demand on May 2, and the convention was signed on June 9. The boundaries of the colony were enlarged so as to include a part of Kaulung on the mainland by the Pekin convention of 1860. The territory now added by a lease running for ninety-nine years from July 1, 1898, embraces about 200 square miles, reaching back from Kaulung 15 miles, up to a line joining Mirs Bay and Deep Bay, leaving the north shore of both bays to China. It includes the whole promontory of Kaulung and a considerable part of the peninsula from which it projects. The island of Lantau and all the islands and waters of the two bays are embraced in the lease, China reserving the right to use them for her own ships, whether belligerent or neutral. The native city of Kaulung remains under Chinese jurisdiction. To prevent Chinese revenue from suffering from the change, it was stipulated that a Chinese commissioner of customs should be empowered to collect duties in Hong-Kong on all goods carried on Chinese junks from or to Chinese ports, as also in the German territory of Kiauchau the Chinese have been allowed to erect a customhouse.

The Manchurian Railroad.—In Manchuria where the Eastern China Railroad was being built as a short cut of the Siberian line to Vladivostok, the Russians already had and exercised all the rights and privileges they could desire. They had the right to mine, the right to build houses and import all kinds of machinery for railroad and min-

ing purposes, the right to navigate all the inland waters, and the right to protect themselves by force, independently of the Chinese. It was on Sept. 8, 1896, that the Chinese Government entered into an agreement with the Russo-Chinese Bank, an institution that is controlled by the Russian Ministry of Finance and backed by the financial resources of the Russian Government for the creation of the Eastern China Railroad Company, practically an agent of the Russian Trans-Siberian Railroad organization. This branch company undertook to connect the Siberian Railroad from a point near Neretehinsk, in the Trans-Baikal, with the terminal section near Vladivostok by a line earried across Manchuria. The route as surveyed is 946 miles, running through Hailar, Petuna, Kirin, and Ninguta. The railroad is to be completed before Aug. 28, 1903, and at the end of eighty years is to become the property of the Chinese Government. It is being built with Russian capital by Russian engineers out of Russian material and is guarded by Russian soldiers, who are already recognized as the masters of northern Manchuria.

By a secret treaty known as the Cassini convention Russia obtained in 1896 the right to carry a branch down through the Leaotong peninsula to a port on the Gulf of Pechili. This right was openly claimed in the agreement of March 21, 1898, for the lease of Talienwan and Port Arthur, which stipulated for a branch line of the Eastern China Railroad to Talienwan, or, if necessary, a branch line to the most suitable point on the coast between Niuchwang and the Yalu river. This stipulation enables Russia to connect the Siberian system with the projected Korean railroad terminating at Wiju, for which a French company has obtained a concession, as well as with the north China extension from Shan-Hai-Kwan.

The route of the railroad down to Talienwan was planned so as to leave Niuchwang, an important *entrepôt* for American cottons and petroleum as well as for English goods, a few miles on one side. A branch was run down to the port to carry the railroad materials.

The Struggle for Concessions.—Although the guaranteed loan had fallen through, Great Britain still pressed for the concessions demanded in the interest of trade. In the end the Chinese Government consented to the following arrangements: The internal water ways of China would be opened to British and other steamers in the course of June, 1898, so that wherever the use of native boats was permitted by treaty foreigners should be allowed to employ steamers or steam launches, whether owned by them or by Chinese; the post of Inspector-General of Maritime Customs shall in the future, as in the past, be held by a British subject so long as British trade with China at the ports continues to exceed that of any other power; a port will be opened in Hunan within two years. Before negotiations were concluded China agreed to open three new treaty ports—Chingwing-Peitaoh, situated on the Gulf of Pechili close to the place where the Great Wall of China abuts on the sea; Funing, on the Sam-Sa inlet of the southeast coast; and Yoechau, situated on the Tungting lake, in the province of Hunan. China of her own accord declared Wusung a treaty port, dismantling the forts there. The voluntary opening of new ports was intended to induce England to acquiesce in a revision of the tariff in accordance with the Treaty of Tientsin. Sir Robert Hart, on account of the fall in exchange, which was the ground for asking an increase of the general tariff, obtained an increase in the salaries of the customhouse officers, which were doubled for the foreigners and increased 50 per cent. for Chinese employees.

The placing of the administration of the *likin* taxes pledged for the Anglo-German loan under the administration of the maritime customs was regarded as the opening wedge for a great reform by the British commercial community. A commutation of *likin* by payment at the port of entry of a 2½-per-cent. *ad valorem* tax, in addition to the regular import duty of 5 per cent., was introduced in the last commercial treaty concluded with England. The importer obtained thereby a certificate of exemption, but the Chinese provincial authorities effectually circumvented it by reviving the obsolete terminal tax called *loti shui* and imposing various duties on the native purchasers. They laid down the doctrine that the immunity attached only to the foreign importer, not to the goods after they had left his hands. Consequently, in southern China at least, the treaty provision proved a dead letter. Baron von Heyking, the German minister, obtained a general concession with regard to *likin* which enables the merchant who has paid the commutation duty of 2½ per cent. in lieu of *likin* and cleared goods for a fixed destination to sell them at intermediate points without paying the local *likin*. The regulation and collection of the *likin* duties by the Maritime Customs Department, presided over by Sir Robert Hart, is an object for which the British representative has striven for several years. The *likin* is a 10-per-cent. tax upon all goods in transit, which may become a 20-per-cent. tax, or even more, if they go through more than one province, and may be lessened by bribing the collectors. It is usually levied 2 or 3 per cent. at a time at successive barriers in each province. It is supposed that a third of the money collected is pocketed by the local mandarins and another third consumed in the cost of collection, while the imperial treasury gets the rest. The revenue from the salt monopoly, which is likewise diminished by peculations, is derived from the profit on the sale of the salt by the Government to licensed dealers and a tax on their sales to the consumers.

Considerable correspondence took place over the British demand for a declaration of the non-alienation of the Yangtse region, but the English minister could obtain no more definite assurance than the statement that "it has to observe that the Yangtse region is of the highest importance as concerning the whole position of China, and it is out of the question that territory in it should be mortgaged, leased, or ceded to another power." This was described as a binding engagement by the responsible ministers in England, who claimed this central part of China, the largest, wealthiest, most populous, and richest in undeveloped resources, as the British "sphere of interest," as contradistinguished from the "spheres of influence" which Russia, Germany, and France sought to set up elsewhere. International lawyers held the Chinese declaration to be nothing but an expression of opinion, carrying no obligation with it. The Chinese Government early in the year had dismissed many of the German military instructors, and had appointed Col. Woronoff, a Russian, its chief military adviser. When the English took possession of Wei-Hai-Wei permission was asked to place Chinese naval cadets under their tuition, as was already done at Port Arthur. Sir Claude MacDonald broached a scheme for the complete reorganization of the military forces and the building up of a powerful Chinese army and navy under British officers, stipulating as a condition precedent that these should have full power and control. This proposition was not considered at all. When M. Pavloff asked later that on new Chinese ships Russian instructors be employed exclusively and that all future army and navy instructors should be Russian the Chinese demurred. The Chinese wanted

to send their new cruisers to Port Arthur, but were told that only Chinese ships whose foreign officers were exclusively Russian would be admitted.

The regulations for the steam navigation of Chinese inland waters when first promulgated by imperial decree were disappointing. They restricted the privilege to the waters of provinces containing treaty ports and forbade towing. After further negotiations these limitations were swept away and the right of using steamers was permitted to foreigners on all the rivers, lakes, and canals, and even in the coast waters.

The competition for railroad enterprises in the middle of the year caused greater friction than the loan negotiations or the occupation of Port Arthur and led the British to prepare their fleet once more for war. The Russians, all-powerful at Pekin, not only blocked their scheme of invading the Russian sphere by extending the line built under British auspices from Tientsin to Shan-Hai-Kwan to the Manchurian port of Niuchwang, but obtained control of the concessions for the projected trunk lines penetrating to the center of the Yangtse region that was supposed to be reserved for British enterprise and aiming to join hands with the French, who were pushing their railroad enterprises up from the south. The English mercantile community called upon their Government to provide capital for Chinese railroads, as the Russian Government was doing, lest their commercial supremacy vanish like the British political predominance. Mr. Chamberlain, applying to Russian diplomatic methods the proverb that to sup with the devil one wants a long spoon, suggested an alliance with Germany, saying that without a powerful military ally England could never seriously injure Russia.

Ten years have elapsed since Li-Hung-Chang and Chang-Chi-Tung undertook in rivalry to provide China with railroad communications. Li-Hung-Chang was for extending the line he had lately begun from Tientsin toward Pekin in one direction and Manchuria in the other. Chang-Chi-Tung disapproved of railroads near the coast, which might be used by an enemy, and of employing foreign capital, engineers, or materials, for fear of political encroachments. He was authorized to build his trunk line from Pekin to Hankau in his own way, but used up the capital he raised and the 2,000,000 taels a year given by the Government in opening the necessary coal and iron mines without being able to build a mile of the great Lu-Han Railroad, so called from the initial syllables of the two terminal towns. Sheng, as Director-General of Railroads, took up the project, but accomplished no more. Li-Hung-Chang's projected line from Tientsin to Pekin was completed by Hu, the Governor of Pekin, after Sheng had failed to obtain the capital from the various syndicates—American, Belgian, and English—with which he treated. A projected line from Shanghai to Suchan and Nankin collapsed with the Hooley loan. Chang-Chi-Tung built the short line from Shanghai to Wusung. The extension of the Pekin-Tientsin line to Shan-Hai-Kwan was accomplished under the direction of the English engineer Kinder. Under Russian auspices a line running southward from Pekin has reached Pao-Ting-Fu and is being extended to Ching-Ting. These are the only existing railroads in China. A Belgian syndicate in 1896 obtained a concession for the construction of the famous Lu-Han line, of which this was the beginning. The Russo-Chinese Bank in the early part of 1898 offered financial assistance to carry out this work, and obtained concessions to build branches from Ching-Ting, through the great mining region of Shansi, to Tai-Yuen-Fu and onward to Si-Ngan-Fu, in Shensi, whence Russians obtain their caravan teas.

In the Shantung peninsula Germany asserted the principle not of a monopoly of railroad construction, but of a preferential right to make tenders for any contemplated line. When a British syndicate undertook the construction of a great trunk line from Tientsin to Chinkiang the German Government objected because the route lay through the western part of Shantung, and a German syndicate was formed to make an offer to build the line, which runs parallel to the Grand Canal. A British syndicate obtained the right to connect Shanghai with Ningpo on the one side and Chinkiang and Nankin on the other by railroads traversing the rich silk and cotton districts of the lower Yangtse. This was the only British railroad concession that was not blocked by the interference of other powers exerted in ways that the English considered to be in violation of the Tientsin treaty, with the exception of the right to extend the Burmese Railroad when it reaches the frontier into the province of Yunnan. In the south of China the French acquired certain rights of railroad construction into Yunnan under the convention of June 20, 1895, and in 1896 China granted the privilege of continuing the Tonquin line from Haifong from the frontier at Sanchau to Nanning-Fu, on the West river. They plan to carry it through into the upper Yangtse valley at some future time. In 1898 they obtained a concession for another line to Nanning-Fu from the treaty port of Pakhoi, on the Gulf of Tonquin.

The principal industrial concession obtained in the British interest, the largest ever granted in China, was sanctioned in favor of an Anglo-Italian syndicate, which was authorized to work the coal and iron mines, petroleum, and other minerals in Shansi. On June 21 the same syndicate obtained a monopoly for sixty years of the coal and iron mines of Honan south of the Yellow river, with permission to connect them by railroad with the nearest trunk line. A Chinese company, financed by the Russo-Chinese Bank, arranged to run a line into the most valuable mining district of Shansi, about Tai-Yuen, and to get mining privileges of its own, which threatened to render useless the Anglo-Italian concession. The Russian gauge has been adopted on the roads mortgaged to the Russo-Chinese Bank, and the bank determines questions of route, etc., and also engages the foreign workmen to be employed until Chinese are available. The Russian representative secured from the Tsungli-Yamen an agreement that any dispute between the Pekin-Hankau Railroad Company and the local authorities shall be arbitrated by the minister of the Government whose people have the greatest financial interest in the railroad.

To carry the existing railroad from Shan-Hai-Kwan to Niuchwang with a view of extending it onward in the direction of Mukden the Hong-Kong and Shanghai Bank, a British institution, offered to provide the money on the security of the line already completed. M. Pavloff protested energetically against the intrusion of foreign enterprise in the Russian sphere. The Chinese Government at first resisted the claim to restrict their use of foreign capital, which was admitted in a convention signed in St. Petersburg on May 7, 1898, but the Russian *chargé d'affaires* insisted on the terms of the Cassini convention. When he resorted to menaces Sir Claude MacDonald, who had already been instructed to press for the insertion in every concession granted by the Chinese Government of proper provisions for the equal treatment of all nationals and trade, was further instructed on July 22 to inform the Yamen that the British Government would support the Chinese Government against any power which committed an act of ag-

gression upon China because China had granted to a British subject permission to make or support any railroad or similar public work. M. Pavloff finally laid down the conditions of accepting the British loan, viz., that the line should not be mortgaged and no foreign control should be allowed even in the event of default in the repayments, which conditions the Chinese Government finally accepted. At the same time he informed the Chinese that, if the Hong-Kong and Shanghai Bank was unable to raise the capital on these conditions, the Russo-Chinese Bank would provide it. Sir Claude MacDonald declared to the Yamen that England would not tolerate any interference of other powers with the British loan contract for the construction of a railroad connecting two treaty ports in which British commercial interests are predominant. Hu-Yu Fen, the new Director of Railroads, who was appointed at the instance of Russia, nevertheless abrogated the preliminary contract with the Hong-Kong and Shanghai Bank, yielding to Russian pressure, and Great Britain agreed to the Russian conditions. The British resisted the conclusion of the contract with the Belgian syndicate for the Pekin-Hankau Railroad and began to mobilize their fleet to intimidate the Chinese Government. This had no effect on the Tsung-li-Yamen, which sanctioned the contract in August. In compensation a concession was granted to a British syndicate for a short line from British Kaulung to Canton. Furthermore, the Pekin or Anglo-Italian syndicate obtained the right to carry their mining railroad beyond the borders of Honan to Sing-Yang, in Hupei, on the river Han.

Insurrectionary Movements.—The agitation caused by the encroachments of foreign powers on the territory of China and the authority of the Government brought to the surface the revolutionary undercurrents which manifest themselves only in periods of storm and danger. An attack on the American Methodist Medical Mission at Chungking in March was only one of the usual anti-foreign disturbances. In July both the Protestant and the Catholic missions there were attacked, and missionaries were assailed in adjacent cities. In September the American and French missions at Hochau were destroyed. A serious riot in May at the treaty port of Shasi, on the upper Yangtse, where consulates, foreign warehouses, and the customhouse were destroyed, was probably instigated by mandarins, who will lose their perquisites by the transfer of the *likin* collectorate to the maritime customs. More ominous was the phenomenon of secret societies growing more numerous and active in all the provinces, especially in the south, where antidynastic sentiments are always rife. The mysterious Triad, which gave the first impetus to the Taiping rebellion, and the White Lily confraternity began to stir as they do in troublous times, and alongside of these accustomed agencies of unrest new political societies, imbued with new ideas, assailed the authority of the supine and impotent Manchu dynasty and the corrupt and incapable official oligarchy. Such were the National Preservers, who advocated Western learning and the adoption of foreign methods, the Young China Society, created by graduates of Yale and Harvard, and the Progressive Society, led by men who have lived in the United States, who dream of transforming the Celestial Kingdom into a republic. The revolutionaries of both types worked harmoniously together and looked for some support from Great Britain, whose side they favored in her struggle against the Russo-French alliance, as conducing best to the preservation of Chinese independence. The Black Flags of the Kwang provinces were used to fighting the French in defense of Chinese institu-

tions, while the advanced thinkers, who derived their ideas from America and Shanghai, sympathized with English aims and methods in China. When the French took possession of their new naval base at Kwangchau-Wan they met with hostile demonstrations. Tan, the Viceroy of Liang-Kwang, resigned his office as a protest against the surrender of this place to the French. In Shanghai the French provoked serious riots by attempting to expropriate by force the ancient burying ground of the Ningpo guild in their settlement. In Kiangsi anti-foreign riots broke out at Chang-Shu, where a mob destroyed the premises of the China Inland Mission. In Hainan American missionaries were attacked. Sun-Yat-Sen, a revolutionist of the new school, started an insurrection in Kwangtung. On June 28 a rebellion was started in Kwangsi. A lawless character named Li-Lap-Yanset himself up as the Chinese deliverer who would free the country from the Manchu dynasty, which had long misgoverned the people and was now reduced to a state of collapse. The provincial authorities, who feared complications with France, hastily collected an army of more than 5,000 men, but before it could take the field the rebels captured Yung-Hsien, Peiliu, Luchuan, and half a dozen other towns. They marched on Moning and Tienpak, and advanced into Kwangtung, threatening Wuchau. Among the rebels were many Black Flags and some trained Annamite soldiers, who had deserted from the French army. Six gunboats were dispatched from Canton to Pakhoi, carrying nearly 3,000 Manchu troops. When these reached the disturbed district they proceeded with barbarous severity against the insurgents, slaughtering them by hundreds and casting their bodies into the West river. The first troops to reach the field were the local militia, who met with a severe reverse near Wuchau, losing 1,500 men. The rebels numbered nearly 40,000 by the middle of July, but they were not able to hold their ground against 7,400 Chinese troops. These recaptured Yung-Hsien, killing 1,000 rebels, and Peiliu. The rebels fell back from the river district, but made a stand in the Hsi-Shan hills, where, with the aid of some field pieces, they repelled the imperial forces from an entrenched position. In the southern part of the province the soldiers were unable to get at them, but the disturbed district near Wuchau was cleared of rebels by a ruthless slaughter of guilty and innocent alike. The rebellion broke out afresh at Yulin and other places where the troops were not in force, and Wang, the governor of the province, was scarcely able to report truthfully that he had subdued the rising within three months, the term given to him by the Pekin Government.

Internal Affairs.—The progress of education in China has been so great that even among the Conservatives are many who would supplant the study of Chinese classics and literary style with science and the useful arts. Newspapers are being established in the most backward cities, and their writers discuss political conditions and theories of government with perfect freedom. The friends of progress attained a remarkable influence even in the Central Government. A curious decree of the Emperor ascribed the neglected and decayed condition of the national defenses to the extravagance and corruption of the mandarins, who keep dummy names on the rolls of the army, and waste the proceeds of the many taxes that were unknown in the period of China's greatness, so that in spite of the large sums obtained from *likin*, opium duties, etc., the ordinary expenses can not be met. He appealed to the honesty and diligence of the high authorities in Pekin and the provinces to work a reformation in the administration so as to enable the country

to withstand powerful and crafty neighbors who seek advantages and combine to overpower China. An edict was issued by the Emperor changing the basis of the higher education of the Celestial Empire by ordering that the official decrees which constitute the indispensable qualification for office should be conferred in future upon an examination in modern subjects, including mathematics, political economy, and the practical sciences. A university for the diffusion of Western science was established at Peking, with Prof. Martin, an American, as president. Changes of officials in the summer indicated that the Emperor had adopted progressive views.

In June the office of Minister of Trade was created. A patent office was established, with a view to encouraging inventors. A central bureau for mining and railroad administration was formed and placed under the presidency of two Cabinet ministers. Frequent edicts decreed reforms and ordered expenses to be cut down. The operations of the post office were extended over the whole empire, putting an end to the clumsy system of Government couriers. The Tsung-li-Yamen was directed to afford facilities for the sons of members of the nobility to visit foreign countries and to promote international intercourse. Chang-Chi-Tung, an opponent of Li-Hung-Chang, who had freely criticised the Tsung-li-Yamen, was summoned to become a member of the Government in April. In September Li-Hung-Chang was dismissed from the Tsung-li-Yamen. Other edicts permitted Manchus to engage in trade, decreed reforms in the civil service, and introduced energetic measures of administrative, financial, and industrial reform. A radical reform was announced in an edict giving to the whole official class the right to memorialize the throne. The Emperor appealed to the people to co-operate with him in strengthening the resources of the empire. It was ordered later that monthly accounts of the Government receipts and expenditures should be rendered and published throughout the empire, so that every one could see the endeavors that the Emperor was making to promote their welfare. The Emperor explained his new policy in a proclamation declaring that in many respects Western civilization is superior to Chinese, and that he meant to adopt its good features, while discarding the bad. This series of startling edicts, issued in September, were the work of a Cantonese, Kang-Yu-Mei, a friend of England, who had gained the confidence of the Emperor. On Sept. 21 this reformer was suddenly banished from Peking, and the dowager Empress assumed charge of the Government, announcing that she would henceforth be present at all Cabinet meetings and audiences, see all memorials, and approve all edicts. On Sept. 22 an imperial edict formally restored the regency.

CHRISTIAN CONNECTION. The tables of statistics of the churches for 1898, published in the "Independent" newspaper, New York, for Jan. 5, 1899, gives this body 1,391 ministers, 1,424 churches, and 107,868 communicants; Christian Church, South, 102 ministers, 174 churches, and 16,500 communicants; total for the united body, 1,493 ministers, 1,598 churches, and 124,368 communicants. The American Christian Convention met in its quadrennial session at Newmarket, Ontario, Oct. 11. The retiring president, Rev. A. H. Morrill, D. D., presented a report giving a satisfactory exhibit of the condition of the Church and its enterprises during the past four years, and in connection therewith recommending some changes in the constitution. Committees were appointed to devise some plan of apportionment of financial burdens, and to report upon a plan of co-operation with independent churches and upon the feasibility of appointing an assistant missionary

secretary to promote the work in the home field. The Rev. O. W. Powers was chosen president of the Convention for the ensuing four years. The report on Christian Endeavor Societies represented those bodies as increasing "in numbers, enthusiasm, and spirit of sacrifice." There were now 449 societies, with 9,504 active and 2,592 associate members, and 69 junior societies with 2,077 members; and they returned collections of \$1,218 for missions and \$2,018 for other purposes; in addition to which the books of the missionary treasurer showed that \$4,040 had passed through the hands of the missionary secretary during the past four years. Many societies were also regularly contributing clothing, books, etc., and money for Franklinton school, North Carolina. Other contributions for conference, local and city mission work, for Armenian and other famine-relief work, and for the local churches not regularly reported should be credited to these societies. The societies of the New England Convention were supporting two missionaries in the field. The Convention urged all other societies to form groups for the support of missionaries in a similar way. It also called on them to make regular and systematic collections for foreign missions. The reports on foreign missions related to missions in Japan and included an account of a visit of the missionary superintendent to China. The work in Japan had been somewhat interrupted by illness of missionaries; the schools had not been as successful during the last as during the previous year. No progress had been made toward self-support. The Convention advised the establishment of a mission among the Armenians in Cyprus, to be under the direction of Mr. Alexanian, an Armenian. The secretary of the educational department reported concerning the condition of nine institutions, viz.: the Christian Biblical Institute, Stanfordville, N. Y.; Union Christian College, Merom, Ind.; Elon College, Suffolk, Va.; Palmer College, Le Grand, Iowa; Kansas Christian College, Lincoln, Kan.; Weaubleau Christian College, Weaubleau, Mo.; Franklinton Christian College, Franklinton, N. C.; the Christian Correspondence College, Eddytown, N. Y.; and Starkey Seminary, Eddytown, N. Y., controlled by Christians and more or less directly affiliated with the Convention; that they employed 59 professors and 11 teachers; had lands and buildings valued at \$192,300, and aggregate cash endowments of \$65,187, besides notes for \$28,026. Some of these institutions were working in the college grade and carrying on a preparatory department, and others were more exclusively limited to preparatory studies. A proposition to establish or acquire a second college in Indiana was under consideration. The urgent need of a fund for the aid of young men contemplating the work of the ministry was presented in the report. The subject had been brought before the Convention at two previous meetings, yet the department had no money at its disposal for such purposes. The treasurer of the Woman's Home-Mission Board represented that of the seventy conferences of the Connection only thirteen had reported, and that the total amount of contributions from the conferences and gifts to the society was \$916. The corresponding secretary of the board reported that she had ascertained, in answer to letters of inquiry, that a majority of the conferences in the Central States had conference home-mission boards. The boards in the Eastern conferences had been formed previous to the organization of the General Board, and its work was not yet so universally adopted by them as in the boards of more recent organization. These boards were adopting measures of co-operation and education, with varying degrees of success. A more rigid investigation

of the characters of ministers applying to be received from other denominations was advised. The Convention recommended that \$60,000 be raised during the ensuing four years and distributed as follows: 35 per cent. to home missions, 35 per cent. to foreign missions, 20 per cent. to education, and 10 per cent. to the American Christian Convention.

The Committee on Christian Union reported that it had met a committee of Congregationalists to consider the subject of Union at Craigville, Mass., in August, 1897, when a recommendation was adopted that a union of the two bodies be formed on a basis including "mutual recognition of the Christian standing of each other's churches and ministers, with no doctrinal test beyond the acceptance of the Bible as the only standard of faith and practice; one name for the highest representative body, such as the General Council of Christian Churches; present organizations, institutions, and churches not to be disturbed by this action; that it be advised that new enterprises or churches be established under such a name as 'Christian' or the equivalent thereof." As co-operative measures supplementing these terms, certain provisions were advised for securing complete fellowship of the two bodies, their ministers and members, without interference with their several existing denominational relations, and for avoiding collision in their work. The plan was approved by all the members of both committees except one Congregationalist. Majority and minority reports were presented to the Convention respecting these recommendations, and a report was finally adopted, in which the majority report was slightly amended, whatever might be construed as an argument for the "Craigville plan" being omitted, and the treatment being made slightly more historical. This paper recited that in agreement with the determination of the founders of the Convention to take a position in which nothing in name, creed, or organization should repel any true Christian, the people of the Connection had rejoiced in witnessing the advance of the spirit of union among Christians of different bodies, and had been ready to recognize and co-operate with it in any feasible way. The Convention had at several quadrennials appointed its standing committees (for correspondence and negotiation) on Christian Union, from which some good and substantial results had been achieved, such as union with the brethren of the South and with the Christian Union. Other correspondence had been had, from which no practical results had followed, but it had produced no alienations. It should, however, be plainly understood that as the Convention held as the basis of its organization no principles that were not essential to Christian character—none that could be dispensed with without compromising the principles of true discipleship—it could entertain no propositions for union which looked in the least to any yielding of those principles; that no union would be a Christian union which was based merely or unconditionally on a name. "So, as we bear a name that has nothing in it that can divide the body of Christ, any suggestion that we should surrender our name as a condition of union would be rejected at once. Desirable as union may be, that only is a Christian union which is a CHRISTIAN union, and Christian only in its spirit and conditions, free from all elements of selfism, personal or denominational; so union for the sake of union, aiming at the making of a larger and more powerful denomination, either by absorption or combination, is vitiating in its spirit and can not be really a Christian union. With such a union we would have nothing to do." The position taken by the Convention at Haverhill, four years previously—no compromise of essential principles, an attitude

the same toward all, and no disintegrations or combinations to be contemplated—was believed to be the true one. The question stood now as the committees at Craigville had left it. Nothing special was pending. The report closed with expressions of the convictions that, considering human weakness and the strength of sectarian prejudice, real Christian union must be of slow growth; that it can not be effected except upon mutual acquaintance, and that it will never come merely by negotiations. The report was adopted, with a reservation that the act should not commit the Convention to the acceptance of the "Craigville" resolution contained in it.

CHRISTIAN ENDEAVOR SOCIETIES. The seventeenth International Convention of the United Societies of Christian Endeavor was held at Nashville, Tenn., July 6 to 11. The secretary's report showed that there were in the United States 41,222 Christian Endeavor Societies proper, 4,647 in England, 3,456 in Canada, 2,284 in Australia, 535 in Scotland, 433 in India, 331 in Wales, 213 in Ireland, 139 in China, 110 in Africa, and others in other countries, the whole number including the United States being 54,191; and Russia being the only country that has none. The increase in South Africa, India, China, Germany, and throughout Great Britain had been large. The constitution for local Christian Endeavor Societies had been translated and printed in 37 languages. The total membership of all the societies was upward of 3,250,000. Besides these, there were nearly 14,000 Junior Societies, 1,000 of which were in foreign lands, more than 730 Intermediate Societies, 77 Mothers' Societies, 45 Senior or Graduate Societies, 17 societies in the army of the United States and in volunteers' camps, 119 societies in the United States navy and on board merchant ships, and societies in prisons, schools of reform, workhouses, almshouses, asylums, institutions for the blind and for the deaf, schools and colleges, among car drivers, policemen, traveling men, men in the life-saving services, men in lighthouses and in large factories, etc., to the number in all of nearly 200. In England, the Baptists stood first in representation in the societies; in Australia, the Wesleyan Methodists; in Canada, the Methodists; and in the United States, the Presbyterians, who were followed by the Congregationalists, Disciples of Christ, and Baptists, more than 30 denominations being represented. Nine thousand societies had contributed \$198,000 directly to the mission boards and \$225,000 for other denominational purposes. The Tenth Legion, a tithe-paying band, started only three months before the previous International Convention, had now an enrollment of 10,300 members. During the year past 196,550 members had joined their home churches from the Young People's societies, 27,686 from the junior societies, and 1,518 from the intermediate societies. The by-laws of the societies had been revised. The meetings of the Convention were devoted to the reading of papers and delivery of addresses on various subjects relating to Christian life and effort, and reunions of the delegates of all the several denominations represented in the meeting were held.

In view of criticisms of the American Christian Endeavor Societies, representing that their tendency is toward an attitude of rivalry to the Church, and toward operating as a check upon the growth of church membership, the officers of the General Society investigated the matter, as it concerned the two denominations in which the organization is strongest—the Presbyterian and Congregational. They found that immediately after the organization of the Christian Endeavor Societies a very marked increase took place in the average number of additions in both churches, and that the

rate of increase was growing. In the Presbyterian churches the additions from 1885, when the Christian Endeavor movement had become effective, to 1894 were 555,268, against 333,481 in the decade 1875 to 1884. In the Congregational churches the annual average of additions from 1875 to 1884 was 16,928; the average from 1884 to 1894 was 30,842. The officers did not presume to attribute the whole of this impulse to church growth to the influence of the Christian Endeavor Societies, but they maintained that it had been a factor in the matter, and considered it demonstrated that they are not an obstacle to church growth.

COLOMBIA, a republic in South America. The Congress consists of a Senate of 27 members, elected by the nine departments, and a House of Representatives containing 66 members, for whom the people vote direct. The President is elected by electoral colleges of the departments for six years. On the death of President Núñez, on Sept. 18, 1894, Vice-President Miguel Antonio Caro succeeded as acting President for the remainder of the term, ending Aug. 7, 1898. The Cabinet was composed in the beginning of 1898 of the following members: Minister of the Interior, A. Roldan, who by the choice of Congress acted as President during the temporary retirement of Vice-President Caro in 1897; Minister of Foreign Affairs, M. Tanco; Minister of Commerce and Communications, M. Esquerre; Minister of War, Gen. Molina; Minister of Education, J. M. Carrasquilla; Minister of Finance, D. J. Reyes.

Area and Population.—The area of the republic is estimated at 513,938 square miles, and the population at 4,000,000, including 150,000 uncivilized Indians.

Finances.—The revenue for 1898 was estimated at 34,361,000 pesos, of which 19,500,000 pesos are derived from customs duties. The estimated total expenditure is 35,771,013 pesos.

The domestic debt on June 30, 1896, was 7,525,156 pesos, including 1,892,110 pesos of floating liabilities. The foreign debt, according to the settlement made with the creditors in January, 1897, consists of £2,700,000 of new bonds bearing $1\frac{1}{2}$ per cent. interest for the first three years, 2 per cent. the next, then 2½ per cent. for three years, and afterward 3 per cent.

Commerce.—The export of coffee in 1895 amounted to 47,300,000 pounds. Other exports are earthenware, gold, silver ore, cacao, cotton, dyestuffs, animals, tobacco, hides, rubber, and cabinet woods. About 60 per cent. of the imports pass through Barranquilla and 20 per cent. through Cartagena. The exports from Barranquilla in 1896 were valued at £1,790,260 sterling, of which sum £987,182 represented coffee, £452,201 gold dust and bars, £146,974 silver ore, £57,466 hides, £48,189 tobacco, and £24,742 rubber.

Communications.—There were 400 miles of railroads in operation in 1897, besides which 270 miles were building and 85 miles were under contract. The Panama Railroad carried in 1896 from Colon, on the Gulf, to Panama, in the Pacific, 92,137 tons of freight from Europe and 51,417 tons from New York, and from Panama to Colon 56,071 tons going to Europe and 33,701 tons for New York. The local traffic was 28,219 tons.

Election of a President.—The Congress assembled on July 20. The aged San Clemente was elected President of the republic for the ensuing term, but as his health would not permit him to undertake the duties of the office the Vice-President elect, José Manuel Marroquín, was inaugurated in his stead. A new Cabinet was formed as follows: Minister of the Interior, Aurelio Mutis; Minister of Foreign Affairs, Señor Paul; Minister

of Finance, Pedro Antonio Molina; Minister of War, Oligario Rivera; Minister of Education, Tomas Herran; Minister of the Treasury, Mejia Alvarez.

Dispute With Italy.—The Italian squadron of four vessels stationed in the Caribbean Sea was dispatched to Cartagena in July, and Admiral Candiani was instructed to make a formal demand upon the Colombian Government for the complete and speedy execution of the decision pronounced on March 2, 1897, by the President of the United States acting as arbitrator in the case of Ernesto Cerruti, an Italian subject, who claimed compensation for imprisonment and the confiscation of his property in 1885 on account of his alleged implication in the attempted revolution of 1884. President Cleveland awarded £60,000 to the claimant, including £10,000 that had been paid already. Of the balance £10,000 was to be paid within two months, and the remainder within nine months. The installments were duly paid, but English and Italian firms which had supplied E. Cerruti & Co. with goods before the forcible collapse of that firm claimed a lien upon the money. The award rendered it obligatory on the Colombian Government to guarantee and protect Signor Cerruti against all liability on account of the debts of his copartnership and to reimburse him for any that he might be legally compelled to pay. The Colombian authorities disputed the validity of this article of the award and refused to pay any money to release the indemnity from the embargo placed upon it by the Colombian and Italian courts. It was an integral part of the award, which would be illusory if the creditors could appropriate the indemnity. Nevertheless the Colombian Government, although it had submitted the case to arbitration unconditionally, contested this last article of the award as being outside of the scope of the reference. Admiral Candiani presented an ultimatum on July 24, demanding compliance with the Cleveland award within twenty days. To avert the forcible seizure of the customhouse and port of Cartagena the United States Government intervened, and by the use of its friendly offices induced the Italian Government to extend to eight months the time in which Colombia must satisfy all duly proved claims of the creditors of the Cerruti company. It required, however, that Colombia should announce her compliance with the Italian demand within the term of the ultimatum. The Colombian Government thereupon paid the balance of £60,000 to Cerruti and deposited 1,000,000 pesos to be employed in paying claims of the creditors when proved to the satisfaction of the President of the United States. The Italian Government insisted that the Italian or the Colombian courts of law should adjudicate the claims. The sum of £20,000 was paid to Admiral Candiani as a guarantee that Signor Cerruti should be released from all the claims of his business creditors within eight months.

The Panama Canal.—By an arrangement concluded with the Colombian Government by the liquidator of the Panama Canal Company on April 4, 1893, the concession for the construction of the canal was extended for ten years longer on condition that the new company then being organized should resume the work of construction before Nov. 1, 1894, and pay over to the Colombian treasury 17,000,000 francs in coin and stock. Work on the canal was taken up again and has since been continued, but the permanent organization of the new company was left to be decided after further study and experience. A decision was expected to be reached before the close of 1898. There were 3,500 laborers employed in the early part of the year, mainly on the work of reducing the Culebra hill.

COLORADO, a Western State, admitted to the Union Aug. 1, 1876; area, 103,925 square miles. The population in 1880 was 194,327; in 1890 it was 412,198. Capital, Denver.

Government.—The following were the State officers during the year: Governor, Alva Adams, Democrat; Lieutenant Governor, Jared L. Brush, Republican; Secretary of State, Charles H. S. Whipple, Democrat; Treasurer, George W. Kephart, Republican; Auditor, John W. Lovell, Republican; Attorney-General, Byron L. Carr, Republican; Superintendent of Public Instruction, Grace E. Patton, Democrat; Adjutant General, Gen. Barnum; Regents of the University, David M. Richards, W. E. Anderson, Charles R. Dudley, Edwin J. Temple, Oscar J. Pfeiffer, and William J. Orange; State Engineer, John E. Field; Commissioner of Mines, Harry A. Lee; Register of Land Board, L. C. Paddock; Dairy Commissioner, H. B. Canon; Fish Commissioner, Joseph S. Swan; Coal-Mine Inspector, David Griffiths; Geologist, Thomas A. Rickard; Chief Justice of the Supreme Court, John Campbell, Republican; Associate Justices, Luther M. Goddard and William H. Gabbert, Democrats; President Judge of the Court of Appeals, Charles I. Thompson; Associate Justices, Julius B. Bissell and Adair Wilson.

Finances.—The estimated expenditures for the biennial period 1897-'98 amounted to \$1,260,872.70, and the estimated general revenue fund income to \$1,092,950. The total valuations of the counties, including railroad property, were \$206,598,561 in 1896. The bonded debt was \$770,500, and the floating indebtedness \$2,387,009.

Education.—The report of the Superintendent of Public Instruction, published in January, shows that the State has a school population of 130,362, of whom 100,882 are enrolled in the public schools. There are 3,120 teachers, 500 school districts, and 1,690 school buildings, of which 338 are of sod, adobe, or log, 1,006 of frame, and 346 of brick or stone. The State funds apportioned to the schools in 1897 amounted to \$89,664.67.

The State Normal School has 367 pupils.

A new building for young women was dedicated, Jan. 11, at the Colorado College, Colorado Springs. An unusually large class was graduated in May at the State Agricultural College.

A "Texas-Colorado Chautauqua" was opened at Boulder, July 4. The grounds are 6,000 feet above sea level and just above the campus of the State University. An auditorium, with seats for 6,000 persons, has been built, and a large dining hall. Tents are provided for lodgings.

Charities and Corrections.—The average of prisoners in the Penitentiary is about 600, while about 100 are confined at the State Reformatory. The Industrial School for Girls has more than 50 inmates, and cost, for the year ending Nov. 30, 1897, \$7,483.75. A riot took place in this institution in March, on the occasion of the installation of a new superintendent. Doors and windows were smashed, stair rails thrown down, and general havoc made of the fixtures and furniture. Ten of the girls were lodged in the city jail.

The Soldiers' Home has about 100 inmates, and the cost of the maintenance is about \$30,000 annually.

Railroads.—It is an evidence of prosperous conditions in the State that the earnings of the Rio Grande for the first six months of the year showed an increase of 15.87 per cent. over those of the corresponding part of 1897, while these were about as much in advance of those of 1896.

A traffic arrangement was made in January between the Denver and Rio Grande, the Rio Grande Western, the Oregon Short Line, the Oregon Rail-

road and Navigation Company, and the Great Northern, designed to open up a channel heretofore closed between this part of the country and that touched by the Great Northern, and tending to bring a large share of through traffic over Colorado roads.

Mining.—Colorado took the lead among the States in the gold production in 1897, the output amounting, according to the report of the Director of the Mint, to \$19,104,200; the report of the State Bureau of Mines makes it \$19,579,636.83; but figures made up from smelter and mint statements raised the total to about \$23,000,000. More than half of the output is from the Cripple Creek district, which produces more than \$1,000,000 a month. Figures so far given for 1898 indicate a larger State output, estimated at \$24,000,000. The

CHARLES S. THOMAS, GOVERNOR OF COLORADO.

product of Cripple Creek runs from \$1,134,800 in January to \$1,302,047 in July. New mining camps are springing up in many parts of the State. That at Eldora, in Boulder County, is the opening up, practically, of the sulphide belt from Gilpin County. The town is only a few months old, but its population is 5,000, and it has several fine producing mines. In Clear Creek County many tunnels are being driven, which promise to increase production and lower cost. The Leadville district produces now almost as much gold as silver. Other promising localities are Hahn's Peak, Whisky Park, La Plata, and Unaweep. It was announced in December that a new town had sprung up five miles southwest of Cañon City, in consequence of the recent discovery of gold there. The new camp is named Dawson City, and more than 1,000 claims have been staked.

A cause of great increase in gold production in Colorado is the advance made in the treatment of low-grade ores, which formerly could not be treated because of a smelting charge of \$12 to \$14 a ton. By the improved methods of cyanide and chlorination these ores have been brought into successful and profitable treatment.

In silver, the amount in 1897 was \$12,692,448; the estimate for 1898 is \$14,250,000. The copper produced in 1897 was valued at \$960,917.13, and the lead at \$2,731,032.49. The estimates based on returns to December, 1898, show \$1,200,000 as the probable production of copper in that year, and \$3,000,000 as that of lead. The coal output in 1897 was valued at \$6,000,000, the iron at \$4,000,000, and petroleum \$1,500,000.

Extensive veins of anthracite coal have been discovered about 90 miles from Denver, on the proposed extension of the Colorado and Northwestern Railroad.

The official report shows that during the year 1897 there were employed in the metalliferous mines of the State 29,215 men. The general average wage was \$3 a day. Reports made by the miners' unions show a little better average. There has been a constant increase in the number of miners employed since 1897, but no decrease in wages.

Business.—The number of incorporations recorded in the office of the Secretary of State for the year ending Nov. 30, 1896, was 1,132, the capital stock amounting to \$385,061,840. The "United States Investor" said in October: "There has been a large increase in the deposits in Denver banks during the past six months, due to improved commercial and industrial conditions, among them being the growth of mining enterprises and the development of dividend-paying gold mines, which have been operated by individuals and private companies. Another reason for increased deposits has been the return of confidence since the outcome of the war was evident, and its effect upon financial enterprise was determined. The deposits in the largest three banks now aggregate about \$26,000,000, which is a very large sum for three Western banks. The very rapid strides making by the mining industries of Colorado are among the important sources of business of the State in general, while the advance of the cattle- and sheep-feeding business in that part of the State which can be reclaimed by irrigation has been a great source of income. The success in the growing of alfalfa on Colorado irrigated lands offers an unlimited field for the development of this industry."

A summary of real-estate transactions in Denver in 1897 shows that the total reduction of indebtedness was \$737,710, and the increase in consideration of warranty deeds over that of 1896 was \$237,810, in the number of releases 726, and the decrease in number of foreclosures was 278.

Agriculture.—The value of the farm products in 1897 are given in round numbers as follow: Wheat, \$3,800,000; alfalfa, \$4,300,000; clover and timothy, \$1,000,000; corn, oats, rye, barley, etc., \$6,500,000; potatoes, \$1,800,000; garden products, \$7,000,000; dairy and poultry, \$2,500,000; total, \$26,900,000; 1896, \$22,000,000.

The live-stock product was given as \$15,000,000 in value, and the wool as \$500,000.

The estimate of "Field and Farm" was much higher, the total of farm, dairy, and garden products amounting by its figures to \$77,800,000.

The following report of experiments with sugar beets in 1897 is given: "The State Agricultural College at Fort Collins sent out last spring over 600 samples of sugar-beet seed to farmers all over the State, who promised to take good care of the crop and report the results. During the fall a great many samples of beets were secured. Some were sent by the raisers, and some taken by representatives of the college, who visited the farms and made notes on the general conditions and management of the crops. The larger part of these samples were analyzed by the chemical department of the college, though some were sent to the chemist of the Department of Agriculture at Washington. The results of the season's work can be summarized in two sentences: First, good sugar beets will not grow in Colorado without care. Second, good sugar beets can be raised almost anywhere in Colorado by proper care. The average of the reported crops in Colorado will be over rather than under 16 tons of beets to the acre, with two farms that exceeded 30 tons. Twelve per cent. of sugar and 80 per cent. purity is the standard of quality in sugar beets. There has been scarcely a sample of ripe beets from the whole State that has gone below the standard. Nearly all that have fallen below

have been raised on clay soil. Many have gone far above the standard."

Early in 1898 the Denver Chamber of Commerce made an appropriation of \$1,000 for encouragement of experiments in the culture of sugar beets. A portion of the fund is to go to each county, under the condition that it shall appropriate at least an equal amount for the same purpose.

Irrigation.—There were at the beginning of the year nearly 16,000 miles of irrigating canals and ditches in the State, furnishing water for more than 3,500,000 acres, besides thousands of miles of small ditches built by individual farmers in the small valleys, of which no official record is made. There were several large projects for canals to be built this year, among which were mentioned the Grand River Valley Canal, heading above Grand Junction, which will bring 80,000 acres of remarkably fertile lands under cultivation. The Arkansas and the San Luis valleys also have each several new irrigation projects of scarcely less importance than that of the Grand. And Weld County has a proposition to tap the South Platte river at a point above La Salle, from which source a supply of water will be obtained sufficiently large to irrigate about 40,000 acres.

Land Grant.—The "Denver Times" said, May 11: "The confirmation of the Baca land grant in the San Luis valley, announced by the United States Supreme Court yesterday, is a matter of far-reaching importance to Colorado interests. The final quieting of title to this immense tract of 100,000 acres, which includes a goodly portion of the Sangre de Cristo range, will speedily open up to settlement a vast territory of immensely rich agricultural lands, and in addition a gold-mining district which experts have pronounced the richest in the State."

Colorado Springs.—A fire in that city, Oct. 1, threatened to destroy the entire business district. A strip four blocks by two was burned over, when the wind, which had been blowing at 45 miles an hour, died down and the flames were controlled with the help of engines from Denver and Pueblo. The losses were estimated at about \$1,000,000.

Anniversary of the Discovery of Gold.—There is a plan on foot to mark the spot where gold was first discovered in the State by a monument, and to celebrate the fortieth anniversary of that event, which occurred Jan. 7, 1859, according to documents in the possession of the State Historical Society. On that day George Jackson, an old California gold miner, who was camping on Chicago creek with no other company than that of two dogs, having built a big fire to thaw out the gravel, found in the ninth cup panned "one nugget of coarse gold." He wrote in his diary after the record of that discovery: "Feel good to-night; dogs don't." They had had a fight the day before with a carajon that came into the camp. The spot where he found the nugget is within the present site of Idaho Springs.

Political.—The Republicans met in State convention, Sept. 15. The platform approved the national administration, reaffirmed belief in the policy of protection, and said further:

"We are unqualifiedly in favor of keeping forever in place the American flag wherever it has been unfurled to the breeze, whether as a result of conquest or peaceable acquirement.

"The Republican party is and always has been a bimetallic party. The Republican party of Colorado is earnestly devoted to the cause of bimetallism. It has no sympathy with monometallism, and believes that the final imposition of a single standard upon the people of this country would work irreparable injury. Its members believe that

the proper place for a Republican bimetallist is in the ranks of the party, and not out of it. In the future, as in the past, Republicans who represent Colorado at the national capital will be found working for the restoration of silver."

Following is the ticket: For Governor, Henry R. Wolcott; Lieutenant Governor, Charles E. Noble; Secretary of State, W. H. Brisbane; Treasurer, Frederick O. Root; Auditor, George S. Adams; Attorney-General, C. C. Goodale; Superintendent of Public Instruction, Mrs. Lucy E. R. Scott; Regents of the State University, Harry B. Gamble, Mrs. Jennie G. Caswell, L. C. Greenlee; Chairman of Central Committee, A. B. Seaman.

The Democrats, Populists, and one wing of the Silver Republicans united and named Charles S. Thomas for Governor. The platform reaffirmed the principles on which the parties are united, and said of expansion:

"We favor the independence of Cuba and the retention by this Government of the other Spanish West India possessions, and the control of all other Spanish territories taken by the American forces in the war just closed."

The Fusionists were successful in November, electing their State ticket and a majority of the Legislature. In the First Congressional District a Silver Republican was elected, and in the Second a Democrat.

The Democratic, Populist, and Silver Republican conventions were called to meet at Colorado Springs, Sept. 8, with a view to fusion on one ticket. But there were two factions of the Silver Republicans, one in favor of fusion, and one opposed to it, and on the morning of the 7th a fight took place between them for the possession of the opera house where the party convention was to meet. It was asserted that 150 shots were fired in the opera house; one man was killed, and three were wounded. One faction applied for a court order to compel the surrender of the opera house, but an arrangement was made by which neither was to have it, and the court so ordered. The coroner's jury in the case of the man who was killed returned a verdict justifying the Teller or fusion faction, which was in possession of the opera house and was attacked by the antifusion or "straight" faction. This wing of the party met the next day and adopted a platform favoring free coinage of gold and silver at the ratio of 16 to 1; commending the Administration for the conduct of the war; favoring the retention of all territory taken, whether by peaceful means or by conquest; favoring the construction of the Nicaragua Canal; and denouncing the action of the other wing of the party. The following ticket was nominated: For Governor, Simon Guggenheim; Lieutenant Governor, Ira Bloomfield; Secretary of State, Joseph W. Millsom; Treasurer, Harry Mulnix; Auditor, John A. Wayne; Attorney-General, H. M. Hogg; Superintendent of Public Instruction, Miss Mayme Marble; Regents of the State University, E. J. Temple, J. W. Gunnell, and Dr. J. H. Pershing.

The proposed fusion between the other wing of the Silver Republicans, the Democrats, and the Populists was effected, and an agreement was reached as to the division of offices. To the Populists were accorded the offices of Lieutenant Governor, Secretary of State, Attorney-General, and one regent, while the Silver Republicans received Treasurer, Auditor, Superintendent of Public Instruction, and one regent. The ticket follows: For Governor, Charles S. Thomas, Democrat; Lieutenant Governor, Francis Carney; Secretary of State, Elmer Beckwith; Treasurer, John F. Fenter; Auditor, George W. Temple; Attorney-General, E. C. Campbell; Superintendent of Instruction,

Helen L. Grenfell; Regents of the University, Harold Thompson, D. M. Richards.

The election returns showed a large majority for the fusion ticket. The two members of Congress were re-elected—in the First District, J. F. Shafroth, Silver Republican, and in the Second, J. C. Bell, Populist.

CONGO INDEPENDENT STATE, a sovereign, independent, monarchical state in Central Africa, created with the consent of the great powers, and declared to be perpetually neutral by the general act of the Congo, signed at Berlin on Feb. 26, 1885. Leopold II, King of the Belgians, who was declared to be its sovereign, by his will, dated Aug. 2, 1889, ceded his sovereign rights to Belgium, which by a convention made with the Independent State on July 3, 1890, and ratified by the Chambers on July 25, acquired the right to annex the territories after a period of ten years. The Government, under King Leopold, is presided over by a Secretary of State at Brussels, Baron Edmond van Eetvelde, who is assisted by Dr. A. de Cuvelier, Secretary of Foreign Affairs; H. Pochez, Treasurer; H. Droogmans, Secretary of Finance; and Charles Liebrecht, Secretary of the Interior, the Public Force, and Marine. Capt. E. Wangermée is Vice Governor General at Boma; he is assisted by Baron Dhanis as Inspector and M. Ghislain as Secretary.

Area and Population.—The area is estimated at 900,000 square miles, and the population at 30,000,000. There were 1,474 resident Europeans on Jan. 1, 1897, of whom 882 were Belgians, 125 British, 91 Portuguese, 87 Italians, 83 Swedes and Norwegians, 64 Americans, 37 Dutch, 21 Germans, 20 Danes, 14 Swiss, and 7 others.

Finances.—The revenue for 1897 was estimated at 9,360,300 francs, and expenditure at 10,141,871 francs. For 1898 a revenue of 14,765,050 francs was looked for, and the expenditure, including 2,524,920 francs for exceptional purposes, was expected to reach 17,251,975 francs. The King of the Belgians continues his annual subvention of 1,000,000 francs, and the Belgian treasury advances 2,000,000 a year for ten years dating from July 3, 1890. The other revenues are derived from sales and leases of lands, customs, posts, transport dues, and monopolies of rubber and ivory. The chief expenditures for 1898 were 6,870,631 francs for the public force, 3,218,711 francs for working the public domain, 1,945,358 francs for the marine, 1,595,960 francs for public works, and 1,495,278 francs for administrative expenses. The local revenue, which sufficed in 1886 for only 5 per cent. of the expenditure, now amounts to 68 per cent. A loan of 20,000,000 francs for the construction of public works was negotiated with Brussels bankers in June, 1898.

Public Force.—The military force consists of 16 companies of native troops, of whom two thirds are recruited within the State, numbering 6,120 men in 1896, commanded by 143 European officers and 146 drill sergeants. The Belgians are able to maintain their power with native troops alone by taking advantage of the hereditary hostilities of the different tribes, using Bateke soldiers to maintain order among the Bangalas and *vice versa*.

Commerce.—The value of the general imports in 1896 was 16,070,370 francs; of the general exports, 15,091,137 francs; of exports, the produce of the State, 12,389,599 francs. The chief imports are textile fabrics, guns and powder, spirits for the limited districts where traffic in spirits is allowed, and tobacco. The export of rubber in 1896 was 6,586,730 francs; of ivory, 3,826,320 francs; of palm oil and nuts, 1,914,137 francs. Other exports are coffee, which is raised in plantations on the upper Congo, orchilla weed, gum copal, earthnuts, and camwood. The Government has plantations of

tobacco, which is also grown in the native villages. Rubber found in the public domain is claimed by the Government. The imports from Belgium in 1896 amounted to 10,204,477 francs; exports to Belgium, 10,866,060 francs. The British and Dutch have most of the remaining trade. In 1897 the total value of exports was 17,450,000 francs, and of imports 23,425,000 francs. The imports from Belgium have increased from 4,000,000 francs in 1893 to over 16,000,000 francs, while of the export trade, which was once in the hands of the Dutch, two thirds is now carried on by Belgians. The rubber exports to Belgium have increased from 250,000 kilogrammes in 1893 to 1,500,000 kilogrammes in 1897.

Navigation.—The number of vessels in the foreign trade entered at Banana and Boma during 1896 was 155, of 257,384 tons; cleared, 153, of 254,076 tons. The number entered in the coasting trade was 385, of 11,667 tons; cleared, 410, of 12,683 tons.

Communications.—The post office in 1896 transmitted 74,526 internal and 207,156 foreign letters, papers, etc. Six steamers belonging to the State run up to Matadi, the head of navigation on the lower Congo, and 14 ply on the upper river, which is navigable for 1,000 miles from Stanley Pool to Stanley Falls. The railroad along the rapids above Matadi was completed and in operation for 164 miles in the beginning of 1898, leaving only the 96 miles between Tumba and Stanley Pool over which the portage of goods was still necessary. The whole line was completed in March and opened to traffic in April. The construction of the road was begun in 1889, when the Belgian state subscribed

of the line was laid. The Belgian state once more came to the rescue, giving 15,000,000 francs more. The public subscribed 20,000,000 francs to complete the work, making the total cost 60,000,000 francs, equal to about \$50,000 a mile. Before the end of the year work was begun on a railroad in the upper Congo region connecting the head of navigation on the Lobefu, an affluent of Sankuru which flows into the Kassai, with the Lomami. Another line connecting the Lomami with the Lualaba is projected; also one from the Lualaba and Manyema to Lake Tanganyika. The Independent State has the right of expropriating the Congo Railroad, but by a convention signed on Feb. 10, 1898, has bound itself not to exercise the right till 1909.

Progress under the Belgians.—Although 9 out of every 10 of the State officials die or are invalidated in three years, the activity of the Belgians and the civilizing effect of their rule, though it has not been free from cruel abuses, is now acknowledged by disinterested witnesses. Great benefit has resulted from the suppression of the liquor traffic, which flourished on the lower Congo when they came. It is now permitted only at Matadi and along the border of the French and Portuguese possessions, where it would be impossible to stop contraband traffic. No liquor for natives is allowed to be carried on the railroad, and to render the decree effective the zone of prohibition has been extended on the south bank for nearly 50 miles down to the Mpozo river. The prohibition of exports of spirits from neighboring European possessions into a colony where sales to natives are illegal was one of the chief measures to be proposed at the new conference which the Belgian Government at

FISHING AT STANLEY FALLS IN CONGO RIVER.

10,000,000 francs of the estimated capital required as a perpetual loan at 3 per cent., enabling the company to obtain the remaining 15,000,000 francs from private capitalists in Belgium. The capital was used up in three years, and only a fiftieth part

the suggestion of Great Britain intended to convene at Brussels. Cannibalism is dying out in the Free State, not only through direct repression, but through the growth of a feeling against the practice, which is the outcome of the mingling of tribes

introduced originally for the purpose of lessening the risks of revolt and making the enforcement of discipline easier. The yoke of the Arab slave-dealers has at last been effectually broken, and intertribal wars have been suppressed over a wide and constantly extending area. The natives are being drilled into habits of regular work, not

ties of Christian Endeavor, 3,930, with 216,043 members; of additions to the churches during the year by confession of faith, 31,090; of baptisms, 13,035 of adults, and 12,664 of infants. Amount of contributions: For foreign missions, \$385,533; for education, \$163,478; for church building, \$76,431; for home missions, \$504,848; for the American

STANLEY POOL IN CONGO RIVER.

without forcible means, and efforts are made to educate the children. Baron Dhanis from his headquarters in Manyema was still engaged in the early months of 1898 in operations against the revolted Batetela soldiers of the Free State, who had recently defeated a detachment of troops that was pursuing them north of Lake Tanganyika. The Free State troops that marched out to punish the rebels could not succeed in engaging them, for they split up into several bands and took to flight when the troops approached. Lieut. Dorme's party overtook one band and gained a victory near the river Losva, west of 28° of longitude. A punitive force led by Lieut. Charquois encountered them on the shore of the lake in April, and was obliged to fall back until the reserves were brought up. The activity of the Belgians in the extreme eastern part of their territory, their project of a railroad from Manyema to Lake Tanganyika, still more their concession to England of the right of way for a telegraph line, to be followed by a railroad, from Rhodesia by way of Nyassa to Tanganyika and northward to Uganda, have moved the Germans to ask for a definite regulation of the frontier from Lake Tanganyika northward. It is claimed that the Rufizi river and the Kivu lake, where the Belgians have military stations, are on the German side of the border.

CONGREGATIONALISTS. Statistics of the Congregational churches in the United States, published in the "Congregational Yearbook" for 1898, show the number of churches to be 5,614; of ministers, 5,475; of members, 625,864; of members of Sunday schools, 685,704; of Young People's Soci-

Missionary Association, \$137,268; for Sunday schools, \$61,959; for ministerial aid, \$22,567; other contributions, \$1,095,240; amount received from legacies, \$1,357,485; contributions for home expenditures, \$6,643,818. Of the churches, 4,253 are registered as supplied, and 1,331 as vacant; of the ministers, 3,684 as in pastoral service, and 1,786 as without charge. The tables show a net gain of 10,669 church members.

The 7 theological seminaries—Andover, Bangor, Chicago, Hartford, Oberlin, Pacific, and Yale—return 64 professors, 25 instructors or lecturers, 19 resident licentiates or fellows, 28 in the advanced or graduate classes, and 433 undergraduates.

The American Congregational Church Building Society received in 1897, from all sources, \$295,504; its available resources were \$381,398. Aid was voted to the amount of \$296,495 to 166 churches; \$232,323 were paid in the form of grants or loans on houses of worship to 166 churches. Grants amounting to \$35,190 were voted to 57 churches for aid in parsonage work, and \$21,867 were paid on parsonage loans to 38 churches. Of the amounts paid out by the treasurer on houses of worship, \$125,500 were in the form of loans, and \$107,823 were in the form of grants. Aid given to parsonages was all in the form of loans. The amount paid back on church building loans during the year was \$19,082. A final settlement had been made with the executor of the will of the late J. Henry Stickney, of Baltimore. The securities representing the legacy had all been placed in the hands of the treasurer, and \$153,976 had been realized from the

sale of them; while some were still held, awaiting the most favorable opportunity for converting them into cash. The work of the year had been the largest, in all the departments, in the history of the society.

The Congregational Educational Society aided in 1897 8 colleges and 10 academies. In the New West department (for Utah and New Mexico) Salt Lake College and Proctor Academy were supported, with 10 mission schools, 5 in Utah and 5 in New Mexico. The total receipts of the society were \$137,414.

The contributions to the Sunday-School and Publishing Society in 1897 were \$53,962, and the total available income was \$61,150.

Home Missionary Society.—The seventy-second annual meeting of the Congregational Home Missionary Society was held at Cleveland, Ohio, June 7 to 9. The total income for the year, apart from contributions made to the auxiliaries, had been \$375,381, while the auxiliaries had raised and expended \$216,845 on their own fields and in State missions; and the debt had been reduced \$24,621. The mission work had been crippled by lack of means. The number of missionaries had been 172 less than in 1896, and the additions to the churches 2,253 fewer. During the year 2,753 churches had received aid, and 187 Sunday schools had been organized; while 159,116 pupils were enrolled in all the schools under the care of the society. Addresses were made and papers read during the meeting on "The New Mormonism," by a grandson of Brigham Young and the Rev. C. W. Luck; "The Work of Sunday-School Missionaries on the Pacific Coast, and other Local Aspects of the Work of the Society;" the "Opportunity in Alaska," by Mrs. E. T. Bailey; and "The Problem of the City," by the Rev. Josiah Strong, D. D., and the Rev. Washington Gladden, D. D.

American Missionary Association.—The fifty-second annual meeting of the American Missionary Association was held in Concord, N. H., beginning Oct. 25. The Rev. F. A. Noble, of Chicago, was chosen president for the ensuing year. The executive committee reported that the receipts for the fiscal year had been \$327,487, and the expenditures \$271,837. Of the receipts, \$37,405 were credited to tuition fees, and \$5,000 to payments to institutions from the Slater fund. The debt of \$54,945 existing at the end of the previous year had been paid, and the association had a balance of \$705. The contributions from the Women's missionary societies, comprising 33 State unions, had been \$26,530. The income from the Daniel Hand fund, instituted by Mr. Hand ten years before, had been \$66,684, which, with a balance of \$12,231 at the beginning of the year, made the total resources from that fund \$89,915. The expenditures on the same account had been \$66,342. It was stated in answer to a question that 84 per cent. of the total receipts of the association were spent in field work. The educational work of the association included 71 schools, with 395 instructors and 11,662 pupils. Of the schools, 6 were chartered institutions, 40 normal and graded schools, and 25 common schools. It had ever been the policy of the society in all schools to begin with elementary grades and retain all grades as schools advanced in their courses of study. Therefore the normal schools and the higher institutions provided that those who could secure only elementary instruction should have the opportunity for that. Through this provision in the advanced schools opportunity was given for furnishing practice-teaching to those who were preparing to teach others. The special elementary schools under the care of the association were chiefly in isolated places not cared for by the public schools, and were usually associated with the rural churches. Besides

the common schools taught by colored teachers, several important graded and normal schools were under the direction and care of graduates of the association's institutions, whose work was well spoken of. The 12 mountain schools returned 51 teachers and 1,605 students. The 6 higher institutions—Fisk University, Nashville, Tenn.; Talladega College, Talladega, Ala.; Tougaloo University, Tougaloo, Miss.; Straight University, New Orleans, La.; Tillotson College, Austin, Texas; and Avery Institute, Charleston, S. C.—had distinctive college studies, in which students who had approved themselves qualified and could continue to do so were were carried to graduation. The aim of these institutions was "to secure trained and thoughtful men of thorough education with adequate preparation for efficient service as pastors of churches, men who have been steadied in their discipline to hold up continuously high ideas to a people who need them." Wood-working, iron-working, tool-making, shoemaking, printing, architecture, and agriculture had been systematically taught to boy pupils, and varied industries to girls. The Joseph K. Brick Agricultural, Industrial, and Normal School had been presented to the association by Mrs. Brick as a memorial of her husband, with a large, substantially built dormitory for young men, a building for manual instruction in carpentry and forging, and a barn. In the Church work in the South nearly 1,000 members had been added on confession of faith. No new mountain church had been taken upon the roll, and only 8 other churches in the South. The 202 churches of this class returned 135 ministers and missionaries, 11,061 members, 991 additions by profession of faith, and 15,059 pupils in church and mission Sunday schools. In the pastoral service of these churches several single ones had been combined into circuits, so that one minister would cover appointments at 3, 4, 5, and sometimes as many as 6 preaching places. The Indian missions, including those in Alaska, comprised 18 churches and 31 missionary out stations, with 1,016 members and 1,397 pupils in Sunday schools, 7 schools with 409 pupils, 80 missionaries and teachers (48 white and 32 Indian), and returned contributions for benevolence and church support of \$2,029. Indian young men and women were trained at the Santee Normal School, where was the chief center of the work of the association among the Indians for missionary and educational leadership among their own people. A correspondence institute was also conducted at Santee. Other Indian missions were at Elbe-woods, N. Dak. (the Fort Berthold mission), on the Cheyenne river (with the Oahe school), in the Standing Rock Agency, at the Rosebud Agency, in Montana, where a Christian Endeavor Society had been organized among the Crows, and in Alaska. The Chinese missions included 20 Chinese and Japanese schools, with 32 teachers, 9 of whom were Chinese, and 1,374 pupils, and returned 70 additions by confession of faith. A new central mission house with a chapel capable of seating 250 people, and a number of rooms for families—"a church, a school, and a Christian 'settlement'"—had been dedicated and occupied in San Francisco. The schools had been more largely attended than at any time before since the Chinese exclusion law went into operation. A special work was carried on for mothers and children.

The American Board.—The eighty-ninth annual meeting of the American Board of Commissioners for Foreign Missions was held at Grand Rapids, Mich., Oct. 4 to 7, the Rev. C. D. Lawson, D. D., presiding. The report of the home department referred to the distracting conditions in the fields of labor, which had drawn away large sums

during the year for special objects; to the disturbed financial conditions at home; and to the constant problem of carrying on the work abroad with inadequate means. Notwithstanding all efforts to increase receipts and diminish expenses, the year had closed with a debt of \$40,000, only \$5,000 less than that at the close of the previous year. The receipts from all sources had been \$687,209, and the expenditures \$727,500. A special sum of \$10,000 had been given for the endowment of a professorship in Foochow. The general summary of the work showed that there were in the 20 missions of the board 101 stations, 1,271 out-stations, 1,617 places for stated preaching, 169 ordained missionaries, 17 of whom were physicians, 11 other physicians; 341 women, 10 of whom were physicians and 168 wives of missionaries; and 4 other assistants; making 581 laborers from the United States; 220 native pastors, 417 native preachers and catechists, 1,713 native school-teachers, 260 Bible women, and 307 other native laborers; making a total of 2,977 native laborers, and of 3,508 American and native laborers together; 465 churches, with 47,122 members, 4,602 members added during the year, and 59,701 Sunday-school scholars. The whole number of members from the beginning was approximately given as 143,392. In the educational department were returned 18 theological seminaries and station classes, with 316 students for the ministry; 113 boarding and high schools, with 7,029 pupils (3,454 male and 3,575 female), and 1,139 common schools, with 46,963 pupils: making the total number under instruction 56,625. The native contributions, so far as reported, amounted to \$118,753. Of the missions of which special mention was made in the report that in south China was spoken of as having displayed a remarkable expansion of the Christian communities and growth in Christian work, while the native Christians had responded most generously to the call for contributions. It was noted also that converted Chinese returning from the United States had, in many instances, given liberally, both in money and personal services, to the work. In the other missions in China—Shansi, north China, and Foochow—the development had also been valuable, the churches were crowded, new centers were opened without effort. In a single station of the Foochow mission 5,000 persons were said to have given up idolatry and heathenism, and to be desiring a place in the Church. The three missions in Africa had had a year of success. The year in central and western Turkey had been more quiet, and increased interest had been manifested in spiritual things. In European Turkey, where the work had been among the Bulgarians, more attention was being given to the Albanians. From eastern Turkey, "notwithstanding the intense suffering and terror throughout the whole nation," there had come no word of fear or discouragement. A special paper on the missionary outlook in China, embodying the results of the observations of a deputation that had made an inspection of that field, recorded that the gains during the past decade had been rapid, and were increasing every year. So far as the work of the board was concerned, new methods were not needed, though they might require modification from time to time. School, medical, and evangelical work supplemented one another, and seemed to meet the demands of the field occupied. The missionaries were scholarly, devoted, conscientious, wise, careful in the use of missionary money, well informed as to matters concerning the whole earth, and almost uniformly successful. The report of the committee of fifteen appointed in 1897 to consider certain financial and economical questions recommended that the missions in papal lands

be not given up, but rather strengthened; that no less money than now be expended in educational work; that self-supporting churches be encouraged by the board in the future, as they have in the past; that deputations be sent from the United States to various mission fields regularly and with reference to their needs; that systematic effort be put forth continually to increase interest in the work of the board among all classes; that special effort be made to increase the constituency of the board, and that so far as may be, corporate members in future be chosen to represent groups of churches or districts, and because of their ability or willingness to aid in diffusing knowledge of the work of the board. A special committee was appointed, consisting of two members of each of the four co-operating committees, to employ and pay the salary and expenses of a man to go among the churches, awaken enthusiasm in them, and persuade single churches or groups of churches, institutions of learning, and individuals to undertake the support of single missionaries. An appropriation was made to meet the expense of this enterprise. For the first time in the history of the board a woman, Miss Margaret J. Evans, of Carleton College, Minnesota, was chosen a corporate member.

Triennial National Council.—The tenth Triennial National Council of Congregational Churches met in Portland, Ore., July 7. The Rev. F. A. Noble, D. D., of Chicago, was chosen moderator. A report was presented concerning the International Council which was to meet in Boston, Mass., in 1899, representing that the meetings would begin Sept. 20, to continue through seven working days; that the number of delegates from the United States, from England, and from other countries would be enlarged, severally, from 100 to 200, making the whole number 600; that the programme would be arranged by a committee of six in conference with a committee of the English Congregational Union, and the preacher of the sermon would be named by the English; and that a proposal by the Boston Congregational Club to be responsible for the proper entertainment of the members of the council had been accepted. A report on union with other denominations mentioned conferences that had been held with representatives of the Christian connection looking toward close federation rather than toward organic union. It recommended that a representative council or conference of the Protestant churches in the United States and Canada be called, to meet in the city of Washington in the year 1900, for the purpose of forming an interdenominational union, to meet at regular periods, and serve as a visible expression of the unity of the churches, and as a common bond in the fellowship with each other and their service of the Lord Jesus Christ. A report was also read on denominational comity. The committee on the John Robinson memorial church at Gainsborough, England, to be built at a cost of about \$35,000, recommended that American Congregationalists give \$5,000 toward the extinction of the debt, thus making a contribution of \$1 from American Congregationalists to \$6 from English. A report on the training of ministers, as adopted, recommended, "that of candidates for the Congregational ministry all who can should take full academic training and a complete course in the theological seminary; that while recognizing the call of God to exceptional men of limited education to preach the Gospel, our theological seminaries, educational societies, and churches should use increased care to maintain the intellectual and educational standard of the Christian ministry. We deem the present an opportune time for councils, churches, conferences, and associations to make

steadfast effort to elevate, and on no account to lower, the requirements for entrance upon the pastoral office; that seminary curricula, while aiming at the highest intellectual and scholarly attainment, should for all students give largely increased inclusion to the practical and tactical in training; that utmost care should be exercised not only in the admission of students, but also in continuing them after admission, to the end of discouraging the incapable and unsuitable, and retaining only the fit; that our churches should exercise much greater care in admitting to their pulpits, whether for purposes of candidacy or supply, men whose credentials as to character and standing have not been thoroughly examined and approved; that from candidates for approbation before associations and conferences, and from men of other denominations seeking admission to our body, evidence should be required of adequate training and experience and of a reasonable familiarity with our polity, and that in lack of these only a limited commendation be granted pending the prosecution of further study; that ministers and churches should exercise the greatest diligence in seeking to recruit the ranks of the ministry from young men of promise in their parishes; and that officers of the Education Society, boards of trust, committees of recommendation, and seminary faculties should hold to close examination and continued strict account all who make application for and all who are receiving educational aid. On the subject of ministerial standing the council reiterated the declarations of the councils of 1886 and 1892—that standing in the Congregational ministry is required by membership in a Congregational church, ordination to the Christian ministry, and reception as an ordained minister into the fellowship of the Congregational churches, in accordance with the usage of the State or territorial organization of churches in which the applicant may reside; and resolved, further, “that in the transfer of ministerial membership from an association, conference, or other ecclesiastical body, in the judgment of the council, the gaining of new membership is ecclesiastically impossible until the applicant shall have been fully released from his previous ecclesiastical membership.” A report on secret societies was adopted which, while commending the fraternal and philanthropic purposes of such organizations, expressed a desire that they might be “supplanted by the higher social service and warmer Christian fellowship of the Church of God.” A report was adopted favoring affiliation with the Antislavery League in its temperance work. A Committee on Comity, Federation, and Union was appointed to seek fellowship and closer relations with the Congregationalists of Canada and the Methodist Protestants of the United States, and the promotion of Christian union generally. The various Congregational benevolent societies were represented on the floor of the council in addresses setting forth their condition and needs. Papers were read during the meetings advocating the union of all churches, of whatever doctrine and policy, in temperance and other reforms, on “A Common Basis of Belief,” “Christian Giving and Living,” “Modern Methods in Mission Work,” “Religious Movements on the Pacific Coast,” and other subjects.

In the case of two ecclesiastical organizations in Alabama claiming representation in the council, one composed of white members only and the other not recognizing distinctions of color, the council, following the example of previous councils, refused to decide upon the differences between them, but referred the question back to the Congregationalists of Alabama with the advice that they come together in the spirit of Christ and settle it between themselves.

British Congregationalists.—Statistics of the British Congregational Churches, published at the close of 1897, showed that there were on Dec. 1 of that year in England, including Monmouthshire, 3,362 churches and mission stations, affording accommodation for 1,263,375 persons, and in Wales and the Channel Islands 1,090 places of worship, with accommodations for 372,657 persons. If to these were added 166 churches from which no reports were received, the total number of churches would be increased to 4,618. In Scotland there were 176 churches, and in Ireland 29 churches, with 96 mission stations. The whole number of churches for the United Kingdom was thus 4,919, besides some mission stations in Scotland not included in the making up of the tables. In the British colonies and on the Continent of Europe there were 1,054 churches and mission stations and 423 ordained ministers. The number of ministers in England and Wales was 2,881, in Scotland 201, and in Ireland 30—in the whole United Kingdom, 3,112. The various county associations returned in all 225 accredited lay pastors and evangelists. The Union of Welsh Independents returned 140,652 members, 142,141 adherents, and 147,884 members of Sunday schools in 1,251 churches and mission stations. The British colleges had 409, and the colonial colleges 27 students. The institutes in South Africa, Madagascar, and the South Seas for the training of native pastors and evangelists had about 300 students, under the care of the London Missionary Society.

The sixty-sixth annual meeting of the Congregational Union of England and Wales was held in London, May 9. The Rev. Alfred Rowland presided. The report showed that there were, including mission stations, 1,600 churches in the union. Reference was made to a visit that had been paid by the Rev. Charles A. Berry, representing the union and the Council of Free Churches, to the United States as having had beneficent results in promoting harmony between English and American churches. In the matter of Lord Wharton’s “Non-conformist Book Charity,” the administration of which, it was alleged, had fallen under the control of the Established Church and was carried on in its interest, the High Court of Justice (Chancery Division) had ordered the establishment of a scheme, and the Attorney General had invited suggestions from the Congregational Union. A special subcommittee had recommended that the charity be deemed one for the free distribution of Bibles among poor children in the counties of York, Westmoreland, Cumberland, and Bucks. The Literature Committee referred to the publication of Dr. John Brown’s Congregational Union “Lectures on the Apostolic Succession,” and reported that Mr. Johnson Evans’s “Summary of the History of the English Free Churches” was expected shortly to be ready. Among the rare works acquired by the Congregational Library were a collection of early Puritan tracts, published about 1590, under the title “Part of a Register,” etc., and a volume of theses maintained by students at Geneva, translated and published with an introduction by John Wesley. The financial report showed a revenue of £17,440, with a credit balance of £1,092. Resolutions were passed favoring the Sunday closing of public houses, protesting against the alliance of Church and state, and denouncing the proposed endowment of a Roman Catholic University for Ireland.

The autumnal meeting of the union was held at Halifax in October. The chairman in his opening address, which was on “Priestism and Priesthood,” accounted for the interest manifested by Congregationalists in what was going on in the Episcopal

Church, although they had voluntarily withdrawn themselves from it, by observing that that Church was national, enjoying its privileges by the will of the nation, of which Nonconformists were a voting part. The assembly, declaring that it was convinced from the history of the past and observation of the present Catholic world "that sacerdotalism triumphant means national decay," in a resolution bearing on the ritualistic movement, expressed its sympathy with that section of the Church of England "which is striving on the authority of Scripture and by the power of the Spirit to resist the inroads of the common enemy." Resolutions on the education question affirmed the existence of an imperative necessity for the creation of undenominational colleges for the training of teachers, under public management, and reiterated former resolutions demanding public control of all denominational schools receiving assistance from the national exchequer or local rates, and the appointment of all teachers in such schools without reference to church or creed. Another resolution expressed satisfaction over the call of the Czar of Russia for a conference of nations on disarmament, and urged upon her Majesty's Government to do its utmost to make the conference a success. A statement was made on behalf of the Church Aid Society that in the past three or four years it had made grants of from £3,000 to £4,000 a year to increase the stipends of ministers to a minimum of £90 a year, including the rental value of the manse, and in doing this had exceeded its income. The Committee on Church Extension reported that the aggregate amount which the local unions and associations were seeking to raise for that object had increased from £45,554 in May to £50,554, while the contributions and subscriptions due through five years had increased from £23,371 to £25,000. Appeals for contributions to increase the Central fund had met with only a small degree of success. A delegate from Ireland represented that Congregationalism in that country was mainly confined to the north, but was growing. There were five large churches in Belfast, with a sixth to be opened soon, and two missions. The Irish Congregational Union was contemplating the assumption of the work of the Irish Evangelical Society of the English union, provided it was transferred free of debt. The Rev. James Gibson, of Port Elizabeth, represented that there were in South Africa 37 principal native Congregational churches absolutely self-supporting, with 37 branch churches, 113 mission stations, 10,569 members, and 68,000 adherents; and that the native contributions in 1897 were £12,000. Subjects were considered, in papers read during the meetings and in discussions, relating to the "Public Ordinances of the Church," "The Spiritual Meaning of the Lord's Supper," "Special Methods of Christian Culture," "The Biblical Instruction of the Children of our Congregations not going to Sunday School," the "Pleasant Sunday Afternoon," "Methods of Reaching the Working Classes," and "The Place of the Old Testament in Present-day Preaching." A meeting of the Young People's Union was addressed on "The Cultivation of a Healthier Denominational Sentiment among Young People from the Point of View of the Christian Endeavor Movement." A meeting was held in support of social settlements.

London Missionary Society.—The income of the London Missionary Society had been £159,132, or £1,750 larger than that of the previous year, but the total expenditure having been £167,548, the report showed a deficiency of £8,416. Two hundred and sixty-one missionaries—192 men and 69 women—were employed, with 924 ordained native agents and 2,808 preachers; and 55,541 church

members, 156,982 native adherents, 688 Sunday schools with 35,031 pupils, and 1,167 day schools with 52,715 pupils were returned. The contributions from the mission stations amounted to £52,715. The Rev. B. Wardlaw Thompson, one of the secretaries of the society, and his colleagues, as a deputation to visit the missionary stations in the East, returned in April, 1898, and reported to the Board of Directors concerning his observations of the missions in New Guinea, the South Seas, Madagascar, and South Africa. The relations of the missions in Madagascar were delicate, owing to the change of sovereignty of the country, and international and religious jealousies between the French Roman Catholics and the English and native Protestants. The disposition of the French Government as represented by Gen. Galliené was regarded as favorable to the continuance of the mission work without interference; but other influences existed which were hostile, subtle, and dangerous. The attention of the deputation having been called by Gen. Galliené to evidence which he claimed to possess of lack of loyalty on the part of agents of the society who hoped to see its influence used with the British Government in favor of the ultimate rescue of the island from French rule, the deputation, while not believing in the existence of any such feeling, published a manifesto on the subject, in French and Malagasy. This document mentioned the charges made, and continued:

"We believe these charges to be false, trumped up by interested parties for their own purposes. We made bold to assure the general that these charges were false, made up for the purpose of bringing you into suspicion with the authorities. Still, lest any of you have, through folly and ignorance, done anything to bring suspicion upon you, we declare again what we have often made known, that the London Missionary Society has no connection with the English Government. Its only object is the conversion of men and women. We beg you then to make known to everybody that there is not the slightest hope of England's interfering on your behalf, either now or in the future. Also, let it be understood that the continuance of the society's work here will largely depend on the loyalty of its adherents. We rejoice that the Governor General of Madagascar declares often, and in all directions, that you have absolute liberty to follow whatever religion you choose. We trust you will quit yourselves like men, and prove by your conduct that all real Protestants are loyal and faithful subjects of France, the great nation with which you are now united."

The Colonial Missionary Society was represented as doing three times the amount of work it had attempted five years previously, while its income had not risen in proportion, and the financial report of the year showed a deficit of £500. Toward the special fund of £5,000 which the society had undertaken to raise when it took over the charge of native churches founded by the London Missionary Society, £4,346 had been secured so far.

CONGRESS. The second session of the Fifty-fifth Congress began Monday, Dec. 6, 1897, and the President sent in the following message:

To the Senate and House of Representatives:

It gives me pleasure to extend greeting to the Fifty-fifth Congress, assembled in regular session at the seat of Government, with many of whose Senators and Representatives I have been associated in the legislative service. Their meeting occurs under felicitous conditions, justifying sincere congratulation and calling for our grateful acknowledgment to a beneficent Providence which has so signally blessed and prospered us as a nation.

Peace and good will with all the nations of the earth continue unbroken.

A matter of genuine satisfaction is the growing feeling of fraternal regard and unification of all sections of our country, the incompleteness of which has too long delayed realization of the highest blessings of the Union. The spirit of patriotism is universal and is ever increasing in fervor. The public questions which now must engross us are lifted far above either partisanship, prejudice, or former sectional differences. They affect every part of our common country alike and permit of no division on ancient lines. Questions of foreign policy, of revenue, the soundness of the currency, the inviolability of national obligations, the improvement of the public service, appeal to the individual conscience of every earnest citizen to whatever party he belongs or in whatever section of the country he may reside.

The extra session of this Congress which closed during July last enacted important legislation, and while its full effect has not yet been realized, what it has already accomplished assures us of its timeliness and wisdom. To test its permanent value, further time will be required, and the people, satisfied with its operation and results thus far, are in no mind to withhold from it a fair trial.

Tariff legislation having been settled by the extra session of Congress, the question next pressing for consideration is that of the currency.

The work of putting our finances upon a sound basis, difficult as it may seem, will appear easier when we recall the financial operations of the Government since 1866. On the 30th day of June of that year we had outstanding demand liabilities in the sum of \$738,868,447.41. On the 1st of January, 1879, these liabilities had been reduced to \$443,889,495.88. Of our interest-bearing obligations, the figures are even more striking. On July 1, 1866, the principal of the interest-bearing debt of the Government was \$2,332,331,208. On the 1st day of July, 1893, this sum had been reduced to \$585,037,100, or an aggregate reduction of \$1,747,294,108. The interest-bearing debt of the United States on the 1st day of December, 1897, was \$847,365,620. The Government money now outstanding (Dec. 1) consists of \$346,681,016 of United States notes, \$107,793,280 of Treasury notes issued by authority of the law of 1890, \$384,963,504 of silver certificates, and \$61,290,761 of standard silver dollars.

With the great resources of the Government and with the honorable example of the past before us, we ought not to hesitate to enter upon a currency revision which will make our demand obligations less onerous to the Government and relieve our financial laws from ambiguity and doubt.

The brief review of what was accomplished from the close of the war to 1893 makes unreasonable and groundless any distrust either of our financial ability or soundness; while the situation from 1893 to 1897 must admonish Congress of the immediate necessity of so legislating as to make the return of the conditions then prevailing impossible.

There are many plans proposed as a remedy for the evil. Before we can find the true remedy we must appreciate the real evil. It is not that our currency of every kind is not good, for every dollar of it is good; good because the Government's pledge is out to keep it so, and that pledge will not be broken. However, the guarantee of our purpose to keep the pledge will be best shown by advancing toward its fulfillment.

The evil of the present system is found in the great cost to the Government of maintaining the parity of our different forms of money—that is, keeping all of them at par with gold. We surely can not be longer heedless of the burden this imposes

upon the people, even under fairly prosperous conditions, while the past four years have demonstrated that it is not only an expensive charge upon the Government, but a dangerous menace to the national credit.

It is manifest that we must devise some plan to protect the Government against bond issues for repeated redemptions. We must either curtail the opportunity for speculation, made easy by the multiplied redemptions of our demand obligations, or increase the gold reserve for their redemption. We have \$900,000,000 of currency which the Government by solemn enactment has undertaken to keep at par with gold. Nobody is obliged to redeem in gold but the Government. The banks are not required to redeem in gold. The Government is obliged to keep equal with gold all its outstanding currency and coin obligations, while its receipts are not required to be paid in gold. They are paid in every kind of money but gold, and the only means by which the Government can with certainty get gold is by borrowing. It can get it in no other way when it most needs it. The Government, without any fixed gold revenue, is pledged to maintain gold redemption, which it has steadily and faithfully done, and which under the authority now given it will continue to do.

The law which requires the Government after having redeemed its United States notes to pay them out again as current funds demands a constant replenishment of the gold reserve. This is especially so in times of business panic and when the revenues are insufficient to meet the expenses of the Government. At such times the Government has no other way to supply its deficit and maintain redemption but through the increase of its bonded debt, as during the administration of my predecessor, when \$262,315,400 of 44-per-cent. bonds were issued and sold and the proceeds used to pay the expenses of the Government in excess of the revenues and sustain the gold reserve. While it is true that the greater part of the proceeds of these bonds were used to supply deficient revenues, a considerable portion was required to maintain the gold reserve.

With our revenues equal to our expenses, there would be no deficit requiring the issuance of bonds. But if the gold reserve falls below \$100,000,000, how will it be replenished except by selling more bonds? Is there any other way practicable under existing law? The serious question then is, Shall we continue the policy that has been pursued in the past; that is, when the gold reserve reaches the point of danger, issue more bonds and supply the needed gold, or shall we provide other means to prevent these recurring drains upon the gold reserve? If no further legislation is had and the policy of selling bonds is to be continued, then Congress should give the Secretary of the Treasury authority to sell bonds at long or short periods, bearing a less rate of interest than is now authorized by law.

I earnestly recommend, as soon as the receipts of the Government are quite sufficient to pay all the expenses of the Government, that when any of the United States notes are presented for redemption in gold and are redeemed in gold, such notes shall be kept and set apart, and only paid out in exchange for gold. This is an obvious duty. If the holder of the United States note prefers the gold and gets it from the Government, he should not receive back from the Government a United States note without paying gold in exchange for it. The reason for this is made all the more apparent when the Government issues an interest-bearing debt to provide gold for the redemption of United States notes—a non-interest-bearing debt. Surely it should not pay them out again except on demand and for

gold. If they are put out in any other way, they may return again to be followed by another bond issue to redeem them—another interest-bearing debt to redeem a non-interest-bearing debt.

In my view it is of the utmost importance that the Government should be relieved from the burden of providing all the gold required for exchanges and export. This responsibility is alone borne by the Government without any of the usual and necessary banking powers to help itself. The banks do not feel the strain of gold redemption. The whole strain rests upon the Government, and the size of the gold reserve in the treasury has come to be, with or without reason, the signal of danger or of security. This ought to be stopped.

If we are to have an era of prosperity in the country, with sufficient receipts for the expenses of the Government, we may feel no immediate embarrassment from our present currency; but the danger still exists and will be ever present menacing us so long as the existing system continues. And besides, it is in times of adequate revenues and business tranquillity that the Government should prepare for the worst. We can not avoid without serious consequences the wise consideration and prompt solution of this question.

The Secretary of the Treasury has outlined a plan in great detail for the purpose of removing the threatened recurrence of a depleted gold reserve and save us from future embarrassment on that account. To this plan I invite your careful consideration.

I concur with the Secretary of the Treasury in his recommendation that national banks be allowed to issue notes to the face value of the bonds which they have deposited for circulation, and that the tax on circulating notes secured by deposit of such bonds be reduced to one half of 1 per cent. per annum. I also join him in recommending that authority be given for the establishment of national banks with a minimum capital of \$25,000. This will enable the smaller villages and agricultural regions of the country to be supplied with currency to meet their needs.

I recommend that the issue of national-bank notes be restricted to the denomination of \$10 and upward. If the suggestions I have herein made shall have the approval of Congress, then I would recommend that national banks be required to redeem their notes in gold.

The most important problem with which this Government is now called upon to deal pertaining to its foreign relations concerns its duty toward Spain and the Cuban insurrection. Problems and conditions more or less in common with those now existing have confronted this Government at various times in the past. The story of Cuba for many years has been one of unrest, growing discontent, an effort toward a larger enjoyment of liberty and self-control, of organized resistance to the mother country, of depression after distress and warfare, and of ineffectual settlement to be followed by renewed revolt. For no enduring period since the enfranchisement of the continental possessions of Spain in the Western Continent has the condition of Cuba or the policy of Spain toward Cuba not caused concern to the United States.

The prospect from time to time that the weakness of Spain's hold upon the island and the political vicissitudes and embarrassments of the home government might lead to the transfer of Cuba to a continental power called forth, between 1823 and 1860, various emphatic declarations of the policy of the United States to permit no disturbance of Cuba's connection with Spain unless in the direction of independence or acquisition by us through purchase; nor has there been any change of this

declared policy since upon the part of the Government.

The revolution which began in 1868 lasted for ten years despite the strenuous efforts of the successive peninsular governments to suppress it. Then, as now, the Government of the United States testified its grave concern and offered its aid to put an end to bloodshed in Cuba. The overtures made by Gen. Grant were refused and the war dragged on, entailing great loss of life and treasure and increased injury to American interests, besides throwing enhanced burdens of neutrality upon this Government. In 1878 peace was brought about by the truce of Zanjón, obtained by negotiations between the Spanish commander, Martínez de Campos, and the insurgent leaders.

The present insurrection broke out in February, 1895. It is not my purpose at this time to recall its remarkable increase or to characterize its tenacious resistance against the enormous forces massed against it by Spain. The revolt and the efforts to subdue it carried destruction to every quarter of the island, developing wide proportions and defying the efforts of Spain for its suppression. The civilized code of war has been disregarded, no less so by the Spaniards than by the Cubans.

The existing conditions can not but fill this Government and the American people with the gravest apprehension. There is no desire on the part of our people to profit by the misfortunes of Spain. We have only the desire to see the Cubans prosperous and contented, enjoying that measure of self-control which is the inalienable right of man, protected in their right to reap the benefit of the exhaustless treasures of their country.

The offer made by my predecessor in April, 1896, tendering the friendly offices of this Government failed. Any mediation on our part was not accepted. In brief, the answer read: "There is no effectual way to pacify Cuba unless it begins with the actual submission of the rebels to the mother country." Then only could Spain act in the promised direction, of her own motion and after her own plans.

The cruel policy of concentration was initiated Feb. 16, 1896. The productive districts controlled by the Spanish armies were depopulated. The agricultural inhabitants were herded in and about the garrison towns, their lands laid waste, and their dwellings destroyed. This policy the late Cabinet of Spain justified as a necessary measure of war and as a means of cutting off supplies from the insurgents. It has utterly failed as a war measure. It was not civilized warfare. It was extermination.

Against this abuse of the rights of war I have felt constrained on repeated occasions to enter the firm and earnest protest of this Government. There was much of public condemnation of the treatment of American citizens by alleged illegal arrests and long imprisonment awaiting trial or pending protracted judicial proceedings. I felt it my first duty to make instant demand for the release or speedy trial of all American citizens under arrest. Before the change of the Spanish Cabinet in October last twenty-two prisoners, citizens of the United States, had been given their freedom.

For the relief of our own citizens suffering because of the conflict the aid of Congress was sought in a special message, and under the appropriation of April 4, 1897, effective aid has been given to American citizens in Cuba, many of them at their own request having been returned to the United States.

The instructions given to our new minister to Spain before his departure for his post directed him to impress upon that Government the sincere wish of the United States to lend its aid toward the ending of the war in Cuba by reaching a peaceful

and lasting result, just and honorable alike to Spain and to the Cuban people. These instructions recited the character and duration of the contest, the widespread losses it entails, the burdens and restraints it imposes upon us, with constant disturbance of national interests, and the injury resulting from an indefinite continuance of this state of things. It was stated that at this juncture our Government was constrained to seriously inquire if the time was not ripe when Spain of her own volition, moved by her own interests and every sentiment of humanity, should put a stop to this destructive war and make proposals of settlement honorable to herself and just to her Cuban colony. It was urged that as a neighboring nation, with large interests in Cuba, we could be required to wait only a reasonable time for the mother country to establish its authority and restore peace and order within the borders of the island; that we could not contemplate an indefinite period for the accomplishment of this result.

No solution was proposed to which the slightest idea of humiliation to Spain could attach, and indeed precise proposals were withheld to avoid embarrassment to that Government. All that was asked or expected was that some safe way might be speedily provided and permanent peace restored. It so chanced that the consideration of this offer, addressed to the same Spanish administration which had declined the tenders of my predecessor and which for more than two years had poured men and treasure into Cuba in the fruitless effort to suppress the revolt, fell to others. Between the departure of Gen. Woodford, the new envoy, and his arrival in Spain, the statesman who had shaped the policy of his country fell by the hand of an assassin, and although the Cabinet of the late Premier still held office and received from our envoy the proposals he bore, that Cabinet gave place within a few days thereafter to a new administration, under the leadership of Sagasta.

The reply to our note was received on the 23d day of October. It is in the direction of a better understanding. It appreciates the friendly purposes of this Government. It admits that our country is deeply affected by the war in Cuba and that its desires for peace are just. It declares that the present Spanish Government is bound by every consideration to a change of policy that should satisfy the United States and pacify Cuba within a reasonable time. To this end Spain has decided to put into effect the political reforms heretofore advocated by the present Premier without halting for any consideration in the path which in its judgment leads to peace. The military operations, it is said, will continue, but will be humane and conducted with all regard for private rights, being accompanied by political action leading to the autonomy of Cuba while guarding Spanish sovereignty. This, it is claimed, will result in investing Cuba with a distinct personality, the island to be governed by an executive and by a local council or Chamber, reserving to Spain the control of the foreign relations, the army and navy, and the judicial administration. To accomplish this the present Government proposes to modify existing legislation by decree, leaving the Spanish Cortes, with the aid of Cuban Senators and Deputies, to solve the economic problem and properly distribute the existing debt.

In the absence of a declaration of the measures that this Government proposes to take in carrying out its proffer of good offices, it suggests that Spain be left free to conduct military operations and grant political reforms, while the United States for its part shall enforce its neutral obligations and cut off the assistance which it is asserted the insurgents receive from this country. The supposition of an

indefinite prolongation of the war is denied. It is asserted that the western provinces are already well-nigh reclaimed, that the planting of cane and tobacco therein has been resumed, and that by force of arms and new and ample reforms very early and complete pacification is hoped for.

The immediate amelioration of existing conditions under the new administration of Cuban affairs is predicted, and therewithal the disturbance and all occasion for any change of attitude on the part of the United States. Discussion of the question of the international duties and responsibilities of the United States as Spain understands them is presented, with an apparent disposition to charge us with failure in this regard. This charge is without any basis in fact. It could not have been made if Spain had been cognizant of the constant efforts this Government has made at the cost of millions and by the employment of the administrative machinery of the nation at command to perform its full duty according to the law of nations. That it has successfully prevented the departure of a single military expedition or armed vessel from our shores in violation of our laws would seem to be a sufficient answer. But of this aspect of the Spanish note it is not necessary to speak further now. Firm in the conviction of a wholly performed obligation, due response to this charge has been made in diplomatic course.

Throughout all these horrors and dangers to our own peace this Government has never in any way abrogated its sovereign prerogative of reserving to itself the determination of its policy and course according to its own high sense of right and in consonance with the dearest interests and convictions of our own people should the prolongation of the strife so demand.

Of the untried measures there remain only: Recognition of the insurgents as belligerents, recognition of the independence of Cuba, neutral intervention to end the war by imposing a rational compromise between the contestants, and intervention in favor of one or the other party. I speak not of forcible annexation, for that can not be thought of. That by our code of morality would be criminal aggression.

Recognition of the belligerency of the Cuban insurgents has often been canvassed as a possible if not inevitable step both in regard to the previous ten years' struggle and during the present war. I am not unmindful that the two houses of Congress in the spring of 1896 expressed the opinion by concurrent resolution that a condition of public war existed requiring or justifying the recognition of a state of belligerency in Cuba, and during the extra session the Senate voted a joint resolution of like import, which, however, was not brought to a vote in the House of Representatives. In the presence of these significant expressions of the sentiment of the legislative branch it behooves the Executive to soberly consider the conditions under which so important a measure must needs rest for justification. It is to be seriously considered whether the Cuban insurrection possesses beyond dispute the attributes of statehood, which alone can demand the recognition of belligerency in its favor. Possession, in short, of the essential qualifications of sovereignty by the insurgents and the conduct of the war by them according to the received code of war are no less important factors toward the determination of the problem of belligerency than are the influences and consequences of the struggle upon the internal polity of the recognizing state.

The wise utterances of President Grant in his memorable message of Dec. 7, 1875, are signally relevant to the present situation in Cuba, and it may be wholesome now to recall them. At that

time a ruinous conflict had for seven years wasted the neighboring island. During all those years an utter disregard of the laws of civilized warfare and of the just demands of humanity, which called forth expressions of condemnation from the nations of Christendom, continued unabated. Desolation and ruin pervaded that productive region, enormously affecting the commerce of all commercial nations, but that of the United States more than any other by reason of proximity and larger trade and intercourse. At that juncture Gen. Grant uttered these words, which now, as then, sum up the elements of the problem:

"A recognition of the independence of Cuba being, in my opinion, impracticable and indefensible, the question which next presents itself is that of the recognition of belligerent rights in the parties to the contest. In a former message to Congress I had occasion to consider this question, and reached the conclusion that the conflict in Cuba, dreadful and devastating as were its incidents, did not rise to the fearful dignity of war. . . . It is possible that the acts of foreign powers, and even acts of Spain herself, of this very nature, might be pointed to in defense of such recognition. But now, as in its past history, the United States should carefully avoid the false lights which might lead it into the mazes of doubtful law and of questionable propriety, and adhere rigidly and sternly to the rule, which has been its guide, of doing only that which is right and honest and of good report. The question of according or of withholding rights of belligerency must be judged, in every case, in view of the particular attending facts. Unless justified by necessity, it is always, and justly, regarded as an unfriendly act and a gratuitous demonstration of moral support to the rebellion. It is necessary, and it is required, when the interests and rights of another government or of its people are so far affected by a pending civil conflict as to require a definition of its relations thereto. But this conflict must be one which will be recognized in the sense of international law as war.

"Belligerence, too, is a fact. The mere existence of contending armed bodies, and their occasional conflicts, do not constitute war in the sense referred to. Applying to the existing condition of affairs in Cuba the tests recognized by publicists and writers on international law, and which have been observed by nations of dignity, honesty, and power, when free from sensitive or selfish and unworthy motives, I fail to find in the insurrection the existence of such a substantial political organization, real, palpable, and manifest to the world, having the forms and capable of the ordinary functions of government toward its own people and to other States, with courts for the administration of justice, with a local habitation, possessing such organization of force, such material, such occupation of territory as to take the contest out of the category of a mere rebellious insurrection, or occasional skirmishes, and place it on the terrible footing of war, to which a recognition of belligerency would aim to elevate it.

"The contest, moreover, is solely on land; the insurrection has not possessed itself of a single seaport whence it may send forth its flag, nor has it any means of communication with foreign powers except through the military lines of its adversaries. No apprehension of any of those sudden and difficult complications which a war upon the ocean is apt to precipitate upon the vessels, both commercial and national, and upon the consular officers of other powers, calls for the definition of their relations to the parties to the contest. Considered as a question of expediency, I regard the accordance of belligerent rights still to be as unwise and pre-

nature as I regard it to be at present indefensible as a measure of right.

"Such recognition entails upon the country according the rights which flow from it difficult and complicated duties, and requires the exaction from the contending parties of the strict observance of their rights and obligations. It confers the right of search upon the high seas by vessels of both parties; it would subject the carrying of arms and munitions of war, which now may be transported freely and without interruption in vessels of the United States, to detention and possible seizure; it would give rise to countless vexatious questions, would release the parent Government from responsibility for acts done by the insurgents, and would invest Spain with the right to exercise the supervision, recognized by our treaty of 1795, over our commerce on the high seas, a very large part of which, in its traffic between the Atlantic and the Gulf States and between all of them and the States on the Pacific, passes through the waters which wash the shores of Cuba. The exercise of this supervision could scarce fail to lead, if not to abuses, certainly to collision perilous to the peaceful relations of the two States. There can be little doubt as to what result such supervision would before long draw this nation. It would be unworthy of the United States to inaugurate the possibilities of such result by measures of questionable right or expediency or by any indirection."

Turning to the practical aspects of a recognition of belligerency and reviewing its inconveniences and positive dangers, still further pertinent considerations appear. In the code of nations there is no such thing as a naked recognition of belligerency unaccompanied by the assumption of international neutrality. Such recognition without more will not confer upon either party to a domestic conflict a status not theretofore actually possessed or affect the relation of either party to other states. The act of recognition usually takes the form of a solemn proclamation of neutrality which recites the *de facto* condition of belligerency as its motive. It announces a domestic law of neutrality in the declaring state. It assumes the international obligations of a neutral in the presence of a public state of war. It warns all citizens and others within the jurisdiction of the proclamaunt that they violate those rigorous obligations at their own peril and can not expect to be shielded from the consequences. The right of visit and search on the seas and seizures of vessels and cargoes and contraband of war and good prize under admiralty law must under international law be admitted as a legitimate consequence of a proclamation of belligerency. While according the equal belligerent rights defined by public law to each party in our ports, disfavours would be imposed on both which, while nominally equal, would weigh heavily in behalf of Spain herself. Possessing a navy and controlling the ports of Cuba, her maritime rights could be asserted not only for the military investment of the island, but up to the margin of our own territorial waters, and a condition of things would exist for which the Cubans within their own domain could not hope to create a parallel; while its creation through aid or sympathy from within our domain would be even more impossible than now, with the additional obligations of international neutrality we would perforce assume.

The enforcement of this enlarged and onerous code of neutrality would only be influential within our own jurisdiction by land and sea, and applicable by our own instrumentalities. It could impart to the United States no jurisdiction between Spain and the insurgents. It would give the United States no right of intervention to enforce the con-

duct of the strife within the paramount authority of Spain according to the international code of war.

For these reasons, I regard the recognition of the belligerency of the Cuban insurgents as now unwise, and therefore inadmissible. Should that step hereafter be deemed wise as a measure of right and duty, the Executive will take it.

Intervention upon humanitarian grounds has been frequently suggested, and has not failed to receive my most anxious and earnest consideration. But should such a step be now taken when it is apparent that a hopeful change has supervened in the policy of Spain toward Cuba? A new Government has taken office in the mother country. It is pledged in advance to the declaration that all the effort in the world can not suffice to maintain peace in Cuba by the bayonet; that vague promises of reform after subjugation afford no solution of the insular problem; that with a substitution of commanders must come a change of the past system of warfare for one in harmony with a new policy which shall no longer aim to drive the Cubans to the "horrible alternative of taking to the thicket or succumbing in misery"; that reforms must be instituted in accordance with the needs and circumstances of the time, and that these reforms, while designed to give full autonomy to the colony and to create a virtual entity and self-controlled administration, shall yet conserve and affirm the sovereignty of Spain by a just distribution of powers and burdens upon a basis of mutual interest untainted by methods of selfish expediency.

The first acts of the new Government lie in these honorable paths. The policy of cruel rapine and extermination that so long shocked the universal sentiment of humanity has been reversed. Under the new military commander a broad clemency is proffered. Measures have already been set on foot to relieve the horrors of starvation. The power of the Spanish armies, it is asserted, is to be used not to spread ruin and desolation, but to protect the resumption of peaceful agricultural pursuits and productive industries. That past methods are futile to force a peace by subjugation is freely admitted, and that ruin without conciliation must inevitably fail to win for Spain the fidelity of a contented dependency.

Decrees in application of the foreshadowed reforms have already been promulgated. The full text of these decrees has not been received, but, as furnished in a telegraphic summary from our minister, are: All civil and electoral rights of peninsular Spaniards are, in virtue of existing constitutional authority, forthwith extended to colonial Spaniards. A scheme of autonomy has been proclaimed by decree, to become effective upon ratification by the Cortes. It creates a Cuban parliament which, with the insular executive, can consider and vote upon all subjects affecting local order and interests, possessing unlimited powers save as to matters of state, war, and the navy, as to which the Governor-General acts by his own authority as the delegate of the Central Government. This parliament receives the oath of the Governor-General to preserve faithfully the liberties and privileges of the colony, and to it the colonial secretaries are responsible. It has the right to propose to the Central Government, through the Governor-General, modifications of the national charter, and to invite new projects of law or executive measures in the interest of the colony.

Besides its local powers, it is competent, first, to regulate electoral registration and procedure and prescribe the qualifications of electors and the manner of exercising suffrage; second, to organize courts of justice with native judges from members of the local bar; third, to frame the insular budget

both as to expenditures and revenues, without limitation of any kind, and to set apart the revenues to meet the Cuban share of the national budget, which latter will be voted by the national Cortes with the assistance of Cuban Senators and Deputies; fourth, to initiate or take part in the negotiations of the National Government for commercial treaties which may affect Cuban interests; fifth, to accept or reject commercial treaties which the National Government may have concluded without the participation of the Cuban Government; sixth, to frame the colonial tariff, acting in accord with the peninsular Government in scheduling articles of mutual commerce between the mother country and the colonies. Before introducing or voting upon a bill, the Cuban Government or the Chambers will lay the project before the Central Government and hear its opinion thereon, all the correspondence in such regard being made public. Finally, all conflicts of jurisdiction arising between the different municipal, provincial, and insular assemblies, or between the latter and the insular executive power, and which from their nature may not be referable to the Central Government for decision, shall be submitted to the courts.

That the Government of Sagasta has entered upon a course from which recession with honor is impossible can hardly be questioned; that in the few weeks it has existed it has made earnest of the sincerity of its professions is undeniable. I shall not impugn its sincerity, nor should impatience be suffered to embarrass it in the task it has undertaken. It is honestly due to Spain and to our friendly relations with Spain that she should be given a reasonable chance to realize her expectations and to prove the asserted efficacy of the new order of things to which she stands irrevocably committed. She has recalled the commander whose brutal orders inflamed the American mind and shocked the civilized world. She has modified the horrible order of concentration, and has undertaken to care for the helpless and permit those who desire to resume the cultivation of their fields to do so, and assures them of the protection of the Spanish Government in their lawful occupations. She has just released the "Competitor" prisoners heretofore sentenced to death and who have been the subject of repeated diplomatic correspondence during both this and the preceding administration.

Not a single American citizen is now in arrest or confinement in Cuba of whom this Government has any knowledge. The near future will demonstrate whether the indispensable condition of a righteous peace, just alike to the Cubans and to Spain as well as equitable to all our interests so intimately involved in the welfare of Cuba, is likely to be attained. If not, the exigency of further and other action by the United States will remain to be taken. When that time comes that action will be determined in the line of indisputable right and duty. It will be faced, without misgiving or hesitancy in the light of the obligation this Government owes to itself, to the people who have confided to it the protection of their interests and honor and to humanity.

Sure of the right, keeping free from all offense ourselves, actuated only by upright and patriotic considerations, moved neither by passion nor selfishness, the Government will continue its watchful care over the rights and property of American citizens, and will abate none of its efforts to bring about by peaceful agencies a peace which shall be honorable and enduring. If it shall hereafter appear to be a duty imposed by our obligations to ourselves, to civilization, and humanity to intervene with force, it shall be without fault on our part and only because the necessity for such action will be so clear

as to command the support and approval of the civilized world.

By a special message, dated the 16th day of June last, I laid before the Senate a treaty signed that day by the plenipotentiaries of the United States and of the republic of Hawaii, having for its purpose the incorporation of the Hawaiian Islands as an integral part of the United States and under its sovereignty. The Senate having removed the injunction of secrecy, although the treaty is still pending before that body, the subject may be properly referred to in this message, because the necessary action of the Congress is required to determine by legislation many details of the eventual union should the fact of annexation be accomplished, as I believe it should be.

While consistently disavowing from a very early period any aggressive policy of absorption in regard to the Hawaiian group, a long series of declarations through three quarters of a century has proclaimed the vital interest of the United States in the independent life of the islands and their intimate commercial dependence upon this country. At the same time, it has been repeatedly asserted that in no event could the entity of Hawaiian statehood cease by the passage of the islands under the domination or influence of another power than the United States. Under these circumstances, the logic of events required that annexation, heretofore offered but declined, should in the ripeness of time come about as the natural result of the strengthening ties that bind us to those islands, and be realized by the free will of the Hawaiian state.

That treaty was unanimously ratified without amendment by the Senate and President of the republic of Hawaii on the 10th of September last, and only awaits the favorable action of the American Senate to effect the complete absorption of the islands into the domain of the United States. What the conditions of such a union shall be, the political relation thereof to the United States, the character of the local administration, the quality and degree of the elective franchise of the inhabitants, the extension of the Federal laws to the territory or the enactment of special laws to fit the peculiar condition thereof, the regulation if need be of the labor system therein, are all matters which the treaty has wisely relegated to the Congress.

If the treaty is confirmed, as every consideration of dignity and honor requires, the wisdom of Congress will see to it that, avoiding abrupt assimilation of elements perhaps hardly yet fitted to share in the highest franchises of citizenship, and having due regard to the geographical conditions, the most just provisions for self-rule in local matters with the largest political liberties as an integral part of our nation will be accorded to the Hawaiians. No less is due to a people who, after nearly five years of demonstrated capacity to fulfill the obligations of self-governing statehood, come of their free will to merge their destinies in our body politic.

The questions which have arisen between Japan and Hawaii by reason of the treatment of Japanese laborers emigrating to the islands under the Hawaiian-Japanese convention of 1888 are in a satisfactory stage of settlement by negotiation. This Government has not been invited to mediate, and, on the other hand, has sought no intervention in that matter, further than to evince its kindest disposition toward such a speedy and direct adjustment by the two sovereign states in interest as shall comport with equity and honor. It is gratifying to learn that the apprehensions at first displayed on the part of Japan lest the cessation of Hawaii's national life through annexation might impair privileges to which Japan honorably laid claim have

given place to confidence in the uprightness of this Government and in the sincerity of its purpose to deal with all possible ulterior questions in the broadest spirit of friendliness.

As to the representation of this Government to Nicaragua, Salvador, and Costa Rica, I have concluded that Mr. William L. Merry, confirmed as minister of the United States to the states of Nicaragua, Salvador, and Costa Rica, shall proceed to San José, Costa Rica, and there temporarily establish the headquarters of the United States to those three states. I took this action for what I regarded as the paramount interests of this country. It was developed upon an investigation by the Secretary of State that the Government of Nicaragua, while not unwilling to receive Mr. Merry in his diplomatic quality, was unable to do so because of the compact concluded June 20, 1895, whereby that republic and those of Salvador and Honduras, forming what is known as the Greater Republic of Central America, had surrendered to the representative Diet thereof their right to receive and send diplomatic agents. The Diet was not willing to accept him because he was not accredited to that body. I could not accredit him to that body because the appropriation law of Congress did not permit it. Mr. Baker, the present minister at Managua, has been directed to present his letters of recall.

Mr. W. Godfrey Hunter has likewise been accredited to the governments of Guatemala and Honduras, the same as his predecessor. Guatemala is not a member of the Greater Republic of Central America, but Honduras is. Should this latter Government decline to receive him, he has been instructed to report this fact to his Government and await its further instructions.

A subject of large importance to our country and increasing appreciation on the part of the people is the completion of the great highway of trade between the Atlantic and Pacific known as the Nicaragua Canal. Its utility and value to American commerce is universally admitted. The commission appointed under date of July 24 last "to continue the surveys and examinations authorized by the act approved March 2, 1895," in regard to "the proper route, feasibility, and cost of construction of the Nicaragua Canal, with a view of making complete plans for the entire work of construction of such canal," is now employed in the undertaking. In the future I shall take occasion to transmit to Congress the report of this commission, making at the same time such further suggestions as may then seem advisable.

Under the provisions of the act of Congress approved March 3, 1897, for the promotion of an international agreement respecting bimetalism, I appointed on the 14th day of April, 1897, Hon. Edward O. Wolcott, of Colorado, Hon. Adlai E. Stevenson, of Illinois, and Hon. Charles J. Paine, of Massachusetts, as special envoys to represent the United States. They have been diligent in their efforts to secure the concurrence and co-operation of European countries in the international settlement of the question, but up to this time have not been able to secure an agreement contemplated by their mission.

The gratifying action of our great sister republic of France in joining this country in the attempt to bring about an agreement among the principal commercial nations of Europe, whereby a fixed and relative value between gold and silver shall be secured, furnishes assurance that we are not alone among the larger nations of the world in realizing the international character of the problem and in the desire of reaching some wise and practical solution of it. The British Government has published a *résumé* of the steps taken jointly by the French

ambassador in London and the special envoys of the United States, with whom our ambassador at London actively co-operated in the presentation of this subject to her Majesty's Government. This will be laid before Congress.

Our special envoys have not made their final report, as further negotiations between the representatives of this Government and the governments of other countries are pending and in contemplation. They believe that doubts which have been raised in certain quarters respecting the position of maintaining the stability of the parity between the metals and kindred questions may yet be solved by further negotiations.

Meanwhile it gives me satisfaction to state that the special envoys have already demonstrated their ability and fitness to deal with the subject, and it is to be earnestly hoped that their labors may result in an international agreement which will bring about recognition of both gold and silver as money upon such terms and with such safeguards as will secure the use of both metals upon a basis which shall work no injustice to any class of our citizens.

In order to execute as early as possible the provisions of the third and fourth sections of the revenue act approved July 24, 1897, I appointed the Hon. John A. Kasson, of Iowa, a special commissioner plenipotentiary to undertake the requisite negotiations with foreign countries desiring to avail themselves of these provisions. The negotiations are now proceeding with several governments, both European and American. It is believed that by a careful exercise of the powers conferred by that act some grievances of our own and of other countries in our mutual trade relations may be either removed or largely alleviated, and that the volume of our commercial exchanges may be enlarged with advantage to both contracting parties.

Most desirable from every standpoint of national interest and patriotism is the effort to extend our foreign commerce. To this end our merchant marine should be improved and enlarged. We should do our full share of the carrying trade of the world. We do not do it now. We should be the laggard no longer. The inferiority of our merchant marine is justly humiliating to the national pride. The Government by every proper constitutional means should aid in making our ships familiar visitors at every commercial port of the world, thus opening up new and valuable markets to the surplus products of the farm and the factory.

The efforts which had been made during the two previous years by my predecessor to secure better protection to the fur seals in the north Pacific Ocean and Bering Sea were renewed at an early date by this Administration and have been pursued with earnestness. Upon my invitation the governments of Japan and Russia sent delegates to Washington and an international conference was held during the months of October and November last, wherein it was unanimously agreed that under the existing regulations this species of useful animals was threatened with extinction and that an international agreement of all the interested powers was necessary for their adequate protection.

The Government of Great Britain did not see proper to be represented at this conference, but subsequently sent to Washington, as delegates, the expert commissioners of Great Britain and Canada who had during the past two years visited the Pribilof Islands, and who met in conference similar commissioners on the part of the United States. The result of this conference was an agreement on important facts connected with the condition of the seal herd, heretofore in dispute, which should place beyond controversy the duty of the governments concerned to adopt measures without delay for the

preservation and restoration of the herd. Negotiations to this end are now in progress, the result of which I hope to be able to report to Congress at an early day.

International arbitration can not be omitted from the list of subjects claiming our consideration. Events have only served to strengthen the general views on this question expressed in my inaugural address. The best sentiment of the civilized world is moving toward the settlement of differences between nations without resorting to the horrors of war. Treaties embodying these humane principles on broad lines without in any way imperiling our interests or our honor shall have my constant encouragement.

The acceptance by this Government of the invitation of the republic of France to participate in the Universal Exposition of 1900 at Paris was immediately followed by the appointment of a special commissioner to represent the United States in the proposed exposition, with special reference to the securing of space for an adequate exhibit on behalf of the United States.

The special commissioner delayed his departure for Paris long enough to ascertain the probable demand for space by American exhibitors. His inquiries developed an almost unprecedented interest in the proposed exposition, and the information thus acquired enabled him to justify an application for a much larger allotment of space for the American section than had been reserved by the exposition authorities. The result was particularly gratifying, in view of the fact that the United States was one of the last countries to accept the invitation of France.

The reception accorded our special commissioner was most cordial, and he was given every reasonable assurance that the United States would receive a consideration commensurate with the proportions of our exhibit. The report of the special commissioner as to the magnitude and importance of the coming exposition and the great demand for space by American exhibitors supplies new arguments for a liberal and judicious appropriation by Congress to the end that an exhibit fairly representative of the industries and resources of our country may be made in an exposition which will illustrate the world's progress during the nineteenth century. That exposition is intended to be the most important and comprehensive of the long series of international exhibitions, of which our own at Chicago was a brilliant example, and it is desirable that the United States should make a worthy exhibit of American genius and skill and their unrivaled achievements in every branch of industry.

The present immediately effective force of the navy consists of 4 battle ships of the first class, 2 of the second, and 48 other vessels, ranging from armored cruisers to torpedo boats. There are under construction 5 battle ships of the first class, 16 torpedo boats, and 1 submarine boat. No provision has yet been made for the armor of 3 of the 5 battle ships, as it has been impossible to obtain it at the price fixed by Congress. It is of great importance that Congress provide this armor, as until then the ships are of no fighting value.

The present naval force, especially in view of its increase by the ships now under construction, while not as large as that of a few other powers, is a formidable force; its vessels are the very best of each type; and with the increase that should be made to it from time to time in the future, and careful attention to keeping it in a high state of efficiency and repair, it is well adapted to the necessities of the country.

The great increase of the navy which has taken place in recent years was justified by the require-

ments for national defense, and has received public approbation. The time has now arrived, however, when this increase, to which the country is committed, should, for a time, take the form of increased facilities commensurate with the increase of our naval vessels. It is an unfortunate fact that there is only one dock on the Pacific coast capable of docking our largest ships, and only one on the Atlantic coast, and that the latter has for the last six or seven months been under repair and therefore incapable of use. Immediate steps should be taken to provide three or four docks of this capacity on the Atlantic coast, at least one on the Pacific coast, and a floating dock in the Gulf. This is the recommendation of a very competent board appointed to investigate the subject. There should also be ample provision made for powder and projectiles and other munitions of war, and for an increased number of officers and enlisted men. Some additions are also necessary to our navy yards, for the repair and care of our larger number of vessels. As there are now on the stocks five battle ships of the largest class, which can not be completed for a year or two, I concur with the recommendation of the Secretary of the Navy for an appropriation authorizing the construction of one battle ship for the Pacific coast, where, at present, there is only one in commission and one under construction, while on the Atlantic coast there are three in commission and four under construction; and also that several torpedo boats be authorized in connection with our general system of coast defense.

The Territory of Alaska requires the prompt and early attention of Congress. The conditions now existing demand material changes in the laws relating to the Territory. The great influx of population during the past summer and fall and the prospect of a still larger immigration in the spring will not permit us to longer neglect the extension of civil authority within the Territory or postpone the establishment of a more thorough government.

A general system of public surveys has not yet been extended to Alaska, and all entries thus far made in that district are upon special surveys. The act of Congress extending to Alaska the mining laws of the United States contained the reservation that it should not be construed to put in force the general land laws of the country. By act approved March 3, 1891, authority was given for entry of lands for town-site purposes and also for the purchase of not exceeding 160 acres then or thereafter occupied for purposes of trade and manufacture. The purpose of Congress as thus far expressed has been that only such rights should apply to that Territory as should be specifically named.

It will be seen how much remains to be done for that vast and remote and yet promising portion of our country. Special authority was given to the President by the act of Congress approved July 24, 1897, to divide that Territory into two land districts and to designate the boundaries thereof and to appoint registers and receivers of said land offices, and the President was also authorized to appoint a surveyor general for the entire district. Pursuant to this authority, a surveyor general and receiver have been appointed, with offices at Sitka. If in the ensuing year the conditions justify it, the additional land district authorized by law will be established, with an office at some point in the Yukon valley. No appropriation, however, was made for this purpose, and that is now necessary to be done for the two land districts into which the Territory is to be divided.

I concur with the Secretary of War in his suggestions as to the necessity for a military force in the Territory of Alaska for the protection of persons and property. Already a small force, consisting of

twenty-five men, with two officers, under command of Lieut.-Col. Randall, of the Eighth Infantry, has been sent to St. Michael to establish a military post.

As it is to the interest of the Government to encourage the development and settlement of the country and its duty to follow up its citizens there with the benefits of legal machinery, I earnestly urge upon Congress the establishment of a system of government with such flexibility as will enable it to adjust itself to the future areas of greatest population.

The startling, though possibly exaggerated, reports from the Yukon river country of the probable shortage of food for the large number of people who are wintering there without the means of leaving the country are confirmed in such measure as to justify bringing the matter to the attention of Congress. Access to that country in winter can be had only by the passes from Dyea and vicinity, which is a most difficult and perhaps an impossible task. However, should these reports of the suffering of our fellow-citizens be further verified, every effort at any cost should be made to carry them relief.

For a number of years past it has been apparent that the conditions under which the Five Civilized Tribes were established in the Indian Territory under treaty provisions with the United States, with the right of self-government and the exclusion of all white persons from within their borders, have undergone so complete a change as to render the continuance of the system thus inaugurated practically impossible. The total number of the Five Civilized Tribes, as shown by the last census, is 45,494, and this number has not materially increased, while the white population is estimated at from 200,000 to 250,000, which by permission of the Indian government has settled in the Territory. The present area of the Indian Territory contains 25,694,564 acres, much of which is very fertile land. The United States citizens residing in the Territory, most of whom have gone there by invitation or with the consent of the tribal authorities, have made permanent homes for themselves. Numerous towns have been built in which from 500 to 5,000 white people now reside. Valuable residences and business houses have been erected in many of them. Large business enterprises are carried on in which vast sums of money are employed, and yet these people, who have invested their capital in the development of the productive resources of the country, are without title to the land they occupy and have no voice whatever in the government either of the nations or tribes. Thousands of their children, who were born in the Territory, are of school age, but the doors of the schools of the nations are shut against them, and what education they get is by private contribution. No provision for the protection of the life or property of these white citizens is made by the tribal governments and courts.

The Secretary of the Interior reports that leading Indians have absorbed great tracts of land to the exclusion of the common people, and government by an Indian aristocracy has been practically established, to the detriment of the people. It has been found impossible for the United States to keep its citizens out of the Territory and the executory conditions contained in the treaties with these nations have for the most part become impossible of execution. Nor has it been possible for the tribal governments to secure to each individual Indian his full enjoyment in common with other Indians of the common property of the nations. Friends of the Indians have long believed that the best interests of the Indians of the Five Civilized Tribes would be found in American citizenship, with all

the rights and privileges which belong to that condition.

By section 16 of the act of March 3, 1893, the President was authorized to appoint three commissioners to enter into negotiations with the Cherokee, Choctaw, Chickasaw, Muscogee (or Creek), and Seminole nations, commonly known as the Five Civilized Tribes in the Indian Territory. Briefly, the purposes of the negotiations were to be: The extinguishment of tribal titles to any lands within that Territory now held by any and all such nations or tribes, either by cession of the same or some part thereof to the United States, or by allotment and division of the same in severalty among the Indians of such nations or tribes, respectively, as may be entitled to the same, or by such other method as may be agreed upon between the several nations and tribes aforesaid, or each of them with the United States, with a view to such an adjustment upon the basis of justice and equity as may, with the consent of the said nations of Indians so far as may be necessary, be requisite and suitable to enable the ultimate creation of a State or States of the Union which shall embrace the lands within said Indian Territory.

The commission met much opposition from the beginning. The Indians were very slow to act and those in control manifested a decided disinclination to meet with favor the propositions submitted to them. A little more than three years after this organization the commission effected an agreement with the Choctaw nation alone. The Chickasaws, however, refused to agree to its terms, and as they have a common interest with the Choctaws in the lands of said nations, the agreement with the latter nation could have no effect without the consent of the former. On April 23, 1897, the commission effected an agreement with both tribes—the Choctaws and Chickasaws. This agreement, it is understood, has been ratified by the constituted authorities of the respective tribes or nations parties thereto, and only requires ratification by Congress to make it binding.

On the 27th of September, 1897, an agreement was effected with the Creek Nation, but it is understood that the national council of said nation has refused to ratify the same. Negotiations are yet to be had with the Cherokees, the most populous of the Five Civilized Tribes, and with the Seminoles, the smallest in point of numbers and territory.

The provision in the Indian appropriation act, approved June 10, 1896, makes it the duty of the commission to investigate and determine the rights of applicants for citizenship in the Five Civilized Tribes, and to make complete census rolls of the citizens of said tribes. The commission is at present engaged in this work among the Creeks and has made appointments for taking the census of these people up to and including the 30th of the present month.

Should the agreement between the Choctaws and Chickasaws be ratified by Congress and should the other tribes fail to make an agreement with the commission, then it will be necessary that some legislation shall be had by Congress which, while just and honorable to the Indians, shall be equitable to the white people who have settled upon these lands by invitation of the tribal nations.

Hon. Henry L. Dawes, chairman of the commission, in a letter to the Secretary of the Interior, under date of Oct. 11, 1897, says: "Individual ownership is in their (the commission's) opinion absolutely essential to any permanent improvement in present conditions, and the lack of it is the root of nearly all the evils which so grievously afflict these people. Allotment by agreement is the only possible method, unless the United States courts

are clothed with the authority to apportion the lands among the citizen Indians for whose use it was originally granted."

I concur with the Secretary of the Interior that there can be no cure for the evils engendered by the perversion of these great trusts excepting by their resumption by the government which created them.

The recent prevalence of yellow fever in a number of cities and towns throughout the South has resulted in much disturbance of commerce and demonstrated the necessity of such amendments to our quarantine laws as will make the regulations of the national quarantine authorities paramount. The Secretary of the Treasury in the portion of his report relating to the operation of the Marine-Hospital Service calls attention to the defects in the present quarantine laws, and recommends amendments thereto which will give the Treasury Department the requisite authority to prevent the invasion of epidemic diseases from foreign countries and, in times of emergency like that of the past summer, will add to the efficiency of the sanitary measures for the protection of the people and at the same time prevent unnecessary restriction of commerce. I concur in his recommendation.

In further effort to prevent the invasion of the United States by yellow fever the importance of the discovery of the exact cause of the disease, which up to the present time has been undetermined, is obvious, and to this end a systematic bacteriological investigation should be made. I therefore recommend that Congress authorize the appointment of a commission by the President, to consist of four expert bacteriologists, one to be selected from the medical officers of the Marine-Hospital Service, one to be appointed from civil life, one to be detailed from the medical officers of the army, and one from the medical officers of the navy.

The Union Pacific Railway, main line, was sold under the decree of the United States court for the district of Nebraska on the 1st and 2d of November of this year. The amount due the Government consisted of the principal of the subsidy bonds, \$27,236,512, and the accrued interest thereon, \$31,211,711.75, making the total indebtedness \$58,448,223.75. The bid at the sale covered the first-mortgage lien and the entire mortgage claim of the Government, principal and interest.

The sale of the subsidized portion of the Kansas Pacific line, upon which the Government holds a second-mortgage lien, has been postponed at the instance of the Government to Dec. 16, 1897. The debt of this division of the Union Pacific Railway to the Government on Nov. 1, 1897, was the principal of the subsidy bonds, \$6,303,000, and the unpaid and accrued interest thereon, \$6,626,690.33, making a total of \$12,929,690.33.

The sale of this road was originally advertised for Nov. 4, but for the purpose of securing the utmost public notice of the event it was postponed until Dec. 16, and a second advertisement of the sale was made. By the decree of the court the upset price on the sale of the Kansas Pacific will yield to the Government the sum of \$2,500,000 over all prior liens, costs, and charges. If no other or better bid is made, this sum is all that the Government will receive on its claim of nearly \$13,000,000. The Government has no information as to whether there will be other bidders or a better bid than the minimum amount herein stated. The question presented therefore is, whether the Government shall, under the authority given it by the act of March 3, 1887, purchase or redeem the road in the event that a bid is not made by private parties covering the entire Government claim. To qualify

the Government to bid at the sales will require a deposit of \$900,000, as follows: In the Government cause \$500,000 and in each of the first-mortgage causes \$200,000, and in the latter the deposit must be in cash. Payments at the sale are as follow: Upon the acceptance of the bid a sum which, with the amount already deposited, shall equal 15 per cent. of the bid; the balance in installments of 25 per cent. thirty, forty, and fifty days after the confirmation of the sale. The lien on the Kansas Pacific prior to that of the Government on the 30th July, 1897, principal and interest, amounted to \$7,281,048.11. The Government, therefore, should it become the highest bidder, will have to pay the amount of the first-mortgage lien.

I believe that under the act of 1887 it has the authority to do this, and in absence of any action by Congress I shall direct the Secretary of the Treasury to make the necessary deposit as required by the court's decree to qualify as a bidder and to bid at the sale a sum which will at least equal the principal of the debt due to the Government; but suggest in order to remove all controversy that an amendment of the law be immediately passed explicitly giving such powers and appropriating in general terms whatever sum is sufficient therefor.

In so important a matter as the Government becoming the possible owner of railroad property which it perforce must conduct and operate, I feel constrained to lay before Congress these facts for its consideration and action before the consummation of the sale. It is clear to my mind that the Government should not permit the property to be sold at a price which will yield less than one half of the principal of its debt and less than one fifth of its entire debt, principal and interest. But whether the Government, rather than accept less than its claim, should become a bidder, and thereby the owner of the property, I submit to the Congress for action.

The library building provided for by the act of Congress approved April 15, 1886, has been completed and opened to the public. It should be a matter of congratulation that through the foresight and munificence of Congress the nation possesses this noble treasure-house of knowledge. It is earnestly to be hoped that, having done so much toward the cause of education, Congress will continue to develop the library in every phase of research, to the end that it may be not only one of the most magnificent, but among the richest and most useful libraries in the world.

The important branch of our Government known as the civil service, the practical improvement of which has long been a subject of earnest discussion, has of late years received increased legislative and Executive approval. During the past few months the service has been placed upon a still firmer basis of business methods and personal merit. While the right of our veteran soldiers to reinstatement in deserving cases has been asserted, dismissals for merely political reasons have been carefully guarded against, the examinations for admittance to the service enlarged and at the same time rendered less technical and more practical, and a distinct advance has been made by giving a hearing before dismissal upon all cases where incompetency is charged or demand made for the removal of officials in any of the departments. This order has been made to give to the accused his right to be heard, but without in any way impairing the power of removal, which should always be exercised in cases of inefficiency and incompetency, and which is one of the vital safeguards of the civil-service-reform system, preventing stagnation and deadwood, and keeping every employee keenly alive to the fact that the security of his tenure depends not on

favor, but on his own tested and carefully watched record of service.

Much of course still remains to be accomplished before the system can be made reasonably perfect for our needs. There are places now in the classified service which ought to be exempted, and others not classified may properly be included. I shall not hesitate to exempt cases which I think have been improperly included in the classified service, or include those which in my judgment will best promote the public service. The system has the approval of the people, and it will be my endeavor to uphold and extend it.

I am forced by the length of this message to omit many important references to affairs of the Government with which Congress will have to deal at the present session. They are fully discussed in the departmental reports, to all of which I invite your earnest attention.

The estimates of the expenses of the Government by the several departments will, I am sure, have your careful scrutiny. While the Congress may not find it an easy task to reduce the expenses of the Government, it should not encourage their increase. These expenses will, in my judgment, admit of a decrease in many branches of the Government without injury to the public service. It is a commanding duty to keep the appropriations within the receipts of the Government, and thus avoid a deficit.

WILLIAM MCKINLEY.

EXECUTIVE MANSION, Dec. 6, 1897.

Cuba.—The condition of affairs in Cuba was the main topic of interest in Congress from the very beginning of the session, and various resolutions were proposed and considered looking toward American intervention, but the feeling throughout the country in favor of interference became irresistible after the destruction of the battle ship "Maine," in Havana harbor, on the night of Feb. 15, 1898, and the impatient eagerness of Congress kept pace with popular sentiment. Prompt action was taken in every appropriate way to recover the dead, relieve the suffering, and investigate the causes of the disaster. A court of inquiry made an investigation of the destruction of the ship, and reported on March 21. The President transmitted the report to Congress, March 28, with the following message:

To the Congress of the United States:

For some time prior to the visit of the "Maine" to Havana harbor our consular representatives pointed out the advantages to flow from the visit of national ships to the Cuban waters, in accustoming the people to the presence of our flag as the symbol of good will, and of our ships in the fulfillment of the mission of protection to American interests, even though no immediate need therefor might exist.

Accordingly on the 24th of January last, after conference with the Spanish minister, in which the renewal of visits of our war vessels to Spanish waters was discussed and accepted, the peninsular authorities at Madrid and Havana were advised of the purpose of this Government to resume friendly naval visits at Cuban ports, and that in that view the "Maine" would forthwith call at the port of Havana.

This announcement was received by the Spanish Government with appreciation of the friendly character of the visit of the "Maine," and with notification of intention to return the courtesy by sending Spanish ships to the principal ports of the United States. Meanwhile the "Maine" entered the port of Havana on the 25th of January, her arrival being marked with no special incident besides the exchange of customary salutes and ceremonial visits.

The "Maine" continued in the harbor of Havana during the three weeks following her arrival. No appreciable excitement attended her stay; on the contrary, a feeling of relief and confidence followed the resumption of the long-interrupted friendly intercourse. So noticeable was this immediate effect of her visit that the consul general strongly urged that the presence of our ships in Cuban waters should be kept up by retaining the "Maine" at Havana or, in the event of her recall, by sending another vessel there to take her place.

At forty minutes past nine in the evening of the 15th of February the "Maine" was destroyed by an explosion, by which the entire forward part of the ship was utterly wrecked. In this catastrophe 2 officers and 264 of her crew perished, those who were not killed outright by her explosion being penned between decks by the tangle of wreckage and drowned by the immediate sinking of the hull.

Prompt assistance was rendered by the neighboring vessels anchored in the harbor, aid being especially given by the boats of the Spanish cruiser "Alfonso XII" and the Ward Line steamer "City of Washington," which lay not far distant. The wounded were generously cared for by the authorities of Havana, the hospitals being freely opened to them, while the earliest recovered bodies of the dead were interred by the municipality in a public cemetery in the city. Tributes of grief and sympathy were offered from all official quarters of the island.

The appalling calamity fell upon the people of our country with crushing force, and for a brief time an intense excitement prevailed, which in a community less just and self-controlled than ours might have led to hasty acts of blind resentment. This spirit, however, soon gave way to the calmer processes of reason and to the resolve to investigate the facts and await material proof before forming a judgment as to the cause, the responsibility, and, if the facts warranted, the remedy due. This course necessarily recommended itself from the outset to the Executive, for only in the light of a dispassionately ascertained certainty could it determine the nature and measure of its full duty in the matter.

The usual procedure was followed, as in all cases of casualty or disaster to national vessels of any maritime state. A naval court of inquiry was at once organized, composed of officers well qualified by rank and practical experience to discharge the onerous duty imposed upon them. Aided by a strong force of wreckers and divers, the court proceeded to make a thorough investigation on the spot, employing every available means for the impartial and exact determination of the causes of the explosion. Its operations have been conducted with the utmost deliberation and judgment, and while independently pursued no attainable source of information was neglected, and the fullest opportunity was allowed for a simultaneous investigation by the Spanish authorities.

The finding of the court of inquiry was reached, after twenty-three days of continuous labor, on the 21st of March instant, and, having been approved on the 22d by the commander in chief of the United States naval force on the North Atlantic Station, was transmitted to the Executive.

It is herewith laid before the Congress, together with the voluminous testimony taken before the court.

Its purport is, in brief, as follows:

When the "Maine" arrived at Havana she was conducted by the regular Government pilot to buoy No. 4, to which she was moored in from 5½ to 6 fathoms of water.

The state of discipline on board and the condi-

tion of her magazines, boilers, coal bunkers, and storage compartments are passed in review, with the conclusion that excellent order prevailed and that no indication of any cause for an internal explosion existed in any quarter.

At eight o'clock in the evening of Feb. 15 everything had been reported secure, and all was quiet.

At forty minutes past nine o'clock the vessel was suddenly destroyed.

There were two distinct explosions, with a brief interval between them.

The first lifted the forward part of the ship very perceptibly. The second, which was more open, prolonged, and of greater volume, is attributed by the court to the partial explosion of two or more of the forward magazines.

The evidence of the divers establishes that the after part of the ship was practically intact and sank in that condition a very few moments after the explosion. The forward part was completely demolished.

Upon the evidence of a concurrent external cause the finding of the court is as follows:

"At frame 17 the outer shell of the ship, from a point 11½ feet from the middle line of the ship and 6 feet above the keel when in its normal position, has been forced up so as to be now about 4 feet above the surface of the water, therefore about 34 feet above where it would be had the ship sunk uninjured.

"The outside bottom plating is bent into a reversed V shape (A), the after wing of which, about 15 feet broad and 32 feet in length (from frame 17 to frame 25), is doubled back upon itself against the continuation of the same plating, extending forward.

"At frame 18 the vertical keel is broken in two and the flat keel bent into an angle similar to the angle formed by the outside bottom plates. This break is now about 6 feet below the surface of the water and about 30 feet above its normal position.

"In the opinion of the court this effect could have been produced only by the explosion of a mine situated under the bottom of a ship at about frame 18 and somewhat on the port side of the ship."

The conclusions of the court are:

That the loss of the "Maine" was not in any respect due to fault or negligence on the part of any of the officers or members of her crew.

That the ship was destroyed by the explosion of a submarine mine, which caused the partial explosion of two or more of her forward magazines; and

That no evidence has been obtainable fixing the responsibility for the destruction of the "Maine" upon any person or persons.

I have directed that the finding of the court of inquiry and the views of this Government thereon be communicated to the Government of her Majesty the Queen Regent, and I do not permit myself to doubt that the sense of justice of the Spanish nation will dictate a course of action suggested by honor and the friendly relations of the two governments.

It will be the duty of the Executive to advise the Congress of the result, and in the meantime deliberate consideration is invoked.

WILLIAM McKINLEY.

EXECUTIVE MANSION, March 28, 1898.

No course of action was recommended by the President, and there was no disposition to consider the destruction of the "Maine" as more than an incident in the great issue of intervention in Cuba; but it was an incident of overmastering influence in hastening national decision. April 11, the President sent to Congress the following message giving in detail an account of his negotiations for peace,

enumerating the evil effects of the war in Cuba, setting forth the duty of interference, and asking for power to compel the restoration of order and the establishment of good government:

To the Congress of the United States :

Obedient to that precept of the Constitution which commands the President to give from time to time to the Congress information of the state of the Union and to recommend to their consideration such measures as he shall judge necessary and expedient, it becomes my duty to now address your body with regard to the grave crisis that has arisen in the relations of the United States to Spain by reason of the warfare that for more than three years has raged in the neighboring island of Cuba.

I do so because of the intimate connection of the Cuban question with the state of our own Union and the grave relation the course which it is now incumbent upon the nation to adopt must needs bear to the traditional policy of our Government if it is to accord with the precepts laid down by the founders of the republic and religiously observed by succeeding administrations to the present day.

The present revolution is but the successor of other similar insurrections which have occurred in Cuba against the dominion of Spain, extending over a period of nearly half a century, each of which, during its progress, has subjected the United States to great effort and expense in enforcing its neutrality laws, caused enormous losses to American trade and commerce, caused irritation, annoyance, and disturbance among our citizens, and, by the exercise of cruel, barbarous, and uncivilized practices of warfare, shocked the sensibilities and offended the humane sympathies of our people.

Since the present revolution began, in February, 1895, this country has seen the fertile domain at our threshold ravaged by fire and sword in the course of a struggle unequaled in the history of the island and rarely paralleled as to the numbers of the combatants and the bitterness of the contest by any revolution of modern times where a dependent people striving to be free have been opposed by the power of the sovereign state.

Our people have beheld a once prosperous community reduced to comparative want, its lucrative commerce virtually paralyzed, its exceptional productiveness diminished, its fields laid waste, its mills in ruins, and its people perishing by tens of thousands from hunger and destitution. We have found ourselves constrained, in the observance of that strict neutrality which our laws enjoin, and which the law of nations commands, to police our own waters and watch our own seaports in prevention of any unlawful act in aid of the Cubans.

Our trade has suffered; the capital invested by our citizens in Cuba has been largely lost, and the temper and forbearance of our people have been so sorely tried as to beget a perilous unrest among our own citizens which has inevitably found its expression from time to time in the national Legislature, so that issues wholly external to our own body politic engross attention and stand in the way of that close devotion to domestic advancement that becomes a self-contained commonwealth whose primal maxim has been the avoidance of all foreign entanglements. All this must needs awaken, and has, indeed, aroused the utmost concern on the part of this Government, as well during my predecessor's term as in my own.

In April, 1896, the evils from which our country suffered through the Cuban war became so onerous that my predecessor made an effort to bring about a peace through the mediation of this Government in any way that might tend to an honorable adjustment of the contest between Spain and her revolted colony, on the basis of some effective scheme of self-

government for Cuba under the flag and sovereignty of Spain. It failed through the refusal of the Spanish Government then in power to consider any form of mediation or, indeed, any plan of settlement which did not begin with the actual submission of the insurgents to the mother country, and then only on such terms as Spain herself might see fit to grant. The war continued unabated. The resistance of the insurgents was in no wise diminished.

The efforts of Spain were increased, both by the dispatch of fresh levies to Cuba and by the addition to the horrors of the strife of a new and inhuman phase happily unprecedented in the modern history of civilized Christian peoples. The policy of devastation and concentration, inaugurated by the captain general's *bando* of Oct. 21, 1896, in the province of Pinar del Rio was thence extended to embrace all of the island to which the power of the Spanish arms was able to reach by occupation or by military operations. The peasantry, including all dwelling in the open agricultural interior, were driven into the garrison towns or isolated places held by the troops.

The raising and movement of provisions of all kinds were interdicted. The fields were laid waste, dwellings unroofed and fired, mills destroyed, and, in short, everything that could desolate the land and render it unfit for human habitation or support was commanded by one or the other of the contending parties and executed by all the powers at their disposal.

By the time the present Administration took office a year ago, reconcentration, so called, had been made effective over the better part of the four central and western provinces—Santa Clara, Matanzas, Havana, and Pinar del Rio.

The agricultural population to the estimated number of 800,000 or more was herded within the towns and their immediate vicinage, deprived of the means of support, rendered destitute of shelter, left poorly clad, and exposed to the most unsanitary conditions. As the scarcity of food increased with the devastation of the depopulated areas of production, destitution and want became misery and starvation. Month by month the death rate increased in an alarming ratio. By March, 1897, according to conservative estimates from official Spanish sources, the mortality among the *reconcentrados*, from starvation and the diseases thereto incident, exceeded 50 per cent. of their total number.

No practical relief was accorded to the destitute. The overburdened towns, already suffering from the general dearth, could give no aid. So-called "zones of cultivation" established within the immediate areas of effective military control about the cities and fortified camps proved illusory as a remedy for the suffering. The unfortunates, being for the most part women and children, with aged and helpless men, enfeebled by disease and hunger, could not have tilled the soil without tools, seed, or shelter for their own support or for the supply of the cities. Reconcentration, adopted avowedly as a war measure in order to cut off the resources of the insurgents, worked its predestined result. As I said in my message of last December, it was not civilized warfare; it was extermination. The only peace it could beget was that of the wilderness and the grave.

Meanwhile the military situation in the island had undergone a noticeable change. The extraordinary activity that characterized the second year of the war, when the insurgents invaded even the hitherto unharmed fields of Pinar del Rio and carried havoc and destruction up to the walls of the city of Havana itself, had relapsed into a dogged struggle in the central and eastern provinces. The

Spanish arms regained a measure of control in Pinar del Rio and parts of Havana, but, under the existing conditions of the rural country, without immediate improvement of their productive situation. Even thus partially restricted, the revolutionists held their own, and their conquest and submission, put forward by Spain as the essential and sole basis of peace, seemed as far distant as at the outset.

In this state of affairs my Administration found itself confronted with the grave problem of its duty. My message of last December reviewed the situation and narrated the steps taken with a view to relieving its acuteness and opening the way to some form of honorable settlement. The assassination of the prime minister, Canovas, led to a change of government in Spain. The former administration, pledged to subjugation without concession, gave place to that of a more liberal party, committed long in advance to a policy of reform involving the wider principle of home rule for Cuba and Puerto Rico.

The overtures of this Government, made through its new envoy, Gen. Woodford, and looking to an immediate and effective amelioration of the condition of the island, although not accepted to the extent of admitted mediation in any shape, were met by assurances that home rule in an advanced phase would be forthwith offered to Cuba, without waiting for the war to end, and that more humane methods should thenceforth prevail in the conduct of hostilities. Coincidentally with these declarations the new Government of Spain continued and completed the policy already begun by its predecessor, of testifying friendly regard for this nation by releasing American citizens held under one charge or another connected with the insurrection, so that by the end of November not a single person entitled in any way to our national protection remained in a Spanish prison.

While these negotiations were in progress the increasing destitution of the unfortunate *reconcentrados* and the alarming mortality among them claimed earnest attention. The success which had attended the limited measure of relief extended to the suffering American citizens among them by the judicious expenditure through the consular agencies of the money appropriated expressly for their succor by the joint resolution approved May 24, 1897, prompted the humane extension of a similar scheme of aid to the great body of sufferers. A suggestion to this end was nequiesced in by the Spanish authorities. On the 24th of December last I caused to be issued an appeal to the American people inviting contributions in money or in kind for the succor of the starving sufferers in Cuba, following this on the 8th of January by a similar public announcement of the formation of a central Cuban relief committee, with headquarters in New York city, composed of 3 members representing the American National Red Cross and the religious and business elements of the community.

The efforts of that committee have been untiring and have accomplished much. Arrangements for free transportation to Cuba have greatly aided the charitable work. The president of the American Red Cross and representatives of other contributory organizations have generously visited Cuba and co-operated with the consul general and the local authorities to make effective distribution of the relief collected through the efforts of the central committee. Nearly \$200,000 in money and supplies has already reached the sufferers and more is forthcoming. The supplies are admitted duty free, and transportation to the interior has been arranged, so that the relief, at first necessarily confined to Havana and the larger cities, is now extended through

most, if not all, of the towns where suffering exists.

Thousands of lives have already been saved. The necessity for a change in the condition of the *reconcentrados* is recognized by the Spanish Government. Within a few days past the orders of General Weyler have been revoked; the *reconcentrados*, it is said, are to be permitted to return to their homes and aided to resume the self-supporting pursuits of peace. Public works have been ordered to give them employment, and a sum of \$600,000 has been appropriated for their relief.

The war in Cuba is of such a nature that short of subjugation or extermination a final military victory for either side seems impracticable. The alternative lies in the physical exhaustion of the one or the other party, or perhaps of both—a condition which in effect ended the ten years' war by the truce of Zanjón. The prospect of such a protraction and conclusion of the present strife is a contingency hardly to be contemplated with equanimity by the civilized world and least of all by the United States, affected and injured as we are, deeply and intimately, by its very existence.

Realizing this, it appeared to be my duty, in a spirit of true friendliness, no less to Spain than to the Cubans, who have so much to lose by the prolongation of the struggle, to seek to bring about an immediate termination of the war. To this end I submitted, on the 27th ultimo, as a result of much representation and correspondence, through the United States minister at Madrid, propositions to the Spanish Government looking to an armistice until Oct. 1 for the negotiation of peace with the good offices of the President.

In addition, I asked the immediate revocation of the order of reconcentration, so as to permit the people to return to their farms and the needy to be relieved with provisions and supplies from the United States, co-operating with the Spanish authorities, so as to afford full relief.

The reply of the Spanish Cabinet was received on the night of the 31st ultimo. It offered, as the means to bring about peace in Cuba, to confide the preparation thereof to the insular Parliament, inasmuch as the concurrence of that body would be necessary to reach a final result, it being, however, understood that the powers reserved by the constitution to the Central Government are not lessened or diminished. As the Cuban Parliament does not meet until the 4th of May next, the Spanish Government would not object, for its part, to accept at once a suspension of hostilities if asked for by the insurgents from the general in chief, to whom it would pertain, in such case, to determine the duration and conditions of the armistice.

The propositions submitted by Gen. Woodford and the reply of the Spanish Government were both in the form of brief memoranda, the texts of which are before me, and are substantially in the language above given. The function of the Cuban Parliament in the matter of "preparing" peace and the manner of its doing so are not expressed in the Spanish memorandum; but from Gen. Woodford's explanatory reports of preliminary discussions preceding the final conference it is understood that the Spanish Government stands ready to give the insular Congress full powers to settle the terms of peace with the insurgents—whether by direct negotiation or indirectly by means of legislation does not appear.

With this last overture in the direction of immediate peace, and its disappointing reception by Spain, the Executive is brought to the end of his effort.

In my annual message of December last I said:
"Of the untried measures there remain only:

Recognition of the insurgents as belligerents; recognition of the independence of Cuba; neutral intervention to end the war by imposing a rational compromise between the contestants, and intervention in favor of one or the other party. I speak not of forcible annexation, for that can not be thought of. That, by our code of morality, would be criminal aggression."

Thereupon I reviewed these alternatives, in the light of President Grant's measured words, uttered in 1875, when after seven years of sanguinary, destructive, and cruel hostilities in Cuba he reached the conclusion that the recognition of the independence of Cuba was impracticable and indefensible; and that the recognition of belligerence was not warranted by the facts according to the tests of public law. I commented especially upon the latter aspect of the question, pointing out the inconveniences and positive dangers of a recognition of belligerence which, while adding to the already onerous burdens of neutrality within our own jurisdiction, could not in any way extend our influence or effective offices in the territory of hostilities.

Nothing has since occurred to change my view in this regard; and I recognize as fully now as then that the issuance of a proclamation of neutrality, by which process the so-called recognition of belligerents is published, could, of itself and unattended by other action, accomplish nothing toward the one end for which we labor—the instant pacification of Cuba and the cessation of the misery that afflicts the island.

Turning to the question of recognizing at this time the independence of the present insurgent government in Cuba, we find safe precedents in our history from an early day. They are well summed up in President Jackson's message to Congress, Dec. 21, 1836, on the subject of the recognition of the independence of Texas. He said:

"In all the contests that have arisen out of the revolutions of France, out of the disputes relating to the Crowns of Portugal and Spain, out of the separation of the American possessions of both from the European governments, and out of the numerous and constantly occurring struggles for dominion in Spanish America, so wisely consistent with our just principles has been the action of our Government that we have, under the most critical circumstances, avoided all censure, and encountered no other evil than that produced by a transient estrangement of good will in those against whom we have been by force of evidence compelled to decide.

"It has thus made known to the world that the uniform policy and practice of the United States is to avoid all interference in disputes which merely relate to the internal government of other nations, and eventually to recognize the authority of the prevailing party without reference to our particular interests and views or to the merits of the original controversy.

"... But on this, as on every other trying occasion, safety is to be found in a rigid adherence to principle.

"In the contest between Spain and the revolted colonies we stood aloof, and waited not only until the ability of the new states to protect themselves was fully established, but until the danger of their being again subjugated had entirely passed away. Then, and not until then, were they recognized.

"Such was our course in regard to Mexico herself. . . . It is true that with regard to Texas the civil authority of Mexico has been expelled, its invading army defeated, the chief of the republic himself captured, and all present power to control the newly organized government of Texas annihilated within its confines; but, on the other hand,

there is, in appearance at least, an immense disparity of physical force on the side of Texas. The Mexican republic, under another executive, is rallying its forces under a new leader and menacing a fresh invasion to recover its lost dominion.

"Upon the issue of this threatened invasion the independence of Texas may be considered as suspended; and were there nothing peculiar in the relative situation of the United States and Texas, our acknowledgment of its independence at such a crisis could scarcely be regarded as consistent with that prudent reserve with which we have hitherto held ourselves bound to treat all similar questions."

Thereupon Andrew Jackson proceeded to consider the risk that there might be imputed to the United States motives of selfish interest in view of the former claim on our part to the Territory of Texas, and of the avowed purpose of the Texans in seeking recognition of independence as an incident to the incorporation of Texas in the Union, concluding thus:

"Prudence, therefore, seems to dictate that we should still stand aloof and maintain our present attitude, if not until Mexico itself or one of the great foreign powers shall recognize the independence of the new government, at least until the lapse of time or the course of events have proved beyond cavil or dispute the ability of the people of that country to maintain their separate sovereignty and to uphold the government constituted by them. Neither of the contending parties can justly complain of this course. By pursuing it we are but carrying out the long-established policy of our Government, a policy which has secured to us respect and influence abroad and inspired confidence at home."

These are the words of the resolute and patriotic Jackson. They are evidence that the United States, in addition to the test imposed by public law as the condition of the recognition of independence by a neutral state (to wit, that the revolted state shall "constitute in fact a body politic, having a government in substance as well as in name, possessed of the elements of stability," and forming *de facto*, "if left to itself, a state among the nations, reasonably capable of discharging the duties of a state"), has imposed for its own governance in dealing with cases like these the further condition that recognition of independent statehood is not due to a revolted dependency until the danger of its being again subjugated by the parent state has entirely passed away.

This extreme test was, in fact, applied in the case of Texas. The Congress to whom President Jackson referred the question as one "probably leading to war," and therefore a proper subject for "a previous understanding with that body by whom war can alone be declared and by whom all the provisions for sustaining its perils must be furnished," left the matter of the recognition of Texas to the discretion of the Executive, providing merely for the sending of a diplomatic agent when the President should be satisfied that the republic of Texas had become "an independent state." It was so recognized by President Van Buren, who commissioned a *chargé d'affaires* March 7, 1837, after Mexico had abandoned an attempt to reconquer the Texan territory, and when there was at the time no *bona fide* contest going on between the insurgent province and its former sovereign.

I said in my message of December last, "It is to be seriously considered whether the Cuban insurrection possesses beyond dispute the attributes of statehood which alone can demand the recognition of belligerency in its favor." The same requirement must certainly be no less seriously considered when the graver issue of recognizing independence

is in question, for no less positive test can be applied to the greater act than to the lesser; while, on the other hand, the influences and consequences of the struggle upon the internal policy of the recognizing state, which form important factors when the recognition of belligerency is concerned, are secondary, if not rightly eliminable, factors when the real question is whether the community claiming recognition is or is not independent beyond peradventure.

Nor from the standpoint of expediency do I think it would be wise or prudent for this Government to recognize at the present time the independence of the so-called Cuban republic. Such recognition is not necessary in order to enable the United States to intervene and pacify the island. To commit this country now to the recognition of any particular government in Cuba might subject us to embarrassing conditions of international obligation toward the organization so recognized. In case of intervention our conduct would be subject to the approval or disapproval of such government. We would be required to submit to its direction and to assume to it the mere relation of a friendly ally.

When it shall appear hereafter that there is within the island a government capable of performing the duties and discharging the functions of a separate nation, and having, as a matter of fact, the proper forms and attributes of nationality, such government can be promptly and readily recognized, and the relations and interests of the United States with such nation adjusted.

There remain the alternative forms of intervention to end the war, either as an impartial neutral by imposing a rational compromise between the contestants, or as the active ally of the one party or the other.

As to the first, it is not to be forgotten that during the last few months the relation of the United States has virtually been one of friendly intervention in many ways, each not of itself conclusive, but all tending to the exertion of a potential influence toward an ultimate pacific result, just and honorable to all interests concerned. The spirit of all our acts hitherto has been an earnest, unselfish desire for peace and prosperity in Cuba, untarnished by differences between us and Spain, and unstained by the blood of American citizens.

The forcible intervention of the United States as a neutral to stop the war, according to the large dictates of humanity and following many historical precedents where neighboring states have interfered to check the hopeless sacrifices of life by internecine conflicts beyond their borders, is justifiable on rational grounds. It involves, however, hostile constraint upon both the parties to the contest as well to enforce a truce as to guide the eventual settlement.

The grounds for such intervention may be briefly summarized as follows:

First. In the cause of humanity and to put an end to the barbarities, bloodshed, starvation, and horrible miseries now existing there, and which the parties to the conflict are either unable or unwilling to stop or mitigate. It is no answer to say this is all in another country, belonging to another nation, and is therefore none of our business. It is specially our duty, for it is right at our door.

Second. We owe it to our citizens in Cuba to afford them that protection and indemnity for life and property which no government there can or will afford, and to that end to terminate the conditions that deprive them of legal protection.

Third. The right to intervene may be justified by the very serious injury to the commerce, trade, and business of our people and by the wanton de-

struction of property and devastation of the island.

Fourth, and which is of the utmost importance. The present condition of affairs in Cuba is a constant menace to our peace, and entails upon this Government an enormous expense. With such a conflict waged for years in an island so near us and with which our people have such trade and business relations—when the lives and liberty of our citizens are in constant danger and their property destroyed and themselves ruined—where our trading vessels are liable to seizure and are seized at our very door by war ships of a foreign nation, the expeditions of filibustering that we are powerless to prevent altogether, and the irritating questions and entanglements thus arising—all these and others that I need not mention, with the resulting strained relations, are a constant menace to our peace, and compel us to keep on a semivar footing with a nation with which we are at peace.

These elements of danger and disorder already pointed out have been strikingly illustrated by a tragic event which has deeply and justly moved the American people. I have already transmitted to Congress the report of the naval court of inquiry on the destruction of the battle ship "Maine" in the harbor of Havana during the night of the 15th of February. The destruction of that noble vessel has filled the national heart with inexpressible horror. Two hundred and fifty-eight brave sailors and marines and two officers of our navy, reposing in the fancied security of a friendly harbor, have been hurled to death, grief and want brought to their homes and sorrow to the nation.

The naval court of inquiry, which, it is needless to say, commands the unqualified confidence of the Government, was unanimous in its conclusion that the destruction of the "Maine" was caused by an exterior explosion, that of a submarine mine. It did not assume to place the responsibility. That remains to be fixed.

In any event the destruction of the "Maine," by whatever exterior cause, is a patent and impressive proof of a state of things in Cuba that is intolerable. That condition is thus shown to be such that the Spanish Government can not assure safety and security to a vessel of the American navy in the harbor of Havana on a mission of peace, and rightfully there.

Further referring in this connection to recent diplomatic correspondence, a dispatch from our minister to Spain, of the 26th ultimo, contained the statement that the Spanish minister for foreign affairs assured him positively that Spain will do all that the highest honor and justice require in the matter of the "Maine." The reply above referred to of the 31st ultimo also contained an expression of the readiness of Spain to submit to an arbitration all the differences which can arise in this matter, which is subsequently explained by the note of the Spanish minister at Washington of the 10th instant, as follows:

"As to the question of fact which springs from the diversity of views between the reports of the American and Spanish boards, Spain proposes that the facts be ascertained by an impartial investigation by experts, whose decision Spain accepts in advance."

To this I have made no reply.

President Grant, in 1875, after discussing the phases of the contest as it then appeared, and its hopeless and apparent indefinite prolongation, said:

"In such event, I am of opinion that other nations will be compelled to assume the responsibility which devolves upon them, and to seriously consider the only remaining measures possible—media-

tion and intervention. Owing, perhaps, to the large expanse of water separating the island from the peninsula, . . . the contending parties appear to have within themselves no depository of common confidence, to suggest wisdom when passion and excitement have their sway, and to assume the part of peacemaker.

"In this view in the earlier days of the contest the good offices of the United States as a mediator were tendered in good faith, without any selfish purpose, in the interest of humanity and in sincere friendship for both parties, but were at the time declined by Spain, with the declaration, nevertheless, that at a future time they would be indispensable. No intimation has been received that in the opinion of Spain that time has been reached. And yet the strife continues with all its dread horrors and all its injuries to the interests of the United States and of other nations.

"Each party seems quite capable of working great injury and damage to the other, as well as to all the relations and interests dependent on the existence of peace in the island; but they seem incapable of reaching any adjustment, and both have thus far failed of achieving any success whereby one party shall possess and control the island to the exclusion of the other. Under these circumstances the agency of others, either by mediation or by intervention, seems to be the only alternative which must sooner or later be invoked for the termination of the strife."

In the last annual message of my immediate predecessor, during the pending struggle, it was said:

"When the inability of Spain to deal successfully with the insurrection has become manifest, and it is demonstrated that her sovereignty is extinct in Cuba for all purposes of its rightful existence, and when a hopeless struggle for its re-establishment has degenerated into a strife which means nothing more than the useless sacrifice of human life and the utter destruction of the very subject-matter of the conflict, a situation will be presented in which our obligations to the sovereignty of Spain will be superseded by higher obligations which we can hardly hesitate to recognize and discharge."

In my annual message to Congress, December last, speaking to this question, I said:

"The near future will demonstrate whether the indispensable condition of a righteous peace, just alike to the Cubans and to Spain, as well as equitable to all our interests so intimately involved in the welfare of Cuba, is likely to be attained. If not, the exigency of further and other action by the United States will remain to be taken. When that time comes that action will be determined in the line of indisputable right and duty. It will be faced, without misgiving or hesitancy, in the light of the obligation this Government owes to itself, to the people who have confided to it the protection of their interests and honor, and to humanity.

"Sure of the right, keeping free from all offense ourselves, actuated only by upright and patriotic considerations, moved neither by passion nor selfishness, the Government will continue its watchful care over the rights and property of American citizens and will abate none of its efforts to bring about by peaceful agencies a peace which shall be honorable and enduring. If it shall hereafter appear to be a duty imposed by our obligations to ourselves, to civilization, and humanity to intervene with force, it shall be without fault on our part and only because the necessity for such action will be so clear as to command the support and approval of the civilized world."

The long trial has proved that the object for which Spain has waged the war can not be at-

tained. The fire of insurrection may flame or may smolder with varying seasons, but it has not been and it is plain that it can not be extinguished by present methods. The only hope of relief and repose from a condition which can no longer be endured is the enforced pacification of Cuba. In the name of humanity, in the name of civilization, in behalf of endangered American interests which give us the right and the duty to speak and to act, the war in Cuba must stop.

In view of these facts and of these considerations, I ask the Congress to authorize and empower the President to take measures to secure a full and final termination of hostilities between the Government of Spain and the people of Cuba, and to secure in the island the establishment of a stable government, capable of maintaining order and observing its international obligations, insuring peace and tranquillity and the security of its citizens as well as our own, and to use the military and naval forces of the United States as may be necessary for these purposes.

And in the interest of humanity and to aid in preserving the lives of the starving people of the island, I recommend that the distribution of food and supplies be continued, and that an appropriation be made out of the public Treasury to supplement the charity of our citizens.

The issue is now with the Congress. It is a solemn responsibility. I have exhausted every effort to relieve the intolerable condition of affairs which is at our doors. Prepared to execute every obligation imposed upon me by the Constitution and the law, I await your action.

Yesterday, and since the preparation of the foregoing message, official information was received by me that the latest decree of the Queen Regent of Spain directs Gen. Blanco, in order to prepare and facilitate peace, to proclaim a suspension of hostilities, the duration and details of which have not yet been communicated to me.

This fact with every other pertinent consideration will, I am sure, have your just and careful attention in the solemn deliberations upon which you are about to enter. If this measure attains a successful result, then our aspirations as a Christian, peace-loving people will be realized. If it fails, it will be only another justification for our contemplated action.

WILLIAM MCKINLEY.

EXECUTIVE MANSION, April 11, 1898.

The response to the President's message was prompt; and April 13 Mr. Adams, of Pennsylvania, reported from the Committee on Foreign Relations in the House of Representatives the following resolution:

"Whereas, The Government of Spain for three years past has been waging war on the island of Cuba against a revolution by the inhabitants thereof, without making any substantial progress toward the suppression of said revolution, and has conducted the warfare in a manner contrary to the laws of nations, by methods inhuman and uncivilized, causing the death by starvation of more than 200,000 innocent noncombatants, the victims being for the most part helpless women and children, inflicting intolerable injury to the commercial interests of the United States, involving the destruction of the lives and property of many of our citizens, entailing the expenditure of millions of money in patrolling our coasts and policing the high seas in order to maintain our neutrality; and

"Whereas, This long series of losses, injuries, and burdens for which Spain is responsible has culminated in the destruction of the United States battle ship 'Maine' in the harbor of Havana and in the death of 260 of our seamen:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is hereby authorized and directed to intervene at once to stop the war in Cuba, to the end and with the purpose of securing permanent peace and order there and establishing by the free action of the people thereof a stable and independent government of their own in the island of Cuba. And the President is hereby authorized and empowered to use the land and naval forces of the United States to execute the purpose of this resolution."

This was the measure proposed by the Republican majority of the committee, but it failed to satisfy the Democratic minority, and the gentlemen composing that minority offered a substitute as follows:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled—

"SECTION 1. That the United States Government hereby recognizes the independence of the republic of Cuba.

"SEC. 2. That, moved thereto by many considerations of humanity, of interest, and of provocation, among which are the deliberate mooring of our battle ship, the 'Maine,' over a submarine mine and its destruction in the harbor of Havana, the President of the United States be, and he is hereby, directed to employ immediately the land and naval forces of the United States in aiding the republic of Cuba to maintain the independence hereby recognized.

"SEC. 3. That the President of the United States is hereby authorized and directed to extend immediate relief to the starving people of Cuba."

There was a disposition on the part of the majority to shut out this resolution and the report in its favor, and the result was a disgraceful scene, as the Democrats who had been very forward in the movement for war were eager to put themselves on record in the matter. As usual in recent years, a special rule was reported for the purpose of rushing action on the resolution; but in the course of the brief discussion the point urged by the minority was granted as a matter of favor.

Mr. Bailey, of Texas, said amid strong expressions of Democratic approval:

"I am gratified to know that after fifteen months of delay and suspense, it has at last dawned upon the Republican majority of this House that the time for action has arrived. For more than a year we have been entreating you to take some action. During the whole of this session we have appealed to you to act. And it is at least some satisfaction that you have resolved at last not to heed our appeal, but to heed your angry constituents at home. But true to your policy and your traditions, you have resolved that when at last you are compelled to act you will deny to members of this body the opportunity to discuss your conduct.

"There is a radical difference between the resolutions reported by the majority and those reported by the minority. There ought to be time and opportunity allowed for those of us who think the minority resolutions the wiser to point out to the House and to the country the reasons for our belief. And yet I know as well as the members on that side that these resolutions that involve the question of peace or war are to be rushed through this body with a short and insufficient debate, and that, too, when every man in the country knows that nothing can be done until the Senate acts, and you know that the Senate will act with proper deliberation.

"But, Mr. Speaker, we would rather have action at last without discussion than to have the practice

of the last twelve months—allowing ample discussion and no decision."

Mr. McMillin, of Tennessee, said:

"The resolution of the majority does not propose to recognize the republic of Cuba, and the resolution of the minority does. The resolution of the majority does not force the President to send our army and our navy to back up this action immediately; the resolution of the minority does. They differ as the poles differ, and their differences ought to be shown and the Representatives here given an opportunity to show which one of the resolutions best accomplishes the work to be performed.

"You heard the President's message. You know the spirit that it breathed. You know the indecision that characterized it. You know there was no free Cuba in it; and yet you propose to turn over to him the army, you propose to turn over to him the navy, and turn back to him the Treasury, and give him discretion to fight or not to fight, as he pleases. So far as I am concerned, and I believe I represent the members on this side of the House, we are not only in favor of free Cuba, but we intend that the President of the United States shall not stand in the way of that freedom.

"Let us have ample discussion; let us have deliberate action. When we shall send the army there, how much we shall send, is important; how we shall raise revenues is important. We are taking a step that is of the utmost importance, and yet we are about to tell the American people that in this momentous question there shall not be calm deliberation. It does us injustice to legislate in such a way."

The argument for the majority resolution was put by Mr. Adams as follows:

"Our country must proceed in order, under the rules of international law, if we wish to preserve our standing among the nations of the earth. Our President has pursued a consistent course. As soon as he entered the Executive chair he made propositions to Spain, all of which have been granted. He had not been in office sixty days until every American citizen, native born, or those bearing the official stamp of our courts, was set free to breathe that air of freedom which God meant we should enjoy.

"The alleged republic of Cuba has my sympathy. I believe that the men who have struggled so long to obtain their freedom are entitled to our sympathy, and, if possible, to our recognition. But they must first have a standing, such standing under international law as will justify the executive department of our Government in giving such recognition. The conditions now do not fulfill those obligations. It would be impossible for our Government to recognize the insurgents in Cuba. The very fact, if you wish to send an envoy there, you would have to send him by force through the Spanish lines, or you would have to land him on a beach, the same as the insurgents and filibusters have to land their munitions in that country, is enough to show that they have not standing for recognition.

"They have not that stable government which is entitled to recognition. They have not power to carry on civil government. They have no capital or permanently located seat of government. They have not a single port in their possession. They have not a single ship on the high seas. They have not a government under civil authority that can enforce its laws.

"They are surrounded entirely by the Spanish army. And it is a principle of international law which will not be disputed by any man who knows anything on that subject that until the parent country has practically ceased to enforce its government against the rebellious subjects, no other

nation can give the insurgents recognition as a government, because they do not have it as a matter of fact. No man can question that principle of international law. We have fully committed ourselves to it as a nation. No South American republic was recognized by us until years after Spain had yielded all active effort to put it down.

"What is the condition in the island of Cuba today? Spain has a large army there. She occupies every seaport. She is still endeavoring to enforce her authority over that island. For this reason the Executive of this country and the Republican members of the Foreign Affairs Committee can not bring themselves to falsify the diplomatic history of our country and place themselves in a position antagonistic to the recognized principles of international law, for the country that dares to do this puts itself beyond the pale of the great family of civilized nations."

The vote to substitute the resolution of the minority by the committee for that of the majority was lost by the following vote:

YEAS—Adamson, Allen, Bailey, Baird, Ball, Bankhead, Barlow, Bartlett, Beach, Bell, Benner of Pennsylvania, Benton, Bland, Bodine, Botkin, Bradley, Brantley, Brenner of Ohio, Broussard, Brucker, Brundidge, Burke, Campbell, Carmaek, Castle, Catchings, Clardy, Clark of Missouri, Clayton, Cochran of Missouri, Cooney, Cooper of Texas, Cowherd, Cox, Cranford, Cummings, Davey, Davis, De Armond, De Graffenreid, De Vries, Dinsmore, Dockery, Dorr, Driggs, Elliott, Ermentrout, Fitzgerald, Fitzpatrick, Fleming, Fowler of North Carolina, Fox, Gaines, Griffith, Griggs, Gunn, Handy, Hartman, Hay, Henry of Mississippi, Henry of Texas, Hinrichsen, Howard of Alabama, Howard of Georgia, Hunter, Jett, Jones of Virginia, Jones of Washington, Kelley, King, Kitchin, Kleberg, Knowles, Lamb, Lanham, Latimer, Lentz, Lester, Lewis of Georgia, Lewis of Washington, Little, Lloyd, Love, McAleer, McClellan, McCormick, McCulloch, McDowell, McMillin, McRae, Maddox, Maguire, Mann, Marshall, Martin, Maxwell, Meekison, Meyer of Louisiana, Miers of Indiana, Moon, Newlands, Norton of Ohio, Norton of South Carolina, Ogden, Osborne, Otey, Peters, Pierce of Tennessee, Rhea, Richardson, Ridgely, Rixey, Robb, Robertson of Louisiana, Robinson of Indiana, Sayers, Settle, Shafroth, Shuford, Simpson, Sims, Skinner, Sladen, Smith of Kentucky, Sparkman, Stallings, Stark, Stephens of Texas, Stokes, Strait, Strowd of North Carolina, Sullivan, Sulzer, Sutherland, Swanson, Talbert, Tate, Taylor of Alabama, Terry, Todd, Underwood, Vandiver, Vehslage, Vincent, Wheeler of Alabama, Wheeler of Kentucky, Williams of Mississippi, Wilson, Young of Virginia, Zenor—150.

NAYS—Acheson, Adams, Aldrich, Alexander, Arnold, Babcock, Baker of Maryland, Barber, Barham, Barney, Barrett, Barrows, Bartholdt, Belden, Belford, Belknap, Bennett, Bingham, Bishop, Booze, Boutell of Illinois, Boutelle of Maine, Brewster, Bromwell, Brown, Brownlow, Brumm, Bull, Burleigh, Burton, Butler, Cannon, Capron, Chickering, Clark of Iowa, Clarke of New Hampshire, Cochrane of New York, Connell, Connolly, Cooper of Wisconsin, Corliss, Cousins, Crump, Crumpacker, Curtis of Iowa, Curtis of Kansas, Dalzell, Danford, Davenport, Davidson of Wisconsin, Davison of Kentucky, Dayton, Dingley, Dolliver, Dovener, Eddy, Ellis, Evans, Faris, Fenton, Fischeer, Fletcher, Foote, Foss, Fowler of New Jersey, Gardner, Gibson, Gillet of New York, Gillett of Massachusetts, Graff, Griffin, Grosvenor, Grout, Grow, Hager, Hamilton, Harmer, Hawley, Heatwole, Hemenway, Henderson, Henry of Connecticut, Henry of Indiana, Hepburn, Hicks, Hilborn, Hill, Hooker, Hopkins, Howe, Howell, Hull, Hurley, Jenkins, Johnson of Indiana, Johnson of

North Dakota, Joy, Kerr, Ketcham, Kirkpatrick, Knox, Kulp, Lacey, Landis, Lawrence, Linney, Littauer, Lorimer, Loud, Loudenslager, Lovering, Low, Lybrand, McCall, McDonald, McEwan, McIntire, Mahany, Mahon, Marsh, Mercer, Mesick, Miller, Mills, Minor, Mitchell, Moody, Morris, Mudd, Northway, Odell, Olmsted, Otjen, Overstreet, Packer of Pennsylvania, Parker of New Jersey, Payne, Pearce of Missouri, Pearson, Perkins, Pitney, Powers, Prince, Pugh, Quigg, Ray, Reeves, Robbins, Royse, Russell, Sauerhering, Shannon, Shattuc, Shelden, Sherman, Showalter, Smith of Illinois, Smith, S. W., Smith, Wm. Alden, Snover, Southard, Southwick, Spalding, Sperry, Sprague, Steele, Stevens of Minnesota, Stewart of New Jersey, Stewart of Wisconsin, Stone, C. W., Strode of Nebraska, Sturtevant, Tawney, Taylor of Ohio, Thorp, Tongue, Updegraff, Van Voorhis, Wadsworth, Walker of Massachusetts, Walker of Virginia, Wanger, Ward, Warner, Weaver, Weymouth, White of Illinois, Williams of Pennsylvania, Yost, Young of Pennsylvania—190.

ANSWERED "PRESENT"—Berry, Brewer—2.

NOT VOTING—Baker of Illinois, Broderick, Brosius, Coddington, Colson, Greene, Hitt, Livingston, McCleary, Stone, W. A., Sulloway, White of North Carolina, Wilber—13.

A motion to recommit was also defeated, and then the majority resolution was adopted under the following title: "Joint resolution authorizing and directing the President of the United States to intervene to stop the war in Cuba, and for the purpose of establishing a stable and independent government by the people therein." All the congressmen voted for the resolution except the following:

NAYS—Adamson, Bankhead, Boutelle of Maine, Brantley, Brewer, Clayton, Cox, Elliott, Griggs, Howard of Georgia, Johnson of Indiana, Lester, Lewis of Georgia, Loud, Maddox, Simpson, Strait, Tate, Taylor of Alabama—19.

ANSWERED "PRESENT"—Berry—1.

NOT VOTING—Baird, Baker of Illinois, Brosius, Coddington, Greene, Hitt, Latimer, Livingston, Stone, W. A., White of North Carolina, Wilber—11.

April 13 the Committee on Foreign Relations of the Senate reported "a joint resolution for the recognition of the independence of the people of Cuba, demanding that the Government of Spain, relinquish its authority and government in the island of Cuba, and withdraw its land and naval forces from Cuba and Cuban waters, and directing the President of the United States to carry these resolutions into effect." The resolution was as follows:

"Whereas, The abhorrent conditions which have existed for more than three years in the island of Cuba, so near our own borders, have shocked the moral sense of the people of the United States, have been a disgrace to Christian civilization, culminating, as they have, in the destruction of a United States battle ship, with 266 of its officers and crew, while on a friendly visit in the harbor of Havana, and can not longer be endured, as has been set forth by the President of the United States in his message to Congress of April 11, 1898, upon which the action of Congress was invited: Therefore,

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, First. That the people of the island of Cuba are, and of right ought to be, free and independent.

"Second. That it is the duty of the United States to demand, and the Government of the United States does hereby demand, that the Government of Spain at once relinquish its authority and government in the island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters.

"Third. That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States, to such extent as may be necessary to carry these resolutions into effect."

The Senators were nearly all for immediate action, but there was a difference of opinion as to the policy of the President.

Mr. Turner, of Washington, said in opposition to it, and in favor of immediate recognition of Cuban independence:

"Mr. President, to pursue the course suggested by the President would be an anomaly in international relations. That course involves, first, a threat of armed intervention to force diplomatic concessions; and second, failing such concessions, possible intervention to expel Spain from the island of Cuba. It does not involve the independence of Cuba, because that is only suggested in the President's message for the purpose of making an argument against its present recognition.

"Such a thing, I believe, as is proposed was never heard of in the history of nations. Nations intervene to secure tranquillity, to preserve order, to stop outrage and murder, but never to themselves usurp sovereignty, nor ever to subvert sovereignty, except in the interest of some other nation or in the interest of a subject people struggling for independence. If we intervene in the affairs of Cuba for either one of the three causes first named, we will have accomplished our purpose when Spain has given proper guarantees of better future conduct.

"To propose to expel her from the island after that, or before giving her opportunity to afford such guarantee, would be unheard of and would justly arouse the opposition and protest of other nations. Mr. President, armed intervention involves the use of force and is, in essence, war. It is only less than war by the acquiescence of the power against which it is employed. When writers speak of it as an international right, they speak of it in the same sense that they speak of the right to make war. That right belongs to any nation at any time and for any cause it may esteem sufficient. Both rights spring from the same source, and are held in check by the same sanction, namely, the reprobation of mankind if improvidently exercised. Hence, if we would avoid that reprobation in our intervention in Cuba, it must be either for the purpose of simply restoring order and tranquillity and stable government under the sovereignty of Spain, or it must be in aid of the struggling insurgents who have already so largely overturned the power of Spain.

"The first purpose the President disclaims and the last one he refuses to permit Congress to proclaim or to himself proclaim, and therefore I say his course is an anomaly. But we have a perfect right to intervene in Cuba, in the sense that the right is spoken of, if the sovereignty of Spain has been superseded there by another and superior power, or if her aggressions against us have been such as to justify us in making war on her and in aiding another power to supplant her. There would be no anomaly about that.

"If we do intervene there, the right to do so and the disposition to do so will be predicated, as everybody knows, on both the grounds I have stated. I am opposed, therefore, to further shuffling or evasion. I think we ought now to declare that which it is our purpose to effectuate. Any other self-respecting nation would do so, and for one I want my country to stand in the front rank of all the nations of the world in the matter of dignified and fearless self-respect.

"To stop short now will be to commit this country to a war of conquest. The conclusion is inevitable. To drive Spain out of Cuba without recognizing the independence of the Cuban republic will be to conquer that island by force of arms and to establish our own sovereignty over it. We may hold our conquest for a short time or a long time. We may treat with the insurgents and turn it over to them on such terms as will suit the 'business interests,' or we may, failing such terms, deliver the island back to Spain; but whatever we do eventually, we will in the first instance have waged a war of conquest. As such it will be justly regarded by all the people of the world, and as such it will be justly resented by all the people of the world."

Mr. Fairbanks, of Indiana, argued in favor of intervention without recognition of the Cuban republic:

"Our own tranquillity, our own sense of security, our regard for our present and future comfort and for the lives of her hapless and helpless subjects, demand that we should interpose the mighty power of this Government to stop the carnival of crime and suffering and restore peace in the island of Cuba until some suitable government may be formed which shall be a guarantee to us and to the other nations of the earth that it will at all times in the future be ready and willing and able to discharge its domestic and international obligations.

"It is instinctive with us to desire to see people who are oppressed freed from the oppressor and secured in the God-given, inalienable privileges of life, liberty, and the pursuit of happiness. We desire and hope to see the independence of Cuba secured. Spain has, by every just consideration, by every standard of international duty, forever forfeited any right to further dominion over the Cuban people; and we hope to see established on the island a free and just government, endowed with functions for protecting the lives and property of the present and future generations who may dwell upon it.

"But, Mr. President, I am not prepared at present to favor the recognition of the independence of the present so-called republic of Cuba. We know but little about it. It is too nebulous, too mythical, to be invited into the family of nations by our potential act. The present so-called government, at most, is a military oligarchy with no habitat, with no well-defined governmental organism exercising the functions of a republic; and if we were to recognize its independence under the present pressure without adequate knowledge or information, it might lead to the establishment of a power upon the island which would prove vexatious and hurtful to us, and our second estate might be as bad or worse than our first, or at least we might continue to be seriously menaced and disturbed by it.

"There are, doubtless, among the citizens of the island those capable of forming and establishing a government which will be stable and secure and which will be a guarantee that the Cuban question is settled for all time to come. It seems to me, therefore, that the first imperative duty resting upon us is to establish tranquillity in the island, relieve the suffering and distressed, and then enable the citizens of the island to deliberate and form a government upon such lines as their highest and best interests may require.

"It may be that the present pretended republic is expressive of the highest and best thought of the island, and that its recognition will be found to be in the best interest of all concerned. If this be so, time will demonstrate it. We should not forget that the ultimate decision is in our hands; that justice will not miscarry; delay will not defeat her righteous demands.

"The air is too full of rumors as to the character of the present so-called Cuban republic and as to the bonds that have been floated in its name in this country and said to be in the hands of speculators, to justify us in any hasty act of recognition."

A different phase of opinion was represented by Senator Hoar, of Massachusetts, who said:

"Mr. President, I can not vote for the joint resolution because it introduces, and I believe was meant to introduce, discord and divided counsels in what ought to be the act of a united country."

"I can not vote for it because it undertakes to direct, contrary to all our legislative precedents, a co-ordinate branch of the Government, the Executive, ordering him to proceed at once when his constitutional and legal duties are defined by the Constitution, and not by the law-making power."

"I can not vote for it because it is contrary to the courtesies which prevail between the legislative and Executive and undertakes to take from the discretion of the Executive what ought to belong to him under the Constitution itself."

"I will not vote for it because if it pass and the government of Cuba be now free and independent, the forces of the army of the United States on Cuban land and the navy of the United States in Cuban waters must be under the command of the insurgent leader or their presence there is a war against him."

"Gentlemen have tried by refined and deluding arguments to torture a sentence of the President of the United States, separated from its context, into a suggestion that possibly he might be expecting to make war upon these insurgents. And yet, and you can not escape from it, you are undertaking, in your eager passion, to do something which will be unpleasant to those of your associates who support the President. You are making an affirmation, I repeat, which will put the army and the navy of the United States under the command of Maximo Gomez the moment they get into Cuban waters or onto Cuban soil, or their presence there is war upon the recognized and established government of the country which you say is his."

"I will not vote for it because it violates international law, and thereby in this great transaction sets the sympathy of the nations of the world against us."

"Mr. President, I am not alarmed or disturbed because in the vote I am about to give I am to encounter the dissent of an excited, inflated, and angered majority."

"I am old enough to remember another transaction to which this is a parallel. In the beginning of the Mexican war—a war in regard to which the feeling of the people of the United States was deeply stirred—it was attempted to coerce the minority in the two Houses of Congress by putting into the law which provided for raising troops, and supplying them, a preamble, 'Whereas war exists by the act of Mexico:' and some weak Whigs of that day, fearing that their action would be unpopular, bowed the knee and affirmed by their votes what they knew and believed to be an untruth. Fourteen members of the House of Representatives, with the approval of Henry Clay, voted against that lying preamble, and to his immortal honor be it said the great commoner, though he was ready and eager for the war, declared that he would rather have his tongue cleave to the roof of his mouth than to utter, by an affirmative vote, what he knew to be an untruth."

"The men who yielded in that hour of weakness and of temptation returned to their constituents. One of the most eminent and brilliant citizens of my own State, who was afterwards Speaker of the House, went home to a doom of defeat and popular

disapprobation. The men who recorded their votes on the side of truth in the face of that excited majority are known to-day in our political history as the immortal fourteen."

"I am willing to trust myself, my reputation, my political character, with the people of Massachusetts when I stand up here and vote against what I know, or think I know, to be untrue."

The Senate amended the resolution as reported, then substituted it, the title and the preamble for the joint resolution passed by the House, and adopted the substitute, April 16, by the following vote:

YEAS—Allen, Bacon, Baker, Bate, Berry, Butler, Cannon, Carter, Chandler, Chilton, Clark, Clay, Cockrell, Cullum, Daniel, Davis, Deboe, Faulkner, Foraker, Frye, Gallinger, Gear, Gorman, Gray, Hansbrough, Harris, Heitfeld, Jones of Arkansas, Jones of Nevada, Kenney, Kyle, Lindsay, Lodge, McEnery, McLaurin, Mallory, Mantle, Martin, Mason, Mills, Mitchell, Money, Morgan, Murphy, Nelson, Pasco, Penrose, Perkins, Pettigrew, Pettus, Proctor, Quay, Rawlins, Roach, Shoup, Smith, Stewart, Teller, Thurston, Tillman, Turley, Turner, Turpie, Vest, Warren, Wilson, Wolcott—67.

NAYS—Aldrich, Allison, Burrows, Caffery, Elkins, Fairbanks, Hale, Hanna, Hawley, Hoar, McBride, McMillan, Morrill, Platt of Connecticut, Platt of New York, Pritchard, Sewell, Spooner, Wellington, Wetmore, White—21.

ABSENT—Walthall—1.

The joint resolution in its new shape was as follows:

"Joint resolution for the recognition of the independence of the people and republic of Cuba, demanding that the Government of Spain relinquish its authority and government in the island of Cuba, and to withdraw its land and naval forces from Cuba and Cuban waters, and directing the President of the United States to use the land and naval forces of the United States to carry these resolutions into effect."

"Whereas, The abhorrent conditions which have existed for more than three years in the island of Cuba, so near our own borders, have shocked the moral sense of the people of the United States, have been a disgrace to Christian civilization, culminating, as they have, in the destruction of a United States battle ship, with 266 of its officers and crew, while on a friendly visit in the harbor of Havana, and can not longer be endured, as has been set forth by the President of the United States in his message to Congress of April 11, 1898, upon which the action of Congress was invited: Therefore,

"First. That the people of the island of Cuba are, and of right ought to be, free and independent, and that the Government of the United States hereby recognizes the republic of Cuba as the true and lawful government of that island."

"Second. That it is the duty of the United States to demand, and the Government of the United States does hereby demand, that the Government of Spain at once relinquish its authority and government in the island of Cuba, and withdraw its land and naval forces from Cuba and Cuban waters."

"Third. That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States, to such extent as may be necessary to carry these resolutions into effect."

"Fourth. That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island except for the pacification thereof, and asserts its determination, when that is accomplished, to leave

the government and control of the island to its people."

The House concurred in the Senate amendments, amending them, however, so as to strike out, first, the words "are, and" in the first clause of the resolution; second, all after the word "independent," in the same clause; and third, to strike out the words "and republic" in the title. After two conferences an agreement was reached by which the House receded from the first amendment, and the Senate concurred in the second and third. The result of the amendments was to avoid the recognition of the existing revolutionary government.

The President approved the joint resolution, April 20, 1898.

On April 25, the President sent to Congress the following message, recommending a joint resolution declaring war against Spain:

To the Senate and House of Representatives of the United States of America:

I transmit to the Congress, for its consideration and appropriate action, copies of correspondence recently had with the representative of Spain in the United States, with the United States minister at Madrid, and through the latter with the Government of Spain, showing the action taken under the joint resolution approved April 20, 1898, "for the recognition of the independence of the people of Cuba, demanding that the Government of Spain relinquish its authority and government in the island of Cuba, and to withdraw its land and naval forces from Cuba and Cuban waters, and directing the President of the United States to use the land and naval forces of the United States to carry these resolutions into effect."

Upon communicating to the Spanish minister in Washington the demand which it became the duty of the Executive to address to the Government of Spain in obedience to said resolution, the minister asked for his passports and withdrew. The United States minister at Madrid was in turn notified by the Spanish Minister for Foreign Affairs that the withdrawal of the Spanish representative from the United States had terminated diplomatic relations between the two countries, and that all official communications between their respective representatives ceased therewith.

I commend to your special attention the note addressed to the United States minister at Madrid by the Spanish Minister for Foreign Affairs on the 21st instant, whereby the foregoing notification was conveyed. It will be perceived therefrom that the Government of Spain, having cognizance of the joint resolution of the United States Congress, and in view of the things which the President is thereby required and authorized to do, responds by treating the reasonable demands of this Government as measures of hostility, following with that instant and complete severance of relations by its action, which by the usage of nations accompanies an existent state of war between sovereign powers.

The position of Spain being thus made known and the demands of the United States being denied with a complete rupture of intercourse by the act of Spain, I have been constrained, in exercise of the power and authority conferred upon me by the joint resolution aforesaid, to proclaim under date of April 22, 1898, a blockade of certain ports of the north coast of Cuba, lying between Cardenas and Bahia Honda and of the port of Cienfuegos on the south coast of Cuba; and further, in exercise of my constitutional powers and using the authority conferred upon me by the act of Congress approved April 22, 1898, to issue my proclamation dated April 23, 1898, calling forth volunteers in order to carry

into effect the said resolution of April 20, 1898. Copies of these proclamations are hereto appended.

In view of the measures so taken, and with a view to the adoption of such other measures as may be necessary to enable me to carry out the expressed will of the Congress of the United States in the premises, I now recommend to your honorable body the adoption of a joint resolution declaring that a state of war exists between the United States of America and the kingdom of Spain, and I urge speedy action thereon to the end that the definition of the international status of the United States as a belligerent power may be made known, and the assertion of all its rights and the maintenance of all its duties in the conduct of a public war may be assured.

WILLIAM MCKINLEY.

EXECUTIVE MANSION, WASHINGTON, April 25, 1898.

On the same day the Senate and the House of Representatives passed and the President signed the declaration of war against Spain. The bill was as follows:

"A bill declaring that war exists between the United States of America and the kingdom of Spain.

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled.* First. That war be, and the same is hereby, declared to exist, and that war has existed since the 21st day of April, A. D. 1898, including said day, between the United States of America and the kingdom of Spain.

"Second. That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States, to such extent as may be necessary to carry this act into effect."

The Measure for National Defense.—Though the declaration of war was not made until April 25, it may be said that the first war measure passed as early as March 9, in the shape of a deficiency bill. The measure was peculiar in itself, beginning with small items for printing and closing with an appropriation of \$50,000,000, to be expended, as the President might see fit, for the national defense; it was more peculiar for the rapidity and unanimity with which it passed, and it was most peculiar as a manifestation of the financial strength of the nation, which could set aside such an amount, on the instant, for a special use. This historic appropriation bill was entitled, "A bill making appropriations to supply urgent deficiencies in the appropriations for the fiscal year ending June 30, 1898, and for prior years, and for other purposes"; and the text was as follows:

"*Be it enacted, etc.,* That the following sums be, and the same are hereby, appropriated, out of any money in the Treasury not otherwise appropriated, to supply deficiencies in the appropriations for the fiscal year 1898, and for other objects hereinafter stated, namely:

"PRINTING AND BINDING.

"For printing and binding for the Navy Department, \$10,000.

"For printing and binding for the Department of Justice, \$4,000.

"For printing and binding for the Department of State, \$12,000.

"For printing and binding for the Interior Department, \$40,000.

"NAVAL ESTABLISHMENT.

"BUREAU OF MEDICINE AND SURGERY.

"For surgeons' necessities for vessels in commission, navy yards, naval stations, Marine Corps, and

Coast Survey, and for the civil establishment at the several naval hospitals, navy yards, naval laboratory and department of instruction, museum of hygiene, and Naval Academy, \$10,000.

"BUREAU OF EQUIPMENT.

"Equipment of vessels: For purchase of coal for steamers' and ships' use, including expenses of transportation, storage, and handling the same; hemp, wire, iron, and other materials for the manufacture of cordage, anchors, cables, galleys, and chains; canvas for the manufacture of sails, awnings, hammocks, and other work; water for steaming purposes; stationery for commanding and navigating officers of ships, equipment officers on shore and afloat, and for the use of courts-martial on board ship, and for the purchase of all other articles of equipment at home and abroad, and for the payment of labor in equipping vessels and manufacture of equipment articles in the several navy yards; foreign and local pilotage and towage of ships of war; services and materials in repairing, correcting, adjusting, and testing compasses on shore and on board ship; nautical and astronomical instruments, and repairs to same; libraries for ships of war: professional books and papers, and drawings and engravings for signal books; naval signals and apparatus, namely, signals, lights, lanterns, rockets, running lights, compass fittings, including binnacles, tripods, and other appendages of ships' compasses; logs and other appliances for measuring the ship's way, and leads and other appliances for sounding; lanterns and lamps, and their appendages, for general use on board ship, for illuminating purposes, and oil and candles used in connection therewith; bunting and other materials for making and repairing flags of all kinds; photographic instruments and materials; musical instruments and music; and installing and maintaining electric lights and interior signal communications on board vessels of war, \$100,000.

"BUREAU OF ORDNANCE.

"For miscellaneous items, namely: Freight for foreign and home stations; advertising; cartage and express charges; repairs to fire engines; gas and water pipes; gas and water tax at magazines; tolls, ferriage, foreign postage and telegrams to and from the bureau, technical books, and incidental expenses attending inspections of ordnance material, \$7,000.

"NATIONAL DEFENSE.

"For the national defense, and for each and every purpose connected therewith, to be expended at the discretion of the President and to remain available until Jan. 1, 1899, \$50,000,000."

The bill was reported March 8 in the House of Representatives and passed the same day, not a single member voting against it, while 313 voted for it. Many brief speeches were made, so similar in sentiment that two of them may be given as representing all.

Mr. Cannon, of Illinois, said:

"Gentlemen may say this is an extraordinary and unusual appropriation. It is. The object of your committee in reporting it and asking your favorable consideration is that the President of the United States in an orderly way may make this expenditure, if it be necessary to make it, to fully utilize the small army that we have, and to utilize the larger navy. It may be suggested in the minds of some that this appropriation may be in the nature of a threat. Nothing could be further from the intention of your committee than that in recommending it to your favorable consideration.

"This appropriation, if made, will be used in the discretion of a wise and a patriotic Executive so as

to enable the United States of America, that we feel stands among the first nations of the world, in an orderly, decent, and just manner to maintain justice and the national honor. Simply that and nothing more. Some may say that this is a war appropriation. I say, in my judgment, measuring my words, that it is a peace appropriation. In conclusion, the Government of the United States can not afford to do more or less than will protect the national honor, justice, and the right. The Government of the United States would not, if it could, trench upon the just rights of any other nation on earth."

Mr. Sayers, of Texas, said:

"Mr. Speaker, in the presence of possible danger from a foreign source, it is indeed gratifying to me, and, I take it, to every gentleman in the House, to know that the representatives of the people are in strict accord and that there is no difference of sentiment among them. The appropriation of \$50,000,000, which is recommended by the Committee on Appropriations, has the hearty and unanimous indorsement of every member of that committee, and the House is asked to accept its recommendation and, without threat or denunciation, to pass the item.

"I cordially agree with the gentleman from Illinois that this is essentially a measure of peace, and it should be so regarded, not only by the House and by the country generally, but also by all other peoples who may be interested in our deliberations. The proposition to place \$50,000,000 under the control of the Executive for the purpose of defense can not and must not be construed as a threat. It is only a wise, safe, and patriotic precaution to enable the President, when Congress shall have adjourned, if the exigencies of the situation should demand, to put the country in a complete state of defense. Only this and nothing more is involved in the appropriation.

"And, Mr. Speaker, I will say before concluding that should it be required to expend this money, I believe it will be done wisely, honestly, and economically; and for one, so long as the present danger from abroad continues to threaten us, I intend to give an honest and a sincere support to the Administration as respects our foreign relations, to the end that peace may be preserved, and if it can not, that the dignity and the honor of our country may be maintained.

"I have every confidence that the Administration will in the pending controversy act wisely, cautiously, and with all proper firmness."

The bill was reported in the Senate March 9, and passed without discussion, 76 Senators voting for it and none against it.

It was approved by the President on the same day.

The War Revenue Law.—The bill to provide ways and means to meet war expenditures was reported by Mr. Dingley, of Maine, from the Committee on Ways and Means, in the House of Representatives April 26, and the debate on it began April 27. In explanation of the measure, Mr. Dingley made a statement as to the increased expenditure made necessary by the war, and argued that the cash balance in the Treasury on March 9, when \$50,000,000 was appropriated for the national defense, though apparently \$225,000,000, was in reality by no means so great, as \$100,000,000 of the gold reserve, \$33,000,000 of the bank redemption fund, \$14,000,000 to meet Pacific Railroad bonds, and \$13,000,000 in fractional currency were not really available. He held, therefore, that an increase of revenue should be provided, and that loans should be authorized. He said:

"Mr. Chairman, the Committee on Ways and

Means have addressed themselves to the various methods that have been suggested for the raising of additional revenue. They naturally have had recourse to the legislation of the period of the civil war, when so large an amount had to be raised, and they have found, after a careful consideration of the question of taxation, that on the whole it is better at the present time, and we trust that that may be all that may be necessary, that about \$100,000,000 additional revenue should be raised, and that entirely through internal-revenue legislation. Hence the war revenue bill which has been reported provides for internal-revenue taxes exclusively.

"These taxes have been selected, first, because we have the machinery for the collection of them now, and they can be collected with but slight additions to the force and with but slight increase of expense. We have selected them also because they were a source of revenue successfully seized upon during the civil war, and because they are taxes either upon articles of voluntary consumption or upon objects where the tax will be paid by those who are ordinarily able to pay them; and we have refrained from putting a tax in a direction where it would be purely upon consumption unless the consumption is of an article of voluntary consumption, so that the consumer may regulate his own tax, following what is the accepted rule of taxation in all countries, with a view of imposing the least burden and disturbing the business of the country as little as possible.

"Now I want to point out the direction in which we have proceeded. First, we have doubled the tax on fermented liquors, giving a rebate of 5 per cent., the estimated proportion of packages that are spoiled and which the owner does not receive compensation for. This increase of tax will yield about \$33,000,000.

"The rebate prior to the act of 1897 was $7\frac{1}{2}$ per cent. We have reduced it to 5 per cent., for the reason that the evidence presented satisfies us that the proportion of spoiled packages is less than formerly, on account of improved processes of manufacture and improved means of cold storage; and we have made the amount 5 per cent. This increase of tax on beer, as I have said, will give an additional revenue of about \$33,000,000.

"We have also doubled the tax on tobacco, now 6 cents per pound, raising it to 12 cents per pound, which will give an additional revenue of \$15,000,000; and we have increased the tax on cigars and cigarettes \$1 per thousand on each kind, giving an additional revenue of about \$5,000,000. The act of 1897 increased the tax on cigars without increasing the tax on tobacco, so that by this arrangement the proportion between tobacco and cigars has been made almost exactly the same as it was before 1897.

"We have provided also that the increased tax shall apply to stocks of tobacco and cigars on hand. As there has been some objection to this, I shall briefly state the reasons that controlled the committee in its action. Internal taxes applied to articles increase the cost and necessarily the selling price of the articles to the extent of the tax. When, therefore, an additional tax of \$1 per thousand is placed on cigars and of 6 cents per pound on the tobacco, the increased cost of the article in the market is inevitably placed on the consumer.

"In view of the fact that the Government proposes to increase the tax for the purpose of securing revenue, and the consumer must pay this increased price to the owner of the stock, this increase belongs to the Treasury, and not to the accidental holder of large stocks, who would gather that amount into his own pocket unless this provision were made. The committee with great unanimity

in this matter, feeling that justice—justice to the Government, justice to all interests, justice to the different manufacturers of tobacco and cigars, some of whom have stocks and some of whom have not stocks—required it, determined that the increased tax should apply to stocks on hand as well as goods to be made hereafter.

"This view is strengthened by the fact that when the tax has been reduced by the Government, the Government has refunded to the holder of stocks the amount of the reduction of the tax and given him the benefit, because the price would be reduced to the extent of the tax; and what was just for the owner of stocks when the tax was reduced is now just to the Government when the tax is to be increased.

"We have also restored a special tax of \$4.80 per annum upon dealers in tobacco and cigars. Many of you will probably remember that the tax on these special dealers was abolished in 1890. It had continued from the war period and subsequently up to 1890, with frequent reductions. It will produce about \$5,000,000; and the belief is that a small tax of this kind will not only enable the officers of the Internal Revenue Bureau to better enforce the tax on tobacco and cigars, but will be so small as to not be felt by the individual dealer, and will yield a considerable revenue to the Government. Thus about \$25,000,000 additional revenue will be secured from tobacco, cigars, cigarettes, and dealers.

"We have restored the adhesive-stamp tax which existed from 1864 to 1872, placing it in large part on the basis of the law as it stood in 1866, with certain additions, including the tax on transfers of stock, etc., which was placed by the Senate as an amendment in the tariff bill of 1897 and was omitted in conference. This will produce a revenue of about \$30,000,000; that is, so far as it can be estimated. The details of that stamp tax in large part are the same as they were under the act of 1866, which can be explained better in the debate under the five-minute rule.

"We selected several articles of voluntary consumption, on which we have placed a stamp tax, not included in the act of 1866. They are chewing gum, mineral waters, beverages of all kinds not otherwise taxed under the internal-revenue laws, and wines. I should also add that we have restored the tax on proprietary medicines substantially as it existed in the act of 1866. It is estimated that the adhesive-stamp tax on instruments, bonds, etc., will reach, as I have said, \$30,000,000.

"How much will be raised on the four articles added it has not been found possible to estimate with any precision. It is not estimated by any one at less than \$5,000,000, and by many it is estimated at very much more. The committee felt that without precise data on which to make a statement they would leave the matter unestimated, being certain, however, that these articles will be large revenue producers.

"We have increased the tonnage tax on vessels in the foreign trade only. There is no tonnage tax now on vessels in the coastwise trade, and none is placed on them by this bill. We have restored these taxes, not however to the amount of the war period, on which there will be an increased revenue of about two and one half million dollars. The reasons for this increased tax lie in these facts.

"Nine tenths of the vessels in this trade are foreign, and during the war now before us, I regret to say, it is probable that nearly all will be foreign vessels. The tonnage tax we propose to apply to these vessels in the foreign trade is not much larger than that imposed by the leading European powers on vessels engaged in foreign trade, precisely the same as France imposes, and slightly larger than

Great Britain imposes for the purpose of maintaining lighthouses and other aids to commerce. It is believed that this is a just tax which the Government is fairly entitled to under any conditions, and there is great propriety in restoring it to two thirds of the figure which existed in the civil war.

"We have repealed that provision of the act of 1886 which tendered to foreign powers reciprocity in tonnage dues, for the reason that in experience it has been found that it worked entirely to the benefit of other countries, and not in any manner to the benefit of this country.

"It has been necessary to repeal the provision in the shipping act of 1886, dedicating the tonnage tax to the support of the Marine Hospital Service. It will be remembered that the act of 1886 reduced the tonnage tax, and that a provision was inserted making a permanent appropriation of the receipts from the tonnage taxes for the support of the Marine Hospital Service, so that since that time the Marine Hospital Service has had the benefit of the amount received from this tonnage tax, which last year was in excess of \$800,000. We believe that method of making appropriations is vicious.

"Every appropriation should be distinctly made by Congress, and those who have expended it should report what has been done with the money. But the main reason for inserting this provision is that if we did not do so all of the two and a half millions would be permanently appropriated to the Marine Hospital Service. After consultation with the chairman of the Committee on Appropriations, he has concurred in this provision making a special appropriation for the next fiscal year and leaving subsequent appropriations for the Marine Hospital Service to be made annually.

"Now, all these increased taxes proposed by the bill will give an additional revenue of from ninety to one hundred million dollars, not less than ninety millions in any probable event, and not more than one hundred millions in any probable event. It is impossible to come nearer than that in any estimate, as what the revenue may be will depend largely on the condition of business.

"But it is the opinion of many of those gentlemen who administer the revenue laws that not less than ninety millions, and some think one hundred millions, will be obtained from these provisions which I have described. All of them, it will be observed, are taxes on articles of voluntary consumption, or taxes on business paid by those who ordinarily can afford to pay them, disturbing business to the minimum extent, giving a measure of revenue immediately in the case of fermented liquors, tobacco, and cigars, or to be obtained as soon as the provisions go into effect as to other provisions.

"The stamp provision will take effect the 1st of June, the special taxes upon dealers in tobacco will go into effect the 1st of July, and the increase on fermented liquors and tobacco on the day following the passage of this bill.

"Having thus reviewed the subjects of taxation resorted to for the purpose of increasing the revenue, I am now brought to the question of borrowing. The additional revenue from the sources I have specified has been provided as a basis for the purpose of meeting current expenditures in part, for the payment of interest on what the Government may borrow, and also for maintaining the public credit.

"But it is evident that the war upon which we have entered—unless all signs should fail, as I hope they may—is not to be simply a sixty days' affair, is not to be simply a three months' affair, is not to be even a six months' affair; and the more earnest we are in our preparations, the more unitedly we stand, the more means we provide for defense and

offense, the more we arm the Government with the means of carrying on this war, the shorter it will be.

"It is evident that no measure of taxation that can be proposed can meet the expenditures of the war we have already entered upon. Some other provision must be made. What does every government have to do after it has exhausted the appropriate means of taxation such as under its constitution are within its reach? It goes out and borrows. Unless we propose to conduct this war feebly—unless we propose to leave our army in the field unfed, unclothed, unpaid—we have got to borrow.

"No nation on the face of the earth ever escaped that necessity in war. Fortunate it is for this country that it has maintained its good faith in the past so fully that to-day it has almost the highest credit of any government on the face of the earth. Now, we must go out and borrow for the time being. There are contained in this bill two provisions with respect to borrowing for the purpose of carrying on this war effectively—for the purpose of sustaining our navy on the seas and our armies in the field and securing as speedy a conclusion of hostilities as possible.

"In the first place, in section 27 we authorize the Secretary of the Treasury to issue and sell not exceeding \$500,000,000 of 10-20 3-per-cent. coin bonds, to be disposed of as a popular loan in the first place and from time to time as the public necessities may require. These bonds are to be issued in denominations of \$25 and multiples thereof, \$50 being the lowest bond that has ever before been issued.

"And, although it is not specifically provided for in this bill, I may say that it is the intention of the Secretary of the Treasury, commencing with \$200,000,000 of this loan, when authorized, to place it at the post offices throughout the country, wherever that can be done, and to offer these bonds first of all to the masses of the American people, who, I believe, will, not only for the purpose of investment but from patriotic motives, embrace the opportunity of subscribing for them.

"And, on the supposition that the amount of subscriptions made will exceed the amount of the loan required by the Government, the circular to be issued by the Secretary of the Treasury will provide that every subscriber for the loan to the extent of a thousand dollars or less shall have the whole amount that he subscribes for, and those who subscribe for larger sums only proportional amounts, the object being to reach the masses of the people who may desire to make this investment.

"Now, I wish to say a single word with regard, first, to the rate of interest—3 per cent. Some doubt has been expressed as to whether a 3-per-cent. bond can now be floated at par. The committee has obtained information, so far as possible, throughout the country in reference to the probability of disposing of such bonds.

"And, Mr. Chairman, the belief of the committee and others who have the most information respecting the matter is that there will be no question whatever about being able to dispose of them.

"But in order to make this absolutely sure—for it would be a serious misfortune not to have the loan taken—in order to make it sure, these bonds are made redeemable after ten years, at the option of the Government, and become payable in twenty years. The reason for making the bonds in this form is that it is believed that a five-year period, in the first place, might affect the placing of the bonds, especially the later issues; and it is important, therefore, in this view of the case, that they should run at least ten years, in order to make it certain that the bonds will be taken.

"But the second reason influencing the committee was this: We found, on examination, that

the existing loans of the Government are payable in such way that, even if we could place 5-20 3-per-cent. bonds instead of ten-twenties, the latter would be equally favorable for the Government for the reason that in 1904, six years from the present time, there will become due \$100,000,000 of 5-per-cent. bonds.

"Now, obviously all we shall be able to do at the end of the five years will be to redeem the \$100,000,000 of 5-per-cent. bonds; and, as they bear 5 per cent. interest, the Government, of course, would choose to call them in and pay them off rather than the 3-per-cent. bonds. In 1907 there comes due \$559,641,500 of 4-per-cent. bonds, coming right along after we have completed the payment of the 5-per-cent. Of course the Government will call them in and pay them off before paying the 3-per-cent.

"And having over five hundred millions of them, they will be all we can take care of, until the ten years' bonds falling due in 1908, when these new bonds will be redeemable at the pleasure of the Government.

"So, Mr. Chairman, from the point of view of the Government's interest it is better that these bonds should bear the minimum time limit of ten years rather than the shorter term of five. And on the point of securing their being taken by the people at 3 per cent., it is evidently better that they should have a longer term to run.

"Having made provision for a permanent loan for an amount not exceeding \$500,000,000, then it became important to make provision for the obtaining of money temporarily immediately, before the permanent loan can be placed, before additional revenue can be secured, and also for any contingencies that may come in the future. Hence, we have provided for a temporary issue of certificates of indebtedness, bearing interest at 3 per cent., payable in not exceeding one year, and providing that the amount that may be outstanding at any time shall not exceed \$100,000,000."

This clear statement gives the scope of the measure as reported from the Committee on Ways and Means and as it passed the House. There was no opposition meant to thwart the purpose of the bill, as there was a thorough agreement on the necessity of providing funds to meet the war expenditure; but there was a sharp difference of opinion as to the methods to be adopted for raising revenue. Various schemes were proposed by members of the minority in the House; and the levying of an income tax, the coinage of the seigniorage silver in the Treasury, the issue of a limited amount of greenbacks, and the taxation of corporations were among the favorable devices. The bitterest criticism was made on the scheme for a great bond issue, as designed to serve other purposes than those professed. Mr. McDowell, of Ohio, stated the position clearly:

"We are heartily in favor of providing sufficient funds for equipping the army and navy thoroughly, to feed them well, to furnish them with everything that will contribute to their comfort and safety as far as possible. We do not want them to lack for anything that will enable them to prosecute the war vigorously and successfully. Since war has come, the American people want prompt, energetic action, and no party will respond more heartily and promptly to the country's call and needs than the Democratic party.

"It must be admitted that there is urgent necessity for providing means to bring this war to a victorious termination. No one is more desirous of accomplishing this than I am. Some provisions in the bill under consideration meet my approval. The proposition to authorize the Secretary of the Treasury to issue \$500,000,000 of 10-20 bonds does

not meet my approval. I do not believe that the present emergency demands the amount of money—\$700,000,000—for which this bill makes almost immediate provision.

"We should studiously avoid an increase of the interest-bearing indebtedness of our Government. The issuing of bonds should come only when an emergency makes it an absolute necessity. Let us see what amount of money can be used for war purposes without issuing bonds now. According to the statement given out by the Secretary of the Treasury to-day there is in the United States Treasury an available cash balance, excluding the gold reserve, of \$118,000,000, in round numbers.

"But according to the statements of the gentleman from Maine, we have only about \$60,000,000 available for all purposes of the Treasury. It therefore appears that the system of bookkeeping of the Treasury Department is misleading. It may be safe to take \$60,000,000 as the amount. For \$42,000,000 silver seigniorage silver certificates could be issued. By the internal-revenue tax provision of this bill we are told \$100,000,000 will be produced.

"By the provision for a temporary issue of certificates of indebtedness another \$100,000,000 can be produced. This would give us \$302,000,000 to carry on the war until Congress would again be in session next December—a sum, in my judgment, greater than we shall need to drive Spain off the Western Hemisphere. Suppose we have doubts about this amount of money being sufficient. There are other well-tried and most satisfactory methods of raising war revenue.

"This bill should start off, first, with an income tax that would produce \$100,000,000 or more annually. The ablest statesmen, lawyers, and economists have pronounced an income tax the most fair and just of all systems of taxation. Dr. Francis Wayland (*Political Economy*, page 257) says, speaking of income tax: 'This is the most equitable of all taxes, since it touches men exactly according to their abilities.' An income tax is not an untried thing. In time of the civil war we laid such tax, and no court of that time ever intimated that it was unconstitutional. During the existence of this law we collected \$346,000,000. It is a notable fact that the law was repealed by a systematic and determined effort of certain politicians who sought to institute high-tariff taxes.

"In 1842 Sir Robert Peel, Premier of England, obtained from Parliament authority to levy an income tax for three years to meet a temporary deficiency in the revenues which then existed.

"This was not in time of war, but when England was at peace. The tax was effectual and satisfactory. In 1845, when the income tax was about to expire by limitation, Sir Robert Peel had come to the conclusion that it was a just tax, and, though himself a protectionist at that time, he considered it more fair than a custom tax. Although he had secured the tax as an expedient, on account of its satisfactory results he determined to keep it on principle.

"Our present system of taxation falls too heavily upon those least able to bear it. The wealthy classes are not bearing their share of the burdens of the Government. By enacting this bill into a law we will make taxes more onerous on the poor. The internal revenue produced by this bill would come in a much larger proportion from the poor and moderately well-to-do classes than from the very wealthy. In other words, those possessing the greater part of the wealth of the country would not pay their share of the taxes.

"This is certainly an opportune time to enact an income-tax law. The masses of the people would approve of such a measure, because it is right. The

poor must fight the battles of the country, and the men with vast incomes should help to pay, according to their ability at least, the expenses of the war. But our friends on the other side say we must not insert the income-tax law of 1894 in this bill, because the Supreme Court has decided that act unconstitutional. We have a very distinct recollection of the history of that decision.

"The court stood 5 to 4 against the constitutionality of the law after one of the judges had mysteriously reversed his former decision. That judge has not to this day given the reasons for his change of opinion. Who knows what he might do if the question should come up again? In time of war men are likely to act differently than in time of peace? They are more likely to be guided by patriotism than by partisanship, more influenced by a sense of justice than by prejudice or selfish motives.

"Former courts have decided an income-tax law constitutional. One court only has decided it unconstitutional. In the minds of the people the question is not permanently settled, and it never will be settled until it is settled right.

"The gentleman from Maine tells us if we pass an income-tax bill we may become entangled in lawsuits and the Government will not get the revenue which it needs. Can it be that wealthy Americans are less patriotic than the Spaniards? Wealthy Spaniards at home and abroad are making large voluntary contributions for the support of their Government.

"Would the gentleman from Maine have us believe that our own citizens, who have made their millions at the mercy of the masses, would resist the authority of the Government to collect taxes that are just and equitable? Does he believe that the trusts and combines that have been so well cared for by his tariff law would refuse to bear their share of the burdens of this war? What a reflection upon the patriotism of American millionaires!

"We on this side have been charged with playing for partisan ends. Let us see where partisanship has been exhibited. This bill was framed exclusively by Republican members of the Ways and Means Committee. The Democratic members were not invited to participate in the work of drafting the bill. They were not notified even when committee meetings were to be held. After the bill was prepared, the Democratic members of the committee were called in to hear it read, but were not given an opportunity to effect any changes.

"The bill is a purely Republican measure. The evident intention of the majority is to railroad it through this House in the shape in which it was brought here. What consistency, then, is there in charging this side with partisanship when we make reasonable efforts to eliminate infamous propositions of the bill and insert popular provisions?

"I believe that this bill has been framed for more purposes than the chairman of the committee has stated. It is well known that under the Dingley tariff law there is a deficit of \$60,000,000, exclusive of the \$54,000,000 received from the sale of the Pacific railroads.

"The Government can not depend upon the sale of more railroads to even up the growing deficit under the present tariff act. Hence the gentleman from Maine has taken advantage of the present emergency to re-enforce his tariff law. The committee has also increased the taxes on certain articles, from doing which they were prevented last year by a conspicuous Republican from Ohio, with the view that these rates shall be permanent. The most outrageous provision of the bill is the bond feature. That any party should designedly take advantage of the present crisis to place upon the

American people \$500,000,000 more of interest-bearing indebtedness is criminal.

"There is absolutely no necessity for a bond issue at this period of the situation. It is within the powers of Congress to provide all the revenue needed without issuing bonds. Let us set about to do that. It seems to me that the very persons who were working to consummate a bond deal before this Government was allowed to take any action upon this Cuban question are now the ones who are determined to place a bond provision in this revenue bill.

"It is unfortunate that there is an element in this country who believe a great public debt is a great public blessing.

"I rejoice that on so many emergency measures brought in here in the last three months the two sides of this House have been able to unite so thoroughly. I wish this revenue bill was in such a shape that we on this side could consistently and conscientiously support it. Our opposition to it is not that we do not want to provide the funds to carry on the war. We believe there is a common ground upon which the parties in this House could and should meet. The best interests of our nation demand it.

"The propositions offered by the minority are reasonable, sensible, and popular. First, let us provide for an income tax. Then coin the silver bullion in the Treasury or issue silver certificates in lieu thereof, provide for an increase of Treasury notes on the credit of the Government, and, if deemed necessary, levy moderate internal-revenue taxes on articles of voluntary consumption. A revenue bill containing these provisions would give us all the revenue we need to defeat a nation decrepit and despised."

All attempts to amend the measure on the vital points urged by its opponents failed. April 29 Mr. Bland, of Missouri, moved that the bill be recommitted, with instructions to the committee to report it with an amendment at the close, which was a detailed provision for an income tax. The motion failed by the following vote:

YEAS—Adamson, Bailey, Baker of Illinois, Ball, Bankhead, Barlow, Bartholdt, Bartlett, Bell, Benner of Pennsylvania, Benton, Berry, Bland, Bodine, Botkin, Bradley, Brantley, Brenner of Ohio, Brewer, Bromwell, Broussard, Brucker, Brundidge, Burke, Carmack, Castle, Catchings, Clardy, Clark of Missouri, Clayton, Cochran of Missouri, Cooney, Cooper of Texas, Cowherd, Cox, Cummings, Davey, Davis, De Armond, De Graffenreid, De Vries, Dinsmore, Dockery, Driggs, Elliott, Fitzgerald, Fitzpatrick, Fleming, Fowler of North Carolina, Fox, Gaines, Greene, Griffith, Griggs, Gunn, Handy, Hartman, Hay, Henry of Mississippi, Henry of Texas, Howard of Georgia, Hunter, Johnson of Indiana, Jones of Virginia, Jones of Washington, King, Kitchin, Kleberg, Knowles, Lamb, Lanham, Latimer, Lentz, Lester, Lewis of Georgia, Lewis of Washington, Little, Livingston, Lloyd, Love, McClellan, McCormick, McCulloch, McDowell, McEwan, McMillin, McRae, Maddox, Magnire, Maxwell, Meyer of Louisiana, Miers of Indiana, Moon, Newlands, Norton of Ohio, Norton of South Carolina, Ogden, Osborne, Otey, Peters, Pierce of Tennessee, Richardson, Ridgely, Rixey, Robb, Robertson of Louisiana, Robinson of Indiana, Sayers, Settle, Shafroth, Shuford, Simpson, Sims, Slayden, Smith of Kentucky, Sparkman, Stephens of Texas, Stokes, Strowd of North Carolina, Sullivan, Sulzer, Swanson, Talbert, Taylor of Alabama, Thorp, Underwood, Vandiver, Vehslage, Vincent, Wheeler of Alabama, Wheeler of Kentucky, White of Illinois, Wilson, Zenor—134.

Smith, William Alden Smith, Southard, Southwick, Spalding, Sperry, Sprague, Steele, Stevens of Minnesota, Stewart of New Jersey, Stewart of Wisconsin, C. W. Stone, W. A. Stone, Strode of Nebraska, Sturtevant, Sulloway, Tawney, Taylor of Ohio, Tongue, Updegraff, Van Voorhis, Wadsworth, Walker of Massachusetts, Walker of Virginia, Wanger, Ward, Weaver, Wheeler of Alabama, White of Illinois, Williams of Pennsylvania, Wise, Young—181.

YAYS—Adamson, Bailey, Baker of Illinois, Ball, Bankhead, Barlow, Bartlett, Bell, Benner of Pennsylvania, Benton, Berry, Bland, Bodine, Botkin, Bradley, Brantley, Brenner of Ohio, Brewer, Broussard, Brueker, Brundidge, Burke, Carmaek, Castle, Clardy, Clark of Missouri, Clayton, Cochran of Missouri, Cooney, Cooper of Texas, Cowherd, Cox, Davey, Davis, De Armond, De Graffenreid, De Vries, Dinsmore, Dockery, Elliott, Fitzpatrick, Fleming, Fowler of North Carolina, Fox, Gaines, Greene, Griffith, Griggs, Gunn, Handy, Hartman, Hay, Henry of Mississippi, Henry of Texas, Howard of Alabama, Howard of Georgia, Hunter, Jones of Virginia, Jones of Washington, Kelley, King, Kitchin, Kleberg, Knowles, Lamb, Lanham, Latimer, Lentz, Lester, Lewis of Georgia, Lewis of Washington, Linney, Little, Livingston, Lloyd, Love, McCormick, McCulloch, McDowell, McMillin, McRae, Maddox, Maguire, Martin, Maxwell, Meyer of Louisiana, Miers of Indiana, Moon, Norton of Ohio, Norton of South Carolina, Ogden, Osborne, Otey, Peters, Pierce of Tennessee, Rhea, Richardson, Ridgely, Rixey, Robb, Robertson of Louisiana, Robinson of Indiana, Sayers, Settle, Shafroth, Shuford, Simpson, Sims, Skinner, Slayden, Smith of Kentucky, Sparkman, Stallings, Stark, Stephens of Texas, Stokes, Strowd of North Carolina, Sullivan, Sulzer, Sutherland, Swanson, Talbert, Taylor of Alabama, Thorp, Underwood, Vandiver, Vehslage, Vincent, Wheeler of Kentucky, Wilson, Zenor—131.

ANSWERED "PRESENT"—Baird—1.

NOT VOTING—Allen, Barber, Barrett, Brosius, Campbell, Catchings, Clarke of New Hampshire, Cochrane of New York, Coddington, Colson, Connolly, Cranford, Davenport, Ermentrout, Gillet of Massachusetts, Hinrichsen, Hurley, Jett, Lorimer, Mahany, Mann, Marshall, Meekison, Newlands, Odell, Packer of Pennsylvania, Pearson, Perkins, Prince, Quigg, Shelden, Snover, Strait, Tate, Terry, Todd, Warner, Weymouth, White of North Carolina, Wilber, Williams of Mississippi, Yost—42.

The bill was reported back from the Finance Committee in the Senate, May 12, with many amendments, some of which were of great importance and became the subject of long discussion. One such amendment was a provision for levying an excise tax on corporations, which brought up the income-tax issue, and led to a renewal of the controversy on the constitutionality of an income tax. The proposition, varied in many forms, was defeated, except as to those corporations engaged in refining sugar and petroleum. Another such amendment was the provision to issue \$150,000,000 of legal-tender notes, instead of interest-bearing bonds. This brought on a renewal of the old controversy over increasing the legal-tender paper of the Government and the scheme for issuing bonds to retire those already in circulation; but the bond provision in the House bill was retained, though the limit to the bond issue was reduced. An amendment providing for postal savings banks was rejected also. The tonnage tax was stricken out; a succession tax on personal property was adopted; a duty was levied on tea; a tax was put upon mixed flour; and a provision for the coinage of the silver seigniorage in the Treasury,

and the issue of silver certificates in anticipation of such coinage, was incorporated in the bill. The last amendment brought on a renewal of the well-worn controversy as to gold and silver. It would be useless to reproduce the discussion on any of these themes, each one of which has been so often the matter directly at issue, and is likely to become so again; and it is enough to say that the division of the Senate over the measure was on a sharply drawn line between the policy of increasing the revenue moderately and borrowing heavily on 3-per-cent. bonds, and the policy of increasing the revenue heavily and supplying deficiencies by coinage of silver and the issue of notes not bearing interest. The measure passed the senate, June 4, by the following vote:

YEAS—Aldrich, Allison, Baker, Burrows, Caffery, Carter, Chandler, Clark, Davis, Deboe, Elkins, Fairbanks, Foraker, Frye, Gallinger, Gear, Gorman, Hale, Hanna, Hansbrough, Hawley, Hoar, Kyle, Lindsay, Lodge, McBride, McEnery, McMillan, Mantle, Mason, Mitchell, Morrill, Murphy, Nelson, Perkins, Platt of Connecticut, Platt of New York, Pritchard, Sewell, Shoup, Spooner, Thurston, Turpie, Warren, Wellington, Wetmore, Wilson, Wolcott—48.

NAYS—Allen, Bacon, Bate, Berry, Butler, Cannon, Chilton, Clay, Cockrell, Daniel, Harris, Heitfeld, Jones of Arkansas, Jones of Nevada, McLaurin, Mallory, Martin, Money, Pasco, Pettigrew, Pettus, Rawlins, Roach, Stewart, Sullivan, Tillman, Turley, White—28.

NOT VOTING—Cullom, Faulkner, Gray, Kenney, Mills, Morgan, Penrose, Proctor, Quay, Smith, Teller, Turner, Vest—13.

The House of Representatives non-concurred in the Senate amendments, and a conference committee was appointed which made a compromise report, in which the amendments specially noted above were accepted with qualifications. The provision as to issuing silver certificates was struck out of the amendment for coining the silver seigniorage, and it was enacted that the silver bullion in the Treasury should be coined at the rate of not less than \$1,500,000 a month. The bill as shaped by the conference committee was accepted by both Houses, and was approved by the President, June 13, 1898.

The text of the measure is as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be paid, in lieu of the tax of one dollar now imposed by law, a tax of two dollars on all beer, lager beer, ale, porter, and other similar fermented liquors, brewed or manufactured and sold, or stored in warehouse, or removed for consumption or sale, within the United States, by whatever name such liquors may be called, for every barrel containing not more than thirty-one gallons; and at a like rate for any other quantity or for the fractional parts of a barrel authorized and defined by law. And section thirty-three hundred and thirty-nine of the Revised Statutes is hereby amended accordingly: *Provided,* That a discount of seven and one half per centum shall be allowed upon all sales by collectors to brewers of the stamps provided for the payment of said tax: *Provided further,* That the additional tax imposed in this section on all fermented liquors stored in warehouse to which a stamp had been affixed shall be assessed and collected in the manner now provided by law for the collection of taxes not paid by stamps.

"SPECIAL TAXES.

"Sec. 2. That from and after July first, eighteen hundred and ninety-eight, special taxes shall be,

and hereby are, imposed annually as follows; that is to say:

"One. Bankers using or employing a capital not exceeding the sum of twenty-five thousand dollars shall pay fifty dollars; when using or employing a capital exceeding twenty-five thousand dollars, for every additional thousand dollars in excess of twenty-five thousand dollars, two dollars, and in estimating capital surplus shall be included. The amount of such annual tax shall in all cases be computed on the basis of the capital and surplus for the preceding fiscal year. Every person, firm, or company, and every incorporated or other bank, having a place of business where credits are opened by the deposit or collection of money or currency, subject to be paid or remitted upon draft, check, or order, or where money is advanced or loaned on stocks, bonds, bullion, bills of exchange, or promissory notes, or where stocks, bonds, bullion, bills of exchange, or promissory notes are received for discount or sale, shall be a banker under this act: *Provided,* That any savings bank having no capital stock, and whose business is confined to receiving deposits and loaning or investing the same for the benefit of its depositors, and which does no other business of banking, shall not be subject to this tax.

"Two. Brokers shall pay fifty dollars. Every person, firm, or company, whose business it is to negotiate purchases or sales of stocks, bonds, exchange, bullion, coined money, bank notes, promissory notes, or other securities for themselves or others, shall be regarded as a broker: *Provided,* That any person having paid the special tax as a banker shall not be required to pay the special tax as a broker.

"Three. Pawnbrokers shall pay twenty dollars. Every person, firm, or company whose business or occupation it is to take or receive, by way of pledge, pawn, or exchange, any goods, wares, or merchandise, or any kind of personal property whatever, as security for the repayment of money loaned thereon, shall be deemed a pawnbroker.

"Four. Commercial brokers shall pay twenty dollars. Every person, firm, or company, whose business it is as a broker to negotiate sales or purchases of goods, wares, produce, or merchandise, or to negotiate freights and other business for the owners of vessels, or for the shippers or consignors or consignees of freight carried by vessels, shall be regarded as a commercial broker under this act.

"Five. Customhouse brokers shall pay ten dollars. Every person, firm, or company whose occupation it is, as the agent of others, to arrange entries and other customhouse papers, or transact business at any port of entry relating to the importation or exportation of goods, wares, or merchandise, shall be regarded as a customhouse broker.

"Six. Proprietors of theaters, museums, and concert halls in cities having more than twenty-five thousand population, as shown by the last preceding United States census, shall pay one hundred dollars. Every edifice used for the purpose of dramatic or operatic or other representations, plays, or performances, for admission to which entrance money is received, not including halls rented or used occasionally for concerts or theatrical representations, shall be regarded as a theater: *Provided,* That whenever any such edifice is under lease at the passage of this act, the tax shall be paid by the lessee, unless otherwise stipulated between the parties to said lease.

"Seven. The proprietor or proprietors of circuses shall pay one hundred dollars. Every building, space, tent, or area where feats of horsemanship or acrobatic sports or theatrical performances are exhibited shall be regarded as a circus: *Provided,*

That no special tax paid in one State, Territory, or the District of Columbia shall exempt exhibitions from the tax in another State, Territory, or the District of Columbia, and but one special tax shall be imposed for exhibitions within any one State, Territory, or District.

"Eight. Proprietors or agents of all other public exhibitions or shows for money not enumerated in this section shall pay ten dollars: *Provided*, That a special tax paid in one State, Territory, or the District of Columbia shall not exempt exhibitions from the tax in another State, Territory, or the District of Columbia, and but one special tax shall be required for exhibitions within any one State, Territory, or the District of Columbia.

"Nine. Proprietors of bowling alleys and billiard rooms shall pay five dollars for each alley or table. Every building or place where bowls are thrown or where games of billiards or pool are played, and that are open to the public with or without price, shall be regarded as a bowling alley or a billiard room, respectively.

"TOBACCO, CIGARS, CIGARETTES, AND SNUFF.

"SEC. 3. That there shall, in lieu of the tax now imposed by law, be levied and collected a tax of twelve cents per pound upon all tobacco and snuff, however prepared, manufactured, and sold, or removed for consumption or sale; and upon cigars and cigarettes which shall be manufactured and sold, or removed for consumption or sale, there shall be levied and collected the following taxes, to be paid by the manufacturer thereof, namely a tax of three dollars and sixty cents per thousand on cigars of all descriptions made of tobacco, or any substitute therefor, and weighing more than three pounds per thousand, and of one dollar per thousand on cigars made of tobacco or any substitute therefor, and weighing not more than three pounds per thousand; and a tax of three dollars and sixty cents per thousand on cigarettes made of tobacco or any substitute therefor, and weighing more than three pounds per thousand; and one dollar and fifty cents per thousand on cigarettes made of tobacco or any substitute therefor, and weighing not more than three pounds per thousand: *Provided*, That in lieu of the two-three- and four-ounce packages of tobacco and snuff now authorized by law, there may be packages thereof containing one and two third ounces, two and one half ounces, and three and one third ounces, respectively, and in addition to packages now authorized by law, there may be packages containing one ounce of smoking tobacco.

"And there shall also be assessed and collected with the exceptions hereinafter in this section provided for upon all the articles enumerated in this section which were manufactured, imported, and removed from factory or customhouse before the passage of this act, bearing tax stamps affixed to such articles for the payment of the taxes thereon, and canceled subsequent to April 14, 1898, and which articles were at the time of the passage of this act held and intended for sale by any person, a tax equal to one half the difference between the tax already paid on such articles at the time of removal from the factory or customhouse and the tax levied in this act upon such articles.

"Every person having on the day succeeding the date of the passage of this act any of the above-described articles on hand for sale in excess of one thousand pounds of manufactured tobacco and twenty thousand cigars or cigarettes, and which have been removed from the factory where produced or the customhouse through which imported, bearing the rate of tax payable thereon at the time of such removal, shall make a full and true return under oath in duplicate of the quantity thereof,

in pounds as to the tobacco and snuff, and in thousands as to the cigars and cigarettes so held on that day, in such form and under such regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe. Such returns shall be made and delivered to the collector or deputy collector for the proper internal-revenue district within thirty days after the passage of this act. One of said returns shall be retained by the collector and the other forwarded to the Commissioner of Internal Revenue together with the assessment list for the month in which the return is received, and the Commissioner of Internal Revenue shall assess and collect the taxes, found to be due, as other taxes not paid by stamps are assessed and collected.

"And for the expense connected with the assessment and collection of the taxes provided by this act there is hereby appropriated the sum of one hundred thousand dollars, or so much thereof as may be required, out of any moneys in the Treasury not otherwise appropriated, for the employment of such deputy collectors and other employees in the several collection districts in the United States, and such clerks and employees in the Bureau of Internal Revenue as may in the discretion of the Commissioner of Internal Revenue be necessary for a period not exceeding one year, to be compensated for their services by such allowances as shall be made by the Secretary of the Treasury, upon the recommendation of the Commissioner of Internal Revenue. And the Commissioner of Internal Revenue is authorized to employ ten agents, to be known and designated as internal-revenue agents, in addition to the number now authorized in section thirty-one hundred and fifty-two of the Revised Statutes as amended, and the existing provisions of law in all other respects shall apply to the duties, compensation, and expenses of such agents.

"TOBACCO DEALERS AND MANUFACTURERS.

"SEC. 4. That from and after July first, eighteen hundred and ninety-eight, special taxes on tobacco dealers and manufacturers shall be and hereby are imposed annually, as follows, the amount of such annual taxes to be computed in all cases on the basis of the annual sales for the preceding fiscal year:

"Dealers in leaf tobacco whose annual sales do not exceed fifty thousand pounds shall each pay six dollars. Dealers in leaf tobacco whose annual sales exceed fifty thousand and do not exceed one hundred thousand pounds shall pay twelve dollars, and if their annual sales exceed one hundred thousand pounds shall pay twenty-four dollars.

"Dealers in tobacco whose annual sales exceed fifty thousand pounds shall each pay twelve dollars.

"Every person whose business it is to sell, or offer for sale, manufactured tobacco, snuff, or cigars shall be regarded as a dealer in tobacco: *Provided*, That no manufacturer of tobacco, snuff, or cigars shall be required to pay a special tax as dealer in manufactured tobacco and cigars for selling his own products at the place of manufacture.

"Manufacturers of tobacco whose annual sales do not exceed fifty thousand pounds shall each pay six dollars.

"Manufacturers of tobacco whose annual sales exceed fifty thousand and do not exceed one hundred thousand pounds shall each pay twelve dollars.

"Manufacturers of tobacco whose annual sales exceed one hundred thousand pounds shall each pay twenty-four dollars.

"Manufacturers of cigars whose annual sales do not exceed one hundred thousand cigars shall each pay six dollars.

"Manufacturers of cigars whose annual sales exceed one hundred thousand and do not exceed two hundred thousand cigars shall each pay twelve dollars.

"Manufacturers of cigars whose annual sales exceed two hundred thousand cigars shall each pay twenty-four dollars.

"And every person who carries on any business or occupation for which special taxes are imposed by this act, without having paid the special tax herein provided, shall, besides being liable to the payment of such special tax, be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not more than five hundred dollars, or be imprisoned not more than six months, or both, at the discretion of the court.

"SEC. 5. Until appropriate stamps are prepared and furnished, the stamps heretofore used to denote the payment of the internal-revenue tax on fermented liquors, tobacco, snuff, cigars, and cigarettes may be stamped or imprinted with a suitable device to denote the new rate of tax, and shall be affixed to all packages containing such articles on which the tax imposed by this act is paid. And any person having possession of unaffixed stamps heretofore issued for the payment of the tax upon fermented liquors, tobacco, snuff, cigars, or cigarettes shall present the same to the collector of the district, who shall receive them at the price paid for such stamps by the purchasers and issue in lieu thereof new or imprinted stamps at the rate provided by this act.

"ADHESIVE STAMPS.

"SEC. 6. That on and after the first day of July, eighteen hundred and ninety-eight, there shall be levied, collected, and paid, for and in respect of the several bonds, debentures, or certificates of stock and of indebtedness, and other documents, instruments, matters, and things mentioned and described in Schedule A of this act, or for or in respect of the vellum, parchment, or paper upon which such instruments, matters, or things, or any of them, shall be written or printed by any person or persons, or party who shall make, sign, or issue the same, or for whose use or benefit the same shall be made, signed, or issued, the several taxes or sums of money set down in figures against the same, respectively, or otherwise specified or set forth in the said schedule.

"And there shall also be levied, collected, and paid, for and in respect to the medicines, preparations, matters, and things mentioned and described in Schedule B of this act, manufactured, sold, or removed for sale, the several taxes or sums of money set down in words or figures against the same, respectively, or otherwise specified or set forth in Schedule B of this act.

"SEC. 7. That if any person or persons shall make, sign, or issue, or cause to be made, signed, or issued, any instrument, document, or paper of any kind or description whatsoever, without the same being duly stamped for denoting the tax hereby imposed thereon, or without having thereupon an adhesive stamp to denote said tax, such person or persons shall be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not more than one hundred dollars, at the discretion of the court, and such instrument, document, or paper, as aforesaid, shall not be competent evidence in any court.

"SEC. 8. That if any person shall forge or counterfeit, or cause or procure to be forged or counterfeited, any stamp, die, plate, or other instrument, or any part of any stamp, die, plate or other instrument, which shall have been provided, or may hereafter be provided, made, or used in pursuance of this act, or shall forge, counterfeit, or resemble,

or cause or procure to be forged, counterfeited, or resembled, the impression, or any part of the impression, of any such stamp, die, plate, or other instrument as aforesaid, upon any vellum, parchment or paper, or shall stamp or mark, or cause or procure to be stamped or marked, any vellum, parchment, or paper with any such forged or counterfeited stamp, die, plate, or other instrument, or part of any stamp, die, plate, or other instrument, as aforesaid, with intent to defraud the United States of any of the taxes hereby imposed, or any part thereof; or if any person shall utter or sell, or expose for sale, any vellum, parchment, paper, article, or thing having thereupon the impression of any such counterfeited stamp, die, plate, or other instrument, or any part of any stamp, die, plate, or other instrument, or any such forged, counterfeited, or resembled impression, or part of impression, as aforesaid, knowing the same to be forged, counterfeited, or resembled; or if any person shall knowingly use or permit the use of any stamp, die, plate, or other instrument which shall have been so provided, made, or used as aforesaid, with intent to defraud the United States; or if any person shall fraudulently cut, tear, or remove, or cause or procure to be cut, torn, or removed, the impression of any stamp, die, plate, or other instrument which shall have been provided, made or used in pursuance of this act from any vellum, parchment, or paper, or any instrument or writing charged or chargeable with any of the taxes imposed by law; or if any person shall fraudulently use, join, fix, or place, or cause to be used, joined, fixed, or placed, to, with, or upon any vellum, parchment, paper, or any instrument or writing charged or chargeable with any of the taxes hereby imposed, any adhesive stamp, or the impression of any stamp, die, plate, or other instrument, which shall have been provided, made, or used in pursuance of law, and which shall have been cut, torn, or removed from any other vellum, parchment, or paper, or any instrument or writing charged or chargeable with any of the taxes imposed by law; or if any person shall willfully remove or cause to be removed, alter or cause to be altered, the canceling or defacing marks of any adhesive stamp with intent to use the same, or to cause the use of the same, after it shall have been once used, or shall knowingly or willfully sell or buy such washed or restored stamp, or offer the same for sale, or give or expose the same to any person for use, or knowingly use the same, or prepare the same with intent for the further use thereof; or if any person shall knowingly and without lawful excuse (the proof whereof shall lie on the person accused) have in his possession any washed, restored, or altered stamp which has been removed from any vellum, parchment, paper, instrument, or writing, then, and in every such case, every person so offending, and every person knowingly and willfully aiding, abetting, or assisting in committing any such offenses as aforesaid shall be deemed guilty of a misdemeanor, and, upon conviction thereof, shall forfeit the said counterfeit stamps and the articles upon which they are placed, and shall be punished by fine not exceeding one thousand dollars, or by imprisonment and confinement at hard labor not exceeding five years, or both, at the discretion of the court.

"SEC. 9. That in any and all cases where an adhesive stamp shall be used for denoting any tax imposed by this act, except as hereinafter provided, the person using or affixing the same shall write or stamp thereon the initials of his name and the date upon which the same shall be attached or used, so that the same may not again be used. And if any person shall fraudulently make use of an adhesive stamp to denote any tax imposed by this act with-

out so effectually canceling and obliterating such stamp, except as before mentioned, he, she, or they shall be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not less than fifty nor more than five hundred dollars, or be imprisoned not more than six months, or both, at the discretion of the court: *Provided*, That any proprietor or proprietors of proprietary articles, or articles subject to stamp duty under Schedule B of this act, shall have the privilege of furnishing, without expense to the United States, in suitable form, to be approved by the Commissioner of Internal Revenue, his or their own dies or designs for stamps to be used thereon, to be retained in the possession of the Commissioner of Internal Revenue, for his or their separate use, which shall not be duplicated to any other person. And the proprietor furnishing such dies or designs shall be required to purchase stamps printed therefrom in quantities of not less than two thousand dollars face value at any one time. That in all cases where such stamp is used, instead of cancellation by initials and date, the said stamp shall be so affixed on the box, bottle, or package that in opening the same, or using the contents thereof, the said stamp shall be effectually destroyed; and in default thereof the party making default shall be liable to the same penalty imposed for neglect to affix said stamp as hereinbefore prescribed in this act. Any person who shall fraudulently obtain or use any of the aforesaid stamps or designs therefor, and any person forging or counterfeiting, or causing or procuring the forging or counterfeiting, any representation, likeness, similitude, or colorable imitation of the said last-mentioned stamp, or any engraver or printer who shall sell or give away said stamps, or selling the same, or being a merchant, broker, peddler, or person dealing, in whole or in part, in similar goods, wares, merchandise, manufactures, preparations, or articles, or those designed for similar objects or purposes, shall have knowingly or fraudulently in his, her, or their possession any such forged, counterfeited likeness, similitude, or colorable imitation of the said last-mentioned stamp, shall be deemed guilty of a crime, and, upon conviction thereof, shall be punished by a fine not exceeding five hundred dollars or imprisonment not exceeding one year, or both.

"Sec. 10. That if any person or persons shall make, sign, or issue, or cause to be made, signed, or issued, or shall accept or pay, or cause to be accepted or paid, with design to evade the payment of any stamp tax, any bill of exchange, draft, or order, or promissory note for the payment of money, liable to any of the taxes imposed by this act, without the same being duly stamped, or having thereupon an adhesive stamp for denoting the tax hereby charged thereon, he, she, or they shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not exceeding two hundred dollars, at the discretion of the court.

"Sec. 11. That the acceptor or acceptors of any bill of exchange or order for the payment of any sum of money drawn, or purporting to be drawn, in any foreign country, but payable in the United States, shall, before paying or accepting the same, place thereupon a stamp, indicating the tax upon the same, as the law requires for inland bills of exchange or promissory notes; and no bill of exchange shall be paid or negotiated without such stamp; and if any person shall pay or negotiate, or offer in payment, or receive or take in payment, any such draft or order, the person or persons so offending shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not exceeding one hundred dollars, in the discretion of the court.

"Sec. 12. That in any collection district where, in the judgment of the Commissioner of Internal Revenue, the facilities for the procurement and distribution of adhesive stamps are or shall be insufficient, the commissioner, as aforesaid, is authorized to furnish, supply, and deliver to the collector of any district, and to any assistant treasurer of the United States or designated depository thereof, or any postmaster, a suitable quantity of adhesive stamps, without prepayment therefor, and may in advance require of any collector, assistant treasurer of the United States, or postmaster, a bond with sufficient sureties, to an amount equal to the value of the adhesive stamps which may be placed in his hands and remain unaccounted for, conditioned for the faithful return, whenever so required, of all quantities or amounts undisposed of, and for the payment monthly of all quantities or amounts sold or not remaining on hand. And it shall be the duty of such collector to supply his deputies with, or sell to other parties within his district who may make application therefor, adhesive stamps, upon the same terms allowed by law or under the regulations of the Commissioner of Internal Revenue, who is hereby authorized to make such other regulations, not inconsistent herewith, for the security of the United States and the better accommodation of the public, in relation to the matters hereinbefore mentioned, as he may judge necessary and expedient. And the Secretary of the Treasury may from time to time make such regulations as he may find necessary to insure the safe keeping or prevent the illegal use of all such adhesive stamps.

"Sec. 13. That any person or persons who shall register, issue, sell, or transfer, or who shall cause to be issued, registered, sold, or transferred, any instrument, document, or paper of any kind or description whatsoever mentioned in Schedule A of this act, without the same being duly stamped, or having thereupon an adhesive stamp for denoting the tax chargeable thereon, and canceled in the manner required by law, with intent to evade the provisions of this act, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not exceeding fifty dollars, or by imprisonment not exceeding six months, or both, in the discretion of the court; and such instrument, document, or paper, not being stamped according to law, shall be deemed invalid and of no effect: *Provided*, That hereafter, in all cases where the party has not affixed to any instrument the stamp required by law thereon at the time of issuing, selling, or transferring the said bonds, debentures, or certificates of stock or of indebtedness, and he or they, or any party having an interest therein, shall be subsequently desirous of affixing such stamp to said instrument, or, if said instrument be lost, to a copy thereof, he or they shall appear before the collector of internal revenue of the proper district, who shall, upon the payment of the price of the proper stamp required by law, and of a penalty of ten dollars, and, where the whole amount of the tax denoted by the stamp required shall exceed the sum of fifty dollars, on payment also of interest, at the rate of six per centum, on said tax from the day on which such stamp ought to have been affixed, affix the proper stamp to such bond, debenture, certificate of stock or of indebtedness or copy, and note upon the margin thereof the date of his so doing and the fact that such penalty has been paid; and the same shall thereupon be deemed and held to be as valid, to all intents and purposes, as if stamped when made or issued: *And provided further*, That where it shall appear to said collector, upon oath or otherwise, to his satisfaction, that any such instrument has not been duly stamped, at the time of making or issuing the same, by reason of accident, mistake,

inadvertence, or urgent necessity, and without any willful design to defraud the United States of the stamp, or to evade or delay the payment thereof, then and in such case, if such instrument, or, if the original be lost, a copy thereof, duly certified by the officer having charge of any records in which such original is required to be recorded, or otherwise duly proven to the satisfaction of the collector, shall, within twelve calendar months after the making or issuing thereof, be brought to the said collector of internal revenue to be stamped, and the stamp tax chargeable thereon shall be paid, it shall be lawful for the said collector to remit the penalty aforesaid and to cause such instrument to be duly stamped. And when the original instrument, or a certified or duly proven copy thereof, as aforesaid, duly stamped so as to entitle the same to be recorded, shall be presented to the clerk, register, recorder, or other officer having charge of the original record, it shall be lawful for such officer, upon the payment of the fee legally chargeable for the recording thereof, to make a new record thereof, or to note upon the original record the fact that the error or omission in the stamping of said original instrument has been corrected pursuant to law; and the original instrument or such certified copy, or the record thereof, may be used in all courts and places in the same manner and with like effect as if the instrument had been originally stamped: *And provided further*, That in all cases where the party has not affixed the stamp required by law upon any such instrument issued, registered, sold, or transferred at a time when and at a place where no collection district was established, it shall be lawful for him or them, or any party having an interest therein, to affix the proper stamp thereto, or, if the original be lost, to a copy thereof. But no right acquired in good faith before the stamping of such instrument, or copy thereof, as herein provided, if such record be required by law, shall in any manner be affected by such stamping as aforesaid.

"SEC. 14. That hereafter no instrument, paper, or document required by law to be stamped, which has been signed or issued without being duly stamped, or with a deficient stamp, nor any copy thereof, shall be recorded or admitted, or used as evidence in any court until a legal stamp or stamps, denoting the amount of tax, shall have been affixed thereto, as prescribed by law: *Provided*, That any bond, debenture, certificate of stock, or certificate of indebtedness issued in any foreign country shall pay the same tax as is required by law on similar instruments when issued, sold, or transferred in the United States; and the party to whom the same is issued, or by whom it is sold or transferred, shall, before selling or transferring the same, affix thereon the stamp or stamps indicating the tax required.

"SEC. 15. That it shall not be lawful to record or register any instrument, paper, or document required by law to be stamped unless a stamp or stamps of the proper amount shall have been affixed and canceled in the manner prescribed by law; and the record, registry, or transfer of any such instruments upon which the proper stamp or stamps aforesaid shall not have been affixed and canceled as aforesaid shall not be used in evidence.

"SEC. 16. That no instrument, paper, or document required by law to be stamped shall be deemed or held invalid and of no effect for the want of a particular kind or description of stamp designated for and denoting the tax charged on any such instrument, paper, or document, provided a legal documentary stamp or stamps denoting a tax of equal amount shall have been duly affixed and used thereon.

"SEC. 17. That all bonds, debentures, or certificates of indebtedness issued by the officers of the United

States Government, or by the officers of any State, county, town, municipal corporation, or other corporation exercising the taxing power, shall be, and hereby are, exempt from the stamp taxes required by this act: *Provided*, That it is the intent hereby to exempt from the stamp taxes imposed by this act such State, county, town, or other municipal corporations in the exercise only of functions strictly belonging to them in their ordinary governmental, taxing, or municipal capacity: *Provided further*, That stock and bonds issued by co-operative building and loan associations whose capital stock does not exceed ten thousand dollars, and building and loan associations or companies that make loans only to their shareholders, shall be exempt from the tax herein provided.

"SEC. 18. That on and after the first day of July, eighteen hundred and ninety-eight, no telegraph company or its agent or employee shall transmit to any person any dispatch or message without an adhesive stamp, denoting the tax imposed by this act, being affixed to a copy thereof, or having the same stamped thereupon, and in default thereof shall incur a penalty of ten dollars: *Provided*, That only one stamp shall be required on each dispatch or message, whether sent through one or more companies: *Provided*, That the messages or dispatches of the officers and employees of any telegraph or telephone company concerning the affairs and service of the company, and like messages or dispatches of the officials and employees of railroad companies sent over the wires on their respective railroads, shall be exempt from this requirement: *Provided further*, That messages of officers and employees of the Government on official business shall be exempt from the taxes herein imposed upon telegraphic and telephonic messages.

"SEC. 19. That all the provisions of this act relating to dies, stamps, adhesive stamps, and stamp taxes shall extend to and include (except where manifestly inapplicable) all articles or objects enumerated in Schedule B, subject to stamp taxes, and apply to the provisions in relation thereto.

"SEC. 20. That on and after the first day of July, eighteen hundred and ninety-eight, any person, firm, company, or corporation that shall make, prepare, and sell, or remove for consumption or sale, drugs, medicines, preparations, compositions, articles, or things, including perfumery and cosmetics, upon which a tax is imposed by this act, as provided for in Schedule B, without affixing thereto an adhesive stamp or label denoting the tax before mentioned shall be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not more than five hundred dollars, or be imprisoned not more than six months, or both, at the discretion of the court: *Provided*, That no stamp tax shall be imposed upon any uncompounded medicinal drug or chemical, nor upon any medicine sold to or for the use of any person which may be mixed or compounded for said person according to the written recipe or prescription of any practicing physician or surgeon, or which may be put up or compounded for said person by a druggist or pharmacist selling at retail only. The stamp taxes provided for in Schedule B of this act shall apply to all medicinal articles compounded by any formula, published or unpublished, which are put up in style or manner similar to that of patent, trade-mark, or proprietary medicine in general, or which are advertised on the package or otherwise as remedies or specifics for any ailment, or as having any special claim to merit, or to any peculiar advantage in mode of preparation, quality, use, or effect.

"SEC. 21. That any manufacturer or maker of any of the articles for sale mentioned in Schedule B, after the same shall have been so made, and the

particulars hereinbefore required as to stamps have been complied with, or any other person who shall take off, remove, or detach, or cause, or permit, or suffer to be taken off, or removed, or detached, any stamp, or who shall use any stamp, or any wrapper or cover to which any stamp is affixed, to cover any other article or commodity than that originally contained in such wrapper or cover, with such stamp when first used, with the intent to evade the stamp duties, shall for every such article, respectively, in respect of which any such offense shall be committed, be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not more than five hundred dollars, or be imprisoned not more than six months, or both, at the discretion of the court, and every such article or commodity as aforesaid shall also be forfeited.

"SEC. 22. That any maker or manufacturer of any of the articles or commodities mentioned in Schedule B, as aforesaid, or any other person who shall sell, send out, remove, or deliver any article or commodity, manufactured as aforesaid, before the tax thereon shall have been fully paid by affixing thereon the proper stamp, as in this act provided, or who shall hide or conceal, or cause to be hidden or concealed, or who shall remove or convey away, or deposit, or cause to be removed or conveyed away from or deposited in any place, any such article or commodity, to evade the tax chargeable thereon, or any part thereof, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not more than five hundred dollars, or be imprisoned not more than six months, or both, at the discretion of the court, together with the forfeiture of any such article or commodity: *Provided*, That articles upon which stamp taxes are required by this act may, when intended for exportation, be manufactured and sold or removed without having stamps affixed thereto, and without being charged with tax as aforesaid; and every manufacturer or maker of any article as aforesaid, intended for exportation, shall give such bonds and be subject to such rules and regulations to protect the revenue against fraud as may be from time to time prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury.

"SEC. 23. That every manufacturer or maker of any of the articles or commodities provided for in Schedule B, or his foreman, agent, or superintendent shall at the end of each and every month make, sign, and file with the collector of internal revenue for the district in which he resides a declaration in writing that no such article or commodity has, during such preceding month or time when the last declaration was made, been removed, or carried, or sent, or caused or suffered or known to have been removed, carried, or sent from the premises of such manufacturer or maker other than such as have been duly taken account of and charged with the stamp tax, on pain of such manufacturer or maker forfeiting for every refusal or neglect to make such declaration one hundred dollars; and if any such manufacturer or maker, or his foreman, agent, or superintendent, shall make any false or untrue declaration, such manufacturer or maker, or foreman, agent, or superintendent making the same shall be deemed guilty of a misdemeanor, and upon conviction shall pay a fine of not more than five hundred dollars, or be imprisoned not more than six months, or both, at the discretion of the court.

"SEC. 24. That the stamp taxes prescribed in this act on the articles provided for in Schedule B, shall attach to all such articles and things sold or removed for sale on and after the said first day of July, eighteen hundred and ninety-eight. Every person, except as otherwise provided in this act,

who offers or exposes for sale any article or thing provided for in said Schedule B, whether the article so offered or exposed is of foreign manufacture and imported or of domestic manufacture, shall be deemed the manufacturer thereof, and shall be subject to all the taxes, liabilities, and penalties imposed by law for the sale of articles without the use of the proper stamp denoting the tax paid thereon; and all such articles of foreign manufacture shall, in addition to the import duty imposed on the same, be subject to the stamp tax prescribed in this act: *Provided further*, That internal-revenue stamps required by existing law on imported merchandise shall be affixed thereto and canceled at the expense of the owner or importer before the withdrawal of such merchandise for consumption, and the Secretary of the Treasury is authorized to make such rules and regulations as may be necessary for the affixing and canceling of such stamps, not inconsistent herewith.

"SEC. 25. That the Commissioner of Internal Revenue shall cause to be prepared for the payment of the taxes prescribed in this act suitable stamps denoting the tax on the document, article, or thing to which the same may be affixed, and he is authorized to prescribe such method for the cancellation of said stamps, as substitute for or in addition to the method provided in this act, as he may deem expedient. The Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, is authorized to procure any of the stamps provided for in this act by contract whenever such stamps can not be speedily prepared by the Bureau of Engraving and Printing; but this authority shall expire on the first day of July, eighteen hundred and ninety-nine. That the adhesive stamps used in the payment of the tax levied in Schedules A and B of this act shall be furnished for sale by the several collectors of internal revenue, who shall sell and deliver them at their face value to all persons applying for the same, except officers or employees of the internal-revenue service: *Provided*, That such collectors may sell and deliver such stamps in quantities of not less than one hundred dollars of face value, with a discount of one per centum, except as otherwise provided in this act. And he may, with the approval of the Secretary of the Treasury, make all needful rules and regulations for the proper enforcement of this act.

"SCHEDULE A.—STAMP TAXES.

"Bonds, debentures, or certificates of indebtedness issued after the first day of July, anno Domini eighteen hundred and ninety-eight, by any association, company, or corporation, on each hundred dollars of face value or fraction thereof, five cents, and on each original issue, whether on organization or reorganization, of certificates of stock by any such association, company, or corporation, on each hundred dollars of face value or fraction thereof, five cents, and on all sales, or agreements to sell, or memoranda of sales or deliveries or transfers of shares or certificates of stock in any association, company, or corporation, whether made upon or shown by the books of the association, company, or corporation, or by any assignment in blank, or by any delivery, or by any paper or agreement or memorandum or other evidence of transfer or sale whether entitling the holder in any manner to the benefit of such stock, or to secure the future payment of money or for the future transfer of any stock, on each hundred dollars of face value or fraction thereof, two cents: *Provided*, That in case of sale where the evidence of transfer is shown only by the books of the company the stamp shall be placed upon such books; and where the change of ownership is by transfer certificate the stamp shall

be placed upon the certificate; and in cases of an agreement to sell or where the transfer is by delivery of the certificate assigned in blank there shall be made and delivered by the seller to the buyer a bill or memorandum of such sale, to which the stamp shall be affixed; and every bill or memorandum of sale or agreement to sell before mentioned shall show the date thereof, the name of the seller, the amount of the sale, and the matter or thing to which it refers. And any person or persons liable to pay the tax as herein provided, or any one who acts in the matter as agent or broker for such person or persons, who shall make any such sale, or who shall, in pursuance of any such sale, deliver any such stock, or evidence of the sale of any such stock or bill or memorandum thereof, as herein required, without having the proper stamps affixed thereto, with intent to evade the foregoing provisions shall be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not less than five hundred nor more than one thousand dollars, or be imprisoned not more than six months, or both, at the discretion of the court.

"Upon each sale, agreement of sale, or agreement to sell, any products or merchandise at any exchange, or board of trade, or other similar place, either for present or future delivery, for each one hundred dollars in value of said sale or agreement of sale or agreement to sell, one cent, and for each additional one hundred dollars or fractional part thereof in excess of one hundred dollars, one cent: *Provided*, That on every sale or agreement of sale or agreement to sell as aforesaid there shall be made and delivered by the seller to the buyer a bill, memorandum, agreement, or other evidence of such sale, agreement of sale, or agreement to sell, to which there shall be affixed a lawful stamp or stamps in value equal to the amount of the tax on such sale. And every such bill, memorandum, or other evidence of sale or agreement to sell shall show the date thereof, the name of the seller, the amount of the sale, and the matter or thing to which it refers; and any person or persons liable to pay the tax as herein provided, or any one who acts in the matter as agent or broker for such person or persons, who shall make any such sale or agreement of sale, or agreement to sell, or who shall, in pursuance of any such sale, agreement of sale, or agreement to sell, deliver any such products or merchandise without a bill, memorandum, or other evidence thereof as herein required, or who shall deliver such bill, memorandum, or other evidence of sale, or agreement to sell, without having the proper stamps affixed thereto, with intent to evade the foregoing provisions, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not less than five hundred nor more than one thousand dollars, or be imprisoned not more than six months, or both at the discretion of the court.

"Bank check, draft, or certificate of deposit not drawing interest, or order for the payment of any sum of money, drawn upon or issued by any bank, trust company, or any person or persons, companies, or corporations at sight or on demand, two cents.

"Bill of exchange (inland), draft, certificate of deposit, drawing interest, or order for the payment of any sum of money, otherwise than at sight or on demand, or any promissory note except bank notes issued for circulation, and for each renewal of the same, for a sum not exceeding one hundred dollars, two cents; and for each additional one hundred dollars or a fractional part thereof in excess of one hundred dollars, two cents. And from and after the first day of July, eighteen hundred and ninety-eight, the provisions of this paragraph shall apply as well to original domestic money orders issued

by the Government of the United States, and the price of such money orders shall be increased by a sum equal to the value of the stamps herein provided for.

"Bill of exchange (foreign) or letter of credit (including orders by telegraph or otherwise for the payment of money issued by express or other companies or any person or persons), drawn in but payable out of the United States, if drawn singly or otherwise than in a set of three or more, according to the custom of merchants and bankers, shall pay for a sum not exceeding one hundred dollars, four cents, and for each one hundred dollars or fractional part thereof in excess of one hundred dollars, four cents.

"If drawn in sets of two or more: For every bill of each set, where the sum made payable shall not exceed one hundred dollars, or the equivalent thereof, in any foreign currency in which such bill may be expressed, according to the standard of value fixed by the United States, two cents; and for each one hundred dollars or fractional part thereof in excess of one hundred dollars, two cents.

"Bills of lading or receipt (other than charter party) for any goods, merchandise, or effects, to be exported from a port or place in the United States to any foreign port or place, ten cents.

"Express and freight: It shall be the duty of every railroad or steamboat company, carrier, express company, or corporation or person whose occupation it is to act as such, to issue to the shipper or consignor, or his agent, or person from whom any goods are accepted for transportation, a bill of lading, manifest, or other evidence of receipt and forwarding for each shipment received for carriage and transportation, whether in bulk or in boxes, bales, packages, bundles, or not so inclosed or included; and there shall be duly attached and canceled, as is in this act provided, to each of said bills of lading, manifests or other memorandum, and to each duplicate thereof, a stamp of the value of one cent: *Provided*, That but one bill of lading shall be required on bundles or packages of newspapers when inclosed in one general bundle at the time of shipment. Any failure to issue such bill of lading, manifest, or other memorandum, as herein provided, shall subject such railroad or steamboat company, carrier, express company, or corporation or person to a penalty of fifty dollars for each offense, and no such bill of lading, manifest, or other memorandum shall be used in evidence unless it shall be duly stamped as aforesaid.

"Telephone messages: It shall be the duty of every person, firm, or corporation owning or operating any telephone line or lines to make within the first fifteen days of each month a sworn statement to the collector of internal revenue in each of their respective districts, stating the number of messages or conversations transmitted over their respective lines during the preceding month for which a charge of fifteen cents or more was imposed, and for each of such messages or conversations the said person, firm, or corporation shall pay a tax of one cent: *Provided*, That only one payment of said tax shall be required, notwithstanding the lines of one or more persons, firms, or corporations shall be used for the transmission of each of said messages or conversations.

"Bond: For indemnifying any person or persons, firm, or corporation who shall have become bound or engaged as surety for the payment of any sum of money, or for the due execution or performance of the duties of any office or position, and to account for money received by virtue thereof, and all other bonds of any description, except such as may be required in legal proceedings, not otherwise provided for in this schedule, fifty cents.

"Certificate of profits, or any certificate or memorandum showing an interest in the property or accumulations of any association, company, or corporation, and on all transfers thereof, on each one hundred dollars of face value or fraction thereof, two cents.

"Certificate: Any certificate of damage, or otherwise, and all other certificates or documents issued by any port warden, marine surveyor, or other person acting as such, twenty-five cents.

"Certificate of any description required by law not otherwise specified in this act, ten cents.

"Charter party: Contract or agreement for the charter of any ship, or vessel, or steamer, or any letter, memorandum, or other writing between the captain, master, or owner, or person acting as agent of any ship, or vessel, or steamer, and any other person or persons, for or relating to the charter of such ship, or vessel, or steamer, or any renewal or transfer thereof, if the registered tonnage of such ship, or vessel, or steamer does not exceed three hundred tons, three dollars.

"Exceeding three hundred tons and not exceeding six hundred tons, five dollars.

"Exceeding six hundred tons, ten dollars.

"Contract: Broker's note, or memorandum of sale of any goods or merchandise, stocks, bonds, exchange, notes of hand, real estate, or property of any kind or description issued by brokers or persons acting as such, for each note or memorandum of sale, not otherwise provided for in this act, ten cents.

"Conveyance: Deed, instrument, or writing, whereby any lands, tenements, or other realty sold shall be granted, assigned, transferred, or otherwise conveyed to, or vested in, the purchaser or purchasers, or any other person or persons, by his, her, or their direction, when the consideration or value exceeds one hundred dollars and does not exceed five hundred dollars, fifty cents; and for each additional five hundred dollars or fractional part thereof in excess of five hundred dollars, fifty cents.

"Dispatch, telegraphic: Any dispatch or message, one cent.

"Entry of any goods, wares, or merchandise at any customhouse, either for consumption or warehousing, not exceeding one hundred dollars in value, twenty-five cents.

"Exceeding one hundred dollars and not exceeding five hundred dollars in value, fifty cents.

"Exceeding five hundred dollars in value, one dollar.

"Entry for the withdrawal of any goods or merchandise from customs bonded warehouse, fifty cents.

"Insurance (life): Policy of insurance, or other instrument, by whatever name the same shall be called, whereby any insurance shall hereafter be made upon any life or lives, for each one hundred dollars or fractional part thereof, eight cents on the amount insured: *Provided*, That on all policies, for life insurance only, issued on the industrial or weekly-payment plan of insurance, the tax shall be forty per centum of the amount of the first weekly premium. And it shall be the duty of each person, firm, or corporation issuing such policies to make within the first fifteen days of every month a sworn statement to the collector of internal revenue in each of their respective districts, of the total amount of first weekly premiums received on such policies issued by the said person, firm, or corporation during the preceding month, and upon the total amount so received, the said person, firm, or corporation shall pay the said tax of forty per centum: *Provided further*, That the provisions of this section shall not apply to any fraternal, beneficiary society, or order, or farmers' purely local co-operative com-

pany or association, or employees' relief associations operated on the lodge system, or local co-operation plan, organized and conducted solely by the members thereof for the exclusive benefit of its members and not for profit.

"Insurance (marine, inland, fire): Each policy of insurance or other instrument, by whatever name the same shall be called, by which insurance shall be made or renewed upon property of any description (including rents or profits), whether against peril by sea or on inland waters, or by fire or lightning, or other peril, made by any person, association, or corporation, upon the amount of premium charged, one half of one cent on each dollar or fractional part thereof: *Provided*, That purely co-operative or mutual fire insurance companies carried on by the members thereof solely for the protection of their own property and not for profit shall be exempted from the tax herein provided.

"Insurance (casualty, fidelity, and guarantee): Each policy of insurance, or bond or obligation of the nature of indemnity for loss, damage, or liability issued, or executed, or renewed by any person, association, company, or corporation, transacting the business of accident, fidelity, employer's liability, plate-glass, steam-boiler, burglary, elevator, automatic sprinkler, or other branch of insurance (except life, marine, inland, and fire insurance), and each bond undertaking or recognizance, conditioned for the performance of the duties of any office or position, or for the doing or not doing of anything therein specified, or other obligation of the nature of indemnity, and each contract or obligation guaranteeing the validity or legality of bonds or other obligations issued by any State, county, municipal, or other body or organization, or guaranteeing titles to real-estate or mercantile credits executed or guaranteed by any fidelity, guarantee, or surety company upon the amount of premium charged, one half of one cent on each dollar or fractional part thereof.

"Lease, agreement, memorandum, or contract for the hire, use, or rent of any land, tenement, or portion thereof—

"If for a period of time not exceeding one year, twenty-five cents.

"If for a period of time exceeding one year and not exceeding three years, fifty cents.

"If for a period exceeding three years, one dollar.

"Manifest for customhouse entry or clearance of the cargo of any ship, vessel, or steamer for a foreign port—

"If the registered tonnage of such ship, vessel, or steamer does not exceed three hundred tons, one dollar.

"Exceeding three hundred tons, and not exceeding six hundred tons, three dollars.

"Exceeding six hundred tons, five dollars.

"Mortgage or pledge, of lands, estate, or property, real or personal, heritable, or movable, whatsoever, where the same shall be made as a security for the payment of any definite and certain sum of money, lent at the time or previously due and owing or forborne to be paid, being payable; also any conveyance of any lands, estate, or property whatsoever, in trust to be sold or otherwise converted into money, which shall be intended only as security, either by express stipulation or otherwise; on any of the foregoing exceeding one thousand dollars and not exceeding one thousand five hundred dollars, twenty-five cents; and on each five hundred dollars or fractional part thereof in excess of fifteen hundred dollars, twenty-five cents: *Provided*, That upon each and every assignment or transfer of a mortgage, lease, or policy of insurance, or the renewal or continuance of any agreement,

contract, or charter, by letter or otherwise, a stamp duty shall be required and paid at the same rate as that imposed on the original instrument.

"Passage ticket, by any vessel from a port in the United States to a foreign port, if costing not exceeding thirty dollars, one dollar.

"Costing more than thirty and not exceeding sixty dollars, three dollars.

"Costing more than sixty dollars, five dollars.

"Power of attorney or proxy for voting at any election for officers of any incorporated company or association, except religious, charitable, or literary societies, or public cemeteries, ten cents.

"Power of attorney to sell and convey real estate, or to rent or lease the same, to receive or collect rent, to sell or transfer any stock, bonds, scrip, or for the collection of any dividends or interest thereon, or to perform any and all other acts not hereinbefore specified, twenty-five cents: *Provided*, That no stamps shall be required upon any papers necessary to be used for the collection of claims from the United States for pensions, back pay, bounty, or for property lost in the military or naval service.

"Protest: Upon the protest of every note, bill of exchange, acceptance, check or draft, or any marine protest, whether protested by a notary public or by any other officer who may be authorized by the law of any State or States to make such protest, twenty-five cents.

"Warehouse receipt for any goods, merchandise, or property of any kind held on storage in any public or private warehouse or yard, except receipts for agricultural products deposited by the actual grower thereof in the regular course of trade for sale, twenty-five cents: *Provided*, That the stamp duties imposed by the foregoing schedule on manifests, bills of lading, and passage tickets shall not apply to steamboats or other vessels plying between ports of the United States and ports in British North America.

"SCHEDULE B.

"Medicinal proprietary articles and preparations: For and upon every packet, box, bottle, pot, or phial, or other inclosure, containing any pills, powders, tinctures, troches or lozenges, sirups, cordials, biters, anodynes, tonics, plasters, liniments, salves, ointments, pastes, drops, waters (except natural spring waters and carbonated natural spring waters), essences, spirits, oils, and all medicinal preparations or compositions whatsoever, made and sold, or removed for sale, by any person or persons whatever, wherein the person making or preparing the same has or claims to have any private formula, secret, or occult art for the making or preparing the same, or has or claims to have any exclusive right or title to the making or preparing the same, or which are prepared, uttered, vended, or exposed for sale under any letters patent, or trade-mark, or which, if prepared by any formula, published or unpublished, are held out or recommended to the public by the makers, venders, or proprietors thereof as proprietary medicines, or medicinal proprietary articles or preparations, or as remedies or specifics for any disease, diseases, or affection whatever affecting the human or animal body, as follows: Where such packet, box, bottle, pot, phial, or other inclosure, with its contents, shall not exceed, at the retail price or value, the sum of five cents, one eighth of one cent.

"Where such packet, box, bottle, pot, phial, or other inclosure, with its contents, shall exceed the retail price or value of five cents and shall not exceed, at the retail price or value, the sum of ten cents, two eighths of one cent.

"Where such packet, box, bottle, pot, phial, or

other inclosure, with its contents, shall exceed the retail price or value of ten cents and shall not exceed at the retail price or value the sum of fifteen cents, three eighths of one cent.

"Where each packet, box, bottle, pot, phial, or other inclosure, with its contents, shall exceed the retail price or value of fifteen cents and shall not exceed the retail price or value of twenty-five cents, five eighths of one cent. And for each additional twenty-five cents of retail price or value or fractional part thereof in excess of twenty-five cents, five eighths of one cent.

"Perfumery and cosmetics and other similar articles: For and upon every packet, box, bottle, pot, phial, or other inclosure containing any essence, extract, toilet water, cosmetic, vaseline, petrolatum, hair oil, pomade, hair dressing, hair restorative, hair dye, tooth wash, dentifrice, tooth paste, aromatic cachous, or any similar substance or article, by whatsoever name the same heretofore have been, now are, or may hereafter be called, known, or distinguished, used or applied, or to be used or applied as perfumes or as applications to the hair, mouth, or skin, or otherwise used, made, prepared, and sold or removed for consumption and sale in the United States, where such packet, box, bottle, pot, phial, or other inclosure, with its contents, shall not exceed at the retail price or value the sum of five cents, one eighth of one cent.

"Where such packet, box, bottle, pot, phial, or other inclosure, with its contents, shall exceed the retail price or value of five cents, and shall not exceed the retail price or value of ten cents, two eighths of one cent.

"Where such packet, box, bottle, pot, phial, or other inclosure, with its contents, shall exceed the retail price or value of ten cents and shall not exceed the retail price or value of fifteen cents, three eighths of one cent.

"Where such packet, box, bottle, pot, phial, or other inclosure, with its contents, shall exceed the retail price or value of fifteen cents and shall not exceed the retail price or value of twenty-five cents, five eighths of one cent. And for each additional twenty-five cents of retail price or value or fractional part thereof in excess of twenty-five cents, five eighths of one cent.

"Chewing gum or substitutes therefor: For and upon each box, carton, jar, or other package containing chewing gum of not more than one dollar of actual retail value, four cents; if exceeding one dollar of retail value, for each additional dollar or fractional part thereof, four cents: under such regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe.

"Sparkling or other wines, when bottled for sale, upon each bottle containing one pint or less, one cent.

"Upon each bottle containing more than one pint, two cents.

"That all articles and preparations provided for in this schedule which are in the hands of manufacturers or of wholesale or retail dealers on the first day of July, eighteen hundred and ninety-eight, shall be subject to the payment of the stamp taxes herein provided for, but it shall be deemed a compliance with this act as to such articles on hand in the hands of wholesale or retail dealers as aforesaid who are not the manufacturers thereof to affix the proper adhesive tax stamp at the time the packet, box, bottle, pot, or phial, or other inclosure with its contents is sold at retail.

"SEC. 26. There shall be an allowance of drawback on articles mentioned in Schedule B of this act on which any internal-revenue tax shall have been paid, equal in amount to the stamp tax paid

thereon, and no more, when exported, to be paid by the warrant of the Secretary of the Treasury on the Treasurer of the United States, out of any money arising from internal taxes not otherwise appropriated: *Provided*, That no allowance of drawback shall be made for any such articles exported prior to July first, eighteen hundred and ninety-eight. The evidence that any such tax has been paid as aforesaid shall be furnished to the satisfaction of the Commissioner of Internal Revenue by the person claiming the allowance of drawback, and the amount shall be ascertained under such regulations as shall be prescribed from time to time by said Commissioner, with the approval of the Secretary of the Treasury.

"EXCISE TAXES ON PERSONS, FIRMS, COMPANIES, AND CORPORATIONS ENGAGED IN REFINING PETROLEUM AND SUGAR.

"SEC. 27. That every person, firm, corporation, or company carrying on or doing the business of refining petroleum, or refining sugar, or owning or controlling any pipe line for transporting oil or other products, whose gross annual receipts exceed two hundred and fifty thousand dollars, shall be subject to pay annually a special excise tax equivalent to one quarter of one per centum on the gross amount of all receipts of such persons, firms, corporations, and companies in their respective business in excess of said sum of two hundred and fifty thousand dollars.

"And a true and accurate return of the amount of gross receipts as aforesaid shall be made and rendered monthly by each of such associations, corporations, companies, or persons to the collector of the district in which any such association, corporation, or company may be located, or in which such person has his place of business. Such return shall be verified under oath by the person making the same, or, in case of corporations, by the president or chief officer thereof. Any person or officer failing or refusing to make return as aforesaid, or who shall make a false or fraudulent return, shall be liable to a penalty of not less than one thousand dollars and not exceeding ten thousand dollars for each failure or refusal to make return as aforesaid and for each and every false or fraudulent return.

"SEC. 28. That from and after the first day of July, eighteen hundred and ninety-eight, a stamp tax of one cent shall be levied and collected on every seat sold in a palace or parlor car and on every berth sold in a sleeping car, the stamp to be affixed to the ticket and paid by the company issuing the same.

"LEGACIES AND DISTRIBUTIVE SHARES OF PERSONAL PROPERTY.

"SEC. 29. That any person or persons having in charge or trust, as administrators, executors, or trustees, any legacies or distributive shares arising from personal property, where the whole amount of such personal property as aforesaid shall exceed the sum of ten thousand dollars in actual value, passing, after the passage of this act, from any person possessed of such property, either by will or by the intestate laws of any State or Territory, or any personal property or interest therein, transferred by deed, grant, bargain, sale, or gift, made or intended to take effect in possession or enjoyment after the death of the grantor or bargainer, to any person or persons, or to any body or bodies, politic or corporate, in trust or otherwise, shall be, and hereby are, made subject to a duty or tax, to be paid to the United States, as follows—that is to say: Where the whole amount of said personal property shall exceed in value ten thousand and

shall not exceed in value the sum of twenty-five thousand dollars the tax shall be:

"First. Where the person or persons entitled to any beneficial interest in such property shall be the lineal issue or lineal ancestor, brother, or sister to the person who died possessed of such property, as aforesaid, at the rate of seventy-five cents for each and every hundred dollars of the clear value of such interest in such property.

"Second. Where the person or persons entitled to any beneficial interest in such property shall be the descendant of a brother or sister of the person who died possessed, as aforesaid, at the rate of one dollar and fifty cents for each and every hundred dollars of the clear value of such interest.

"Third. Where the person or persons entitled to any beneficial interest in such property shall be the brother or sister of the father or mother, or a descendant of a brother or sister of the father or mother, of the person who died possessed as aforesaid, at the rate of three dollars for each and every hundred dollars of the clear value of such interest.

"Fourth. Where the person or persons entitled to any beneficial interest in such property shall be the brother or sister of the grandfather or grandmother, or a descendant of the brother or sister of the grandfather or grandmother, of the person who died possessed as aforesaid, at the rate of four dollars for each and every hundred dollars of the clear value of such interest.

"Fifth. Where the person or persons entitled to any beneficial interest in such property shall be in any other degree of collateral consanguinity than is hereinbefore stated, or shall be a stranger in blood to the person who died possessed, as aforesaid, or shall be a body politic or corporate, at the rate of five dollars for each and every hundred dollars of the clear value of such interest: *Provided*, That all legacies or property passing by will, or by the laws of any State or Territory, to husband or wife of the person died possessed, as aforesaid, shall be exempt from tax or duty.

"When the amount or value of said property shall exceed the sum of twenty-five thousand dollars, but shall not exceed the sum or value of one hundred thousand dollars, the rates of duty or tax above set forth shall be multiplied by one and one half; and where the amount or value of said property shall exceed the sum of one hundred thousand dollars, but shall not exceed the sum of five hundred thousand dollars, such rates of duty shall be multiplied by two; and where the amount or value of said property shall exceed the sum of five hundred thousand dollars, but shall not exceed the sum of one million dollars, such rates of duty shall be multiplied by two and one half; and where the amount or value of said property shall exceed the sum of one million dollars, such rates of duty shall be multiplied by three.

"SEC. 30. That the tax or duty aforesaid shall be a lien and charge upon the property of every person who may die as aforesaid for twenty years, or until the same shall, within that period, be fully paid to and discharged by the United States; and every executor, administrator, or trustee, before payment and distribution to the legatees, or any parties entitled to beneficial interest therein, shall pay to the collector or deputy collector of the district of which the deceased person was a resident the amount of the duty or tax assessed upon such legacy or distributive share, and shall also make and render to the said collector or deputy collector a schedule, list, or statement, in duplicate, of the amount of such legacy or distributive share, together with the amount of duty which has accrued, or shall accrue, thereon, verified by his oath or affirmation, to be administered and certified thereon by some magis-

trate or officer having lawful power to administer such oaths, in such form and manner as may be prescribed by the Commissioner of Internal Revenue, which schedule, list, or statement shall contain the names of each and every person entitled to any beneficial interest therein, together with the clear value of such interest, the duplicate of which schedule, list, or statement shall be by him immediately delivered, and the tax thereon paid to such collector; and upon such payment and delivery of such schedule, list, or statement said collector or deputy collector shall grant to such person paying such duty or tax a receipt or receipts for the same in duplicate, which shall be prepared as hereinafter provided. Such receipt or receipts, duly signed and delivered by such collector or deputy collector, shall be sufficient evidence to entitle such executor, administrator, or trustee to be credited and allowed such payment by every tribunal which, by the laws of any State or Territory, is, or may be, empowered to decide upon and settle the accounts of executors and administrators. And in case such executor, administrator, or trustee shall refuse or neglect to pay the aforesaid duty or tax to the collector or deputy collector, as aforesaid, within the time hereinafter provided, or shall neglect or refuse to deliver to said collector or deputy collector the duplicate of the schedule, list, or statement of such legacies, property, or personal estate, under oath, as aforesaid, or shall neglect or refuse to deliver the schedule, list, or statement of such legacies, property, or personal estate, under oath, as aforesaid, or shall deliver to said collector or deputy collector a false schedule or statement of such legacies, property, or personal estate, or give the names and relationship of the persons entitled to beneficial interests therein untruly, or shall not truly and correctly set forth and state therein the clear value of such beneficial interest, or where no administration upon such property or personal estate shall have been granted or allowed under existing laws, the collector or deputy collector shall make out such lists and valuation as in other cases of neglect or refusal, and shall assess the duty thereon; and the collector shall commence appropriate proceedings before any court of the United States, in the name of the United States, against such person or persons as may have the actual or constructive custody or possession of such property or personal estate, or any part thereof, and shall subject such property or personal estate, or any portion of the same, to be sold upon the judgment or decree of such court, and from the proceeds of such sale the amount of such tax or duty, together with all costs and expenses of every description to be allowed by such court, shall be first paid, and the balance, if any, deposited according to the order of such court, to be paid under its direction to such person or persons as shall establish title to the same. The deed or deeds, or any proper conveyance of such property or personal estate, or any portion thereof, so sold under such judgment or decree, executed by the officer lawfully charged with carrying the same into effect, shall vest in the purchaser thereof all the title of the delinquent to the property or personal estate sold under and by virtue of such judgment or decree, and shall release every other portion of such property or personal estate from the lien or charge thereon created by this act. And every person or persons who shall have in his possession, charge, or custody any record, file, or paper containing, or supposed to contain, any information concerning such property or personal estate, as aforesaid, passing from any person who may die, as aforesaid, shall exhibit the same at the request of the collector or deputy collector of the district, and to any law officer of the United States, in the performance of

his duty under this act, his deputy or agent, who may desire to examine the same. And if any such person, having in his possession, charge, or custody any such records, files, or papers, shall refuse or neglect to exhibit the same on request, as aforesaid, he shall forfeit and pay the sum of five hundred dollars: *Provided*, That in all legal controversies where such deed or title shall be the subject of judicial investigation, the recital in said deed shall be *prima facie* evidence of its truth, and that the requirements of the law had been complied with by the officers of the Government.

"SEC. 31. That all administrative, special, or stamp provisions of law, including the laws in relation to the assessment of taxes, not heretofore specifically repealed are hereby made applicable to this act.

"LOANS.

"SEC. 32. That the Secretary of the Treasury is authorized to borrow from time to time, at a rate of interest not exceeding three per centum per annum, such sum or sums as, in his judgment, may be necessary to meet public expenditures, and to issue therefor certificates of indebtedness in such form as he may prescribe and in denominations of fifty dollars or some multiple of that sum; and each certificate so issued shall be payable, with the interest accrued thereon, at such time, not exceeding one year from the date of its issue, as the Secretary of the Treasury may prescribe: *Provided*, That the amount of such certificates outstanding shall at no time exceed one hundred millions of dollars; and the provisions of existing law respecting counterfeiting and other fraudulent practices are hereby extended to the bonds and certificates of indebtedness authorized by this act.

"SEC. 33. That the Secretary of the Treasury is hereby authorized to borrow on the credit of the United States from time to time as the proceeds may be required to defray expenditures authorized on account of the existing war (such proceeds when received to be used only for the purpose of meeting such war expenditures), the sum of four hundred million dollars, or so much thereof as may be necessary, and to prepare and issue therefor, coupon or registered bonds of the United States in such form as he may prescribe, and in denominations of twenty dollars or some multiple of that sum, redeemable in coin at the pleasure of the United States after ten years from the date of their issue, and payable twenty years from such date, and bearing interest payable quarterly in coin at the rate of three per centum per annum; and the bonds herein authorized shall be exempt from all taxes or duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority: *Provided*, That the bonds authorized by this section shall be first offered at par as a popular loan under such regulations, prescribed by the Secretary of the Treasury, as will give opportunity to the citizens of the United States to participate in the subscriptions to such loan, and in allotting said bonds the several subscriptions of individuals shall be first accepted, and the subscriptions for the lowest amounts shall be first allotted: *Provided further*, That any portion of any issue of said bonds not subscribed for as above provided may be disposed of by the Secretary of the Treasury at not less than par, under such regulations as he may prescribe, but no commissions shall be allowed or paid thereon; and a sum not exceeding one tenth of one per centum of the amount of the bonds and certificates herein authorized is hereby appropriated out of any money in the Treasury not otherwise appropriated, to pay the expense of preparing, advertising, and issuing the same.

"COINAGE OF SILVER BULLION.

"SEC. 34. That the Secretary of the Treasury is hereby authorized and directed to coin into standard silver dollars as rapidly as the public interests may require, to an amount, however, of not less than one and one half millions of dollars in each month, all of the silver bullion now in the Treasury purchased in accordance with the provisions of the act approved July fourteenth, eighteen hundred and ninety, entitled 'An Act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' and said dollars, when so coined, shall be used and applied in the manner and for the purposes named in said act.

"MIXED FLOUR.

"SEC. 35. That for the purposes of this act the words 'mixed flour' shall be understood to mean the food product made from wheat mixed or blended in whole or in part with any other grain or other material, or the manufactured product of any other grain or other material than wheat.

"SEC. 36. That every person, firm, or corporation, before engaging in the business of making, packing, or repacking mixed flour, shall pay a special tax at the rate of twelve dollars per annum, the same to be paid and posted in accordance with the provisions of sections thirty-two hundred and forty-two and thirty-two hundred and thirty-nine of the Revised Statutes, and subject to the fines and penalties therein imposed for any violation thereof.

"SEC. 37. That every person, firm, or corporation making, packing, or repacking mixed flour shall plainly mark or brand each package containing the same with the words 'mixed flour' in plain black letters not less than two inches in length, together with the true weight of such package, the names of the ingredients composing the same, the name of the maker or packer, and the place where made or packed. In addition thereto, such maker or packer shall place in each package a card not smaller than two inches in width by three inches in length, upon which shall be printed the words 'mixed flour,' together with the names of the ingredients composing the same, and the name of the maker or packer, and the place where made or packed. Any person, firm, or corporation making, packing, or repacking mixed flour hereunder, failing to comply with the provisions of this section shall be deemed guilty of a misdemeanor, and upon conviction shall be punished by a fine of not less than two hundred and fifty dollars and not more than five hundred dollars, or be imprisoned not less than sixty days nor more than one year.

"SEC. 38. That all sales and consignments of mixed flour shall be in packages not before used for that purpose; and every person, firm, or corporation knowingly selling or offering for sale any mixed flour in other than marked and branded packages, as required by the provisions of this act relating to the manufacture and sale of mixed flour, or who packs in any package or packages any mixed flour in any manner contrary to the provisions relating to the manufacture and sale of mixed flour of this act, or who falsely marks or brands any package or packages containing mixed flour, or unlawfully removes such marks or brands, shall, for each such offense, be punished by a fine of not less than two hundred and fifty dollars and not more than five hundred dollars, or by imprisonment not less than sixty days nor more than one year.

"SEC. 39. That in addition to the branding and marking of mixed flour as herein provided, there shall be affixed to the packages containing the same a label in the following words: 'Notice.—The manufacturer (or packer, as the case may be) of the

mixed flour herein contained has complied with all the requirements of law. Every person is cautioned not to use this package or label again or to remove the contents without destroying the revenue stamp thereon, under the penalty prescribed by law in such cases.' Every person, firm, or corporation failing or neglecting to affix such label to any package containing mixed flour made or packed by him or them, or who removes from any such package any label so affixed, shall, upon conviction thereof, be fined not less than fifty dollars for each label so removed.

"SEC. 40. That barrels or other packages in which mixed flour may be packed shall contain not to exceed one hundred and ninety-six pounds; that upon the manufacture and sale of mixed flour there shall be levied a tax of four cents per barrel or other package containing one hundred and ninety-six pounds or more than ninety-eight pounds; two cents on every half barrel or other package containing ninety-eight pounds or more than forty-nine pounds; one cent on every quarter barrel or other package containing forty-nine pounds or more than twenty-four and one half pounds; and one half cent on every one eighth barrel or other package containing twenty-four and a half pounds or less, to be paid by the person, firm, or corporation making or packing said flour. The tax levied by this section shall be represented by coupon stamps, and the provisions of existing laws governing the engraving, issue, sale, accountability, effacement, and destruction of stamps relating to tobacco and snuff shall, so far as applicable, be made to apply to stamps provided in this section: *Provided*, That when mixed flour, on the manufacture and sale of which the tax herein imposed has been paid, is sold and then repacked without the addition of any other material, such repacked flour shall not be liable to any additional tax; but the packages containing such repacked flour shall be branded or marked as required by the provisions of section thirty-seven of this act, and shall contain the card provided for in section thirty-seven hereof; and in addition thereto the person, firm, or corporation repacking mixed flour shall place on the packages containing the same a label in the following words: 'Notice.—The contents of this package have been taken from a regular statutory package, upon which the tax has been duly paid.' Any person violating the provisions of this section shall, upon conviction thereof, be punished by a fine of not less than two hundred and fifty dollars and not more than five hundred dollars, or by imprisonment not to exceed one year.

"SEC. 41. That whenever any person, firm, or corporation sells, consigns, or removes for sale, consignment, or consumption any mixed flour upon which the tax required by this act has not been paid, it shall be the duty of the Commissioner of Internal Revenue, for a period of not more than one year after such sale, consignment, or removal, upon satisfactory proof, to estimate the amount of tax which should have been paid, and to make an assessment therefor and certify the same to the collector of the proper district. The tax so assessed shall be in addition to the penalties imposed by this act for an unauthorized sale or removal.

"SEC. 42. That all mixed flours, imported from foreign countries, shall, in addition to any import duties imposed thereon, pay an internal-revenue tax equal in amount to the tax imposed under section forty of this act, such tax to be represented by coupon stamps, and the packages containing such imported mixed flour shall be marked, branded, labeled, and stamped as in the case of mixed flour made or packed in the United States. Any person, firm, or corporation purchasing or re-

ceiving for sale or repacking any such mixed flour which has not been branded, labeled, or stamped as required by this act, or which is contained in packages which have not been marked, branded, labeled, or stamped as required by this act, shall, upon conviction, be fined not less than fifty dollars nor more than five hundred dollars.

"SEC. 43. That any person, firm, or corporation knowingly purchasing or receiving for sale or for repacking and resale any mixed flour from any maker, packer, or importer, who has not paid the tax herein provided, shall, for each offense, be fined not less than fifty dollars, and forfeit to the United States all the articles so purchased or received, or the full value thereof.

"SEC. 44. That mixed flour may be removed from the place of manufacture or from the place where packed for export to a foreign country without payment of tax or affixing stamps or labels thereto, under such regulation and the filing of such bond and other security as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe. Every person, firm, or corporation who shall export mixed flour shall plainly mark on each package containing the same, the words 'mixed flour,' and the names of the ingredients composing the same, the name of the maker or packer, and the place where made or packed, in accordance with the provisions of sections thirty-six to forty-five, inclusive, of this act.

"SEC. 45. That whenever any package containing mixed flour is emptied it shall be the duty of the person in whose possession it is to destroy the stamp thereon. Any person disposing of such package without first having destroyed the stamp or mark or marks thereon shall, upon conviction, be punished by a fine not exceeding the sum of twenty-five dollars.

"SEC. 46. That all fines, penalties, and forfeitures imposed by section thirty-six to section forty-five, both inclusive, of this act may be recovered in any court of competent jurisdiction.

"SEC. 47. That the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall make all needful rules and regulations for carrying into effect the provisions relating to the manufacture and sale of mixed flour, being section thirty-five to section forty-nine, both inclusive, of this act, and the said Commissioner of Internal Revenue, by and with the approval of the Secretary of the Treasury, for the purpose of carrying said last-mentioned provisions of this act into effect, is hereby authorized to employ such additional clerks and agents as may be necessary for that purpose, not to exceed twenty in number.

"SEC. 48. That any person, firm, or corporation found guilty of a second or any subsequent violation of any of the provisions of section thirty-six to section forty-five, both inclusive, relating to the manufacture and sale of mixed flour as aforesaid, of this act shall, in addition to the penalties herein imposed, be imprisoned not less than thirty days nor more than ninety days.

"SEC. 49. That the provisions of this act relating to the manufacture and sale of mixed flour shall take effect and be in force sixty days from and after the date of the passage of this act; and all packages of mixed flour found on the premises of any person, firm, or corporation on said day, who has made, packed, or repacked the same, on which the tax herein authorized has not been paid, shall be deemed taxable under the provisions of section thirty-six to section forty-five, both inclusive, of this act, and shall be taxed and have affixed thereon such marks, brands, labels, and stamps as required by the provisions of said sections or by the rules

and regulations prescribed by the Commissioner of Internal Revenue, under authority of this act.

"TEA.

"SEC. 50. That there shall be levied, collected, and paid upon tea when imported from foreign countries a duty of ten cents per pound.

"SEC. 51. That this act shall take effect on the day next succeeding the date of its passage except as otherwise specially provided for.

"Approved, June 13, 1898."

Removal of Disability.—The good feeling between the North and the South, brought about by the war with Spain, was manifested in many ways during the session through individual action; but the passage of an act removing the disability imposed in section 3 of Amendment XIV to the Constitution seemed to brush aside the last shadow of a grievance left by the civil war. This section provides that no one who, having taken an oath as member of Congress, as an officer of the United States, as a member of any State Legislature, or as an executive or judicial officer of any State to support the Constitution, shall have engaged in insurrection against the United States, shall be Senator, Representative, presidential elector, or hold any civil or military office under the United States; but the disability may be removed by Congress by a two-thirds vote. The class excluded on account of complicity in the rebellion was so large in the beginning as to include nearly all the leading men of the South; but the disabilities were removed by special action in many cases, nearly every one who asked for the favor receiving it, so that 3,300 persons were amnestied within two years after the adoption of the fourteenth amendment. An effort was then made for removing the disability of classes instead of individuals, and the House of Representatives twice passed measures for amnesty excluding former members of Congress, officers of the army and navy, and members of State conventions who voted for ordinances of secession, but the measures failed in the Senate, though President Grant was urgent for a general amnesty. However, a measure was passed and approved May 23, 1872, removing disabilities from all save members of the Thirty-sixth and Thirty-seventh Congresses, judicial, naval, and military officers, heads of departments, and foreign ministers who had taken part in the rebellion. This left only a small remnant under disability—about 750 in 1876, out of at least 18,000 of the most prominent men in the South originally disqualified. In 1875 the movement for general amnesty was strongly pushed, but it failed after a fierce and vindictive debate in the House of Representatives, in which Mr. Blaine, who, with President Grant, had been its great champion, insisted on the exclusion of Jeff Davis from the scope of the measure, and so defeated it. And so the disability which had been a great practical device for keeping thousands of Southern leaders out of politics became a mere grievance to a few men, for most of whom disability was a title to distinction, and their number decreased rapidly with the lapse of years. Its removal at this late day had become a mere matter of sentiment.

The bill for that purpose was introduced in the Senate, May 12, by Mr. Stewart, of Nevada, as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all disabilities imposed by the fourteenth amendment of the Constitution of the United States upon persons on account of having engaged in insurrection or rebellion against the United States and on account of having given aid

or comfort to the enemies thereof are hereby removed."

It was passed at once, without discussion; and it came up in the House of Representatives June 1. The title was amended so as to read: "A bill to remove all disability imposed by section 3 of the fourteenth amendment to the Constitution of the United States," and the measure was amended so as to provide simply, "that the disability imposed by section 3 of the fourteenth amendment to the Constitution of the United States heretofore incurred is hereby removed." It was then passed after a few harmonious speeches. It was approved by the President, June 6, 1898.

War Measures.—April 23 the House of Representatives passed a bill for the better organization of the line of the army of the United States; on April 25 it was amended and passed by the Senate; and the President approved it, April 26, in the form adopted by a conference committee, as follows:

"Be it enacted, etc., That hereafter the peace organization of each regiment of infantry now in service shall embrace 1 colonel, 1 lieutenant colonel, 2 majors, 10 captains, 12 first lieutenants, 10 second lieutenants, 1 sergeant major, 1 quartermaster sergeant, 1 chief musician, 2 principal musicians, 2 battalions of 4 companies each, and 2 skeleton or unmanned companies, the organized companies to be constituted as now authorized by law: *Provided*, That nothing herein contained shall be construed as abolishing the office of chaplain in each regiment of colored troops: *And provided further*, That the vacancies in the grade of major created by this section shall be filled by promotion according to seniority in the infantry arm.

"Sec. 2. That upon a declaration of war by Congress, or a declaration by Congress that war exists, the President, in his discretion, may establish a third battalion for each infantry regiment, consisting of four companies, to be supplied by manning the two skeleton companies and by organizing two additional companies. The vacancies of commissioned officers in the additional companies shall be filled by promotions by seniority in the infantry arm and by appointments in accordance with existing law; and hereafter all vacancies occurring in the cavalry, artillery, and infantry above the grade of second lieutenant shall, subject to the examination now required by law, be filled by promotion according to seniority from the next lower grade in each arm.

"Sec. 3. That upon a declaration of war by Congress, or a declaration by Congress that war exists, the enlisted strength of a company, troop, and battery, respectively, may, in the discretion of the President, be increased to comprise not exceeding:

"For each company of infantry: One first sergeant, 1 quartermaster sergeant, 4 sergeants, 12 corporals, 2 musicians, 1 artificer, 1 wagoner, and 84 privates; total enlisted, 106: *Provided*, That in the event of a call by the President for either volunteers or the militia of the country the President is authorized to accept the quotas of troops of the various States and Territories, including the District of Columbia and Indian Territory, as organized under the laws of the States and Territories, including the District of Columbia, in companies, troops, and batteries, each to contain, so far as practicable, the number of enlisted men authorized in this act for each arm of the service, and battalions of not less than 3 such companies and regiments of not less than 10 nor more than 12 such companies, but this proviso shall apply to companies, troops, batteries, battalions, and regimental organizations and none other: *Provided further*, That in volunteer organizations received into the

service under this act and existing laws one hospital steward shall be authorized for each battalion.

"For each troop of cavalry: One first sergeant, 1 quartermaster sergeant, 6 sergeants, 8 corporals, 2 farriers and blacksmiths, 2 trumpeters, 1 saddler, 1 wagoner, 78 privates; total enlisted, 100.

"For each battery of heavy artillery: One first sergeant, 22 sergeants, 10 corporals, 2 musicians, 2 artificers, 1 wagoner, 162 privates; total enlisted, 200.

"For each battery of field artillery: One first sergeant, 1 quartermaster sergeant, 1 veterinary sergeant, 6 sergeants, 15 corporals, 2 farriers, 2 artificers, 1 saddler, 2 musicians, 1 wagoner, 141 privates; total enlisted, 173.

"For each company of engineers: One first sergeant, 10 sergeants, 10 corporals, 2 musicians, 64 first-class privates, 63 second-class privates; total enlisted, 150.

"In time of war there shall be added to the Signal Corps of the army 10 corporals, 100 first-class privates, and 40 second-class privates, who shall have the pay and allowances of engineer troops of the same grade.

"The quartermaster and veterinary sergeants provided for in this section shall have the pay and allowances of sergeants of their respective arms.

"SEC. 4. That when recruited to their war strength the President may add one second lieutenant to each battery of artillery; such officers to be filled by appointments, as prescribed by existing law.

"SEC. 5. That in time of war the President shall cause the batteries of artillery authorized by law to be organized as heavy or field artillery, as in his judgment the exigencies of the service may require.

"SEC. 6. That in time of war the pay proper of enlisted men shall be increased 20 per cent. over and above the rates of pay as fixed by law: *Provided*, That in war time no additional increased compensation shall be allowed to soldiers performing what is known as extra or special duty: *Provided further*, That any soldier who deserts shall, besides incurring the penalties now attaching to the crime of desertion, forfeit all right to pension which he might otherwise have acquired.

"SEC. 7. That in time of war every officer serving with troops operating against an enemy who shall exercise, under assignment in orders issued by competent authority, a command above that pertaining to his grade, shall be entitled to receive the pay and allowances of the grade appropriate to the command so exercised: *Provided*, That a rate of pay exceeding that of a brigadier general shall not be paid in any case by reason of such assignment: *Provided further*, That at the end of any war in which the United States may become involved the army shall be reduced to a peace basis by the transfer in the same arm of the service or absorption by promotion or honorable discharge under such regulations as the Secretary of War may establish of supernumerary commissioned officers and the honorable discharge or transfer of supernumerary enlisted men; and nothing contained in this act shall be construed as authorizing a permanent increase of the commissioned or enlisted force of the Regular Army beyond that now provided by the law in force prior to the passage of this act, except as to the increase of twenty-five majors provided for in section 1 hereof."

On April 20 the House of Representatives passed a bill "to provide for temporarily increasing the military establishment of the United States in time of war and for other purposes." On April 21 it was amended and passed by the Senate, and after an agreement on certain changes in conference

committee, it was approved by the President, April 22, in the following form:

"Be it enacted, etc., That all able-bodied male citizens of the United States, and persons of foreign birth who shall have declared their intention to become citizens of the United States under and in pursuance of the laws thereof, between the ages of eighteen and forty-five years, are hereby declared to constitute the national forces, and, with such exceptions and under such conditions as may be prescribed by law, shall be liable to perform military duty in the service of the United States.

"SEC. 2. That the organized and active land forces of the United States shall consist of the Army of the United States and of the militia of the several States when called into the service of the United States: *Provided*, That in time of war the army shall consist of two branches, which shall be designated, respectively, as the Regular Army and the Volunteer Army of the United States.

"SEC. 3. That the Regular Army is the permanent military establishment, which is maintained both in peace and war according to law.

"SEC. 4. That the Volunteer Army shall be maintained only during the existence of war, or while war is imminent, and shall be raised and organized, as in this act provided, only after Congress has or shall have authorized the President to raise such a force or to call into the actual service of the United States the militia of the several States: *Provided*, That all enlistments for the Volunteer Army shall be for a term of two years, unless sooner terminated, and that all officers and men composing said army shall be discharged from the service of the United States when the purposes for which they were called into service shall have been accomplished, or on the conclusion of hostilities.

"SEC. 5. That when it becomes necessary to raise a volunteer army the President shall issue his proclamation stating the number of men desired, within such limits as may be fixed by law, and the Secretary of War shall prescribe such rules and regulations, not inconsistent with the terms of this act, as may in his judgment be necessary for the purpose of examining, organizing, and receiving into service the men called for: *Provided*, That all men received into service in the Volunteer Army shall, as far as practicable, be taken from the several States and Territories and the District of Columbia and the Indian Territory in proportion to their population. And any company, troop, battalion, or regiment from the Indian Territory shall be formed and organized under such rules and regulations as shall be prescribed by the Secretary of War.

"SEC. 6. That the Volunteer Army and the militia of the States when called into the service of the United States shall be organized under, and shall be subject to, the laws, orders, and regulations governing the Regular Army: *Provided*, That each regiment of the Volunteer Army shall have one surgeon, two assistant surgeons, and one chaplain, and that all the regimental and company officers shall be appointed by the governors of the States in which their respective organizations are raised: *Provided further*, That when the members of any company, troop, battery, battalion, or regiment of the organized militia of any State shall enlist in the Volunteer Army in a body, as such company, troop, battery, battalion, or regiment, the regimental, company, troop, battery, and battalion officers in service with the militia organization thus enlisting may be appointed by the governors of the States and Territories, and shall when so appointed be officers of corresponding grades in the same organization when it shall have been received into the service of the United States as a part of the Volunteer Army. *Provided further*, That the President

may authorize the Secretary of War to organize companies, troops, battalions, or regiments, possessing special qualifications, from the nation at large, not to exceed three thousand men, under such rules and regulations, including the appointment of the officers thereof, as may be prescribed by the Secretary of War.

"SEC. 7. That all organizations of the Volunteer Army shall be so recruited from time to time as to maintain them as near to their maximum strength as the President may deem necessary, and no new organization shall be accepted into service from any State unless the organizations already in service from such State are as near to their maximum strength of officers and enlisted men as the President may deem necessary.

"SEC. 8. That all returns and muster rolls of organizations of the Volunteer Army and of militia organizations while in the service of the United States shall be rendered to the adjutant general of the army, and upon the disbandment of such organizations the records pertaining to them shall be transferred to and filed in the Record and Pension Office of the War Department. And regimental and all other medical officers serving with volunteer troops in the field or elsewhere shall keep a daily record of all soldiers reported sick or wounded, as shown by the morning call or reports, and shall deposit such reports, with other reports provided for in this section, with the Record and Pension Office, as provided herein for other reports, return and muster rolls.

"SEC. 9. That in time of war, or when war is imminent, the troops in the service of the United States, whether belonging to the Regular or Volunteer Army or to the militia, shall be organized, as far as practicable, into divisions of three brigades, each brigade to be composed of three or more regiments; and whenever three or more divisions are assembled in the same army the President is authorized to organize them into army corps, each corps to consist of not more than three divisions.

"SEC. 10. That the staff of the commander of an army corps shall consist of one assistant adjutant general, one chief engineer, one inspector general, one chief quartermaster, one chief commissary of subsistence, one judge advocate, and one chief surgeon, who shall have, respectively, the rank of lieutenant colonel; one assistant adjutant general, who shall have the rank of captain, and the aids-de-camp authorized by law. The staff of the commander of a division shall consist of one assistant adjutant general, one inspector general, one chief quartermaster, one chief commissary of subsistence, and one chief surgeon, who shall have, respectively, the rank of major, and the aids-de-camp authorized by law. The staff of the commander of a brigade shall consist of one assistant adjutant general, one engineer officer, one assistant quartermaster, and one commissary of subsistence, each with the rank of captain, one surgeon, and the aids-de-camp authorized by law. The staff officers herein authorized for the corps, division, and brigade commanders may be appointed by the President, by and with the advice and consent of the Senate, as officers of the Volunteer Army, or may be assigned by him, in his discretion, from officers of the Regular Army or the Volunteer Army, or of the militia in the service of the United States: *Provided*, That when relieved from such staff service said appointments or assignments shall terminate.

"SEC. 11. That the President is hereby authorized to appoint in the Volunteer Army, by and with the advice and consent of the Senate, not exceeding one major general for each organized army corps and division, one brigadier general for each brigade, and any officer so selected and appointed from the

Regular Army shall be entitled to retain his rank therein: *Provided*, That each general officer of the Volunteer Army shall be entitled to the number of aids-de-camp authorized for an officer of like grade in the Regular Army.

"SEC. 12. That all officers and enlisted men of the Volunteer Army, and of the militia of the States when in the service of the United States, shall be in all respects on the same footing as to pay, allowances, and pensions as that of officers and enlisted men of corresponding grades in the Regular Army.

"SEC. 13. That the governor of any State or Territory may with the consent of the President appoint officers of the Regular Army in the grades of field officers in organizations of the Volunteer Army, and officers thus appointed shall be entitled to retain their rank in the Regular Army: *Provided*, That not more than one officer of the Regular Army shall hold a commission in any one regiment of the Volunteer Army at the same time.

"SEC. 14. That the general commanding a separate department or a detached army is authorized to appoint from time to time military boards of not less than three nor more than five volunteer officers of the Volunteer Army to examine into the capacity, qualifications, conduct, and efficiency of any commissioned officer of said army within his command: *Provided*, That each member of the board shall be superior in rank to the officer whose qualifications are to be inquired into: *And provided further*, That if the report of such a board is adverse to the continuance of any officer, and the report be approved by the President, such officer shall be discharged from service in the Volunteer Army, at the discretion of the President, with one month's pay and allowances.

"SEC. 15. That all acts and parts of acts inconsistent with the provisions hereof be, and the same are hereby, repealed."

Subsequently the following act amendatory of the above was passed:

"*Be it enacted, etc.*, That so much of section 10 of the act approved April 22, 1898, entitled 'An Act to provide for temporarily increasing the military establishment of the United States in time of war, and for other purposes,' as provides that 'officers appointed or assigned to the staff of commanders of army corps, divisions, and brigades shall serve only in such capacity, and that when relieved from such staff service such appointments or assignments shall terminate,' be, and the same is hereby, repealed, and that assignments of the officers of the volunteer staff shall be governed by the same rules and regulations as those of the Regular Army."

A bill was passed and approved by the President, June 17. "to organize a hospital corps of the navy of the United States, to define its duties and regulate its pay." The following is the text of the measure:

"*Be it enacted, etc.*, That a hospital corps of the United States navy is hereby established, and shall consist of pharmacists, hospital stewards, hospital apprentices (first class), and hospital apprentices; and for this purpose the Secretary of the Navy is empowered to appoint 25 pharmacists with the rank, pay, and privileges of warrant officers, removable at the discretion of the Secretary, and to enlist, or cause to be enlisted, as many hospital stewards, hospital apprentices (first class), and hospital apprentices as in his judgment may be necessary, and to limit or fix the number, and to make such regulations as may be required for their enlistment and government. Enlisted men in the navy or the Marine Corps shall be eligible for transfer to the hospital corps, and vacancies occurring in the

grade of pharmacist shall be filled by the Secretary of the Navy by selection from those holding the rate of hospital steward.

"SEC. 2. That all necessary hospital and ambulance service at naval hospitals, naval stations, navy yards, and marine barracks, and on vessels of the navy, Coast Survey, and Fish Commission, shall be performed by the members of said corps, and the corps shall be permanently attached to the medical department of the navy, and shall be included in the effective strength of the navy and be counted as a part of the enlisted force provided by law, and shall be subject to the laws and regulations for the government of the navy.

"SEC. 3. That the pay of hospital stewards shall be \$60 a month, the pay of hospital apprentices (first class) \$24 a month, and the pay of hospital apprentices \$18 a month, with the increase on account of length of service as is now or may hereafter be allowed by law to other enlisted men in the navy.

"SEC. 4. That all benefits derived from existing laws, or that may hereafter be allowed by law, to other warrant officers or enlisted men in the navy shall be allowed in the same manner to the warrant officers or enlisted men in the hospital corps of the navy.

"SEC. 5. That all acts and parts of acts, so far as they conflict with the provisions of this act, are hereby repealed."

A joint resolution was passed for "the organization and enrollment of the United States auxiliary naval force," and approved by the President, May 26, 1898, as follows:

"*Resolved, etc.*, That a United States auxiliary naval force is hereby authorized to be established, to be enrolled in such numbers as the President may deem necessary, not exceeding 3,000 enlisted men, for the exigencies of the present war with Spain, and to serve for a period of one year, or less, and shall be disbanded by the President at the conclusion of the war.

"SEC. 2. That the chief of the United States auxiliary naval force shall be detailed by the Secretary of the Navy from the active or retired list of the line officers of the navy not below the grade of captain, who shall receive the highest pay of his grade while so employed.

"SEC. 3. That enlistment into the United States auxiliary naval force shall be made by such officer or officers as the Navy Department may detail for the purpose, who shall also select from merchant vessels and other available sources such volunteers as may be deemed best fitted for service as officers in said force, and shall report to the Secretary of the Navy, for his action, their names and the grade for which each is recommended.

"SEC. 4. That for the purposes of this organization the coast line shall be divided into districts, each of which shall be in charge of an assistant to the chief of the United States auxiliary naval force; and such assistant chiefs may be detailed by the Secretary of the Navy from the officers of the active or retired list of the line of the navy, or appointed by him from civil life, not above the rank of lieutenant commander.

"SEC. 5. That the officers and men comprising the United States auxiliary naval force shall receive the same pay and emoluments as those holding similar rank or rate in the regular navy; and all matters relating to the organization, discipline, and government of men in said force shall conform to the laws and regulations governing the United States navy.

"SEC. 6. That the chief of the United States auxiliary naval force, or such officers as the Navy Department may detail for such service, may, with

the consent of the Governor of any State, muster into the said force the whole or any part of the organizations of the naval militia of any State to serve in said auxiliary naval force, and shall report to the Secretary of the Navy, for his action, the names and grades for which commissions in said United States auxiliary naval force shall be issued to the officers of such naval militia, and shall have the power to appoint and disrate the petty officers thereof.

"SEC. 7. That the officers, warrant officers, petty officers, and enlisted men and boys of the United States auxiliary naval force thus created shall be paid from the appropriation 'Pay of the Navy'; and the sum of \$3,000,000, or so much thereof as may be required, is hereby appropriated, from any money in the Treasury not otherwise appropriated, for the purchase or hire of vessels necessary for the purposes of this resolution."

The following bill to increase the efficiency of the quartermaster's department was passed by the Congress and approved by the President, July 7, 1898:

"*Be it enacted, etc.,* That during the existing war, and for a period not exceeding one year thereafter, the Secretary of War may make such distribution of the duties and labors of the quartermaster's department as may be deemed for the best interests of the service, and may assign a suitable officer in charge of each of such divisions, and may assign to duty as special inspectors of the quartermaster's department not exceeding four officers, to be selected from the regular and volunteer officers of the department; and such officers, and the quartermaster on the staff of the commanding general of the army, while so acting, shall have the rank next above that held by them and not above colonel.

"SEC. 2. That the President may nominate and, by and with the advice and consent of the Senate, may appoint 2 quartermasters of volunteers with the rank of colonel, 2 quartermasters of volunteers with the rank of lieutenant colonel, 3 quartermasters of volunteers with the rank of major, and 20 assistant quartermasters of volunteers with the rank of captain; and the Secretary of War may assign an officer of the quartermaster's department in charge of each principal depot of the quartermaster's department not exceeding 12, to be selected from the regular and volunteer officers of the quartermaster's department; and such officers while so acting shall have the rank next above that held by them and not above colonel, and the 4 principal assistants of the quartermaster general while so acting shall have the rank of colonel. The Secretary of War may assign such of the said volunteer quartermasters as may be deemed necessary to duty in the office of the quartermaster general, at the various supply depots or on other important and special work, and may continue such assignments for a period not exceeding one year after the close of the war, then to be discharged."

The following bill to increase the efficiency of the subsistence department of the army was passed by the Congress and approved by the President, July 7, 1898:

"*Be it enacted, etc.,* That during the existence of the present war, and for not exceeding one year thereafter, every commissary of subsistence, of whatever rank, who shall be assigned to the duty of purchasing and shipping subsistence supplies at important depots, shall have the rank next above that held by him and not above colonel, but the number so assigned shall only be such as may be found necessary, not exceeding 12; also that the 2 commissaries of subsistence, who may be detailed as assistants to the commissary general of subsistence, shall have the rank of colonel: *Provided,*

That when any such officer is relieved from said duty his temporary rank, pay, and emoluments shall cease, and he shall return to his lineal rank in the department.

"SEC. 2. That there is hereby authorized to be added to the subsistence department in the volunteer service during the present war, and not to exceed one year thereafter, 8 majors and 12 captains for the discharge of such subsistence duties as may be assigned to them by the Secretary of War, to be nominated and by and with the advice and consent of the Senate to be appointed by the President."

The Congress passed and the President approved, July 5, the following bill relative to the Corps of Engineers of the army:

"*Be it enacted, etc.,* That the Corps of Engineers of the army shall hereafter consist of one chief of engineers with the rank of brigadier general, 7 colonels, 14 lieutenant colonels, 28 majors, 35 captains, 30 first lieutenants, 12 second lieutenants, and the Battalion of Engineers: *Provided,* That the vacancies created by this act in all grades above second lieutenant shall be filled by the promotion by seniority of the officers now in the Corps of Engineers: *And provided further,* That the number of officers in any grade above second lieutenant shall not be increased beyond the number heretofore established by law by the promotion of any officer to fill an original vacancy created by this act until such officer shall have served at least three years in the grade from which he is promoted and the captains and lieutenants shall have satisfactorily passed the examinations required by existing laws."

The Congress passed and the President approved, July 8, 1898, the following bill for a temporary increase in the inspector general's department:

"*Be it enacted, etc.,* That the President is authorized, by and with the advice and consent of the Senate, to appoint one inspector general with the rank of colonel, one inspector general with the rank of lieutenant colonel, and one inspector general with the rank of major: *Provided,* That the vacancies created in the grade of colonel and lieutenant colonel by this act shall be filled by the promotion of officers now in the inspector general's department according to seniority, and that upon the mustering out of the volunteer forces and the reduction of the Regular Army to a peace basis no appointments shall be made in the inspector general's department until the number of officers in each grade in that department shall be reduced to the number now authorized by law."

The Congress passed and the President approved, June 18, 1898, a bill "to amend an act entitled 'An Act to promote the administration of justice in the army,' approved Oct. 1, 1890, and for other purposes." It is as follows:

"*Be it enacted, etc.,* That the act entitled 'An Act to promote the administration of justice in the army,' approved Oct. 1, 1890, as supplemented and amended by subsequent legislation, be, and the same is hereby, amended so as to read as follows:

"That the commanding officer of each garrison, fort, or other place, regiment or corps, detached battalion, or company, or other detachment in the army, shall have power to appoint for such place or command, or in his discretion for each battalion thereof, a summary court to consist of one officer to be designated by him, before whom enlisted men who are to be tried for offenses, such as were prior to the passage of the act "to promote the administration of justice in the army," approved Oct. 1, 1890, cognizable by garrison or regimental courts-martial, and offenses cognizable by field officers detailed to try offenders under the provisions of the

eightieth and one hundred and tenth articles of war, shall be brought to trial within twenty-four hours of the time of the arrest, or as soon thereafter as practicable, except when the accused is to be tried by general court-martial; but such summary court may be appointed and the officer designated by superior authority when by him deemed desirable; and the officer holding the summary court shall have power to administer oaths and to hear and determine such cases, and when satisfied of the guilt of the accused adjudge the punishment to be inflicted, which said punishment shall not exceed confinement at hard labor for one month and forfeiture of one month's pay, and, in the case of a noncommissioned officer, reduction to the ranks in addition thereto; that there shall be a summary court record kept at each military post and in the field at the headquarters of the proper command, in which shall be entered a record of all cases heard and determined and the action had thereon; and no sentence adjudged by said summary court shall be executed until it shall have been approved by the officer appointing the court, or by the officer commanding for the time being: *Provided*, That when but one commissioned officer is present with a command he shall hear and finally determine such cases: *And provided further*, That no one while holding the privileges of a certificate of eligibility to promotion shall be brought before a summary court, and that noncommissioned officers shall not, if they object thereto, be brought to trial before summary courts without the authority of the officer competent to order their trial by general court-martial, but shall in such cases be brought to trial before garrison, regimental, or general courts-martial, as the case may be."

"SEC. 2. That Articles 80 and 110 of the Rules and Articles for the Government of the Armies of the United States be, and the same are hereby, repealed.

"SEC. 3. That the commanding officers authorized to approve the sentences of summary courts and superior authority shall have power to remit or mitigate the same.

"SEC. 4. That post and other commanders shall, in time of peace, on the last day of each month, make a report to the department headquarters of the number of cases determined by summary court during the month, setting forth the offenses committed and the penalties awarded, which report shall be filed in the office of the judge advocate of the department, and may be destroyed when no longer of use.

"SEC. 5. That soldiers sentenced by court-martial to dishonorable discharge and confinement shall, until discharged from such confinement, remain subject to the Articles of War and other laws relating to the administration of military justice.

"SEC. 6. That it shall be lawful for any civil officer having authority under the laws of the United States, or of any State, Territory, or District, to arrest offenders, to summarily arrest a deserter from the military service of the United States and deliver him into the custody of the military authority of the General Government.

"SEC. 7. That this act shall take effect sixty days after its passage."

The Congress passed and the President approved, July 7, 1898, the following measure for increasing the force of the ordnance department:

"That section 5 of an act entitled 'An Act reorganizing the several staff corps of the army,' approved June 23, 1874, be, and the same is hereby, amended so as to read as follows:

"SEC. 5. The ordnance department shall consist of 1 chief of ordnance, with the rank, pay, and emoluments of a brigadier general; 4 colonels, 5

lieutenant-colonels, 12 majors, 24 captains, 20 first lieutenants.

"A chief ordnance officer may be assigned to the staff of an army or a corps commander, and while so assigned shall have the rank, pay, and allowances of a lieutenant colonel. A chief ordnance officer may be assigned to the staff of a division commander, and while so assigned shall have the rank, pay, and allowances of a major."

The Congress passed and the President approved, July 7, 1898, the following measure for the enlistment of cooks:

"*Be it enacted, etc.*, That the Secretary of War be, and he is hereby, authorized and directed to cause to be enlisted in each company, battery, and troop in the Regular and Volunteer Armies of the United States, as a part of the authorized enlisted strength thereof, under rules to be prescribed by him, a competent person as cook, who shall take rank as and be allowed the pay of a corporal of the arm of the service to which he belongs, and whose duties in connection with the preparation and serving of the food of the enlisted men of the company, battery, or troop, and with the supervision and instruction of enlisted men hereby authorized to be detailed to assist him, shall be prescribed in the regulations for the government of the army."

The Congress passed and the President approved, May 27, 1898, the following measure as to the date at which the pay of volunteers was to begin:

"*Be it enacted, etc.*, That the pay and allowance of such of the volunteers as are received into the service of the United States under the act of Congress approved April 22, 1898, and the acts supplemental thereto, shall be deemed to commence from the day on which they joined for duty and are enrolled at the battalion, regimental, or State rendezvous: *Provided*, That troops about to embark for service in the Philippine Islands may, in the discretion of the Secretary of War, be paid one month's wages in advance prior to embarkation."

The act was afterward amended and approved, July 8, so as to read as follows:

"*Be it enacted, etc.*, That the act of Congress approved May 26, 1898, entitled 'An Act providing for the payment and maintenance of volunteers during the interval between their enrollment and muster into the United States service, and for other purposes,' be, and the same is hereby, amended to read as follows:

"That the pay and allowance of all officers and enlisted men of the volunteers received into the service of the United States under the act of Congress approved April 22, 1898, and the acts supplemental thereto, shall be deemed to commence from the day on which they had their names enrolled for service in the Volunteer Army of the United States and joined for duty therein after having been called for by the governor on the authority of the President, of all officers and enlisted men who have not been so paid shall be paid by the pay department of the army out of any moneys appropriated for the maintenance of the army: *Provided*, That troops about to embark for service in the Philippine Islands may, in the discretion of the Secretary of War, be paid one month's wages in advance prior to embarkation."

The Congress passed and the President approved, May 11, 1898, a bill to provide for a volunteer brigade of engineers, and an additional force of 10,000 enlisted men specially accustomed to tropical climates. It is as follows:

"*Be it enacted, etc.*, That, in addition to the volunteer forces provided for by the act of April 22, 1898, entitled "An Act to provide for temporarily increasing the military establishment of the United States in time of war, and for other purposes," the

President may authorize the Secretary of War to organize, under the terms and conditions of the aforesaid act, a volunteer brigade of engineers from the nation at large, to consist of not more than 3 regiments and not more than 3,500 men, possessing the special qualifications necessary for engineer troops, under such rules and regulations, including the appointment of the officers thereof, as may be prescribed by the Secretary of War: *Provided*, That not to exceed three officers of the Corps of Engineers of the Regular Army may hold volunteer commissions in any one regiment of the volunteer brigade of engineers at the same time: *And provided further*, That all officers shall be appointed by the President and with the consent of the Senate.

"SEC. 2. And the President is further empowered during the present war, under the act of April 22, 1898, to authorize the Secretary of War to organize an additional volunteer force of not exceeding 10,000 enlisted men possessing immunity from diseases incident to tropical climates; the officers thereof to be appointed by the President, by and with the advice and consent of the Senate.

"SEC. 3. The provisions of the act of April 22, 1898, which provide that volunteers called out by proclamation of the President shall be apportioned to the several States and the provisions of said act which provide that the governors of the States shall appoint officers shall not apply to this act."

The Congress passed and the President approved, May 17, a bill to provide assistance to the inhabitants of Cuba, and arms, munitions, and military stores to the people of the island of Cuba, and for other purposes. It is as follows:

"*Be it enacted, etc.*, That while serving in Cuba during the existing war officers of the army of the United States exercising separate commands may, by special order, cause subsistence, medical, and quartermaster's supplies to be issued to, and other aid rendered to, inhabitants of the island of Cuba who are destitute and in imminent danger of perishing unless they receive the same.

"SEC. 2. That the President and general officers commanding troops in Cuba are hereby authorized to furnish to the Cuban people such arms, ammunition, equipments, and military stores and supplies as they may require in order to increase their effective fighting force in the existing war against Spain."

The following were also passed and approved:

A bill to protect homestead settlers who enter into the military or naval service of the United States.

A bill to establish the rank and pay of volunteer chaplains as that of a mounted captain.

A resolution to facilitate the building of temporary fortifications.

A bill to authorize the establishment of post offices at military posts or camps.

A bill suspending the limitation on the number of hospital stewards during the war.

A bill to organize a volunteer signal corps.

A bill to provide for the increased volume of work in the adjutant general's office due to calling out of volunteers and the increase in the Regular Army.

A bill to reimburse the governors of States and Territories for expenses incurred by them in aiding the United States to raise, organize, and supply and equip the Volunteer Army of the United States.

The Annexation of Hawaii.—May 17, 1898, Mr. Hitt, of Illinois, reported from the Committee on Foreign Affairs of the House of Representatives the following joint resolution to provide for annexing the Hawaiian Islands to the United States.

"*Whereas*, The Government of the Republic of Hawaii having, in due form, signified its consent,

in the manner provided by its Constitution, to cede absolutely and without reserve to the United States of America all rights of sovereignty of whatsoever kind in and over the Hawaiian Islands and their dependencies, and also to cede and transfer to the United States the absolute fee and ownership of all public, Government, or Crown lands, public buildings or edifices, ports, harbors, military equipment, and all other public property of every kind and description belonging to the Government of the Hawaiian Islands, together with every right and appurtenance thereunto appertaining: Therefore,

"*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled*, That said cession is accepted, ratified, and confirmed, and that the said Hawaiian Islands and their dependencies be, and they are hereby, annexed as a part of the territory of the United States, and are subject to the sovereign dominion thereof, and that all and singular the property and rights hereinbefore mentioned are vested in the United States of America.

"The existing laws of the United States relative to public lands shall not apply to such lands in the Hawaiian Islands; but the Congress of the United States shall enact special laws for their management and disposition: *Provided*, That all revenue from or proceeds of the same, except as regards such part thereof as may be used or occupied for the civil, military, or naval purposes of the United States, or may be assigned for the use of the local government, shall be used solely for the benefit of the inhabitants of the Hawaiian Islands for educational and other public purposes.

"Until Congress shall provide for the government of such islands all the civil, judicial, and military powers exercised by the officers of the existing Government in said islands shall be vested in such person or persons and shall be exercised in such manner as the President of the United States shall direct; and the President shall have power to remove said officers and fill the vacancies so occasioned.

"The existing treaties of the Hawaiian Islands with foreign nations shall forthwith cease and determine, being replaced by such treaties as may exist, or as may be hereafter concluded, between the United States and such foreign nations. The municipal legislation of the Hawaiian Islands, not enacted for the fulfillment of the treaties so extinguished, and not inconsistent with this joint resolution nor contrary to the Constitution of the United States nor to any existing treaty of the United States, shall remain in force until the Congress of the United States shall otherwise determine.

"Until legislation shall be enacted extending the United States customs laws and regulations to the Hawaiian Islands the existing customs relations of the Hawaiian Islands with the United States and other countries shall remain unchanged.

"The public debt of the republic of Hawaii, lawfully existing at the date of the passage of this joint resolution, including the amounts due to depositors in the Hawaiian Postal Savings Bank, is hereby assumed by the Government of the United States; but the liability of the United States in this regard shall in no case exceed \$4,000,000. So long, however, as the existing Government and the present commercial relations of the Hawaiian Islands are continued as hereinbefore provided said Government shall continue to pay the interest on said debt.

"There shall be no further immigration of Chinese into the Hawaiian Islands, except upon such conditions as are now or may hereafter be allowed by the laws of the United States; and no Chinese, by reason of anything herein contained, shall be

allowed to enter the United States from the Hawaiian Islands.

"The President shall appoint five commissioners, at least two of whom shall be residents of the Hawaiian Islands, who shall, as soon as reasonably practicable, recommend to Congress such legislation concerning the Hawaiian Islands as they shall deem necessary or proper.

"Sec. 2. That the commissioners hereinbefore provided for shall be appointed by the President, by and with the advice and consent of the Senate.

"Sec. 3. That the sum of \$100,000, or so much thereof as may be necessary, is hereby appropriated, out of any money in the Treasury not otherwise appropriated, and to be immediately available, to be expended at the discretion of the President of the United States of America, for the purpose of carrying this joint resolution into effect."

Mr. Hitt said in explanation and support of the measure:

"Mr. Speaker, the measure which is now before the House for the annexation of the Hawaiian Islands is substantially the same as a treaty negotiated last year, which is here put into the form of a joint resolution. The treaty was duly ratified by the Senate of the republic of Hawaii. We therefore know that we are acting with the cordial assent of the Government of the country proposed to be annexed. That treaty was preceded by another negotiated by President Harrison five years ago between the two countries, providing for the annexation of the Hawaiian Islands to the United States, which treaty was duly ratified by the Government of Hawaii and would probably have been ratified by our Senate had it not been withdrawn by reason of a change of the occupant of our Executive office.

"This is not a novel question at all. It is not an emergency proposition sprung upon us suddenly. It is not a case of greed for territory and overweening influence brought to bear by a great and powerful Government upon one of the smallest in the world to constrain it to give up its independent existence and be absorbed by the other under the form of a legal proceeding. There is no oppression on our side, there is no unwillingness on the other side. The whole proceeding is with the cordial assent of the duly constituted authorities of the Hawaiian republic, and in accordance with the terms of the Constitution of that republic.

"It is in pursuance of a policy long discussed and well known there and to our people here and to all the world. It is a result often contemplated by the successive governments of those islands for fifty years, because the circumstances surrounding the little nation in all the changes in its history have plainly made this a foregone conclusion. So slender, so tottering a political existence in the midst of the mighty political powers of the world had a precarious tenure of life. It was a continual temptation to them—an all-important possession of a weak power. It has often been threatened. Several times it has been seized and occupied by a passing commander of a frigate—by a French captain in 1829, by a British commander in 1843, again by the French in 1849.

"Conscious of its feeble ability to maintain independence among the nations, the subject of union with our country has been contemplated long. One of the kings of Hawaii executed a deed of cession to the United States in 1851. Another of the kings prepared a draft of a treaty of annexation to the United States in 1854, but before it was executed he died. As I have said, treaties of annexation to the United States have twice been negotiated with this Government within the last five years. It is the natural result of events and causes long oper-

ating and now concluding with mutual, cordial consent.

"There is nothing that can impute to us, though this is so great and mighty a nation, any purpose of exercising undue pressure, as has ordinarily been the case in European history where a powerful government has taken possession of, absorbed, and extinguished a smaller. The only question we have to consider, when this little commonwealth with open hands offers itself to us, is whether we would be better off by taking this step; whether it would be advantageous to us to accept these islands; whether they are worth owning; whether their possession is of any value to us or not.

"That is a simple question and ought to be easily answered. Other nations have long since expressed their opinion of the value of the islands in many ways. Though it is a very small nationality, a very small extent of the earth's surface, not equal in people to a congressional district represented on this floor, yet 19 nations continually maintain representatives at Honolulu to watch their interests. We keep there to-day an envoy extraordinary and minister plenipotentiary. Why? Not because they are fertile and beautiful islands, not because there are a little over a hundred thousand people there. No; it is because of the supreme importance and value of the islands on account of their position.

"They sit facing our Western coast—that long stretch confronting the great Pacific Ocean, the most extensive body of water in the world, stretching away for six, seven, eight thousand miles—and they are the nearest point to our coast, and far, very far, removed from any other point in that vast sea. They are 2,000 miles away from us. That seems a very considerable distance, but the immense stretch beyond them to the other portions of the earth is so much greater that they seem comparatively near and are a part of our own system.

"With the great change in the construction of fighting ships, all of which are now moved by steam, coal has become an essential of maritime war, as much so as powder or guns, and across that wide ocean any vessel of war coming to attack the United States must stop for coal and supplies at the Hawaiian Islands before it can attack us. No ship can be constructed, no battle ship exists in the world, which can make the trip from the other side of that wide sea to our shores, conduct any operation of hostility against us, and ever get back unless it has its supply of coal renewed.

"We are all pretty familiar with the map—the remarkable position of these islands and the routes that ships are accustomed to follow. I do not suppose that my personal opinion is worth more than that of the average of mankind who are not specially qualified as commanders and mariners, nor that any member of the House is so presumptuous as to consider his own personal opinion itself an important fact.

"But we have on this critical and central question, which is not one of common judgment, the opinions of the most distinguished, specially expert, and able men of the age, the greatest commanders of our armies and our fleets who are living. It is an impressive and convincing fact that all have given the same opinion. There has been no divergence. Every one has stated that the possession of those islands was to us of great importance, many of them say indispensable; that it will diminish, not increase, the necessity for naval force, economize ships of war and not require more; that in the possession of an enemy, if we shall so foolishly and unwisely act as to refuse annexation and permit them to pass into the hands of an enemy, they will furnish a secure base for active operations to harass and destroy the cities of our Western coast; that in

our possession, duly fortified, those islands will paralyze any fleet, however strong, however superior to our own naval force in the Pacific, before it can attack our coast.

"I accept the opinion of men like Admiral Walker and Capt. Mahan and Gen. Schofield, Admiral Belknap, Gen. Alexander, and Admiral Dupont and Chief-Engineer Melville. It is a long list of great sailors and soldiers, distinguished strategists and authorities. The striking fact is that there is no dissent among them. These men, who are authorities, have all concurred as to the great importance of the islands. On one of the islands is Pearl Harbor, now unimproved, a possible stronghold and a refuge for a fleet, which, fortified by the expenditure of half a million dollars and garrisoned and aided by the militia of the island and its resources, can be made impregnable to any naval force, however large.

"I speak of a naval force. To capture it there must be a land force also. The possession of all the islands was stated by these able men, who were before the committee, to be essential, as they would furnish a valuable militia to promptly co-operate with a garrison of one or two regiments of artillery until, in the short distance from our shore, we could re-enforce them with abundant military strength to repel the assault of the disembarking troops, who must come many thousands of miles farther than our own.

"This is not my mere assertion or opinion on so grave and technical a question. I am merely giving some of the leading points made by those whose names command the respect of the military and naval professions throughout the world and who have said that the possession not only of Pearl Harbor but of all that little group of islands is to us a necessity."

The resolution was vigorously advocated and vigorously attacked. The line of argument in favor was the predominance of American interests, the share of America in civilizing the islands, our long guardianship over them, their necessity as a naval outpost, the danger of Japanese conquest, their eagerness for annexation. The line of argument in opposition was the lack of constitutional authority to take in distant territory, the impropriety of doing by joint resolution what should be done by treaty, the unfitness of the people of Hawaii for citizenship, the danger of ruling them, outside of constitutional provisions, the risk of departing from our traditional policy and venturing upon a career of imperialism.

June 15, a vote was taken on a substitute for the resolution reported by the minority of the Committee on Foreign Affairs. It was as follows:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, 1. That the United States will view as an act of hostility any attempt upon the part of any government of Europe or Asia to take or hold possession of the Hawaiian Islands or to exercise upon any pretext or under any conditions sovereign authority therein.

"2. That the United States hereby announces to the people of those islands and to the world their guarantee of the independence of the people of the Hawaiian Islands and their firm determination to maintain the same."

The substitute was rejected by a vote of 96 to 204; absent or not voting, 55.

The joint resolution was then passed by the following vote, taken the same day:

YEAS—Acheson, Adams, Aldrich, Alexander, Babcock, Baker of Illinois, Baker of Maryland, Barham, Barney, Barrows, Bartholdt, Belden, Belford, Belknap, Benner of Pennsylvania, Bennett, Berry,

Bingham, Bishop, Booze, Botkin, Boutell of Illinois, Boutelle of Maine, Brewster, Broderick, Bromwell, Brown, Brownlow, Brucker, Brumm, Bull, Burleigh, Butler, Cannon, Capron, Chickering, Clark of Iowa, Clarke of New Hampshire, Cochran of Missouri, Cochrane of New York, Coddington, Connell, Connolly, Cooper of Wisconsin, Corliss, Cousins, Crump, Cummings, Curtis of Iowa, Curtis of Kansas, Dalzell, Danford, Davenport, Davidson of Wisconsin, Davidson of Kentucky, Dayton, De Vries, Dingley, Dilliver, Dovener, Driggs, Ellis, Ermentrout, Faris, Fenton, Fischer, Fletcher, Foote, Foss, Fowler of New Jersey, Gibson, Gillet of New York, Graff, Greene of Massachusetts, Griffin, Griffith, Grosvenor, Grout, Grow, Hager, Hamilton, Hawley, Heatwole, Heineman, Henderson, Henry of Connecticut, Henry of Indiana, Hepburn, Hicks, Hilborn, Hill, Hitt, Hooker, Hopkins, Howe, Howell, Hull, Hurley, Jenkins, Johnson of North Dakota, Jones of Washington, Joy, Kelley, Kerr, Ketcham, Kirkpatrick, Knowles, Knox, Kulp, Lacey, Landis, Lawrence, Lewis of Georgia, Lewis of Washington, Linney, Littauer, Livingston, Loud, Loudenslager, Lovering, Low, Lybrand, McCall, McCleary, McCormick, McDonald, McEwan, McIntire, Mahany, Mahon, Mann, Marsh, Marshall, Meekison, Mercer, Mesiek, Miller, Mills, Minor, Mitchell, Moody, Morris, Mudd, Newlands, Northway, Norton of South Carolina, Olmsted, Osborne, Otjen, Packer of Pennsylvania, Parker of New Jersey, Payne, Pearee of Missouri, Pearson, Perkins, Peters, Pitney, Powers, Prince, Pugh, Ray, Ridgely, Robbins, Russell, Sauerhering, Shannon, Shattue, Shelden, Sherman, Showalter, Simpson, Skinner, Smith of Illinois, S. W. Smith, William Alden Smith, Snover, Southard, Southwick, Spalding, Sperry, Steele, Stevens of Minnesota, Stewart of New Jersey, Stewart of Wisconsin, C. W. Stone, Strode of Nebraska, Sulloway, Sulzer, Tawney, Taylor of Alabama, Thorp, Todd, Tongue, Updegraff, Van Voorhis, Vehslage, Walker of Virginia, Wanger, Ward, Warner, Weaver, Weymouth, White of Illinois, White of North Carolina, Wilber, Williams of Pennsylvania, Wise, Yost, Young—209.

NAYS—Adamson, Bailey, Baird, Ball, Bankhead, Bartlett, Bell, Benton, Bland, Bradley, Brantley, Brewer, Broussard, Brundidge, Carmack, Clardy, Clark of Missouri, Clayton, Cooney, Cowherd, Crumpacker, Davey, Davis, De Graffenreid, Dinsmore, Dockery, Elliott, Fitzgerald, Fleming, Fowler of North Carolina, Fox, Gaines, Griggs, Handy, Hartman, Hay, Henry of Mississippi, Henry of Texas, Hinrichsen, Howard of Alabama, Howard of Georgia, Jett, Johnson of Indiana, Jones of Virginia, Kitchin, Kleberg, Lamb, Lanham, Lester, Little, Lloyd, Love, McAleer, McCulloch, McDowell, McMillin, McKee, Maguire, Martin, Maxwell, Meyer of Louisiana, Moon, Ogden, Pierce of Tennessee, Rhea, Richardson, Rixey, Robb, Robertson of Louisiana, Robinson of Indiana, Sayers, Settle, Shafroth, Shuford, Sims, Slayden, Sparkman, Stallings, Stark, Stephens of Texas, Stokes, Strait, Strowd of North Carolina, Swanson, Tate, Underwood, Vandiver, Wadsworth, Wheeler of Kentucky, Williams of Mississippi, Wilson—91.

ANSWERED "PRESENT"—Bodine, Burke, King, Norton of Ohio, Terry, Zenor—6.

NOT VOTING—Allen, Arnold, Barber, Barlow, Barrett, Beach, Brenner of Ohio, Brosius, Burton, Campbell, Castle, Catchings, Colson, Cooper of Texas, Cox, Cranford, De Armond, Dorr, Eddy, Evans, Fitzpatrick, Gardner, Gillett of Massachusetts, Greene of Nebraska, Gunn, Harmer, Hunter, Latimer, Lentz, Lorimer, McClellan, Maddox, Miers of Indiana, Odell, Otey, Overstreet, Quigg, Reeves, Royse, Smith of Kentucky, Sprague, W. A. Stone, Sturtevant, Sutherland, Talbert, Taylor of Ohio, Vincent, Walker of Massachusetts, Wheeler of Alabama—49.

The resolution was reported in the Senate June 17; it was taken up for discussion June 20; and the debate continued until July 6, when the resolution was adopted. Those in favor of it refrained from discussion, and the speeches delivered were mainly in opposition to the measure.

These extracts from the argument of the late Senator from Vermont, the venerable and lamented Morrill, represent the drift of conservative opinion against annexation:

"On our part the annexation of the Hawaiian Islands is only an overdone example of the European colonial system. It belongs to and emanates from the aristocratic school of politics. It has no abhorrence of coolie labor, which is the double cousin of slavery. It covets prodigal expenditures and a big display of power. It does not listen to the still, small voice of peace, industry, and economy, but to the blast of the popular trumpet which would conquer worlds and reign over Hawaii rather than serve in heaven.

"My firm conviction, however, is that annexation of distant islands is not in harmony with the Constitution of the United States, but is conspicuously repugnant thereto; nor is it in harmony with the history or even with any of the recorded opinions of our earliest and ripest statesmen. Claiming nothing in consideration of any words of mine, except for the facts here presented, I have yet to hear any sufficient reasons which should induce me to break the consistency of my record of many years' standing against the annexation of distant foreign lands. May I not ask, Has the country ever lamented the rejection of Santo Domingo? Manifestly no. Let me hope that I may never part with my profound reverence for the eminent statesmen who constructed the Constitution of our republic, and I shall also hope to be pardoned if I should not turn the pictures of the faces of those eminent Americans to the wall, and flout their memory, whose wisdom has guided the great achievements of our country through its first century, although they, 'rich in saving common sense,' flatly refused the doubtful achievement of annexing distant foreign islands.

"The title of the parties now holding the dominion of the Hawaiian Islands is based on conquest without arms, which is better than would have been a title by usurpation, superior to any bargain that might have been made with Liliuokalani, and must now be treated as a *de facto* government. It succeeds to the power and estate of its predecessor, and the United States may extend, if it chooses, some favors to Hawaii, as was done long years ago, but can not afford to even seem to profit by the recent conquest. Nor can the United States afford to accept the validity of the title of the present possessors—all they have—while much of the world and so many Senators hold it open to suspicion and dispute, although held to be excellent by most of those who favor annexation, an anyhow annexation.

"It has been very ominously hinted that other nations, more ambitious, are eager to take these islands in case of our declination, but this is squarely denied by Great Britain, and, were the islanders to so consent, their ingratitude would diminish my grief were we called upon to say, 'Farewell, Hawaii.' But Hawaii will never let go of even our little flinger, and the ominous hint is of no more worth than it was when made in the case of Santo Domingo, or of St. John, or St. Thomas, or in the case of Hawaii in 1854, or than any other very cheap theatrical thunder.

"No other nation can offer Hawaii an equal market for its sugar to that of the United States, and such a market is their great and abiding necessity. Hawaii has nothing, however, to give in re-

turn or no market of the slightest importance to reciprocate. England could not renounce and stultify its free-trade policy by imposing duties on sugar, and then, in the same act of Parliament, provide that all sugar imported from Hawaii should be free of duty. Germany and France are both heavily in the sugar industry, and would be the last to nurse and coddle Hawaii in the same line, as that would only compel them to assume the burden we now bear. They may not like us, but they have been taught—

"Heat not a furnace for your foe so hot
That it do singe yourself."

"The republic of Hawaii, with 'all the world before it where to choose,' would not commit commercial suicide by the blunder of trying to find a better friend than the United States. No other nation will seek their acquisition so long as we let it be known, as we have done for more than fifty years, that the United States would regard it as an unfriendly act and would resist it.

"The *personnel* of the present Hawaiian Government is guided not only with some skill, but with sufficient 'iron and blood' to maintain its independence as a state. I see no good reason for a change. Let us tell them, as we have done for over a half century, 'We are your friend, and your independence as a state will have our continued favor and support.' If a trinity of foreign powers move to combine, or to galvanize the carcass of the ancient Holy Alliance, as some timid people apprehend, in order to curb the United States, the first crack of the European whip will be the only summons required by Americans for the crisis. Later let the historian record whether empires or republics in Europe have been made stronger or weaker by such a conflict. It is known to be perilous to expose imperial armies to political contagion by contact, even in war, with republican soldiers.

"The fact, however, that we have been so long held as the foremost friend of the Hawaiians makes it difficult for any of us to look upon the question of their annexation with absolute justice to the national interests of our own country. Yet that is what we are here for.

"The important question is now presented of the acquisition of this far-away territory—not contiguous, but a straggling litter of islands of volcanic birth, which it is proposed shall somehow actually become an integral part of the territory of our republic. Annexation, it should be honestly confessed, has not been so much sought after by the natives as by the dominant and more astute aliens, who have been fully acclimated by their very tropical sugar dividends.

"After denouncing as forbidden fruit the acquisition of the distant islands of the sea, as we have often done, for which European empires are still so hungry, it appears strange that a change so radical should suddenly blot our past history and present us to the world as eager to acquire even what will be impossible for Americans to assimilate, what will degrade our republican system of government, and can not elevate the general political character of our people.

"The formal annexation of the Hawaiian Islands, under a one-man power, under a republic in name, or whatever form of governmental experiment we may choose or be compelled to prescribe, will advertise the final wreckage of the 'Monroe doctrine,' so long held dear by the American people. Self-respect will compel us to discard and seek a divorce from the glory of a connection with a historic measure to which the public opinion of mankind will at once pronounce us unworthy. We can not afford to denounce and forbid all acquisitions of

territory in the Western Hemisphere by European governments, even at the peril of war, and forthwith embark on a thus bedamned enterprise ourselves. If we would have our yet unstained doctrine respected by others, we must scrupulously practice what we preach.

"Because several of the larger Eastern nations have been in an expensive and furious catch-as-catch-can naval hunt to seize ports and harbors, or any tidbits of the Chinese Empire, it is not a sufficient reason why the United States should suddenly blot its record by showing how easily we can be seduced by a like besetting sin.

"How unfortunate are we that the wonderful value and prodigious importance, military and sentimental, of the Hawaiian Islands had not been discovered earlier, and their annexation pushed prior to our distinct pledge in favor of their 'independence as a state' and before we had rejected these and all other like distant islands, and by rather grandly proposing instead to establish the 'Monroe doctrine,' which we now find more difficult to practice ourselves than it has been to impose upon Europe. Surely Hawaiian annexation would have been less repugnant, less unfortunate, had it been proposed before leprosy had destroyed so large a part of the native population, and especially before the islands had been invaded and so heavily stocked with the Chinese and Japanese contract laborers. Certainly, could these incurable grievances now be removed, the objections to annexation would be less conspicuous, but still formidable, as even then the islands as American dependencies would have had no temptation to the statesmen of the eras of Washington, nor of Jackson or Lincoln.

"Less than 3 per cent. of the present number of inhabitants in Hawaii are of American origin—not enough to dominate or to boss the 97 per cent. of the other nationalities, which could not without too great risk be trusted to self-government, nor even to loyalty to the United States, yet they expect soon, whatever may be the terms of annexation, that they will be full-fledged citizens of an integral part of the Union, entitled to share in governing the United States in both houses of Congress. To this I am irrevocably opposed.

"An examination of the basis of any possible free government in Hawaii, with inhabitants of so many different languages, religions, habits, and traditions, mostly monarchists, presents no encouragement for the creation or permanence of a republican form of government, to which nine out every ten are theoretically as well as practically opposed. The objections apparent there to suffrage, whether free or limited, seem insuperable. To confine suffrage to the 3,080 Americans alone, including men, women, and children, would hardly be submitted to, except at the point of the bayonet. If the natives were allowed to vote, representing 39,504 (including half-castes and lepers), they might restore the deposed Queen, and it would be queer to treat the natives as no longer citizens but savages after we have been their schoolmasters and missionaries so many years. What the Japanese, numbering 25,407, with their rights by treaty, would do if allowed to vote we can only guess that they would antagonize the Chinese, who number 21,606. And there are 15,291 of the unreckoned Portuguese. Certainly none of these could ever be safely counted in favor of leaving the 'paramount' authority in the hands of the United States, and an army of sufficient strength, with the Stars and Stripes, would therefore be a permanent necessity to shield the islands from insurrections and revolutions.

"It has been the happiness of the republic of the United States that it has long and very distinctly had the benefit of a contrast with aristocratic em-

pires and monarchies in relation to colonial dependencies. These arrogant aristocracies nurse their pride and dazzle their subjects with the obedience and enchantments of distant colonies and dependencies, but their condition is now, or was recently, on exhibition by their paternal and maternal wars and rumors of wars in India, North and South Africa, Madagascar, Egypt, China, Philippine Islands, and Cuba.

"These perennial colonial flagellations, or life struggles of colonies and dependencies which refuse to stay conquered, require the increase of big home armies and bigger navies, which can only be maintained by the biggest taxes. The aristocratic empires push the inexorable demand of three to five years of the life of all their young men in military service, and then to be ready for further service until emancipated by the decrepitude of old age. These large standing armies threaten their neighbors, and their neighbors threaten everybody else by an increase of their battle ships. Boundless public debts and double and twisted taxes leave their people poor, with no hope that these grim and stubborn exactions will ever be less.

"Hitherto the statesmen of our republic have kept clear of colonies and dependencies, for it need not be admitted that Alaska is an exception, nor that it is ever more likely to become one of the United States than any other part of the yet unappropriated north pole. Our young men of the republic are at school, or at work on the farm, or busy somewhere learning a trade or a profession from which they may derive a livelihood or the comforts of an independent home. They are not impressed for the regular army, which is so small as to be almost invisible, and wholly composed of volunteers. Two thirds of our rebellion debt has been paid, and we fully expect to pay the remainder, and that it will speedily grow less.

"The historic policy of the republic of the United States for the hundred years just passed, based as it has been upon the sound doctrine promulgated by Washington in his farewell address with words of perennial wisdom against foreign entangling alliances, has taken root in the hearts of the American people, where it is treasured up as their political Bible and can not now be 'mocked at' as merely an ancient tradition. Its acceptance has made the nation great, made it respected. If our fidelity to the well-ripened statesmanship of the Father of his Country shall be perpetuated for the next hundred years as in the past, the honor, prosperity, and power of our republic, it may safely be predicted, will light and lead all the nations."

An amendment to the resolution was offered by Senator White, of California, striking out the phrase "in due form" in the preamble, and inserting the phrase, "by a treaty which has never been ratified but is now pending in the Senate of the United States." It was rejected by a vote of 40 nays to 20 yeas.

An amendment was offered by Senator Pettigrew, of South Dakota: "That contract labor laws and all laws, civil or criminal, now in force in said islands by which men are held for service for a definite term, except in punishment of crime, whereof the party has been duly convicted, are hereby repealed." It was rejected by a vote of 41 nays to 22 yeas.

An amendment was offered by Senator Bacon, of Georgia: "That this resolution shall not be operative and of binding effect upon either the United States of America or the republic of Hawaii until the same shall have been consented to and approved by the majority of the voters voting at an election to be held in the Hawaiian Islands, at which election all male natives of such islands of the age of twenty-one years, and all naturalized male persons in said

islands of the age of twenty-one years, shall be duly qualified voters. The said election shall be held at a time and in the manner and under regulations to be prescribed by the President of the United States." It was rejected by a vote of 42 nays to 20 yeas.

An amendment was offered by Senator Faulkner, of West Virginia: "That until Congress provides a system of government for Hawaii the officers of the existing Government, and not persons appointed by the President, shall exercise authority under existing laws, not in conflict with the Constitution and laws of the United States." The amendment was rejected by a vote of 43 nays to 20 yeas.

An amendment providing for an excise tax on Hawaiian sugar imported into the United States during a period of ten years was also rejected; also an amendment providing that all male persons over twenty-one years of age born on the islands are citizens thereof, and that all male persons twenty-one years of age naturalized on the islands shall be entitled to vote at all elections hereafter held on such islands; also an amendment by way of substitute; and also an amendment providing that the United States shall maintain the silver money coined by the Government of Hawaii at a parity with gold.

The vote on the passage of the resolution was as follows:

YEAS—Allison, Baker, Burrows, Cannon, Carter, Clark, Cullom, Davis, Deboe, Elkins, Fairbanks, Foraker, Frye, Gallinger, Gorman, Hale, Hanna, Hansbrough, Hawley, Hoar, Kyle, Lodge, McBride, McLaurin, Money, Morgan, Nelson, Penrose, Perkins, Pettus, Platt of Connecticut, Pritchard, Proctor, Sewell, Shoup, Sullivan, Teller, Warren, Wellington, Wetmore, Wilson, Wolcott—42.

NAYS—Allen, Bacon, Bate, Berry, Caffery, Chilton, Clay, Daniel, Faulkner, Jones of Nevada, Lindsay, McEnery, Mallory, Mitchell, Morrill, Pasco, Pettigrew, Roach, Turley, Turpie, White—21.

NOT VOTING—Aldrich, Butler, Chandler, Cockrell, Gear, Gray, Harris, Heitfeld, Jones of Arkansas, Kenney, McMillan, Mantle, Martin, Mason, Mills, Murphy, Platt of New York, Quay, Rawlins, Smith, Spooner, Stewart, Thurston, Tillman, Turner, Vest—26.

The resolution was approved by the President, July 7, 1898.

Uniform System of Bankruptcy.—For many years the subject of a bankruptcy law has been before successive Congresses; and a great part of the congressional reports is taken up with the discussion of bankruptcy bills, nearly all of which made progress toward enactment and some of which came close to final success. The public paid little attention to the matter and many members of Congress were indifferent, but there was a persistent effort on the part of certain men with strong convictions as to the good policy of the measure, and in the end they carried the point. At a former session of this Congress the Senate passed a bankruptcy act, and it was taken up in the House of Representatives, Feb. 16, 1898, and, under special order, debated that day and the following day, and passed Feb. 19, with various amendments, by a vote of 159 yeas to 125 nays. The Senate non-concurred in the House amendments, but after conference the measure was adopted in the following shape, June 15, and June 28, and so approved by the President, July 1:

"CHAPTER I.—DEFINITIONS.

"SECTION 1. Meaning of words and phrases.—*a.* The words and phrases used in this act and in proceedings pursuant hereto shall, unless the same be inconsistent with the context, be construed as follows: (1) 'A person against whom a petition has

been filed' shall include a person who has filed a voluntary petition; (2) 'adjudication' shall mean the date of the entry of a decree that the defendant, in a bankruptcy proceeding, is a bankrupt, or if such decree is appealed from, then the date when such decree is finally confirmed; (3) 'appellate courts' shall include the circuit courts of appeals of the United States, the supreme courts of the Territories, and the Supreme Court of the United States; (4) 'bankrupt' shall include a person against whom an involuntary petition or an application to set a composition aside or to revoke a discharge has been filed, or who has filed a voluntary petition, or who has been adjudged a bankrupt; (5) 'clerk' shall mean the clerk of a court of bankruptcy; (6) 'corporations' shall mean all bodies having any of the powers and privileges of private corporations not possessed by individuals or partnerships, and shall include limited or other partnership associations organized under laws making the capital subscribed alone responsible for the debts of the association; (7) 'court' shall mean the court of bankruptcy in which the proceedings are pending, and may include the referee; (8) 'courts of bankruptcy' shall include the district courts of the United States and of the Territories, the Supreme Court of the District of Columbia, and the United States court of the Indian Territory, and of Alaska; (9) 'creditor' shall include any one who owns a demand or claim provable in bankruptcy, and may include his duly authorized agent, attorney, or proxy; (10) 'date of bankruptcy,' or 'time of bankruptcy,' or 'commencement of proceeding,' or 'bankruptcy,' with reference to time, shall mean the date when the petition was filed; (11) 'debt' shall include any debt, demand, or claim provable in bankruptcy; (12) 'discharge' shall mean the release of a bankrupt from all of his debts which are provable in bankruptcy, except such as are excepted by this act; (13) 'document' shall include any book, deed, or instrument in writing; (14) 'holiday' shall include Christmas, the Fourth of July, the 22d of February, and any day appointed by the President of the United States or the Congress of the United States as a holiday or as a day of public fasting or thanksgiving; (15) a person shall be deemed insolvent within the provisions of this act whenever the aggregate of his property, exclusive of any property which he may have conveyed, transferred, concealed, or removed, or permitted to be concealed or removed, with intent to defraud, hinder or delay his creditors, shall not, at a fair valuation, be sufficient in amount to pay his debts; (16) 'judge' shall mean a judge of a court of bankruptcy, not including the referee; (17) 'oath' shall include affirmation; (18) 'officer' shall include clerk, marshal, receiver, referee, and trustee, and the imposing of a duty upon or the forbidding of an act by any officer shall include his successor and any person authorized by law to perform the duties of such officer; (19) 'persons' shall include corporations, except where otherwise specified, and officers, partnerships, and women, and when used with reference to the commission of acts which are herein forbidden shall include persons who are participants in the forbidden acts, and the agents, officers, and members of the board of directors or trustees, or other similar controlling bodies of corporations; (20) 'petition' shall mean a paper filed in a court of bankruptcy or with a clerk or deputy clerk by a debtor praying for the benefits of this act, or by creditors alleging the commission of an act of bankruptcy by a debtor therein named; (21) 'referee' shall mean the referee who has jurisdiction of the case or to whom the case has been referred, or any one acting in his stead; (22) 'conceal' shall include secrete, falsify, and

mutilate; (23) 'secured creditor' shall include a creditor who has security for his debt upon the property of the bankrupt of a nature to be assignable under this act, or who owns such a debt for which some indorser, surety, or other persons secondarily liable for the bankrupt has such security upon the bankrupt's assets; (24) 'States' shall include the Territories, the Indian Territory, Alaska, and the District of Columbia; (25) 'transfer' shall include the sale and every other and different mode of disposing of or parting with property, or the possession of property, absolutely or conditionally, as a payment, pledge, mortgage, gift, or security; (26) 'trustee' shall include all of the trustees of an estate; (27) 'wage earner' shall mean an individual who works for wages, salary, or hire, at a rate of compensation not exceeding \$1,500 per year; (28) words importing the masculine gender may be applied to and include corporations, partnerships, and women; (29) words importing the plural number may be applied to and mean only a single person or thing; (30) words importing the singular number may be applied to and mean several persons or things.

"CHAPTER II.—CREATION OF COURTS OF BANKRUPTCY AND, THEIR JURISDICTION.

"SEC. 2. That the courts of bankruptcy as hereinbefore defined, viz., the district courts of the United States in the several States, the Supreme Court of the District of Columbia, the district courts of the several Territories, and the United States courts in the Indian Territory and the District of Alaska, are hereby made courts of bankruptcy, and are hereby invested, within their respective Territorial limits as now established or as they may be hereafter changed, with such jurisdiction at law and in equity as will enable them to exercise original jurisdiction in bankruptcy proceedings, in vacation in chambers and during their respective terms, as they are now or may be hereafter held, to (1) adjudge persons bankrupt who have had their principal place of business, resided, or had their domicile within their respective Territorial jurisdictions for the preceding six months, or the greater portion thereof, or who do not have their principal place of business, reside, or have their domicile, within the United States, but have property within their jurisdictions, or who have been adjudged bankrupts by courts of competent jurisdiction without the United States, and have property within their jurisdictions; (2) allow claims, disallow claims, reconsider allowed or disallowed claims, and allow or disallow them against bankrupt estates; (3) appoint receivers or the marshals, upon application of parties in interest, in case the courts shall find it absolutely necessary, for the preservation of estates, to take charge of the property of bankrupts after the filing of the petition and until it is dismissed or the trustee is qualified; (4) arraign, try, and punish bankrupts, officers, and other persons, and the agents, officers, members of the board of directors or trustees, or other similar controlling bodies, of corporations for violations of this act, in accordance with the laws of procedure of the United States now in force, or such as may be hereafter enacted regulating trials for the alleged violation of laws of the United States; (5) authorize the business of bankrupts to be conducted for limited periods by receivers, the marshals, or trustees, if necessary in the best interests of the estates; (6) bring in and substitute additional persons or parties in proceedings in bankruptcy when necessary for the complete determination of a matter in controversy; (7) cause the estates of bankrupts to be collected, reduced to money and distributed, and determine controversies in relation thereto, except as herein otherwise provided; (8) close estates, when-

ever it appears that they have been fully administered, by approving the final accounts and discharging the trustees, and reopen them whenever it appears they were closed before being fully administered; (9) confirm or reject compositions between debtors and their creditors, and set aside compositions and reinstate the cases; (10) consider and confirm, modify or overrule, or return with instructions for further proceedings, records, and findings certified to them by referees; (11) determine all claims of bankrupts to their exemptions; (12) discharge or refuse to discharge bankrupts and set aside discharges and reinstate the cases; (13) enforce obedience by bankrupts, officers, and other persons to all lawful orders, by fine or imprisonment or fine and imprisonment; (14) extradite bankrupts from their respective districts to other districts; (15) make such orders, issue such process, and enter such judgments in addition to those specifically provided for as may be necessary for the enforcement of the provisions of this act; (16) punish persons for contempts committed before referees; (17) pursuant to the recommendation of creditors, or when they neglect to recommend the appointment of trustees, appoint trustees, and upon complaints of creditors, remove trustees for cause upon hearings and after notices to them; (18) tax costs, whenever they are allowed by law, and render judgments therefor against the unsuccessful party, or the successful party for cause, or in part against each of the parties, and against estates, in proceedings in bankruptcy; and (19) transfer cases to other courts of bankruptcy.

"Nothing in this section contained shall be construed to deprive a court of bankruptcy of any power it would possess were certain specific powers not herein enumerated.

"CHAPTER III.—BANKRUPTS.

"SEC. 3. Acts of Bankruptcy.—*a.* Acts of bankruptcy by a person shall consist of his having (1) conveyed, transferred, concealed, or removed, or permitted to be concealed or removed, any part of his property with intent to hinder, delay or defraud his creditors, or any of them; or (2) transferred, while insolvent, any portion of his property to one or more of his creditors with intent to prefer such creditors over his other creditors; or (3) suffered or permitted, while insolvent, any creditor to obtain a preference through legal proceedings, and not having at least five days before a sale or final disposition of any property affected by such preference vacated or discharged such preference; or (4) made a general assignment for the benefit of his creditors; or (5) admitted in writing his inability to pay his debts and his willingness to be adjudged a bankrupt on that ground.

"*b.* A petition may be filed against a person who is insolvent and who has committed an act of bankruptcy within four months after the commission of such act. Such time shall not expire until four months after (1) the date of the recording or registering of the transfer or assignment when the act consists in having made a transfer of any of his property with intent to hinder, delay, or defraud his creditors or for the purpose of giving a preference as hereinbefore provided, or a general assignment for the benefit of his creditors, if by law such recording or registering is required or permitted, or, if it is not, from the date when the beneficiary takes notorious, exclusive or continuous possession of the property unless the petitioning creditors have received actual notice of such transfer or assignment.

"*c.* It shall be a complete defense to any proceedings in bankruptcy instituted under the first subdivision of this section to allege and prove that the

party proceeded against was not insolvent as defined in this act at the time of the filing the petition against him, and if solvency at such date is proved by the alleged bankrupt the proceedings shall be dismissed, and under said subdivision 1 the burden of proving solvency shall be on the alleged bankrupt.

"d. Whenever a person against whom a petition has been filed as hereinbefore provided under the second and third subdivisions of this section takes issue with and denies the allegation of his insolvency, it shall be his duty to appear in court on the hearing, with his books, papers, and accounts, and submit to an examination, and give testimony as to all matters tending to establish solvency or insolvency, and in case of his failure to so attend and submit to examination the burden of proving his solvency shall rest upon him.

"e. Whenever a petition is filed by any person for the purpose of having another adjudged a bankrupt, and an application is made to take charge of and hold the property of the alleged bankrupt or any part of the same, prior to the adjudication and pending a hearing on the petition, the petitioner or applicant shall file in the same court a bond, with at least two good and sufficient sureties, who shall reside within the jurisdiction of said court, to be approved by the court or a judge thereof, in such sum as the court shall direct, conditioned for the payment, in case such petition is dismissed, to the respondent, his or her personal representatives all costs, expenses, and damages occasioned by such seizure, taking, and detention of the property of the alleged bankrupt.

"If such petition be dismissed by the court or withdrawn by the petitioner, the respondent or respondents shall be allowed all costs, counsel fees, expenses, and damages occasioned by such seizure, taking, or detention of such property. Counsel fees, costs, expenses, and damages shall be fixed and allowed by the court and paid by the obligors in such bond.

"Sec. 4. Who may become bankrupts.—a. Any person who owes debts, except a corporation, shall be entitled to the benefits of this act as a voluntary bankrupt.

"b. Any natural person, except a wage earner or a person engaged chiefly in farming or the tillage of the soil, any unincorporated company, and any corporation engaged principally in manufacturing, trading, printing, publishing, or mercantile pursuits, owing debts to the amount of \$1,000 or over, may be adjudged an involuntary bankrupt upon default or an impartial trial, and shall be subject to the provisions and entitled to the benefits of this act. Private bankers, but not national banks or banks incorporated under State or Territorial laws, may be adjudged involuntary bankrupts.

"Sec. 5. Partners.—a. A partnership during the continuation of the partnership business or after its dissolution and before the final settlement thereof, may be adjudged a bankrupt.

"b. The creditors of the partnership shall appoint the trustee; in other respects so far as possible the estate shall be administered as herein provided for other estates.

"c. The court of bankruptcy which has jurisdiction of one of the partners may have jurisdiction of all the partners and of the administration of the partnership and individual property.

"d. The trustee shall keep separate accounts of the partnership property and of the property belonging to the individual partners.

"e. The expenses shall be paid from the partnership property and the individual property in such proportion as the court shall determine.

"f. The net proceeds of the partnership property

shall be appropriated to the payment of the partnership debts, and the net proceeds of the individual estate of each partner to the payment of his individual debts. Should any surplus remain of the property of any partner after paying his individual debts, such surplus shall be added to the partnership assets and be applied to the payment of the partnership debts. Should any surplus of the partnership property remain after paying the partnership debts, such surplus shall be added to the assets of the individual partners in the proportion of their respective interests in the partnership.

"g. The court may permit the proof of the claim of the partnership estate against the individual estates, and *vice versa*, and may marshal the assets of the partnership estate and individual estates so as to prevent preferences and secure the equitable distribution of the property of the several estates.

"h. In the event of one or more but not all of the members of a partnership being adjudged bankrupt, the partnership property shall not be administered in bankruptcy, unless by consent of the partner or partners not adjudged bankrupt; but such partner or partners not adjudged bankrupt shall settle the partnership business as expeditiously as its nature will permit, and account for the interest of the partner or partners adjudged bankrupt.

"Sec. 6. Exemptions of bankrupts.—a. This act shall not affect the allowance to bankrupts of the exemptions which are prescribed by the State laws in force at the time of the filing of the petition in the State wherein they have had their domicile for the six months or the greater portion thereof immediately preceding the filing of the petition.

"Sec. 7. Duties of bankrupts.—a. The bankrupt shall (1) attend the first meeting of his creditors, if directed by the court or a judge thereof to do so, and the hearing upon his application for a discharge, if filed; (2) comply with all lawful orders of the court; (3) examine the correctness of all proofs of claims filed against his estate; (4) execute and deliver such papers as shall be ordered by the court; (5) execute to his trustee transfers of all his property in foreign countries; (6) immediately inform his trustee of any attempt, by his creditors or other persons, to evade the provisions of this act, coming to his knowledge; (7) in case of any person having to his knowledge proved a false claim against his estate, disclose that fact immediately to his trustee; (8) prepare, make oath to, and file in court within ten days, unless further time is granted, after the adjudication, if an involuntary bankrupt, and with the petition if a voluntary bankrupt, a schedule of his property showing the amount and kind of property, the location thereof, its money value in detail, and a list of his creditors, showing their residences, if known, if unknown, that fact to be stated, the amounts due each of them, the consideration thereof, the security held by them, if any, and a claim for such exemptions as he may be entitled to, all in triplicate, one copy of each for the clerk, one for the referee, and one for the trustee; and (9) when present at the first meeting of his creditors, and at such other times as the court shall order, submit to an examination concerning the conducting of his business, the cause of his bankruptcy, his dealings with his creditors and other persons, the amount, kind and whereabouts of his property, and, in addition, all matters which may affect the administration and settlement of his estate; but no testimony given by him shall be offered in evidence against him in any criminal proceeding.

"Provided, however, That he shall not be required to attend a meeting of his creditors, or at or for an

examination at a place more than 150 miles distant from his home or principal place of business, or to examine claims except when presented to him, unless ordered by the court or a judge thereof for cause shown, and the bankrupt shall be paid his actual expenses from the estate when examined or required to attend at any place other than the city, town, or village of his residence.

"Sec. 8. Death or insanity of bankrupts.—*a.* The death or insanity of a bankrupt shall not abate the proceedings, but the same shall be conducted and concluded in the same manner, so far as possible, as though he had not died or become insane: *Provided*, That in case of death the widow and children shall be entitled to all rights of dower and allowance fixed by the laws of the State of the bankrupt's residence.

"Sec. 9. Protection and detention of bankrupts.—*a.* A bankrupt shall be exempt from arrest upon civil process except in the following cases: (1) When issued from a court of bankruptcy for contempt or disobedience of its lawful orders; (2) when issued from a State court having jurisdiction, and served within such State, upon a debt or claim from which his discharge in bankruptcy would not be a release, and in such case he shall be exempt from such arrest when in attendance upon a court of bankruptcy, or engaged in the performance of a duty imposed by this act.

"*b.* The judge may, at any time after the filing of a petition by or against a person, and before the expiration of one month after the qualification of the trustee, upon satisfactory proof by the affidavits of at least two persons that such bankrupt is about to leave the district in which he resides or has his principal place of business to avoid examination, and that his departure will defeat the proceedings in bankruptcy, issue a warrant to the marshal directing him to bring such bankrupt forthwith before the court for examination. If upon hearing the evidence of the parties it shall appear to the court, or a judge thereof, that the allegations are true and that it is necessary, he shall order such marshal to keep such bankrupt in custody not exceeding ten days, but not imprison him, until he shall be examined and released, or give bail conditioned for his appearance for examination, from time to time, not exceeding in all ten days, as required by the court, and for his obedience to all lawful orders made in reference thereto.

"Sec. 10. Extradition of bankrupts.—*a.* Whenever a warrant for the apprehension of a bankrupt shall have been issued, and he shall have been found within the jurisdiction of a court other than the one issuing the warrant, he may be extradited in the same manner in which persons under indictment are now extradited from one district within which a district court has jurisdiction to another.

"Sec. 11. Suits by and against bankrupts.—*a.* A suit which is founded upon a claim from which a discharge would be a release, and which is pending against a person at the time of the filing of a petition against him, shall be stayed until after an adjudication or the dismissal of the petition; if such person is adjudged a bankrupt, such action may be further stayed until twelve months after the date of such adjudication, or, if within that time such person applies for a discharge, then until the question of such discharge is determined.

"*b.* The court may order the trustee to enter his appearance and defend any pending suit against the bankrupt.

"*c.* A trustee may, with the approval of the court, be permitted to prosecute as trustee any suit commenced by the bankrupt prior to the adjudication with like force and effect as though it had been commenced by him.

"*d.* Suits shall not be brought by or against a trustee of a bankrupt estate subsequent to two years after the estate has been closed.

"Sec. 12. Compositions, when confirmed.—*a.* A bankrupt may offer terms of composition to his creditors after, but not before, he has been examined in open court or at a meeting of his creditors and filed in court the schedule of his property and list of his creditors, required to be filed by bankrupts.

"*b.* An application for the confirmation of a composition may be filed in the court of bankruptcy after, but not before, it has been accepted in writing by a majority in number of all creditors whose claims have been allowed, which number must represent a majority in amount of such claims, and the consideration to be paid by the bankrupt to his creditors, and the money necessary to pay all debts which have priority and the cost of the proceedings, have been deposited in such place as shall be designated by and subject to the order of the judge.

"*c.* A date and place, with reference to the convenience of the parties in interest, shall be fixed for the hearing upon each application for the confirmation of a composition and such objections as may be made to its confirmation.

"*d.* The judge shall confirm a composition if satisfied that (1) it is for the best interests of the creditors; (2) the bankrupt has not been guilty of any of the acts or failed to perform any of the duties which would be a bar to his discharge; and (3) the offer and its acceptance are in good faith and have not been made or procured except as herein provided, or by any means, promises, or acts herein forbidden.

"*e.* Upon the confirmation of a composition, the consideration shall be distributed as the judge shall direct, and the case dismissed. Whenever a composition is not confirmed, the estate shall be administered in bankruptcy as herein provided.

"Sec. 13. Compositions, when set aside.—*a.* The judge may, upon the application of parties in interest, filed at any time within six months after a composition has been confirmed, set the same aside and reinstate the case if it shall be made to appear upon a trial that fraud was practiced in the procuring of such composition, and that the knowledge thereof has come to the petitioners since the confirmation of such composition.

"Sec. 14. Discharges, when granted.—*a.* Any person may, after the expiration of one month and within the next twelve months subsequent to being adjudged a bankrupt, file an application for a discharge in the court of bankruptcy in which the proceedings are pending; if it shall be made to appear to the judge that the bankrupt was unavoidably prevented from filing it within such time, it may be filed within but not after the expiration of the next six months.

"*b.* The judge shall hear the application for a discharge, and such proofs and pleas as may be made in opposition thereto by parties in interest, at such time as will give parties in interest a reasonable opportunity to be fully heard, and investigate the merits of the application and discharge the applicant unless he has (1) committed an offense punishable by imprisonment as herein provided; or (2) with fraudulent intent to conceal his true financial condition and in contemplation of bankruptcy, destroyed, concealed, or failed to keep books of account or records from which his true condition might be ascertained.

"*c.* The confirmation of a composition shall discharge the bankrupt from his debts, other than those agreed to be paid by the terms of the composition and those not affected by a discharge.

"Sec. 15. Discharges, when revoked.—*a.* The judge may, upon the application of parties in interest who have not been guilty of undue laches,

filed at any time within one year after a discharge shall have been granted, revoke it upon a trial if it shall be made to appear that it was obtained through the fraud of the bankrupt, and that the knowledge of the fraud has come to the petitioners since the granting of the discharge, and that the actual facts did not warrant the discharge.

"SEC. 16. Codebtors of bankrupts.—*a*. The liability of a person who is a codebtor with, or guarantor or in any manner a surety for, a bankrupt shall not be altered by the discharge of such bankrupt.

"SEC. 17. Debts not affected by a discharge.—*a*. A discharge in bankruptcy shall release a bankrupt from all of his provable debts, except such as (1) are due as a tax levied by the United States, and State, county, district, or municipality in which he resides; (2) are judgments in actions for frauds, or obtaining property by false pretenses or false representations, or for willful and malicious injuries to the person or property of another; (3) have not been duly scheduled in time for proof and allowance, with the name of the creditor if known to the bankrupt, unless such creditor had notice or actual knowledge of the proceedings in bankruptcy; or (4) were created by his fraud, embezzlement, misappropriation, or defalcation while acting as an officer or in any fiduciary capacity.

"CHAPTER IV.—COURTS AND PROCEDURE THEREIN.

"SEC. 18. Process, pleadings, and adjudications.—*a*. Upon the filing of a petition for involuntary bankruptcy, service thereof, with a writ of subpoena, shall be made upon the person therein named as defendant in the same manner that service of such process is now had upon the commencement of a suit in equity in the courts of the United States, except that it shall be returnable within fifteen days, unless the judge shall for cause fix a longer time; but in case personal service can not be made, then notice shall be given by publication in the same manner and for the same time as provided by law for notice by publication in suits in equity in courts of the United States.

"*b*. The bankrupt, or any creditor, may appear and plead to the petition within ten days after the return day, or within such further time as the court may allow.

"*c*. All pleadings setting up matters of fact shall be verified under oath.

"*d*. If the bankrupt, or any of his creditors, shall appear, within the time limited, and controvert the facts alleged in the petition, the judge shall determine, as soon as may be, the issues presented by the pleadings, without the intervention of a jury, except in cases where a jury trial is given by this act, and make the adjudication or dismiss the petition.

"*e*. If on the last day within which pleadings may be filed none are filed by the bankrupt or any of his creditors, the judge shall on the next day, if present, or as soon thereafter as practicable, make the adjudication or dismiss the petition.

"*f*. If the judge is absent from the district, or the division of the district in which the petition is pending, on the next day after the last day on which pleadings may be filed, and none have been filed by the bankrupt or any of his creditors, the clerk shall forthwith refer the case to the referee.

"*g*. Upon the filing of a voluntary petition the judge shall hear the petition and make the adjudication or dismiss the petition. If the judge is absent from the district, or the division of the district in which the petition is filed, at the time of the filing, the clerk shall forthwith refer the case to the referee.

"SEC. 19. Jury trials.—*a*. A person against whom an involuntary petition has been filed shall be en-

titled to have a trial by jury, in respect to the question of his insolvency, except as herein otherwise provided, and any act of bankruptcy alleged in such petition to have been committed, upon filing a written application therefor at or before the time within which an answer may be filed. If such application is not filed within such time, a trial by jury shall be deemed to have been waived.

"*b*. If a jury is not in attendance upon the court, one may be specially summoned for the trial, or the case may be postponed, or, if the case is pending in one of the district courts within the jurisdiction of a circuit court of the United States, it may be certified for trial to the circuit court sitting at the same place, or by consent of parties when sitting at any other place in the same district, if such circuit court has or is to have a jury first in attendance.

"*c*. The right to submit matters in controversy, or an alleged offense under this act, to a jury shall be determined and enjoyed, except as provided by this act, according to the United States laws now in force or such as may be hereafter enacted in relation to trials by jury.

"SEC. 20. Oaths, affirmations.—*a*. Oaths required by this act, except upon hearings in court, may be administered by (1) referees; (2) officers authorized to administer oaths in proceedings before the courts of the United States, or under the laws of the State where the same are to be taken; and (3) diplomatic or consular officers of the United States in any foreign country.

"*b*. Any person conscientiously opposed to taking an oath may, in lieu thereof, affirm. Any person who shall affirm falsely shall be punished as for the making of a false oath.

"SEC. 21. Evidence.—*a*. A court of bankruptcy may, upon application of any officer, bankrupt, or creditor, by order require any designated person, including the bankrupt, who is a competent witness under the laws of the State in which the proceedings are pending, to appear in court or before a referee or the judge of any State court, to be examined concerning the acts, conduct, or property of a bankrupt whose estate is in process of administration under this act.

"*b*. The right to take depositions in proceedings under this act shall be determined and enjoyed according to the United States laws now in force, or such as may be hereafter enacted relating to the taking of depositions, except as herein provided.

"*c*. Notice of the taking of depositions shall be filed with the referee in every case. When depositions are to be taken in opposition to the allowance of a claim notice shall also be served upon the claimant, and when in opposition to a discharge notice shall also be served upon the bankrupt.

"*d*. Certified copies of proceedings before a referee or of papers, when issued by the clerk or referee, shall be admitted as evidence with like force and effect as certified copies of the records of district courts of the United States are now or may hereafter be admitted as evidence.

"*e*. A certified copy of the order approving the bond of a trustee shall constitute conclusive evidence of the vesting in him of the title to the property of the bankrupt, and if recorded shall impart the same notice that a deed from the bankrupt to the trustee if recorded would have imparted had not bankruptcy proceedings intervened.

"*f*. A certified copy of an order confirming or setting aside a composition or granting or setting aside a discharge, not revoked, shall be evidence of the jurisdiction of the court, the regularity of the proceedings, and of the fact that the order was made.

"*g*. A certified copy of an order confirming a composition shall constitute evidence of the revesting of the title of his property in the bankrupt, and

if recorded shall impart the same notice that a deed from the trustee to the bankrupt if recorded would impart.

"Sec. 22. Reference of cases after adjudication.—*a.* After a person has been adjudged a bankrupt the judge may cause the trustee to proceed with the administration of the estate, or refer it (1) generally to the referee or specially with only limited authority to act in the premises or to consider and report upon specified issues; or (2) to any referee within the territorial jurisdiction of the court, if the convenience of parties in interest will be served thereby, or for cause, or if the bankrupt does not do business, reside, or have his domicile in the district.

"*b.* The judge may, at any time, for the convenience of parties or for cause, transfer a case from one referee to another.

"Sec. 23. Jurisdiction of United States and State courts.—*a.* The United States circuit courts shall have jurisdiction of all controversies at law and in equity, as distinguished from proceedings in bankruptcy, between trustees as such and adverse claimants concerning the property acquired or claimed by the trustees, in the same manner and to the same extent only as though bankruptcy proceedings had not been instituted and such controversies had been between the bankrupts and such adverse claimants.

"*b.* Suits by the trustee shall only be brought or prosecuted in the courts where the bankrupt, whose estate is being administered by such trustee, might have brought or prosecuted them if proceedings in bankruptcy had not been instituted, unless by consent of the proposed defendant.

"*c.* The United States circuit courts shall have concurrent jurisdiction with the courts of bankruptcy, within their respective territorial limits, of the offenses enumerated in this act.

"Sec. 24. Jurisdiction of appellate courts.—*a.* The Supreme Court of the United States, the circuit courts of appeals of the United States, and the supreme courts of the Territories, in vacation in chambers and during their respective terms, as now or as they may be hereafter held, are hereby invested with appellate jurisdiction of controversies arising in bankruptcy proceedings from the courts of bankruptcy from which they have appellate jurisdiction in other cases. The Supreme Court of the United States shall exercise a like jurisdiction from courts of bankruptcy not within any organized circuit of the United States and from the Supreme Court of the District of Columbia.

"*b.* The several circuit courts of appeals shall have jurisdiction in equity, either interlocutory or final, to superintend and revise in matter of law the proceedings of the several inferior courts of bankruptcy within their jurisdiction. Such power shall be exercised on due notice and petition by any party aggrieved.

"Sec. 25. Appeals and writs of error.—*a.* That appeals, as in equity cases, may be taken in bankruptcy proceedings from the courts of bankruptcy to the circuit court of appeals of the United States, and to the supreme court of the Territories, in the following cases, to wit, (1) from a judgment adjudging or refusing to adjudge the defendant a bankrupt; (2) from a judgment granting or denying a discharge; and (3) from a judgment allowing or rejecting a debt or claim of \$500 or over. Such appeal shall be taken within ten days after the judgment appealed from has been rendered, and may be heard and determined by the appellate court in term or vacation, as the case may be.

"*b.* From any final decision of a court of appeals, allowing for rejecting a claim under this act, an appeal may be had under such rules and within such time as may be prescribed by the Supreme Court of

the United States in the following cases, and no other:

"1. Where the amount in controversy exceeds the sum of \$2,000, and the question involved is one which might have been taken on appeal or writ of error from the highest court of a State to the Supreme Court of the United States; or

"2. Where some justice of the Supreme Court of the United States shall certify that in his opinion the determination of the question or questions involved in the allowance or rejection of such claim is essential to a uniform construction of this act throughout the United States.

"*c.* Trustees shall not be required to give bond when they take appeals or sue out writs of error.

"Sec. 26. Arbitration of controversies.—*a.* The trustee may, pursuant to the direction of the court, submit to arbitration any controversy arising in the settlement of the estate.

"*b.* Three arbitrators shall be chosen by mutual consent, or one by the trustee, one by the other party to the controversy, and the third by the two so chosen, or if they fail to agree in five days after their appointment the court shall appoint the third arbitrator.

"*c.* The written finding of the arbitrators, or a majority of them, as to the issues presented, may be filed in court and shall have like force and effect as the verdict of a jury.

"Sec. 27. Compromises.—*a.* The trustee may, with the approval of the court, compromise any controversy arising in the administration of the estate upon such terms as he may deem for the best interests of the estate.

"Sec. 28. Designation of newspapers.—*a.* Courts of bankruptcy shall by order designate a newspaper published within their respective territorial districts, and in the county in which the bankrupt resides or the major part of his property is situated, in which notices required to be published by this act and orders which the court may direct to be published shall be inserted. Any court may, in a particular case, for the convenience of parties in interest, designate some additional newspaper in which notices and orders in such case shall be published.

"Sec. 29. Offenses.—*a.* A person shall be punished, by imprisonment for a period not to exceed five years, upon conviction of the offense of having knowingly and fraudulently appropriated to his own use, embezzled, spent, or unlawfully transferred any property or secreted or destroyed any document belonging to a bankrupt estate which came into his charge as trustee.

"*b.* A person shall be punished, by imprisonment for a period not to exceed two years, upon conviction of the offense of having knowingly and fraudulently (1) concealed while a bankrupt, or after his discharge, from his trustee any of the property belonging to his estate in bankruptcy; or (2) made a false oath or account in, or in relation to, any proceeding in bankruptcy; (3) presented under oath any false claim for proof against the estate of a bankrupt, or used any such claim in composition personally or by agent, proxy, or attorney, or as agent, proxy, or attorney; or (4) received any material amount of property from a bankrupt after the filing of the petition, with intent to defeat this act; or (5) extorted or attempted to extort any money or property from any person as a consideration for acting or forbearing to act in bankruptcy proceedings.

"*c.* A person shall be punished by fine, not to exceed \$500, and forfeit his office, and the same shall thereupon become vacant, upon conviction of the offense of having knowingly (1) acted as a referee in a case in which he is directly or indirectly interested; or (2) purchased, while a referee, directly or

indirectly, any property of the estate in bankruptcy of which he is referee; or (3) refused, while a referee or trustee, to permit a reasonable opportunity for the inspection of the accounts relating to the affairs of, and the papers and records of, estates in his charge by parties in interest when directed by the court so to do.

"d. A person shall not be prosecuted for any offense arising under this act unless the indictment is found or the information is filed in court within one year after the commission of the offense.

"SEC. 30. Rules, forms, and orders.—a. All necessary rules, forms, and orders as to procedure and for carrying this act into force and effect shall be prescribed, and may be amended from time to time, by the Supreme Court of the United States.

"SEC. 31. Computation of time.—a. Whenever time is enumerated by days in this act, or in any proceeding in bankruptcy, the number of days shall be computed by excluding the first and including the last, unless the last fall on a Sunday or holiday, in which event the day last included shall be the next day thereafter which is not a Sunday or a legal holiday.

"SEC. 32. Transfer of cases.—a. In the event petitions are filed against the same person, or against different members of a partnership, in different courts of bankruptcy each of which has jurisdiction, the cases shall be transferred, by order of the courts relinquishing jurisdiction, to and be consolidated by the one of such courts which can proceed with the same for the greatest convenience of parties in interest.

"CHAPTER V.—OFFICERS, THEIR DUTIES AND COMPENSATION.

"SEC. 33. Creation of two offices.—a. The offices of referee and trustee are hereby created.

"SEC. 34. Appointment, removal, and districts of referees.—a. Courts of bankruptcy shall, within the territorial limits of which they respectively have jurisdiction, (1) appoint referees, each for a term of two years, and may, in their discretion, remove them because their services are not needed or for other cause; and (2) designate, and from time to time change, the limits of the districts of referees, so that each county, where the services of a referee are needed, may constitute at least one district.

"SEC. 35. Qualifications of referees.—a. Individuals shall not be eligible to appointment as referees unless they are respectively (1) competent to perform the duties of that office; (2) not holding any office of profit or emolument under the laws of the United States or of any State other than commissioners of deeds, justices of the peace, masters in chancery, or notaries public; (3) not related by consanguinity or affinity, within the third degree as determined by the common law, to any of the judges of the courts of bankruptcy or circuit courts of the United States, or of the justices or judges of the appellate courts of the districts wherein they may be appointed; and (4) residents of, or have their offices in, the territorial districts for which they are to be appointed.

"SEC. 36. Oaths of office of referees.—a. Referees shall take the same oath of office as that prescribed for judges of United States courts.

"SEC. 37. Number of referees.—a. Such number of referees shall be appointed as may be necessary to assist in expeditiously transacting the bankruptcy business pending in the various courts of bankruptcy.

"SEC. 38. Jurisdiction of referees.—a. Referees respectively are hereby invested, subject always to a review by the judge, within the limits of their districts as established from time to time, with jurisdiction to (1) consider all petitions referred to them

by the clerks and make the adjudications or dismiss the petitions; (2) exercise the powers vested in courts of bankruptcy for the administering of oaths to and the examination of persons as witnesses and for requiring the production of documents in proceedings before them, except the power of commitment; (3) exercise the powers of the judge for the taking possession and releasing of the property of the bankrupt in the event of the issuance by the clerk of a certificate showing the absence of a judge from the judicial district, or the division of the district, or his sickness, or inability to act; (4) perform such part of the duties, except as to questions arising out of the applications of bankrupts for compositions or discharges, as are by this act conferred on courts of bankruptcy and as shall be prescribed by rules or orders of the courts of bankruptcy of their respective districts, except as herein otherwise provided; and (5) upon the application of the trustee during the examination of the bankrupts, or other proceedings, authorize the employment of stenographers at the expense of the estates at a compensation not to exceed 10 cents per folio for reporting and transcribing the proceedings.

"SEC. 39. Duties of referees.—a. Referees shall (1) declare dividends and prepare and deliver to trustees dividend sheets showing the dividends declared and to whom payable; (2) examine all schedules of property and lists of creditors filed by bankrupts and cause such as are incomplete or defective to be amended; (3) furnish such information concerning the estates in process of administration before them as may be requested by the parties in interest; (4) give notices to creditors as herein provided; (5) make up records embodying the evidence, or the substance thereof, as agreed upon by the parties in all contested matters arising before them, whenever requested to do so by either of the parties thereto, together with their findings therein, and transmit them to the judges; (6) prepare and file the schedules of property and list of creditors required to be filed by the bankrupts, or cause the same to be done, when the bankrupts fail, refuse, or neglect to do so; (7) safely keep, perfect, and transmit to the clerks the records, herein required to be kept by them, when the cases are concluded; (8) transmit to the clerks such papers as may be on file before them whenever the same are needed in any proceedings in courts, and in like manner secure the return of such papers after they have been used, or if it be impracticable to transmit the original papers, transmit certified copies thereof by mail; (9) upon application of any party in interest, preserve the evidence taken or the substance thereof as agreed upon by the parties before them when a stenographer is not in attendance; and (10) whenever their respective offices are in the same cities or towns where the courts of bankruptcy convene, call upon and receive from the clerks all papers filed in courts of bankruptcy which have been referred to them.

"b. Referees shall not (1) act in cases in which they are directly or indirectly interested; (2) practice as attorneys and counselors at law in any bankruptcy proceedings; or (3) purchase, directly or indirectly, any property of an estate in bankruptcy.

"SEC. 40. Compensation of referees.—a. Referees shall receive as full compensation for their services, payable after they are rendered, a fee of \$10 deposited with the clerk at the time the petition is filed in each case, except when a fee is not required from a voluntary bankrupt, and from estates which have been administered before them 1 per cent. commissions on sums to be paid as dividends and commissions, or one half of 1 per cent. on the amount to be paid to creditors upon the confirmation of a composition.

"*b.* Whenever a case is transferred from one referee to another, the judge shall determine the proportion in which the fee and commissions therefor shall be divided between the referees.

"*c.* In the event of the reference of a case being revoked before it is concluded, and when the case is specially referred, the judge shall determine what part of the fee and commissions shall be paid to the referee.

"SEC. 41. Contempts before referees.—*a.* A person shall not, in proceedings before a referee, (1) disobey or resist any lawful order, process, or writ; (2) misbehave during a hearing or so near the place thereof as to obstruct the same; (3) neglect to produce, having been ordered to do so, any pertinent document; or (4) refuse to appear after having been subpoenaed, or, upon appearing, refuse to take the oath as a witness, or, after having taken the oath, refuse to be examined according to law; *Provided*, That no person shall be required to attend as a witness before a referee at a place outside of the State of his residence, and more than 100 miles from such place of residence, and only in case his lawful mileage and fee for one day's attendance shall be first paid or tendered to him.

"*b.* The referee shall certify the facts to the judge, if any person shall do any of the things forbidden in this section. The judge shall thereupon, in a summary manner, hear the evidence, as to the acts complained of, and, if it is such as to warrant him in so doing, punish such person in the same manner and to the same extent as for a contempt committed before the court of bankruptcy, or commit such person upon the same conditions as if the doing of the forbidden act had occurred with reference to the process of, or in the presence of, the court.

"SEC. 42. Records of referees.—*a.* The records of all proceedings in each case before a referee shall be kept as nearly as may be in the same manner as records are now kept in equity cases in circuit courts in the United States.

"*b.* A record of the proceedings in each case shall be kept in a separate book or books, and shall, together with the papers on file, constitute the records of the case.

"*c.* The book or books containing a record of the proceedings shall, when the case is concluded before the referee, be certified to by him, and, together with such papers as are on file before him, be transmitted to the court of bankruptcy and shall there remain as a part of the records of the court.

"SEC. 43. Referee's absence or disability.—*a.* Whenever the office of a referee is vacant, or its occupant is absent or disqualified to act, the judge may act, or may appoint another referee, or another referee holding an appointment under the same court may, by order of the judge, temporarily fill the vacancy.

"SEC. 44. Appointment of trustees.—*a.* The creditors of a bankrupt estate shall, at their first meeting after the adjudication or after a vacancy has occurred in the office of trustee, or after an estate has been reopened, or after a composition has been set aside or a discharge revoked, or if there is a vacancy in the office of trustee, appoint one trustee or three trustees of such estate. If the creditors do not appoint a trustee or trustees as herein provided, the court shall do so.

"SEC. 45. Qualifications of trustees.—*a.* Trustees may be (1) individuals who are respectively competent to perform the duties of that office, and reside or have an office in the judicial district within which they are appointed, or (2) corporations authorized by their charters or by law to act in such capacity and having an office in the judicial district within which they are appointed.

"SEC. 46. Death or removal of trustees.—*a.* The death or removal of a trustee shall not abate any

suit or proceeding which he is prosecuting or defending at the time of his death or removal, but the same may be proceeded with or defended by his joint trustee or successor in the same manner as though the same had been commenced or was being defended by such joint trustee alone or by such successor.

"SEC. 47. Duties of trustees.—*a.* Trustees shall respectively (1) account for and pay over to the estates under their control all interest received by them upon property of such estates; (2) collect and reduce to money the property of the estates for which they are trustees, under the direction of the court, and close up the estate as expeditiously as is compatible with the best interests of the parties in interest; (3) deposit all money received by them in one of the designated depositories; (4) disburse money only by check or draft on the depositories in which it has been deposited; (5) furnish such information concerning the estates of which they are trustees and their administration as may be requested by parties in interest; (6) keep regular accounts showing all amounts received and from what sources and all amounts expended and on what accounts; (7) lay before the final meeting of the creditors detailed statements of the administration of the estates; (8) make final reports and file final accounts with the courts fifteen days before the days fixed for the final meetings of the creditors; (9) pay dividends within ten days after they are declared by the referees; (10) report to the courts, in writing, the condition of the estates and the amounts of money on hand, and such other details as may be required by the courts, within the first month after their appointment and every two months thereafter, unless otherwise ordered by the courts; and (11) set apart the bankrupt's exemptions and report the items and estimated value thereof to the court as soon as practicable after their appointment.

"*b.* Whenever three trustees have been appointed for an estate, the concurrence of at least two of them shall be necessary to the validity of their every act concerning the administration of the estate.

"SEC. 48. Compensation of trustees.—*a.* Trustees shall receive, as full compensation for their services, payable after they are rendered, a fee of \$5 deposited with the clerk at the time the petition is filed in each case, except when a fee is not required from a voluntary bankrupt, and from estates which they have administered, such commissions on sums to be paid as dividends and commissions as may be allowed by the courts, not to exceed 3 per cent. on the first \$5,000 or less, 2 per cent. on the second \$5,000 or part thereof, and 1 per cent. on such sums in excess of \$10,000.

"*b.* In the event of an estate being administered by three trustees instead of one trustee or by successive trustees, the court shall apportion the fees and commissions between them according to the services actually rendered, so that there shall not be paid to trustees for the administering of any estate a greater amount than one trustee would be entitled to.

"*c.* The court may, in its discretion, withhold all compensation from any trustee who has been removed for cause.

"SEC. 49. Accounts and papers of trustees.—*a.* The accounts and papers of trustees shall be open to the inspection of officers and all parties in interest.

"SEC. 50. Bonds of referees and trustees.—*a.* Referees, before assuming the duties of their office, and within such time as the district courts of the United States having jurisdiction shall prescribe, shall respectively qualify by entering into bond to the United States in such sum as shall be fixed by such courts, not to exceed \$5,000, with such sureties

as shall be approved by such courts, conditioned for the faithful performance of their official duties.

"*b.* Trustees before entering upon the performance of their official duties, and within ten days after their appointment, or within such further time, not to exceed five days, as the court may permit, shall respectively qualify by entering into bond to the United States, with such sureties as shall be approved by the courts, conditioned for the faithful performance of their official duties.

"*c.* The creditors of a bankrupt estate, at their first meeting after the adjudication, or after a vacancy has occurred in the office of trustee, or after an estate has been reopened, or after a composition has been set aside or a discharge revoked, if there is a vacancy in the office of trustee, shall fix the amount of the bond of the trustee; they may at any time increase the amount of the bond. If the creditors do not fix the amount of the bond of the trustees as herein provided the court shall do so.

"*d.* The court shall require evidence as to the actual value of the property of sureties.

"*e.* There shall be at least two sureties upon each bond.

"*f.* The actual value of the property of the sureties, over and above their liabilities and exemptions on each bond, shall equal at least the amount of such bond.

"*g.* Corporations organized for the purpose of becoming sureties upon bonds, or authorized by law to do so, may be accepted as sureties upon the bonds of referees and trustees whenever the courts are satisfied that the rights of all parties in interest will be thereby amply protected.

"*h.* Bonds of referees, trustees, and designated depositors shall be filed of record in the office of the clerk of the court and may be sued upon in the name of the United States for the use of any person injured by a breach of their conditions.

"*i.* Trustees shall not be liable, personally or on their bonds, to the United States for any penalties or forfeitures incurred by the bankrupts under this act of whose estates they are respectively trustees.

"*j.* Joint trustees may give joint or several bonds.

"*k.* If any referee or trustee shall fail to give bond as herein provided and within the time limited, he shall be deemed to have declined his appointment, and such failure shall create a vacancy in his office.

"*l.* Suits upon referees' bonds shall not be brought subsequent to two years after the alleged breach of the bond.

"*m.* Suits upon trustees' bonds shall not be brought subsequent to two years after the estate has been closed.

"SEC. 51. Duties of clerks.—*a.* Clerks shall respectively (1) account for, as for other fees received by them, the clerk's fee paid in each case and such other fees as may be received for certified copies of records which may be prepared for persons other than officers; (2) collect the fees of the clerk, referee, and trustee in each case instituted before filing the petition, except the petition of a proposed voluntary bankrupt which is accompanied by an affidavit stating that the petitioner is without, and can not obtain, the money with which to pay such fees; (3) deliver to the referees upon application all papers which may be referred to them, or, if the offices of such referees are not in the same cities or towns as the offices of such clerks, transmit such papers by mail, and in like manner return papers which were received from such referees after they have been used; (4) and within ten days after each case has been closed pay to the referee, if the case was referred, the fee collected for him, and to the trustee the fee collected for him at the time of filing the petition.

"SEC. 52. Compensation of clerks and marshals.—*a.* Clerks shall respectively receive as full compensation for their service to each estate a filing fee of \$10, except when a fee is not required from a voluntary bankrupt.

"*b.* Marshals shall respectively receive from the estate where an adjudication in bankruptcy is made, except as herein otherwise provided, for the performance of their services in proceedings in bankruptcy, the same fees, and account for them in the same way, as they are entitled to receive for the performance of the same or similar services in other cases in accordance with laws now in force, or such as may be hereafter enacted, fixing the compensation of marshals.

"SEC. 53. Duties of Attorney-General.—*a.* The Attorney-General shall annually lay before Congress statistical tables showing for the whole country, and by States, the number of cases during the year of voluntary and involuntary bankruptcy; the amount of the property of the estates; the dividends paid and the expenses of administering such estates; and such other like information as he may deem important.

"SEC. 54. Statistics of bankruptcy proceedings.—*a.* Officers shall furnish in writing and transmit by mail such information as is within their knowledge, and as may be shown by the records and papers in their possession, to the Attorney-General, for statistical purposes, within ten days after being requested by him to do so."

"CHAPTER VI.—CREDITORS.

"SEC. 55. Meetings of creditors.—*a.* The court shall cause the first meeting of the creditors of a bankrupt to be held, not less than ten nor more than thirty days after the adjudication, at the county seat of the county in which the bankrupt has had his principal place of business, resided, or had his domicile; or if that place would be manifestly inconvenient as a place of meeting for the parties in interest, or if the bankrupt is one who does not do business, reside, or have his domicile within the United States, the court shall fix a place for the meeting which is the most convenient for parties in interest. If such meeting should by any mischance not be held within such time, the court shall fix the date, as soon as may be thereafter, when it shall be held.

"*b.* At the first meeting of creditors the judge or referee shall preside, and, before proceeding with the other business, may allow or disallow the claims of creditors there presented, and may publicly examine the bankrupt or cause him to be examined at the instance of any creditor.

"*c.* The creditors shall at each meeting take such steps as may be pertinent and necessary for the promotion of the best interests of the estate and the enforcement of this act.

"*d.* A meeting of creditors, subsequent to the first one, may be held at any time and place when all of the creditors who have secured the allowance of their claims sign a written consent to hold a meeting at such time and place.

"*e.* The court shall call a meeting of creditors whenever one fourth or more in number of those who have proved their claims shall file a written request to that effect; if such request is signed by a majority of such creditors, which number represents a majority in amount of such claims, and contains a request for such meeting to be held at a designated place, the court shall call such meeting at such place within thirty days after the date of the filing of the request.

"*f.* Whenever the affairs of the estate are ready to be closed a final meeting of creditors shall be ordered.

"SEC. 56. Voters at meetings of creditors.—*a.* Creditors shall pass upon matters submitted to them at their meetings by a majority vote in number and amount of claims of all creditors whose claims have been allowed and are present, except as herein otherwise provided.

"*b.* Creditors holding claims which are secured or have priority shall not, in respect to such claims, be entitled to vote at creditors' meetings, nor shall such claims be counted in computing either the number of creditors or the amount of their claims, unless the amounts of such claims exceed the values of such securities or priorities, and then only for such excess.

"SEC. 57. Proof and allowance of claims.—*a.* Proof of claims shall consist of a statement under oath, in writing, signed by a creditor setting forth the claim, the consideration therefor, and whether any, and, if so, what securities are held therefor, and whether any, and, if so, what payments have been made thereon, and that the sum claimed is justly owing from the bankrupt to the creditor.

"*b.* Whenever a claim is founded upon an instrument of writing such instrument, unless lost or destroyed, shall be filed with the proof of claim. If such instrument is lost or destroyed, a statement of such fact and of the circumstances of such loss or destruction shall be filed under oath with the claim. After the claim is allowed or disallowed such instrument may be withdrawn by permission of the court upon leaving a copy thereof on file with the claim.

"*c.* Claims after being proved may, for the purpose of allowance, be filed by the claimants in the court where the proceedings are pending or before the referee if the case has been referred.

"*d.* Claims which have been duly proved shall be allowed, upon receipt by or upon presentation to the court, unless objection to their allowance shall be made by parties in interest, or their consideration be continued for cause by the court upon its own motion.

"*e.* Claims of secured creditors and those who have priority may be allowed to enable such creditors to participate in the proceedings at creditors' meetings held prior to the determination of the value of their securities or priorities, but shall be allowed for such sums only as to the courts seem to be owing over and above the value of their securities or priorities.

"*f.* Objections to claims shall be heard and determined as soon as the convenience of the court and the best interests of the estates and the claimants will permit.

"*g.* The claims of creditors who have received preferences shall not be allowed unless such creditors shall surrender their preferences.

"*h.* The value of securities held by secured creditors shall be determined by converting the same into money according to the terms of the agreement pursuant to which such securities were delivered to such creditors or by such creditors and the trustee, by agreement, arbitration, compromise, or litigation, as the court may direct, and the amount of such value shall be credited upon such claims; and a dividend shall be paid only on the unpaid balance.

"*i.* Whenever a creditor, whose claims against a bankrupt estate is secured by the individual undertaking of any person, fails to prove such claim, such person may do so in the creditor's name, and if he discharge such undertaking in whole or in part he shall be subrogated to that extent to the rights of the creditor.

"*j.* Debts owing to the United States, a State, a county, a district, or a municipality as a penalty of forfeiture shall not be allowed, except for the amount of the pecuniary loss sustained by the act,

transaction, or proceeding out of which the penalty of forfeiture arose, with reasonable and actual costs occasioned thereby and such interest as may have accrued thereon according to law.

"*k.* Claims which have been allowed may be reconsidered for cause and reallocated or rejected in whole or in part, according to the equities of the case, before but not after the estate has been closed.

"*l.* Whenever a claim shall have been reconsidered and rejected, in whole or in part, upon which a dividend has been paid, the trustee may recover from the creditor the amount of the dividend received upon the claim if rejected in whole, or the proportional part thereof if rejected only in part.

"*m.* The claim of any estate which is being administered in bankruptcy against any like estate may be proved by the trustee and allowed by the court in the same manner and upon like terms as the claims of other creditors.

"*n.* Claims shall not be proved against a bankrupt estate subsequent to one year after the adjudication; or if they are liquidated by litigation and the final judgment therein is rendered within thirty days before or after the expiration of such time, then within sixty days after the rendition of such judgment: *Provided*, That the right of infants and insane persons without guardians, without notice of the proceedings, may continue six months longer.

"SEC. 58. Notices to creditors.—*a.* Creditors shall have at least ten days' notice, by mail to their respective addresses as they appear in the list of creditors of the bankrupt, or as afterward filed with the papers in the case by the creditors, unless they waive notice in writing, of (1) all examinations of the bankrupt; (2) all hearings upon applications for the confirmation of compositions or the discharge of bankrupts; (3) all meetings of creditors; (4) all proposed sales of property; (5) the declaration and time of payment of dividends; (6) the filing of the final accounts of the trustee, and the time when and the place where they will be examined and passed upon; (7) the proposed compromise of any controversy; and (8) the proposed dismissal of the proceedings.

"*b.* Notice to creditors of the first meeting shall be published at least once and may be published such number of additional times as the court may direct; the last publication shall be at least one week prior to the date fixed for the meeting. Other notices may be published as the court shall direct.

"*c.* All notices shall be given by the referee, unless otherwise ordered by the judge.

"SEC. 59. Who may file and dismiss petitions.—*a.* Any qualified person may file a petition to be adjudged a voluntary bankrupt.

"*b.* Three or more creditors who have provable claims against any person which amount in the aggregate, in excess of the value of securities held by them, if any, to \$500 or over, or if all of the creditors of such person are less than twelve in number, then one of such creditors whose claim equals such amount may file a petition to have him adjudged a bankrupt.

"*c.* Petitions shall be filed in duplicate, one copy for the clerk and one for service on the bankrupt.

"*d.* If it be averred in the petition that the creditors of the bankrupt are less than twelve in number, and less than three creditors have joined as petitioners therein, and the answer avers the existence of a larger number of creditors, there shall be filed with the answer a list under oath of all the creditors, with their addresses, and thereupon the court shall cause all such creditors to be notified of the pendency of such petition and shall delay the hearing upon such petition for a reasonable time, to the end that parties in interest shall have an opportunity to be heard; if, upon such hearing, it shall appear that

a sufficient number have joined in such petition, or if prior to or during such hearing a sufficient number shall join therein, the case may be proceeded with, but otherwise it shall be dismissed.

"*e.* In computing the number of creditors of a bankrupt for the purpose of determining how many creditors must join in the petition, such creditors as were employed by him at the time of the filing of the petition or are related to him by consanguinity or affinity within the third degree, as determined by the common law, and have not joined in the petition, shall not be counted.

"*f.* Creditors other than original petitioners may at any time enter their appearance and join in the petition, or file an answer and be heard in opposition to the prayer of the petition.

"*g.* A voluntary or involuntary petition shall not be dismissed by the petitioner or petitioners or for want of prosecution or by consent of parties until after notice to the creditors.

"SEC. 60. Preferred creditors.—*a.* A person shall be deemed to have given a preference if, being insolvent, he has procured or suffered a judgment to be entered against himself in favor of any person, or made a transfer of any of his property, and the effect of the enforcement of such judgment or transfer will be to enable any one of his creditors to obtain a greater percentage of his debt than any other of such creditors of the same class.

"*b.* If a bankrupt shall have given a preference within four months before the filing of a petition, or after the filing of the petition and before the adjudication, and the person receiving it, or to be benefited thereby, or his agent acting therein, shall have had reasonable cause to believe that it was intended thereby to give a preference, it shall be voidable by the trustee, and he may recover the property or its value from such person.

"*c.* If a creditor has been preferred, and afterward in good faith gives the debtor further credit without security of any kind for property which becomes a part of the debtor's estates, the amount of such new credit remaining unpaid at the time of the adjudication in bankruptcy may be set off against the amount which would otherwise be recoverable from him.

"*d.* If a debtor shall, directly or indirectly, in contemplation of the filing of a petition by or against him, pay money or transfer property to an attorney and counselor at law, solicitor in equity, or proctor in admiralty for services to be rendered, the transaction shall be re-examined by the court on petition of the trustee or any creditor and shall only be held valid to the extent of a reasonable amount to be determined by the court, and the excess may be recovered by the trustee for the benefit of the estate.

"CHAPTER VII.—ESTATES.

"SEC. 61. Depositories for money.—*a.* Courts of bankruptcy shall designate, by order, banking institutions as depositories for the money of bankrupt estates, as convenient as may be to the residences of trustees, and shall require bonds to the United States, subject to their approval, to be given by such banking institutions, and may from time to time, as occasion may require, by like order increase the number of depositories or the amount of any bond or change such depositories.

"SEC. 62. Expenses of administering estates.—*a.* The actual and necessary expenses incurred by officers in the administration of estates shall, except where other provisions are made for their payment, be reported in detail, under oath, and examined and approved or disapproved by the court. If approved, they shall be paid or allowed out of the estates in which they were incurred.

"SEC. 63. Debts which may be proved.—*a.* Debts of the bankrupt may be proved and allowed against his estate which are (1) a fixed liability, as evidenced by a judgment or an instrument in writing, absolutely owing at the time of the filing of the petition against him, whether then payable or not, with any interest thereon which would have been recoverable at that date or with a rebate of interest upon such as were not then payable and did not bear interest; (2) due as costs taxable against an involuntary bankrupt who was at the time of the filing of the petition against him plaintiff in a cause of action which would pass to the trustee and which the trustee declines to prosecute after notice; (3) founded upon a claim for taxable costs incurred in good faith by a creditor before the filing of the petition in an action to recover a provable debt; (4) founded upon an open account, or upon a contract express or implied; and (5) founded upon provable debts reduced to judgments after the filing of the petition and before the consideration of the bankrupt's application for a discharge, less costs incurred and interests accrued after the filing of the petition and up to the time of the entry of such judgments.

"*b.* Unliquidated claims against the bankrupt may, pursuant to application to the court, be liquidated in such manner as it shall direct, and may thereafter be proved and allowed against his estate.

"SEC. 64. Debts which have priority.—*a.* The court shall order the trustee to pay all taxes legally due and owing by the bankrupt to the United States, State, county, district, or municipality in advance of the payment of dividends to creditors, and upon filing the receipts of the proper public officers for such payment he shall be credited with the amount thereof, and in case any question arises as to the amount or legality of any such tax the same shall be heard and determined by the court.

"*b.* The debts to have priority, except as herein provided, and to be paid in full out of bankrupt estates, and the order of payment shall be (1) the actual and necessary cost of preserving the estate subsequent to filing the petition; (2) the filing fees paid by creditors in involuntary cases; (3) the cost of administration, including the fees and mileage payable to witnesses as now or hereafter provided by the laws of the United States, and one reasonable attorney's fee, for the professional services actually rendered, irrespective of the number of attorneys employed to the petitioning creditors in involuntary cases, to the bankrupt in involuntary cases while performing the duties herein prescribed, and to the bankrupt in voluntary cases, as the court may allow; (4) wages due to workmen, clerks, or servants which have been earned within three months before the date of the commencement of proceedings, not to exceed \$300 to each claimant; and (5) debts owing to any person who by the laws of the State or the United States is entitled to priority.

"*c.* In the event of the confirmation of a composition being set aside, or a discharge revoked, the property acquired by the bankrupt in addition to his estate at the time the composition was confirmed or the adjudication was made shall be applied to the payment in full of the claims of creditors for property sold to him on credit, in good faith, while such composition or discharge was in force, and the residue, if any, shall be applied to the payment of the debts which were owing at the time of the adjudication.

"SEC. 65. Declaration and payment of dividends.—*a.* Dividends of an equal per cent. shall be declared and paid on all allowed claims, except such as have priority or are secured.

"*b.* The first dividend shall be declared within thirty days after the adjudication, if the money of

the estate in excess of the amount necessary to pay the debts which have priority and such claims as have not been, but probably will be, allowed equals 5 per cent. or more of such allowed claims. Dividends subsequent to the first shall be declared upon like terms as the first and as often as the amount shall equal 10 per cent. or more and upon closing the estate. Dividends may be declared oftener and in smaller proportions if the judge shall so order.

"c. The rights of creditors who have received dividends, or in whose favor final dividends have been declared, shall not be affected by the proof and allowance of claims subsequent to the date of such payment or declarations of dividends; but the creditors proving and securing the allowance of such claims shall be paid dividends equal in amount to those already received by the other creditors if the estate equals so much before such other creditors are paid any further dividends.

"d. Whenever a person shall have been adjudged a bankrupt by a court without the United States and also by a court of bankruptcy, creditors residing within the United States shall first be paid a dividend equal to that received in the court without the United States by other creditors before creditors who have received a dividend in such court shall be paid any amounts.

"e. A claimant shall not be entitled to collect from a bankrupt estate any greater amount than shall accrue pursuant to the provisions of this act.

"SEC. 66. Unclaimed dividends.—a. Dividends which remain unclaimed for six months after the final dividend has been declared shall be paid by the trustee into court.

"b. Dividends remaining unclaimed for one year shall, under the direction of the court, be distributed to the creditors whose claims have been allowed but not paid in full, and after such claims have been paid in full the balance shall be paid to the bankrupt: *Provided*, That in case unclaimed dividends belong to minors such minors may have one year after arriving at majority to claim such dividends.

"SEC. 67. Liens.—a. Claims which for want of record or for other reasons would not have been valid liens as against the claims of the creditors of the bankrupt shall not be liens against his estate.

"b. Whenever a creditor is prevented from enforcing his rights as against a lien created, or attempted to be created, by his debtor, who afterward becomes a bankrupt, the trustees of the estate of such bankrupt shall be subrogated to and may enforce such rights of such creditor for the benefit of the estate.

"c. A lien created by or obtained in or pursuant to any suit or proceeding at law or in equity, including an attachment upon *mesne* process or a judgment by confession, which was begun against a person within four months before the filing of a petition in bankruptcy by or against such person shall be dissolved by the adjudication of such person to be a bankrupt if (1) it appears that said lien was obtained and permitted while the defendant was insolvent and that its existence and enforcement will work a preference, or (2) the party or parties to be benefited thereby had reasonable cause to believe the defendant was insolvent and in contemplation of bankruptcy, or (3) that such lien was sought and permitted in fraud of the provisions of this act; or if the dissolution of such lien would militate against the best interests of the estate of such person the same shall not be dissolved, but the trustee of the estate of such person, for the benefit of the estate, shall be subrogated to the rights of the holder of such lien and empowered to perfect and enforce the same in his name as trustee with like force and effect as such holder might have done had not bankruptcy proceedings intervened.

"d. Liens given or accepted in good faith and not in contemplation of or in fraud upon this act, and for a present consideration, which have been recorded according to law, if record thereof was necessary in order to impart notice, shall not be affected by this act.

"e. That all conveyances, transfers, assignments, or incumbrances of his property, or any part thereof, made or given by a person adjudged a bankrupt under the provisions of this act subsequent to the passage of this act and within four months prior to the filing of the petition, with the intent and purpose on his part to hinder, delay, or defraud his creditors, or any of them, shall be null and void as against the creditors of such debtor, except as to purchasers in good faith and for a present fair consideration; and all property of the debtor conveyed, transferred, assigned, or encumbered as aforesaid shall, if he be adjudged a bankrupt, and the same is not exempt from execution and liability for debts by the law of his domicile, be and remain a part of the assets and estate of the bankrupt and shall pass to his said trustee, whose duty it shall be to recover and reclaim the same by legal proceedings or otherwise for the benefit of the creditors. And all conveyances, transfers, or encumbrances of his property made by a debtor at any time within four months prior to the filing of the petition against him, and while insolvent, which are held null and void as against the creditors of such debtor by the laws of the State, Territory, or District in which such property is situate, shall be deemed null and void under this act against the creditors of such debtor if he be adjudged a bankrupt, and such property shall pass to the assignee and be by him reclaimed and recovered for the benefit of the creditors of the bankrupt.

"f. That all levies, judgments, attachments, or other liens obtained through legal proceedings against a person who is insolvent, at any time within four months prior to the filing of a petition in bankruptcy against him, shall be deemed null and void in case he is adjudged a bankrupt; and the property affected by the levy, judgment, attachment, or the other lien shall be deemed wholly discharged and released from the same and shall pass to the trustee as a part of the estate of the bankrupt, unless the court shall on due notice order that the right under such levy, judgment, attachment, or other lien shall be preserved for the benefit of the estate; and thereupon the same may pass to and shall be preserved by the trustee for the benefit of the estate as aforesaid. And the court may order such conveyance as shall be necessary to carry the purposes of this section into effect: *Provided*, That nothing herein contained shall have the effect to destroy or impair the title obtained by such levy, judgment, attachment, or other lien of a *bona fide* purchaser for value who shall have acquired the same without notice or reasonable cause for inquiry.

"SEC. 68. Set-offs and counter-claims.—a. In all cases of mutual debts or mutual credits between the estate of a bankrupt and a creditor the account shall be stated and one debt shall be set off against the other, and the balance only shall be allowed or paid.

"b. A set-off or counter-claim shall not be allowed in favor of any debtor of the bankrupt which (1) is not provable against the estate; or (2) was purchased by or transferred to him after the filing of the petition, or within four months before such filing, with a view to such use and with knowledge or notice that such bankrupt was insolvent, or had committed an act of bankruptcy.

"SEC. 69. Possession of property.—a. A judge may, upon satisfactory proof, by affidavit, that a bankrupt against whom an involuntary petition has been

filed and is pending has committed an act of bankruptcy, or has neglected, or is neglecting, or is about to neglect his property that it has thereby deteriorated, or is thereby deteriorating, or is about thereby to deteriorate in value, issue a warrant to the marshal to seize and hold it subject to further orders. Before such warrant is issued the petitioners applying therefor shall enter into a bond in such an amount as the judge shall fix, with such sureties as he shall approve, conditioned to indemnify such bankrupt for such damages as he shall sustain in the event such seizure shall prove to have been wrongfully obtained. Such property shall be released if such bankrupt shall give bond in a sum which shall be fixed by the judge, with such sureties as he shall approve, conditioned to turn over such property, or pay the value thereof in money to the trustee, in the event he is adjudged a bankrupt pursuant to such petition.

"SEC. 70. Title to property.—*a.* The trustee of the estate of a bankrupt, upon his appointment and qualification, and his successor or successors, if he shall have one or more, upon his or their appointment and qualification, shall in turn be vested by operation of law with the title of the bankrupt, as of the date he was adjudged a bankrupt, except in so far as it is to property which is exempt, to all (1) documents relating to his property; (2) interests in patents, patent rights, copyrights, and trade-marks; (3) powers which he might have exercised for his own benefit, but not those which he might have exercised for some other person; (4) property transferred by him in fraud of his creditors; (5) property which prior to the filing of the petition he could by any means have transferred or which might have been levied upon and sold under judicial processes against him: *Provided*, That when any bankrupt shall have any insurance policy which has a cash surrender value payable to himself, his estate, or personal representatives, he may within thirty days after the cash surrender value has been ascertained and stated to the trustee by the company issuing the same, pay or secure to the trustee the sum so ascertained and stated, and continue to hold, own, and carry such policy free from the claims of the creditors participating in the distribution of his estate under the bankruptcy proceedings, otherwise the policy shall pass to the trustee as assets; and (6) rights of action arising upon contracts or from the unlawful taking or detention of, or injury to, his property.

"*b.* All real and personal property belonging to bankrupt estates shall be appraised by three disinterested appraisers; they shall be appointed by, and report to the court. Real and personal property shall, when practicable, be sold subject to the approval of the court; it shall not be sold otherwise than subject to the approval of the court for less than 75 per cent. of its appraised value.

"*c.* The title to property of a bankrupt estate which has been sold, as herein provided, shall be conveyed to the purchaser by the trustee.

"*d.* Whenever a composition shall be set aside, or discharge revoked, the trustee shall upon his appointment and qualification, be vested as herein provided with the title to all of the property of the bankrupt as of the date of the final decree setting aside the composition or revoking the discharge.

"*e.* The trustee may avoid any transfer by the bankrupt of his property which any creditor of such bankrupt might have avoided, and may recover the property so transferred, or its value, from the person to whom it was transferred, unless he was a *bona fide* holder for value prior to the date of the adjudication. Such property may be recovered or its value collected from whoever may have received it, except a *bona fide* holder for value.

"*f.* Upon the confirmation of a composition offered by a bankrupt, the title to his property shall thereupon revert in him.

"THE TIME WHEN THIS ACT SHALL GO INTO EFFECT.

"*a.* This act shall go into full force and effect upon its passage: *Provided, however*, That no petition for voluntary bankruptcy shall be filed within one month of the passage thereof, and no petition for involuntary bankruptcy shall be filed within four months of the passage thereof.

"*b.* Proceedings commenced under State insolvency laws before the passage of this act shall not be affected by it."

Carriers and their Employees.—The Congress passed, and the President approved, June 1, 1898, the following act in regard to arbitration in cases of controversy among those engaged in interstate commerce:

"*Be it enacted, etc.*, That the provisions of this act shall apply to any common carrier or carriers and their officers, agents, and employees, except masters of vessels and seamen, as defined in section 4612, Revised Statutes of the United States, engaged in the transportation of passengers or property wholly by railroad, or partly by railroad and partly by water, for a continuous carriage or shipment, from one State or Territory of the United States, or the District of Columbia, to any other State or Territory of the United States, or the District of Columbia, or from any place in the United States to an adjacent foreign country, or from any place in the United States through a foreign country to any other place in the United States.

"The term 'railroad' as used in this act shall include all bridges and ferries used or operated in connection with any railroad, and also all the road in use by any corporation operating a railroad, whether owned or operated under a contract, agreement, or lease; and the term 'transportation' shall include all instrumentalities or shipment or carriage.

"The term 'employees' as used in this act shall include all persons actually engaged in any capacity in train operation or train service of any description, and notwithstanding that the cars upon or in which they are employed may be held and operated by the carrier under lease or other contract: *Provided, however*, That this act shall not be held to apply to employees of street railroads and shall apply only to employees engaged in railroad train service. In every such case the carrier shall be responsible for the acts and defaults of such employees in the same manner and to the same extent as if said cars were owned by it, and said employees directly employed by it, and any provisions to the contrary of any such lease or other contract shall be binding only as between the parties thereto and shall not affect the obligations of said carrier either to the public or to the private parties concerned.

"SEC. 2. That whenever a controversy concerning wages, hours of labor, or conditions of employment shall arise between a carrier subject to this act and the employees of such carrier, seriously interrupting or threatening to interrupt the business of said carrier, the Chairman of the Interstate Commerce Commission and the Commissioner of Labor shall, upon the request of either party to the controversy, with all practicable expedition, put themselves in communication with the parties to such controversy, and shall use their best efforts, by mediation and conciliation, to amicably settle the same; and if such efforts shall be unsuccessful, shall at once endeavor to bring about an arbitration of said controversy in accordance with the provisions of this act.

"SEC. 3. That whenever a controversy shall arise

between a carrier subject to this act and the employees of such carrier which can not be settled by mediation and conciliation in the manner provided in the preceding section, said controversy may be submitted to the arbitration of a board of three persons, who shall be chosen in the manner following: One shall be named by the carrier or employer directly interested; the other shall be named by the labor organization to which the employees directly interested belong, or, if they belong to more than one, by that one of them which specially represents employees of the same grade and class and engaged in services of the same nature as said employees so directly interested: *Provided, however,* That when a controversy involves and affects the interests of two or more classes and grades of employees belonging to different labor organizations, such arbitrator shall be agreed upon and designated by the concurrent action of all such labor organizations; and in all cases where the majority of such employees are not members of any labor organization said employees may by a majority vote select a committee of their own number, which committee shall have the right to select the arbitrator on behalf of their employees.

"The two thus chosen shall select the third commissioner of arbitration; but, in the event of their failure to name such arbitrator within five days after their first meeting, the third arbitrator shall be named by the commissioners named in the preceding section. A majority of said arbitrators shall be competent to make a valid and binding award under the provisions hereof. The submission shall be in writing, shall be signed by the employer and by the labor organization representing the employees, shall specify the time and place of meeting of said board of arbitration, shall state the questions to be decided, and shall contain appropriate provisions by which the respective parties shall stipulate, as follows:

"First. That the board of arbitration shall commence their hearings within ten days from the date of the appointment of the third arbitrator, and shall find and file their award, as provided in this section, within thirty days from the date of the appointment of the third arbitrator; and that pending the arbitration the status existing immediately prior to the dispute shall not be changed: *Provided,* That no employee shall be compelled to render personal service without his consent.

"Second. That the award and the papers and proceedings, including the testimony relating thereto, certify under the hands of the arbitrators, and which shall have the force and effect of a bill of exceptions, shall be first in the clerk's office of the circuit court of the United States for the district wherein the controversy arises or the arbitration is entered into, and shall be final and conclusive upon both parties, unless set aside for error of law apparent on the record.

"Third. That the respective parties to the award will each faithfully execute the same, and that the same may be specifically enforced in equity so far as the powers of a court of equity permit: *Provided,* That no injunction or other legal process shall be issued which shall compel the performance by any laborer against his will of a contract for personal labor or service.

"Fourth. That employees dissatisfied with the award shall not by reason of such dissatisfaction quit the service of the employer before the expiration of three months from and after the making of such award without giving thirty days' notice in writing of their intention so to quit. Nor shall the employer dissatisfied with such award dismiss any employee or employees on account of such dissatisfaction before the expiration of three months from

and after the making of such award without giving thirty days' notice in writing of his intention so to discharge.

"Fifth. That said award shall continue in force as between the parties thereto for the period of one year after the same shall go into practical operation, and no new arbitration upon the same subject between the same employer and the same class of employees shall be had until the expiration of said one year if the award is not set aside as provided in section 4. That as to individual employees not belonging to the labor organization or organizations which shall enter into the arbitration, the said arbitration and the award made therein shall not be binding unless the said individual employees shall give assent in writing to become parties to said arbitration.

"SEC. 4. That the award being filed in the clerk's office of a circuit court of the United States, as hereinbefore provided, shall go into practical operation, and judgment shall be entered thereon accordingly at the expiration of ten days from such filing, unless within such ten days either party shall file exceptions thereto for matter of law apparent upon the record, in which case said award shall go into practical operation and judgment be entered accordingly when such exceptions shall have been finally disposed of either by said circuit court or on appeal therefrom.

"At the expiration of ten days from the decision of the circuit court upon exceptions taken to said award, as aforesaid, judgment shall be entered in accordance with said decision unless during said ten days either party shall appeal therefrom to the circuit court of appeals. In such case only such portion of the record shall be transmitted to the appellate court as is necessary to the proper understanding and considerations of the questions of law presented by said exceptions and to be decided.

"The determination of said circuit court of appeals upon said questions shall be final, and being certified by the clerk thereof to said circuit court, judgment pursuant thereto shall thereupon be entered by said circuit court.

"If exceptions to an award are finally sustained, judgment shall be entered setting aside the award. But in such case the parties may agree upon a judgment to be entered disposing of the subject-matter of the controversy, which judgment when entered shall have the same force and effect as judgment entered upon an award.

"SEC. 5. That for the purposes of this act the arbitrators herein provided for, or either of them, shall have power to administer oaths and affirmations, sign subpoenas, require the attendance and testimony of witnesses, and the production of such books, papers, contracts, agreements, and documents material to a just determination of the matters under investigation as may be ordered by the court; and may invoke the aid of the United States courts to compel witnesses to attend and testify and to produce such books, papers, contracts, agreements, and documents to the same extent and under the same conditions and penalties as is provided for in the act to regulate commerce approved Feb. 4, 1887, and the amendments thereto.

"SEC. 6. That every agreement of arbitration under this act shall be acknowledged by the parties before a notary public or clerk of a district or circuit court of the United States, and when so acknowledged a copy of the same shall be transmitted to the Chairman of the Interstate Commerce Commission, who shall file the same in the office of said commission.

"Any agreement of arbitration which shall be entered into conforming to this act, except that it shall be executed by employees individually instead

of by a labor organization as their representative, shall, when duly acknowledged as herein provided, be transmitted to the Chairman of the Interstate Commerce Commission, who shall cause a notice in writing to be served upon the arbitrators, fixing a time and place for a meeting of said board, which shall be within fifteen days from the execution of said agreement of arbitration: *Provided, however,* That the said Chairman of the Interstate Commerce Commission shall decline to call a meeting of arbitrators under such agreement unless it be shown to his satisfaction that the employees signing the submission represent or include a majority of all employees in the service of the same employer and of the same grade and class, and that an award pursuant to said submission can justly be regarded as binding upon all such employees.

"SEC. 7. That during the pendency of arbitration under this act it shall not be lawful for the employer, party to such arbitration, to discharge the employees, parties thereto, except for inefficiency, violation of law, or neglect of duty; nor for the organization representing such employees to order, nor for the employees to unite in, aid, or abet, strikes against said employer; nor, during a period of three months after an award under such an arbitration, for such employer to discharge any such employees, except for the causes aforesaid, without giving thirty days' written notice of an intent so to discharge; nor for any such employees, during a like period, to quit the service of said employer without just cause, without giving to said employer thirty days' written notice of an intent so to do; nor for such organization representing such employees to order, counsel, or advise otherwise. Any violation of this section shall subject the offending party to liability for damages: *Provided,* That nothing herein contained shall be construed to prevent any employer, party to such arbitration, from reducing the number of its or his employees whenever in its or his judgment business necessities require such reduction.

"SEC. 8. That in every incorporation under the provisions of chapter 567 of the United States Statutes of 1885 and 1886 it must be provided in the articles of incorporation and in the constitution, rules, and by-laws that a member shall cease to be such by participating in or by instigating force or violence against persons or property during strikes, lockouts, or boycotts, or by seeking to prevent others from working through violence, threats, or intimidations. Members of such incorporations shall not be personally liable for the acts, debts, or obligations of the corporations, nor shall such corporations be liable for the acts of members or others in violation of law; and such corporations may appear by designated representatives before the board created by this act, or in any suits or proceedings for or against such corporations or their members in any of the Federal courts.

"SEC. 9. That whenever receivers appointed by Federal courts are in the possession and control of railroads, the employees upon such railroads shall have the right to be heard in such courts upon all questions affecting the terms and conditions of their employment, through the officers and representatives of their associations, whether incorporated or unincorporated, and no reduction of wages shall be made by such receivers without the authority of the court therefor upon notice to such employees, said notice to be not less than twenty days before the hearing upon the receivers' petition or application, and to be posted upon all customary bulletin boards along or upon the railway operated by such receiver or receivers.

"SEC. 10. That any employer subject to the provisions of this act and any officer, agent, or receiver

of such employer who shall require any employee, or any person seeking employment, as a condition of such employment, to enter into an agreement, either written or verbal, not to become or remain a member of any labor corporation, association, or organization; or shall threaten any employee with loss of employment, or shall unjustly discriminate against any employee because of his membership in such a labor corporation, association, or organization; or who shall require any employee, or any person seeking employment, as a condition of such employment, to enter into a contract whereby such employee or applicant for employment shall agree to contribute to any fund for charitable, social, or beneficial purposes; to release such employer from legal liability for any personal injury by reason of any benefit received from such fund beyond the proportion of the benefit arising from the employer's contribution to such fund; or who shall, after having discharged an employee, attempt or conspire to prevent such employee from obtaining employment, or who shall, after the quitting of an employee, attempt or conspire to prevent such employee from obtaining employment, is hereby declared to be guilty of a misdemeanor, and, upon conviction thereof in any court of the United States of competent jurisdiction in the district in which such offense was committed, shall be punished for each offense by a fine of not less than \$100 and not more than \$1,000.

"SEC. 11. That each member of said board of arbitration shall receive a compensation of \$10 per day for the time he is actually employed, and his traveling and other necessary expenses; and a sum of money sufficient to pay the same, together with the traveling and other necessary and proper expenses of any conciliation or arbitration had hereunder, not to exceed \$10,000 in any one year, to be approved by the Chairman of the Interstate Commerce Commission and audited by the proper accounting officers of the Treasury, is hereby appropriated for the fiscal years ending June 30, 1898, and June 30, 1899, out of any money in the Treasury not otherwise appropriated.

"SEC. 12. That the act to create boards of arbitration or commission for settling controversies and differences between railroad corporations and other common carriers engaged in interstate or Territorial transportation of property or persons and their employees, approved October 1, 1888, is hereby repealed."

Postal Cards.—Congress passed, and the President approved, the following act in regard to postal cards:

"*Be it enacted, etc.,* That from and after the 1st day of July, 1898, it shall be lawful to transmit by mail, at the postage rate of a cent apiece, payable by stamps to be affixed by the sender, and under such regulations as the Postmaster-General may prescribe, written messages on private mailing cards, such cards to be sent openly in the mails, to be no larger than the size fixed by the convention of the Universal Postal Union, and to be approximately of the same form, quality, and weight as the stamped postal card now in general use in the United States."

Miscellaneous.—This was distinctly a working session of Congress, and many measures were passed, besides private bills, among them the following:

An act, of great importance, for the protection of the people of Indian Territory and other purposes.

An act to settle the Bering Sea award, appropriating \$473,151.26 to enable the President to pay to the Government of her Britannic Majesty the amount awarded by the commissioners appointed pursuant to the stipulations of the convention of Feb. 8, 1896, between the United States and Great

Britain, providing for the settlement of the claims presented by the latter against the former in virtue of the convention of Feb. 29, 1892.

A joint resolution tendering the thanks of Congress to Commodore George Dewey, U. S. N., and to the officers and men of the squadron under his command.

A joint resolution authorizing the Secretary of the Navy to present a sword of honor to Commodore George Dewey, and to cause to be struck bronze medals commemorating the battle of Manila Bay, and to distribute such medals to the officers and men of the ships of the Asiatic squadron of the United States.

A joint resolution providing for a survey and report upon the practicability of securing a navigable channel of adequate width and of 35 feet depth at mean low water of the Gulf of Mexico throughout southwest pass of the Mississippi river; and various joint resolutions in regard to surveys and estimates of public improvements at different points.

An act concerning sailing vessels of over 700 tons and for other purposes.

An act to abolish the distinction between offered and unoffered land.

An act concerning attorneys and marshals of the United States.

An act for the appointment of a commission to make allotments of lands in severalty to Indians upon the Uintah Indian Reservation in Utah and to obtain the cession to the United States of all lands within such reservation not so allotted.

An act to amend section 4440 of the Revised Statutes, authorizing the licensing of mates on river and ocean steamers.

An act to amend the act to provide times and places for holding terms of the United States courts in the States of Idaho and Wyoming.

An act to provide for the disposition of abandoned imported merchandise.

An act to establish an assay office at Seattle.

An act to amend an act to prohibit the passage of local or special laws in Territories.

An act to ratify the agreement between the Dawes Commission and the Seminole nation of Indians.

An act to provide a life-saving station on the westerly side of the harbor of Gloucester, Mass.

An act for revising and perfecting the classification of letters patent and printed publications of the Patent Office.

To designate Gladstone, Mich., as a support of entry.

An act giving the assent of Congress to a change of the compact entered into between the United States and the State of Arkansas, on her admission to the Union.

An act to locate permanently the capital of the Territory of New Mexico.

An act authorizing the appointment of a non-partisan commission to collate information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital.

An act to confer jurisdiction on circuit courts in certain cases.

An act to confirm certain cash entries of the public lands.

An act relating to leases on the Hot Springs Reservation.

An act for the relief of the book agents of the Methodist Episcopal Church, South.

An act to repeal in part and to limit section 3480 of the Revised Statutes.

An act to amend section 2234 of the Revised Statutes.

An act to authorize the establishment of a life-saving station at or near Charlevoix, Mich.

An act to amend sections 1 and 2 of the act of March 3, 1887, 24 Statutes at Large, chapter 359.

An act extending the homestead laws and providing for right of way for railroads in the District of Alaska.

An act authorizing the Supreme Lodge of the Knights of Pythias to erect and maintain a sanitarium and bath house on the Government reservation at the city of Hot Springs, Ark.

An act for the removal of cases from the courts of Texas to the courts of the United States in Texas.

An act to make certain grants of land in the Territory of New Mexico.

An act granting additional powers to railroad companies created by laws of the United States and operating lines in Indian Territory.

An act for the relief of sufferers by the destruction of the United States steamer "Maine" in the harbor of Havana, Cuba.

An act granting certain lands to the city of Santa Barbara, Cal.

An act to increase the number of surgeons in the United States army.

An act to amend the act to establish a Court of Private Land Claims.

Acts in relation to bridges: Over the Black river in Arkansas, by the White and Black River Railway; over the Snake river between the States of Washington and Idaho; across the Loggy bayou in Louisiana; across Portage lake, Michigan; across the Missouri river at Yankton; over the Black river at Pocolontas, Ark.; across the Mississippi at Prairie du Chien, Wis.; across the Alabama river near Montgomery, Ala.; across Bayou Bartholomew, Arkansas; across the Missouri river at St. Charles, Mo.; across the Arkansas river near Webber's Falls, Indian Territory; across the Yalabusha river between Leflore and Carroll Counties, Mississippi; over the Tombigbee river in the State of Mississippi; across the Niagara river; across the Choctawhatchee river at two points in Dale County, Alabama; across the St. Lawrence river; across the St. Francis river, Arkansas; across the Red river at or near Grand Ecore, La.; across the Monongahela river; across the Missouri river at Quindaro, Kan.; across St. Francis lake near Lake City, Ark.

Various railway acts: Granting to the Omaha Northern Railway Company the right to construct a railway across the Omaha and Winnebago Reservations in Nebraska; to the Muscogee Coal and Railroad Company the right to construct and operate a road through Oklahoma and Indian Territories; to Kettle River Valley Railway Company a right of way through Colville Indian Reservation in the State of Washington; to the Washington Improvement and Development Company a right of way through the same reservation; to the Cripple Creek Railway a right of way through the Pike's Peak Timber Reserve; to the Missouri, Kansas and Texas Railway Company the right to straighten the channel of South Canadian river in Indian Territory; to the Chattanooga Rapid Transit Company the right to cross the Dry Valley road to the Chickamauga and Chattanooga National Park; to the Nebraska, Kansas and Gulf Railway Company the right to construct and operate a railway through the Indian Territory; to the Norwich and Worcester Railway Company the right of way through the naval station at New London, Conn.; to the St. Louis, Oklahoma and Southern Railway Company the right of way through Indian Territory; to the Santa Fé and Grand Cañon Railway Company the right of way through the Grand Cañon Forest Reserve in Arizona.

An act to amend an act to permit the use of the right of way through public lands for tramroads, canals, and reservoirs, and for other purposes.

Many special acts were passed for the government of the District of Columbia, and the number of special pension bills still remains one of the amazing features of this as of every congressional session.

Appropriations.—The heaviest part of the routine work of every session of Congress is the shaping and discussing of the appropriation bills, covering in their items every phase of governmental expenditure; but the second session of the Fifty-fifth Congress had an unusual task on its hands. The bills for 1898-'99 had to be prepared with the possibility of continued war expenditure in view and the probability of indefinite expenditures in the establishment of peace in newly acquired territory; and the appropriations for 1897-'98, which were inadequate to meet the necessities of the war, had to be supplemented by various deficiency bills. The work of Congress in this matter was fairly stated by Mr. Cannon, of Illinois, at the close of the session. He said: "The sum of \$892,527,991.16 has been appropriated at this session of Congress. This includes \$117,836,220 of permanent appropriations to meet sinking-fund requirements of and interest on the public debt, and for other objects, and \$361,788,095.11 to meet expenditures of the war with Spain.

"Deducting the last two from the sum first mentioned, there remains \$412,903,676.05, representing the appropriations made at the present session to meet all ordinary expenses of the Government; which sum is only \$4,246,816.75 more than was appropriated at the last session of the last Congress for the same purposes (including the appropriations made during the recent extra session), which apparent excess is almost doubly offset by the increased appropriation of \$8,070,872.46 for the payment of pensions on account of the fiscal year 1898, provided for in a deficiency act at this session.

"No river and harbor bill has been passed at this session; but the sundry civil act carries \$14,031,613.56 to meet contracts authorized by previous Congresses for river and harbor works. No laws authorizing the construction of public buildings in any of the cities throughout the country have been enacted, and otherwise the legislation authorizing expenditures and appropriations has been confined to the actual necessities of the Government, and to meet all demands incident to the existing war.

"In addition to the appropriations made specifically for expenses of the conduct of the war since its inception and for the first six months of the fiscal year beginning July 1, 1898, contracts have been authorized on the naval appropriation act for new war vessels and for their armament, for which Congress will be called upon in the future to appropriate to an amount estimated at \$19,216,156.

"The appropriations made during the second session of the Fifty-fifth Congress to meet expenses incident to the war with Spain were as follow: For the national defense, act March 9, 1898, \$50,117,000; army and navy deficiencies, act May 4, 1898, \$34,625,725.71; naval appropriation act, May 4, 1898—amount of increase over preceding naval appropriation act, \$23,095,549.49; fortification appropriation act, May 7, 1898—amount of increase over act as passed by House, \$5,232,582; naval auxiliary act, May 26, 1898, \$3,000,000; additional clerical force, War Department, Auditors' offices, etc., act May 31, 1898, \$227,976.45; Life-Saving Service, act June 7, 1898, \$70,000; army and navy deficiencies, act June 8, 1898, \$18,015,000; appropriations in act to provide ways and means to meet war expenditures, June 13, 1898, \$600,000; army, navy, and other war expenses for six months, beginning July 1, 1898, in general deficiency act, \$226,604,261.46; expenses of bringing home remains of soldiers, \$200,000; total, \$361,788,095.11."

His speech contained an elaborate table giving the history of the various appropriation bills; but it will be enough to select the separate measures and the amount provided at this session for 1898-'99 and provided to meet deficiencies for 1897-'98: Agriculture, \$3,509,202; army, \$23,192,892; diplomatic and consular, \$1,752,208.76; District of Columbia, \$6,425,880.07; fortification, \$9,377,494; Indian, \$7,660,814.90; legislative, etc., \$21,625,846.65; Military Academy, \$458,689.23; navy, \$56,098,783.68; pension, \$141,233,880; post office \$99,222,300.75; sundry civil, \$48,489,217.26; total, \$419,047,159.30; deficiency, 1898, Congress, etc., \$210,000; urgent deficiency, 1898, \$1,928,779.33; deficiency, United States courts; public printing, etc., \$800,000; urgent deficiency, national defense, etc., \$50,183,000; deficiency, army, fortifications, navy, etc., \$35,720,945.41; deficiency, pensions, etc., \$8,498,431.91; urgent deficiency, military and naval establishments, \$18,015,000; deficiency, 1898, and prior years, \$234,288,455.21; total, \$768,691,771.16; miscellaneous, \$6,000,000; total, regular annual appropriations, \$774,691,771.16; permanent annual appropriations, \$117,836,220; grand total, regular and permanent annual appropriations, \$892,527,991.16.

CONNECTICUT, a New England State, one of the original thirteen; ratified the national Constitution Jan. 9, 1788: area, 4,900 square miles. The population, according to each decennial census, was 237,946 in 1790; 251,002 in 1800; 261,942 in 1810; 275,148 in 1820; 297,675 in 1830; 309,978 in 1840; 370,792 in 1850; 460,147 in 1860; 537,454 in 1870; 622,700 in 1880; and 746,258 in 1890. Capital, Hartford.

GEORGE E. LOUNSBURY, GOVERNOR OF CONNECTICUT.

Government.—The following were the State officers during the year: Governor, Lorrin A. Cooke; Lieutenant Governor, James D. Dewell; Secretary of State, Charles Phelps; Treasurer, Charles W. Grosvenor; Comptroller, Benjamin P. Mead; Adjutant General, George Haven; Insurance Commissioner, F. A. Betts—all Republicans; Supreme Court of Errors—Chief Justice, Charles B. Andrews, Republican; Associate Justices, David Torrance, Republican; Augustus H. Fenn, Democrat; Simeon E. Baldwin, Democrat; and William Hamersley, Democrat; Clerk, C. W. Johnson.

Finances.—The State Treasurer reported that during the fiscal year ended Sept. 30, 1898, the financial condition had materially improved. For the first time since 1892 the receipts exceeded the expenses, the excess being \$340,863.64, to be further increased to more than \$460,000 by the receipt of \$120,000 from the United States for expenses incurred by reason of the Spanish war, this sum be-

ing arrived at without imposing the State tax on the towns. The Treasurer called attention to the fact that no provision had been made to pay the State bonds coming due Jan. 1, 1903, at which time \$1,500,000 will be needed for the redemption of the 3½ per cents. A large part, if not the entire issue, of these bonds must be paid from the surplus revenue to be received previous to their maturity.

The report shows the following transactions: Civil list account, balance on hand Oct. 1, 1897, \$123,027.50; revenue receipts from all sources during the year, \$2,612,385.15; total, \$2,735,412.55. Specific receipts: Interest of school fund, transferred, \$122,427.91; principal of Agricultural College fund (special), transferred, \$224.60; avails of courts, \$35,220.44; commissioners of pharmacy, \$1,794.25; commissioners of shell fisheries, \$8,732.25; comptroller, statutes sold, \$121; corporate franchise tax, \$2,000; tax on express companies, \$9,711.02; fees from executive secretary, \$539.50; fees from secretary's office, \$1,971.52; Greenwich Loan, Trust, and Deposit Company, \$500; inheritance tax, \$133,037.37; receipts of insurance commissioners, \$76,659.81; interest account, \$26,954.92; tax on investments, \$87,177.19; itinerant vender's license fees, \$300; Meriden Trust and Safe Deposit Company, \$250; military commutation tax, \$154,044.60; miscellaneous receipts, \$17,376.52; tax on mutual fire insurance companies, \$10,671.42; tax on mutual life insurance companies, \$272,242.40; national aid to State homes for soldiers, \$39,200; non-residents' stock tax, \$159,148.32; tax on steam railroads, \$910,137.50; tax on street railroads, \$133,052.77; tax on rolling stock companies, \$152.05; salaries of the Bank Commissioners, \$6,175.43; salaries of the Railroad Commissioners, \$14,514.31; salary of the Building and Loan Commissioner, \$2,068.33; tax on savings banks, \$373,370.32; State Librarian, atlases and maps sold, \$82; tax on telegraph and telephone companies, \$12,527.40; total, \$2,612,385.15. The payments were as follow: Civil-list orders, \$1,810,354.87; registered orders, \$353,112.84; interest on State bonds, \$104,700; interest on Agricultural College fund in treasury, \$211.33; interest on town deposit fund in treasury, \$311.42; interest on principal of school fund in treasury, \$416.01; interest on interest of school fund in treasury, \$1,940.04; interest on loan to State, \$375; State bond (paid), \$100; total, \$2,271,521.51; balance in treasury to the credit of the civil list, Oct. 1, 1898, \$463,891.14. General and special accounts: Balance to credit of all accounts, Oct. 1, 1897, \$320,745.45; receipts from all sources for fiscal year ending Sept. 30, 1898, \$3,097,013.21; total, \$3,417,758.66; deduct payments for all purposes, \$2,737,088.72; balance to the credit of all accounts, Oct. 1, 1898, \$680,749.94. State debt: The funded debt of the State, Sept. 30, 1898, was \$3,240,100; less cash in the treasury to credit of civil list funds, \$463,891.14; total State debt, less civil list funds, \$2,776,208.86.

The Board of Equalization during 1898 added \$56,275,000 to the lists of the various towns in the effort to have all property listed at its actual value. The rate of tax on non-resident stockholders in certain corporations was increased by the last General Assembly from 1 per cent. to 1½ per cent. One company protested not only against paying the increased tax, but against the greater part of the tax formerly levied and collected, and suit was instituted to enforce collection.

In 1897 the General Assembly increased the tax on choses in action from 2 to 4 mills per annum on each dollar. The new rate showed a larger receipt from this source than in 1897 by more than \$10,000. The number of such choses presented for taxation was less than any year since 1893, and the

amount taxed was less than in any year, with two exceptions, since the law was enacted. This statement is considered important to those interested in new forms of taxation.

The tax on street railway companies shows an increase each year, and at each session of the General Assembly bills have been introduced intending to divert this tax to the towns where such railways are located, but such action has been thought undesirable, the difficulty of towns assessing and collecting this tax being an argument against such change. The taxes paid by steam and street railroads in 1897 gave an increase of \$46,066 over 1896.

Insurance.—The number of fire insurance companies doing business in the State increased from 118 in 1891 to 142 in 1898. A comparison with the 124 companies operating during 1896 shows an increase in assets of \$23,256,803.76, a decrease in liabilities of \$842,010.86, and an increase in surplus of \$24,098,814.62. The 117 stock companies had a surplus of \$87,835,182.36, an increase of \$23,933,921.56. The 23 mutual companies had a surplus of \$2,969,581.50, a gain of \$137,893.06 during the year. The assets of the 142 companies amounted to \$266,922,873.16; the liabilities, including reinsurance reserve, capital, scrip, and special funds, to \$176,118,109.30, and the surplus over all to \$90,804,763.86. The liability for reinsurance amounted to \$104,504,030.49, for unpaid losses to \$12,242,584.97, and for all other liability to \$5,140,618.84. The net amount of outstanding insurance was \$18,435,905,044, an increase of \$1,224,275,945 over 1897. Of the total risks by all companies in the State in 1897, \$327,788,439, the Connecticut companies wrote \$111,517,054, or about one third.

Building and Loan Associations.—The business of these associations was reported to have increased notably during 1897. The assets of the domestic associations were \$3,243,935.19, an increase over the preceding year of \$462,992.55. The assets of the foreign associations amounted to \$7,515,073, an increase of \$1,483,534.64. Mortgage loans of domestic associations increased \$221,371.50; real estate, \$102,073.67; cash, \$48,133.55; stock, bonds, and other securities, \$72,006.78. Mortgage loans of the foreign associations increased \$961,592.22; real estate, \$158,081.43; cash, \$101,132.72; stocks and bonds, etc., \$15,422.60. In the foreign associations installments paid and earnings credited showed an increase of \$306,101.20, and in single-payment shares of \$793,606.60. The total number of shares issued by domestic associations during the year was 22,448; withdrawn, 15,184. Total number of shares at end of the year by borrowing members, 12,708½, and by non-borrowing members 39,479. Number of shares issued by foreign associations during the year was 104,386½; withdrawn, 87,910½; total number of shares held at end of the year by borrowing members, 64,785; by non-borrowing members, 266,471. The rate per cent. of operating expenses to receipts of "nationals," as reported, was more than three times greater than in local associations.

Savings Banks.—The reports show a somewhat better financial condition of the small-deposit class. In Hartford the increase in the number of depositors having under \$1,000 was from 56,843 in 1896 to 58,920 in 1897, a gain of 2,077. In 1896 their deposits lying in four Hartford banks aggregated \$9,878,987.93, and in 1897 they rose to \$10,311,854.26. In 1896 the deposits under \$1,000 formed a trifle over 38½ per cent. of all the deposits in the banks, and in 1897 they had risen to 39 per cent.

Education.—The school enumeration of the State affords a basis upon which to estimate the present population. Taking the ratio of school children in 1890 to the known population in that

year as shown by the census, which was 4.62, and applying it to the enumeration for 1897, shows a population of about 851,000, which is a gain of 106,000 since 1890. Following is a summary by counties of the school enumeration of 1897: Hartford, 36,590; New Haven, 56,405; New London, 17,028; Fairfield, 38,620; Windham, 9,798; Litchfield, 12,581; Middlesex, 8,187; Tolland, 5,146; total, 184,355, an increase of 5,092 over the previous year. The report of the Board of Education shows that in 1897 the increase of school population was 2.6 per cent. The number of pupils on the registers had increased 1.7 per cent., and there was a rise of 4.2 per cent. in the average attendance—an increase made in spite of withdrawals to private schools. The number of different pupils on the registers had increased by the number of 2,436 to 143,921; the average attendance had risen to 104,064. For every 100 children on the registers the average attendance was 70.22, or 4.2 per cent. greater than in the former year.

There are 71 high schools in the State, with a registration of 6,672 pupils. The expense of these schools amounts to \$275,000.31, including \$241,514.84 for teachers' salaries. There are 158 private schools, in which are registered 27,352 pupils, the teachers numbering 828.

The securities constituting the capital of the school fund was reported to amount to \$2,007,080.97, as follows: Bonds and mortgages in Connecticut, \$783,392.63; in Ohio, \$850,578.60; in Indiana, \$17,100; real-estate mortgages, \$163,808.04; bank stock in eleven banks, \$167,147.61; cash in treasury, \$17,077.09.

Labor and Industries.—The report of the Labor Bureau shows that a canvass was made of the manufacturing establishments, and reports from 768 of these were received, by which it appears that the number of persons on the pay rolls in 1897 was 87,907, a decrease from the previous year, when the number was 88,934. Fifty-six hours a week was reported as being the average time of labor for all establishments. Wages paid in 1896, \$40,404,002; for the corresponding period in 1897, \$36,271,729, showing a decrease of 10.2 per cent. The proportion of business done of full capacity, as estimated by all the manufacturers reporting, shows the average to have been 74 per cent.

The earnings of 107 employees of American birth reporting to the bureau averaged \$13.82 per week per family; the annual cost of living (exclusive of interest, taxes, water rents, and repairs or house rent) was 67.8 per cent.; the expense for interest, taxes, rent, etc., 14.6 per cent., and the possible savings 17.6 per cent. of total annual earnings. Of the 93 employees of foreign birth reporting, the average weekly earnings per family was \$10.71; the annual cost of living of the whole number (exclusive of interest, taxes, water rents, etc.) was 69.6 per cent.; amount paid for interest, taxes, etc., 14.5 per cent.; and the possible savings 15.9 per cent. of earnings. Thus while the average weekly earnings per family were 22.5 per cent. less than that shown by reports from those of American birth, the possible savings of the family were 30 per cent. lower.

The silk-machine works in Stonington ran during the year on full time, with an increased force of employees, and, with the exception of one small order from Switzerland, all the machines made were for American manufacturers. A large plant was established in New Haven for the manufacture of "colophyte," a material resembling cellulose, used in electrical work for insulating.

The capital invested in the dairy business was reported to exceed, in round numbers, \$10,000,000, and the yearly product was estimated at more than \$5,000,000.

Shad Culture.—The Fish and Game Commissioner advocates the planting of fish adults, or "fingerlings," instead of fry, as the latter are too readily devoured by their natural enemies. He says that under ordinary conditions the commissioners can meet any reasonable demand for shad, and that the problem of how best to stock the rivers with these fish is solved. "They can turn into the Connecticut river 6,000,000 to 8,000,000 shad, from 3 to 5 inches long, in October of each year. That these have a better chance for life than the infinitesimal shad fry, with a part of the egg-sac still unabsorbed, is a self-evident fact and with this number of such fish annually released, the fear that shad may be exterminated is groundless."

Horticulture.—The Fruit Committee of the American Pomological Society gave out a list of the fruits best adapted to the soil of the State, namely: plums, pears, apples, peaches, gooseberries, grapes, cherries, blackberries, and currants; though many other fruits can be grown. Several instances of second-crop strawberries ripening in September or later were reported.

Vital Statistics.—The total number of births reported for 1897 was 20,509, giving a birth rate of 23.2 to 1,000 population; total marriages reported, 6,358, a rate of 7.2 to 1,000; total deaths, 13,923, a rate of 15.6 to 1,000.

State Prison.—The Board of Charities reported that the marked increase in the number of inmates in the penal institutions of the State presented a strong argument for the establishment of a State reformatory. The directors and warden of the State Prison reported that the average prison population, far surpassing that of any previous year and exceeding that of 1896 by 27.5, was 432.5, adding: "But even this fat figure fails fully to represent the penal census of the State, for, owing to the limited cell room at the prison, convicts were detained at the ordinary jails. The growth of the institution during the past five years, following a long period during which the population was substantially stationary, has been constant and at times rapid. Such an increase, which has now developed a condition of congestion, involves new problems in prison finance and administration, and begets additional responsibilities of management." The report alludes to the 32 additional steel cells which have been built, and to a commodious insane ward, nearly completed. The grading system, under which convicts are divided into three classes, in accordance with their antecedents, disposition, and prison conduct, is said to mark an important departure in penal administration. After a year's test, the directors feel justified in affirming the unqualified success of the system. The parole legislation enacted by the General Assembly supplements the grading system. The law authorizes the Board of Pardons to release upon parole first-term convicts who have served at least half their full sentence, whose prison record suggests probable reformation, and for whom suitable employment has been obtained. Reference is made to the literary and debating society which has been organized among the first-grade convicts, to the establishment of a monthly prison paper, and to the increased number of sessions of the evening school in which the elementary branches are taught to a limited number of convicts. During the year (1897) 221 prisoners, of whom 9 were women, were admitted; discharged, 160; total confined in the course of the year, 606. The prison is lighted with electricity, each cell having an incandescent lamp.

Crime.—The homicides in 1897 were fewer by 1 than in the previous year—24. The report says: "Assuming that the population of the State last year was 850,000, the ratio of homicides per 100,000

was 2.82, or an average of 1 homicide to a little less than 40,000 inhabitants."

Highways.—The total amount paid by the State for work on highways was \$59,337.81, the commissioner retaining the balance of \$38,859.19 until the contracts were completed. The amount allotted for telfordizing and macadamizing was \$89,250, and for grading \$8,947, making a total of \$98,197.

Decisions.—One of the most important Supreme Court decisions during the year was in relation to the Travelers' Insurance Company, regarding the payment of taxes on stock held by non-resident stockholders. The decision was favorable to the State, entitling it to recover \$5,556.74.

Fast Day.—On March 22, 1898, Gov. Cooke issued the annual proclamation for Fast Day in the following words: "Following a custom as old as the State, and in harmony with our laws, I hereby designate and appoint Friday, the eighth day of April next, as a day of fasting and prayer. I recommend that the people of the State abstain from their various pursuits, and upon that day gather in their places of public worship and render to the Almighty God sincere and devout homage by confession and prayer, and especially that they do earnestly beseech him in the present crisis of our country to avert war if it may be consistent with humanity and national honor."

Political.—The election in November resulted in a victory for the Republicans, who elected their State ticket, 4 Congressmen, and sheriffs in all the counties, and retain control of both branches of the General Assembly. The State officers elected are: Governor, George E. Lounsbury; Lieutenant Governor, Lyman A. Mills; Secretary of State, Huber Clark; Treasurer, Charles S. Merrick; Comptroller, T. S. Grant; Attorney-General, Charles Phelps. Lounsbury received a plurality of 16,788, and a majority of 12,454. The Republican plurality in the Senate in 1899 will be 20; in the House, 108; on joint ballot, 128.

COREA. See KOREA.

COSTA RICA, a republic in Central America. The Congress is a single Chamber of 21 members elected by electoral colleges, whose members are chosen by the votes of all self-supporting citizens. The electoral period is four years for the House of Representatives, one half being renewed every two years, and also for the President of the republic. Rafael Iglesias was elected in November, 1897, for his second term, ending May 8, 1902. The Cabinet in the beginning of 1898 was composed as follows: Minister of Foreign Affairs, Worship, Education, Charities, and Justice and Minister of Finance, Ricardo Montealegre; Minister of the Interior and Police and of Public Works, Dr. Juan J. Ulloa; Minister of War and Marine, Juan Bautista Quiróz.

Area and Population.—The area of the republic is about 23,000 square miles, with a population estimated in 1897 at 268,000. The Government has made various concessions for colonizing purposes and grants land on easy terms to immigrant settlers, of whom an average of 1,000 come in annually. The number of marriages in 1897 was 1,763; of births, 13,012; of deaths, 9,925; excess of births, 3,087.

Finances.—The revenue for 1897 was 7,435,611 pesos; expenditure, 6,697,327 pesos. The public debt amounted in 1896 to £2,000,000, the sum on which the Government compromised with its creditors in 1888, with unpaid coupons from January, 1895. In March, 1897, a fresh arrangement was made, whereby interest on £525,000 of the capital was reduced to 3 per cent. and on £1,475,000 to 2½ per cent., and the defaulted interest was to be canceled by the payment of £31,562 at once and

£100,000 in 20 annual installments. The internal debt on March 31, 1897, was 1,116,784 pesos.

Commerce.—The domestic exports in 1895 were valued at 12,218,550 pesos, and in 1896 at 12,152,592 pesos. The value of the coffee exported in 1896 was 10,178,040 pesos; of bananas, 1,333,107 pesos. Hides and skins and cedar and cabinet and dye woods are the principal other exports.

Navigation.—There were 476 vessels, of 471,125 tons, entered at the ports of Limon and Punta Arenas during 1896, of which number 178, of 205,937 tons, were British, 77, of 96,925 tons, American, and 45, of 57,041 tons, German. The number cleared was 475, of 473,929 tons.

Communications.—Of the long-projected inter-oceanic railroad a section of 14 miles from Punta Arenas, on the Pacific coast, and one of 117 miles from Port Limon to Alajuela are in operation. Other lines are in contemplation. The telegraph lines have a length of 878 miles. In 1897 there were sent 382,116 messages, and through the post office 1,361,885 internal and 652,058 external letters, papers, etc.

Dispute with Nicaragua.—The old conflict over the San Juan river boundary became so acute in the spring of 1898 that all intercourse between the republics was suspended and commerce and industry in Costa Rica were paralyzed. The laborers on the coffee and banana plantations were drafted into the army. Merchants ceased importing goods. On March 20 the Costa Rican troops on the frontier near La Cruz advanced so threateningly that the Nicaraguan pickets fired upon them, killing a private and wounding the commander, Gen. Avila. The Costa Ricans returned the fire, killing 7 men. On March 21 the President placed an embargo on all passengers arriving from Nicaraguan ports. The national Constitution was suspended and the President given full power to act as he should see fit. Field guns and rifles were brought, with ammunition, from New York. The chronic difficulty between the republics was aggravated in the previous September by the action of the Nicaraguan Government in arresting Eduardo Beeche, the Costa Rican consul, on the charge of aiding the Nicaraguan revolutionists. Costa Rica demanded reparation for the arrest and began preparing for war, threatening to enforce with arms her claim to the disputed territory. Negotiations looking to a peaceful settlement of the difficulty were then begun by the Diet of the Greater Republic of Central America. After the skirmish on the frontier, when President Iglesias was going to the front with his staff they were resumed, and soon an understanding was reached between the Diet and Costa Rica, whereby the claims of Nicaragua against Costa Rica for alleged intervention in the revolution and the claims of Costa Rica for the imprisonment of her consul would be submitted to a special commission, while another commission would consider later the boundary dispute.

CRETE, an island in the Mediterranean forming an autonomous province of Turkey. It has an area of 3,326 square miles and an estimated population of 294,190.

The International Régime.—When the year 1898 opened the naval forces of the six great powers were in joint occupation of the seacoast towns, where the Turkish garrisons, which had been withdrawn from all other parts of the island, aided in maintaining order. The provisional Cretan Assembly, which had elected Dr. Sphakianaki, an intelligent and prudent patriot, as its president, had agreed to accept an autonomous constitution, but insisted on the Turkish troops evacuating the island. The Sultan had agreed to grant autonomous institutions on condition that his suzerainty

should be maintained. He promised to appoint a Christian Governor with the approval of the powers, urging, however, that a Turkish subject be selected for the post.

The Christian inhabitants of the cities, who formed the bulk of the population, were fugitives from their homes, living on the charity of their Hellenic sympathizers in the Greek islands and the towns of the mainland. The Cretan towns were full of refugee Mohammedans who had been driven from their farms, now devastated or occupied by Christian insurgents. Their olive groves and buildings were destroyed, their land was tilled by others, and the cattle that they had brought away with them were starving, being restricted to the herbage that grew within the narrow limits of the international cordon. Sometimes, with the connivance of the Turkish military, they drove their herds outside the limits, and then they usually came into conflict with the armed insurgents who surrounded the occupied zone. They occasionally broke through the lines to raid undefended villages and farms in the surrounding country, and they broke into the deserted houses of the Christian citizens to steal whatever articles they could use or sell. They slept miserably on the floors of the mosques and schoolhouses, and for the most part subsisted on the scanty doles that the Sultan originally, and afterward the European governments, gave to be distributed among them. The Christians were permitted to enter the towns only when they arrived by sea. The International Council of Admirals would not permit access by land until the Christians should allow the Moslems to visit their properties in the interior. Small parties of Moslems were conducted occasionally to their estates outside the military cordons by European troops, and similarly Christians were allowed to visit their houses in the towns under escort. The Christian insurgents had full possession of the rural districts, and, except when interrupted by the political agitation and frequent calls of their leaders to arms, tilled the soil and gathered the crops as well as could be expected amid the prevailing demoralization and anarchy. They lived on the fruits not only of their own lands, but of those of their Mohammedan neighbors, but suffered from the ruin that had been wrought in the civil conflict and from the lack of many things that are in ordinary times supplied from abroad, especially sulphur for dusting the vines to save them from the phylloxera.

The ambassadors at Constantinople formulated a scheme of autonomy modeled after the organic statute of Eastern Roumelia, the Sultan to retain political and military control and to keep a garrison in Crete. To this the Cretan Assembly vigorously objected, saying that it would leave Crete only a privileged province under the Sultan's sovereignty instead of creating a separate government under his suzerainty. The question of who was to carry autonomy into effect as Governor-General was of no less practical importance than that of what particular form of autonomy should be established. Numa Droz, a Swiss statesman, had been proposed, afterward Col. Schäffer, an officer of the Luxemburg army, and then Bozo Petrovieh, a Montenegrin prince. Just before the opening of the year the Russian Government suggested Prince George of Greece. He was formally proposed later, and although he was willing to renounce his claims of succession to the Greek throne, and his candidature was supported by Great Britain, France, and Italy, the Porte strenuously protested against the choice as being only a preliminary to the annexation of the island to Greece, and was upheld by Austria-Hungary and Germany. The Germans, who were not

before represented in the force of occupation, sent the cruiser "Oldenburg," from which a detachment of sailors was landed at Canea on Jan. 7. The Cretan Assembly, which had called for the instantaneous withdrawal of the Turkish troops, declared that, if the powers considered the immediate and simultaneous evacuation impossible, it would not object to a gradual withdrawal, provided that the great powers guaranteed complete evacuation within a short specified period. The situation at Candia, where there were 30,000 starving Mohammedan refugees, became so serious that the admirals of the fleet determined to send detachments of all the international troops to re-enforce the English garrison, now reduced to about 600. The cordon, 20 miles long, was guarded by the 3,000 Turkish regulars, who were unable or unwilling to prevent occasional forays. Conditions improved, however, after a band of Bashibazouks that had sallied out to commit depredations was deported. The Turkish Governor of Candia, Chefki Bey, was replaced, at the request of the admirals, by Edhem Pasha. The Christian insurgents, who gathered in force round the outposts as a demonstration against the ambassador's plan of autonomy and in favor of the appointment of the Greek prince to be their ruler, frequently attacked the Turkish military cordon. The Assembly complained of the indifference or the impotence of the Europeans, who had not succeeded in preventing raids on the Christians or in securing for them free communication with the largest and richest town in the island. The Deputies gathered at Plakonves, in Akrotiri, on Feb. 1, and unanimously appealed to the powers to give them Prince George as Governor-General. A Turkish circular to the powers on Feb. 24 called attention to the miserable condition of the Mohammedan Cretans, who were absolutely at the mercy of the Christians, and urged the governments to terminate the evils by executing their own remedial scheme of autonomy, long before accepted by the Sultan. It contained a veiled threat to hold on to Thessaly until the Cretan question was settled. The German Government proposed to intrust the introduction of the organic statute to a commissioner of the powers. The question of the governor-generalship remained in abeyance until after the Greek loan to secure the deliverance of Thessaly from Turkish occupation had been guaranteed by England, France, and Russia. When Russia then pressed the Ottoman Government to accept Prince George, the German vessel, on March 16, was withdrawn from Cretan waters. Herr von Bülow, who had recently assumed charge of the Foreign Office in Berlin, said that Germany had played only the flute in the European concert. If the Greeks were to be rewarded for their efforts to disturb the peace of Europe and the Cretans for their rebellion against their lawful sovereign, the German Government, which had not a sufficient stake in the Eastern question to risk the bones of a Pomeranian grenadier, would not gainsay the will of the other powers, but did not care to incur any share in the trouble and expense of pacifying the island under such conditions. The Austro-Hungarian Government a month later recalled its squadron from the blockade and its troops at Canea and Kisamo. Neither Germany nor Austria withdrew definitely from the European concert. The British Government, which Lord Salisbury had declared willing to accept any candidate on whom the powers were ready to agree, provided he were not an Englishman nor a Turk, supported warmly the candidature of Prince George. In the middle of March the Porte sent out another circular asking the co-operation of the powers in the establishment of Cretan autonomy. On March 23 the Porte proposed as Governor Alexander Kar-

atheodory Pasha, saying that it had other names in reserve if his candidature should prove unacceptable. The Sultan urged the adoption of the model of the Lebanon and Samos, with a Christian Governor, who should be an Ottoman subject, and reiterated his unalterable objections to the candidature of Prince George of Greece.

The admirals having approved the plan of holding semiweekly markets outside of Candia under the protection of British troops, Col. Sir Herbert Chermiside opened one in the middle of March, and it resulted in the killing of several Turkish gendarmes by the Christians. The Assembly was asked to use its influence with the insurgents to preserve order, but the Mohammedans abstained from attending subsequent bazars until Djavad Pasha induced them to attend. When members of the two factions were at last brought together under the surveillance of European troops the first meeting was only formal. Later, the markets were held at regular intervals, but little trading took place. Murders and mutilations were still committed by both sides in the vicinity of Candia. At Retimo Russian troops who went out after cattle raiders were fired upon by Turkish irregulars. In the Canea district, where there was great distress, the French contingent of the international forces came into collision with the Turkish troops, in consequence of which the admirals decided to abolish the Turkish cordon round Canea. The Mohammedans began to emigrate from the island, following the example of the Christians, until the orders of Ismail Bey, the new Turkish military governor, put a stop to the movement. On April 5, for the fourth time, the Porte notified the powers that the Sultan could not accept as Governor a foreign subject, and asked them to guarantee imperial rights and Mohammedan interests. The admirals, who went to Candia to superintend the experiment of opening a bazar, determined to substitute English troops for the Turkish irregulars who occupied the outposts along the cordon. They decided to divide the island into four zones, each to be guarded exclusively by the forces of a single power: the western zone by the Italians, with headquarters at Kismamo, Canea being separated and kept in mixed occupation as before; the adjacent zone by the Russians, with headquarters at Retimo; the next zone, in which was Candia, by the English; and the eastern zone, including Hierapetra, previously guarded by Italian troops, by the French, who retained their headquarters at Sitia. When the Turkish irregulars were withdrawn from the outposts at Candia the cordon was enlarged by agreement with the Christian leaders.

Provisional Government.—In June, Lord Salisbury conferred with the ambassadors of France, Italy, and Russia in London, and as a result of the exchange of views it was decided on a provisional arrangement for carrying on the government in the interior. The task was to be undertaken by a committee of the Cretan Assembly acting under the supervision of the admirals. Its first business was to organize a corps of gendarmerie, and to provide for a loan. The coast towns would remain under the control of the admirals, who were instructed to arrange, if possible, for the concentration of the Ottoman troops at certain points, with a view to their eventual withdrawal. The proposed provisional régime was repugnant to the Porte, and drew forth another circular begging the powers to hasten the final solution of the Cretan question, which it was hoped would respect the sovereign rights and integrity of the empire, and provide for an Ottoman subject as governor. The admirals, in sanctioning the executive committee of the Assembly, reserved the right to revoke its authority in

case of its exceeding its mandate. The governments of the four powers undertook to arrange the loan with an international syndicate of bankers, who would be empowered to collect the customs surtax of 3 per cent. The budget was to be framed by the Executive Council, subject to the control of the four powers, and the Council was empowered to introduce measures for the temporary administration of the island. Elections were held on July 18 for a new Assembly, which, instead of 30 Deputies for each province, contained only 6, or 114 in all.

The Cretan Mohammedans were greatly excited, and the Porte moved to strong remonstrances by the action taken by the admirals in preventing the re-enforcement of the Turkish garrison or the replacement of the troops that went away. Turkish transports when they arrived were ordered to return without debarking their troops. The Porte protested that the powers were in the habit of relieving their own garrisons. Djavad Pasha tendered his resignation as military governor. The Cretan Assembly, which met at Plakouves on July 20, accepted the scheme for a provisional government, but refused to allow native Mohammedans to return to their homes while Turkish troops still remained in the island. Dr. Sphakianaki was elected president of the Executive Council. Modifications in the scheme for a provisional constitution were proposed by the Assembly, and were accepted by the admirals. Native courts were given jurisdiction in criminal cases, subject to revision by the international military tribunal at Canea. The right of pardon was reserved to the admirals. The gendarmerie, composed of natives officered by Europeans, was placed under the direction of the civil authorities, save in matters of discipline. On July 29 the admirals requested authority from their respective governments to collect the tithe on agricultural produce. Some of the powers were slow in giving their sanction to the measure, and consequently no funds were forthcoming to set the Provisional Government in motion. On Aug. 4 the Porte issued a circular stoutly maintaining its right to relieve, renew, and replenish the Cretan garrisons, and declaring its intention to exercise this right. The four powers declared themselves opposed to the dispatch of fresh Turkish troops to Crete. On the departure of Admiral Canevaro the supreme international command devolved on Admiral Pottier by reason of his seniority, and on Aug. 15 French gendarmes relieved the Italian *carabinieri* at Canea. The procrastination of the powers in taking measures for establishing the provisional régime and organizing a gendarmerie exasperated the peasants, who believed that they had been hoodwinked. Anarchy reigned in the western provinces, and murder and rapine were rampant. While the admirals proposed to limit the strength of the new Cretan gendarmerie to 500 men there were thrice that number of outlaws at large in the island. On Aug. 26 the admirals received authority to grant the Assembly the tithes collected on exports. On Sept. 6, as the British were about to install representatives of the Assembly as collectors of tithes in the customhouse at Candia, the Moslems held a mass meeting to protest against the levying of tithes by the insurgents, to complain that the British had broken their promise to enable them to visit their villages, although Christians were permitted to re-enter the town, and to demand release from the suffering and destitution to which forced confinement in the town condemned them while their property was going to ruin. The two British camps in Candia contained only 130 men. The Moslems were in a desperate mood. They prevented the opening of the bazar at Gazi and the landing of Christians from steamers. Neverthe-

less, Col. Reid, successor to Sir Herbert Chermiside, determined to take possession of the tithe office and hand it over to the insurgents. He placed a guard of 20 marines in front of the customhouse to protect the Christian officials who took charge of the tithes. A mob of unarmed Mohammedans jostled the guards until one of them fired into the crowd, killing a man. According to another account the marine had been stabbed, and his weapon was discharged involuntarily. The Mohammedans ran for their arms, and, returning, attacked the marines, who, firing one volley, fled down the quay to a boat which carried them on board the gunboat "Hazard." Of the party 4 were killed and 15 wounded. Col. Reid with a detachment of Highland infantry fought off the Mohammedan rioters for four hours, until the Turkish governor came to his relief and got the British off on a steamer to their gunboat, which meanwhile was shelling the town. The town was set on fire in seven places, and the Moslems fell upon the Christian inhabitants, and butchered at least 800 out of a total number of about 1,200. Of the Highlanders 1 officer and 7 men were killed, and 27 wounded, 4 of these mortally. The Turkish garrison, having been ordered not to interfere when the English demanded the tithes, took no effective measures to stop the massacre. It consisted of 4,000 regular Turkish troops with guns, in addition to a great number of Bashi-bazouks. These latter the Turkish authorities blamed for the disturbance. The international fleet in Suda Bay proceeded at once to the scene of the disturbance. Edhem Pasha placed a Turkish battalion at the disposal of the admirals, and proposed to proceed in person to Candia, but his offer was refused. The insurgents massed themselves round the cordon and attacked the Turkish outposts, while their best fighting men hastened to the spot from other parts of the island. The Cretan Executive Committee offered to send a force of Cretans to assist the English, and declared it to be impossible to organize the Provisional Government unless the Turks evacuated the island. British re-enforcements were dispatched from Malta. Two days after the outbreak 600 international troops had landed, and were encamped in the British position on the ramparts. The surviving Christians of the town, who had been protected by the Turkish troops, were taken on board ships and carried to Canea.

The Bashi-bazouks barricaded the streets and threatened the English outposts and the international camp on the ramparts, while insurgent forces advanced on the Turkish outposts and threatened to attack Suda from Malaxa. Panic seized the Mohammedans at Sitia, and the Christians at Canea and Retimo. The insurgents were massed at Anopolis, one of the British outposts, to the number of 5,000, and fresh bands were marching on Candia from all directions. The Cretan Executive Committee threatened to resign until the Turks left the island, but were requested by the admirals to remain, and assured that a final settlement was near. The admirals requested their governments to send each an additional battalion to Crete, and recommended as the only means of pacification that the Bashi-bazouks, and afterward the Turkish troops and officials, be withdrawn. While they remained, neither the Christian nor the Mohammedan population could be convinced that Turkish rule might not one day be restored. Admiral Noel, who arrived to take command of the English forces, accused the Turkish troops of firing on British soldiers, and the Ottoman commander requested an investigation by a mixed commission. By Sept. 12 the European forces to the number of 6,600 were in possession of the fortress at Candia. Turkish soldiers had restored order in the town. During the *émeute* 29

Bashi-bazouks and 4 Turkish regulars were killed. Admiral Noel, supported by his French, Italian, and Russian colleagues, demanded the delivery of the ringleaders in the outbreak within forty-eight hours, the transfer to his charge of the Christian survivors of the massacre, the surrender of the forts and ramparts held by Turkish troops, the demolition of houses surrounding the British rampart, and the delivery of all tithes collected since Sept. 3. While protesting that the British were to blame for the disorders, through their non-fulfillment of their promise to extend the zone of occupation and their seizure of the tithes, the Porte complied with the ultimatum, which was accompanied by a threat of bombardment. The disarmament of the Bashi-bazouks was also demanded, and they consented to give up their rifles to the Turkish soldiery. About 60 suspected ringleaders were handed over, not to be summarily punished by the British admiral, but to be tried by an international court. Edhem Pasha issued a proclamation ordering the people to deliver up their arms to a commission appointed to collect them. Disarmament was a part of the English demands that the other admirals discountenanced. The Porte on Sept. 11 addressed a circular to its representatives in London, Paris, St. Petersburg, and Rome, protesting against the re-enforcement of the international forces, offering to send Ottoman troops to assist in restoring order, and asking for the nomination of a Turkish subject as Governor of Crete. The British admiral requested the Italian and French commanders to withdraw their forces entirely from Candia, as he was confident that he had a large enough British force to deal with the situation under the circumstances. The Christian leaders were informed that the disarmed Mohammedans were under British protection, and must not be attacked.

The Italian Government, recognizing that, if the Mohammedans at Candia were now under control, at Retimo and Canea they still regarded the Christians as hostages, and the Turkish garrisons, if summoned to withdraw, would probably refuse to leave their posts without orders from Constantinople, and would resist any forcible attempt to expel them, determined to make a final diplomatic effort at Constantinople before proceeding to extreme measures. Accordingly, Admiral Canevaro, now the Italian Minister of Foreign Affairs, suggested to the cabinets of the five other powers that representations be made to the Porte on the following basis: Turkey to withdraw immediately all garrisons and officials from Crete; Europe in return to guarantee both the high suzerainty of the Sultan and the protection of the lives and property of the Cretan Mohammedans. Germany and Austria declined to take part in the negotiations. Lord Salisbury suggested that the safety of the Cretan Mohammedans should be guaranteed by the four powers only to the extent to which it had hitherto been by the Turkish troops. With this proviso the Italian suggestion was accepted, and a joint representation in that sense was made to the Porte. The Turkish Government rejected as illegal the demand for evacuation. The powers regarded the provisional *régime* as having broken down. The British assumed full responsibility for the preservation of order in their allotted sphere. In October, Sir Herbert Chermiside, who had resumed his military command at the time of the disturbances, demanded the removal of Turkish troops from posts that they were ready to occupy, and after some hesitation the Turkish officers withdrew their men to avoid open hostilities. The Russians at Retimo, having re-enforced their garrison with Russian troops and Montenegrin gendarmes in November, proceeded in the same manner.

CUBA, the largest and westernmost island of the Antilles, before the Spanish-American War a colony of Spain. It has a length of 780 miles and is from 25 to 130 miles wide, with an aggregate area of 43,319 square miles, including the Isle of Pines and other adjacent islands.

Finances.—At the beginning of 1898 the war had already cost Spain \$300,000,000, including \$60,000,000 of arrears that there was no money to meet. The Cuban debt on Jan. 1, 1898, consisted of \$118,010,200 of Cuban bonds of 1886, \$171,710,000 of Cuban bonds of 1890, \$143,300,000 of customhouse bonds issued in Spain for the expenses of the war, and \$14,000,000 of bank notes issued without specie guarantee by the Spanish bank for war purposes, making, with the \$60,000,000 of arrears of pay to the army, navy, and civil service and \$15,000,000 of other outstanding debts, the total sum of \$522,020,200, of which more than \$350,000,000 had been incurred on account of the war.

Commerce and Production.—The crop both of sugar and of tobacco promised to be larger in 1898 than in the preceding year. Of sugar a yield of 300,000 tons was looked for, provided the insurgent leaders would allow the cane to be cut and crushed. The yield of tobacco was considerably greater than in 1897, amounting to nearly 80,000 bales in the Vuelta Abajo and 130,000 in other parts of the island, in all about three tenths of an average crop before the war, when 823,096 tons of sugar were produced annually, besides 103,000 tons of molasses, and when the crop of tobacco was about 300,000 bales. The exports were then valued at nearly \$30,000,000, and imports at \$12,000,000. There are about 1,000 miles of railroad and 3,000 miles of telegraph. There were more than 1,000 vessels, with a tonnage exceeding in the aggregate 1,200,000, entered at Havana alone. (For a narrative of military operations in Cuba, see UNITED STATES.)

D

DELAWARE, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 7, 1787; area, 2,120 square miles. The population, according to each decennial census, was 59,096 in 1790; 64,273 in 1800; 72,674 in 1810; 72,749 in 1820; 76,748 in 1830; 78,085 in 1840; 91,532 in 1850; 112,216 in 1860; 125,015 in 1870; 146,608 in 1880; and 168,493 in 1890. Capital, Dover.

Government.—The following were the State officers during the year: Governor, Ebe W. Tunnell; Secretary of State, James H. Hughes; Treasurer, Willie M. Ross; Auditor, B. L. Lewis; Attorney-General, Robert C. White; Adjutant General, Garrett J. Hart; Insurance Commissioner, Edward Fowler; Agricultural Inspector, E. H. Bancroft—all Democrats; Chancellor, John R. Nicholson; Chief Justice of the Supreme Court, Charles B. Lore; Associate Justices, William C. Spruance, Ignatius C. Grubb, James Pennewill, and William H. Boyce.

Finances.—The State has a debt of \$719,750, but the interest-bearing assets amount to about \$300,000 more than that sum. The time for satisfying claims against the war tax repaid to the State having expired, the sum of \$8,232.17, which was left unclaimed, reverts to the State treasury. The Treasurer received in October \$12,500 taxes from the Baltimore and Ohio Railroad, and \$13,362.50 from the Philadelphia, Wilmington and Baltimore.

Education.—Delaware College had about 90 students in 1897-'98; the expenses amount to about \$40,000 yearly, including \$15,000 for the experiment station. The value of farm lands belonging is \$3,000; four acres are under cultivation, and four are used for experiments. Improvements have been made in the library and reading room, and it now has 8,500 bound volumes. A fire broke out in the machine shops, April 26, which threatened to destroy all the buildings, but all but the shops were saved. The loss was about \$25,000. A new mechanical building was finished and occupied by November. The Legislature appropriated \$19,200 to the institution.

At the closing exercises of the State College for Colored Students, near Dover, May 27, two diplomas were given, and prizes were awarded for the highest average standing, and for excellence in shop work and in declamation. The estimate for the year's appropriation was \$4,800.

Apropos of the failure of an educational bill in the Legislature, it was said by a speaker at the New

Century Club: "We have no State head in our school government; we have 100 local school governments who draw more than half the public funds, yet are not amenable to any head in the State, but keep their school districts in local hands; we need an effective State board." The Legislature appropriated \$100,000 for the free schools, \$450 for institutes for white teachers, and \$100 for colored.

Charities.—The biennial report of the State Hospital for the Insane, at Farnhurst, shows that there were 258 patients at the beginning of the term, and 178 had been admitted since; 98 were discharged, 58 died, and 4 were cured. The average number was 273, and 276 were present, Dec. 1. From the farm attached to the asylum produce valued at \$1,969.47 was raised. In the sewing room 7,233 pieces of clothing were made. The amount expended in the two years was \$95,871.26, of which \$89,999.57 came from the State and \$5,871.69 from the board of patients. The average cost per patient was \$162.23.

The Industrial School for Girls was chartered in 1893, and has been housed since its opening in rented quarters. A square of ground in Wilmington valued at \$8,000 was given for a site by Mr. and Mrs. Samuel Bancroft, and in September the corner stone was laid of a building to cost \$20,000. The school contained twenty-five girls in 1898. The State makes a small appropriation and the county another, but the expenses are largely paid by contributions from the people of Wilmington.

The Ferris Industrial School had 70 boys in April. The levy court made but half the usual appropriation this year.

The annual report of the Delaware Hospital for 1897 shows that 343 patients were admitted, and more than 300 received free treatment. The whole number of days' care given was 7,200. In the dispensaries free treatment was given to 1,726 patients. New facilities have been added, and a training school for nurses has been established. The endowment fund was increased in 1897 by \$10,710, of which \$5,000 was given by the family of Dr. W. P. Johnston; and it was further increased in 1898 by a bequest from Mrs. M. M. Carter of \$5,000. The receipts, including cash balance at previous report, were \$19,902.83, and the cash balance in bank, Jan. 1, 1898, \$1,660.63. The revenue from patients was \$1,281.28. The annual subscriptions aggregated \$3,430.50. The report says that the dispensary service has been abused by persons who are able to

employ doctors, but who come to the dispensary and receive free treatment.

Railroads.—The gross earnings of the Wilmington and Northern for 1897 were \$435,720.81, and the operating expenses \$368,774.66. The rental of leased lines, the interest on funded and floating debts and mortgages, and on car-trust certificates and the taxes leave the net income \$7,433.31. The mileage, including branches and lines operated under contract, is \$2.30.

The gross earnings of the Delaware Railroad amounted to \$1,087,466.36, and the operating expenses to \$766,303.69; the interest, taxes, etc., to \$52,139.01; the dividends, \$161,239.50; the surplus, after all deductions, \$93,783.57. There was a decrease in receipts in 1897 of \$208,892.28, due largely to the virtual failure of the peach crop on the peninsula. A new lease was made to the Philadelphia, Wilmington and Baltimore, under which the entire net earnings are paid over to the Delaware company. The gross earnings of the Delaware and Chesapeake were \$96,881.04; the expenses, \$86,037.84; deductions, \$21,109.22; deficit, \$10,266.02. The gross earnings of the Delaware, Maryland and Virginia were \$208,019.10; the expenses, \$189,169.76; deficit after deductions, \$26,514.52. These also are operated by the Philadelphia, Wilmington and Northern.

Mineral Oils.—The exports of mineral oils during the eleven months ending with November, 1898, amounted to 82,631,944 gallons, valued at \$3,137,858. This is a little below the record of the corresponding months of 1897, when there were 84,081,788 gallons, valued at \$3,934,597.

Failures.—A mercantile agency reported 45 failures in the State in 1897, with liabilities of \$210,800, and assets of \$91,950. This is the best showing since 1892, and the amount involved is only about one third as much as in 1896.

Banks.—Trials resulting from the defalcation by which the First National Bank of Dover lost \$107,000 in 1897 were in progress during the year. When it became known that the paying teller had defaulted, a run was prevented by the president, who offered to make good all sums due depositors that the bank was not able to pay. The teller returned in February, and four others were arrested as accomplices. Two more arrests were made in March. E. T. Cooper was convicted in May on one count of an indictment charging him with conspiracy to commit an offense against the United States, and sentenced to imprisonment for eighteen months, and the payment of \$5,000. Indictments were found in June against others, one being United States Senator Kenney. T. S. Clark was convicted in June on five counts of the indictment. Senator Kenney's trial in July resulted in a disagreement of the jury, which stood seven to five for acquittal after seventy-nine hours' consultation. He was again indicted in September, charged with conspiring with W. N. Boggs to misappropriate the funds of the bank, but the trial was postponed till Dec. 5. It ended in the same way; the jury was discharged after deliberating three days without coming to an agreement. Eight favored acquittal, three were for conviction, and one voted a blank on nearly all ballots.

An opinion was given in June by the Chancellor in the suit of N. Lieberman to restrain the First National Bank of Wilmington, and an ex-sheriff from collecting on his bonds. Lieberman was surety for the paying teller of the bank in the sum of \$30,000. The teller committed defalcations extending over a period of fourteen years or more, and was not detected till 1893. The bonds of the plaintiff covered only a part of the time. He resisted payment on the ground that the bank had

not used proper vigilance, and that the teller had been required to perform the duties of bookkeeper, by means of which employment he was enabled to embezzle the money, and that the bond was not given for him as bookkeeper. It was shown on the part of the bank that the work characterized as bookkeeping was the keeping of the individual deposit ledger, and that it was the custom of many banks at that time to impose that duty upon the paying teller. The opinion denied the injunction, setting aside these and other reasons urged for resisting the payment, and according to its terms about \$23,000 may be collected on the bonds.

Old Swedes' Church.—The bicentennial of the laying of the corner stone of this church was celebrated May 28, and on June 5 the one hundred and ninety-ninth anniversary of its consecration. Efforts are making to raise funds to renovate the church and have it in complete repair for the two hundredth anniversary of its consecration in 1899.

Legislative Session.—An adjourned session of the Legislature began Jan. 11 and ended May 30. It was held for the purpose of making such changes and additions to the laws as were needed to make them conform to the provisions of the new Constitution.

A general election law was made, and provision for a uniform ballot.

The Adams law for taxing investments was revised, amended, and passed, was vetoed, and again amended, and received the approval of the Governor on its second passage, the changes having been made in accordance with his recommendations. The levy courts are required to act immediately under the law.

For the purpose of giving the State militia some training in field duty, an expenditure of \$30,000 was authorized, and the Governor, who is commander in chief, was made custodian of the fund. Another bill permits the Federal Government to acquire land in the State on which to build fortifications. A resolution was passed directing the Governor to tender the services of the militia to the Government.

The courts were reorganized according to the requirements of the Constitution. The Court of Appeals is succeeded by the Supreme Court, the Court of General Sessions of the Peace and Jail Delivery by the Court of General Sessions. The salary of the Chief Justice was fixed at \$3,800, and that of each Associate Justice of the Supreme Court at \$3,600. Provision was made for a clerk of the Supreme Court.

May 27 was set apart for receiving portraits of the present Governor and of former governors, which were given to the State and have been placed in the Capitol. Thirty were received, most of them gifts from the families of the governors.

Among the other acts of the session were the following:

Extending the limits of the city of Wilmington; authorizing the State Treasurer to borrow \$50,000; to allow the Delaware soldiers to vote while in the field; requiring the Levy Court of New Castle County to make an annual appropriation to the Ferris Industrial School, at the rate of \$100 for each boy, not to exceed \$5,000 in the aggregate for any one year; requiring all bakers to put a pound of weight in each loaf of bread; granting appropriations for teachers' institutes; creating a general school law; providing for the maintenance of the indigent deaf, dumb, and blind, appropriating \$5,000; providing for the appointment of registration officers; preventing illegal arrests of colored people as well as of white people; providing for the maintenance of indigent imbecile children; making provision for the eradication of infectious diseases

in lower animals; making provision for colored teachers' institutes; abolishing days of grace on negotiable paper after July 1; authorizing the publication of the decisions of the Court of Errors and Appeals, Superior Court, Court of General Sessions of the Peace and Jail Delivery, and the Court of Oyer and Terminer from Feb. 1, 1893, to June 10, 1897; abolishing the old court seals and establishing new ones; regulating the levying of a capitation tax; allowing the taking of an appeal in cases where a demurrer has been filed; regulating the terms of various State officers and fixing their salaries. The Governor's salary is \$2,000; that of the Secretary of State, \$1,000; Treasurer, \$1,450; Auditor, \$1,200; Attorney-General, \$2,000.

Among important bills that failed were these: Regulating telephone rates; providing for the improvement of Wilmington harbor; prohibiting the trading-stamp business; giving the Legislature discretionary power in making laws for levying taxes; regulating the sale of intoxicating liquors from wagons; making wages a prior lien in cases of insolvency; amending the new Constitution so as to give each county equal representation in the Senate; creating a general corporation law; establishing a State board of agriculture; providing for a naval reserve force.

Political.—The death of State Senator R. J. Hanby, of New Castle County, during the session of the Legislature, made a special election necessary, and one was held Feb. 21. The regular and Union Republicans united upon D. F. Stewart; the Democrats divided and put up two candidates. The combined vote for these two was 2,902; the Republican nominee was elected by a vote of 4,058; the Prohibition vote was 19.

At the November election a State Treasurer and Auditor, a Member of Congress, a State Legislature, and county officers were to be chosen. The offices of Treasurer and Auditor were elective for the first time.

The State Convention of Regular Republicans was held Aug. 25, and a ticket was put in nomination. The Union Republicans met Aug. 30 and named the same candidates. In addition to affirming the party principles on currency and protection, the platform favored fortification of the seacoasts, the retention of all territory taken during the war, and Government construction and control of the Nicaragua Canal. On State issues the resolutions said, in part:

"We again declare that we approve of the Constitution of our State as at present amended, reserving the right, however, to correct the infamous gerrymander of the city of Wilmington into the present legislative districts, and to re-establish trial by jury as it has always existed in this State prior to June 10, A. D. 1897.

"We condemn the Democratic party of Delaware for the following:

"For deliberately disfranchising 2,962 of the electors of Kent County who voted at the general election of A. D. 1896, against no one of which voters any charge had been made. It pursued this revolutionary course in defiance of the plain mandate of the laws of Delaware. For counting only such returns of the said general election as were favorable to its continuance in power, unlawfully certifying such count and giving certificates in pursuance thereof. For so legislating in the Constitutional Convention and the General Assembly (both of which bodies it controlled) by means of the votes of men who were not elected, and who acted as judges in their own cases—as to smother all inquiry as to the result of said election, thereby setting aside the dearest of human rights and interests. When proceedings were instituted in the courts to enforce the verdict of the people, it cow-

ardly refused to meet the charge squarely, but resorted to subterfuges and dilatory tactics, thereby confessing that its case was hopeless, that it had been defeated at the polls, and that it had stolen the fruits of the election."

Following were the nominations: For Member of Congress, John H. Hoffecker; Treasurer, L. Heisler Ball; Auditor, John A. Lingo. In many of the districts there were both regular and Union Republican candidates for the Legislature.

The Prohibitionists met in State convention at Dover, Sept. 8. The platform, besides declaring strongly in favor of the special principle of the party, favored woman suffrage, an improved school system liberally supported, and strict enforcement of the laws for insuring purity of elections; and said further: "We condemn the President and all who are in any way responsible for the 'army canteen,' or, in other words, the beer saloons in the camps, whereby the health of the soldiers has been undermined and their morals corrupted."

The nominations were: For Member of Congress, Lewis W. Brosius; Treasurer, John Hutton; Auditor, George F. Jones.

The Single-Tax party made no nomination for Member of Congress, but named Samuel Swain for Treasurer, and Frank L. Brand for Auditor.

The Democratic convention met at Dover, Sept. 13. The platform declared the devotion of the party in Delaware and all the cardinal principles of the Democratic faith, and commended Gov. Tunnell's administration, and the Senators and Representative in Congress for securing the appropriation for Wilmington harbor. The administration of national affairs under President McKinley was declared to be a disappointment, and it was set forth that prosperity has not returned; that trusts, combines, and monopolies have grown, and that no measures of economy have been introduced.

The inequalities of the war-revenue act were condemned. The people were congratulated upon the termination of the war with Spain, and a demand was made that the burdens of war taxation be lessened as quickly as possible. Further the platform said: "The Democratic party generously trusted by the people, has been almost continuously in control of the affairs of Delaware for forty years. Its record in this State has been one of honesty, economy, and devotion to the public welfare. On the whole, the Democratic party in Delaware has been sound and true to the great and beneficent principles upon which as an organization it is founded.

"The Republican party in Delaware has forfeited all rights to the confidence of good citizens by falling under the foul and malign influence of a corrupt political adventurer, who, in his impudent effort to seize in this State a political honor for which he is utterly unfit, has used methods in the primaries of the Republican party and at the general election so base and corrupt that the reputable portion of the Republican party withdrew from fellowship with him and in 1896 set up a separate organization of its own. The nominations follow: For Member of Congress, L. Irving Handy; Treasurer, Willie M. Ross; Auditor, Lemuel A. H. Bishop.

The returns showed that the Republicans had carried all the State offices and will have a majority on joint ballot in the Legislature. The figures for Member of Congress were: Handy, Democrat, 15,043; Hoffecker, Republican, 17,566; Brosius, Prohibitionist 454. For Treasurer—Ross, Democrat, 14,805; Ball, Republican, 17,544; Swain, Single Tax, 935; Hutton, Prohibitionist, 468. For Auditor the vote was nearly the same as for Treasurer. The Senate will stand: Republicans 8, Democrats 9; the House, Republicans 23, Democrats 12.

DENMARK, a kingdom in northern Europe. The legislative body, called the Rigsdag, is composed of two Chambers. The Landsting is the upper house, containing 66 members, 12 of whom are appointed by the Crown for life and the others elected by the highest taxpayers in the country, delegates of the same class in the towns, and delegates of the whole electorate. The Folkething, or popular assembly, is composed of 114 members elected by all male citizens above the age of thirty except domestic servants and recipients of public charity.

The reigning King is Christian IX, born April 18, 1818, the son of Duke Wilhelm of Schleswig-Holstein-Sonderburg-Glücksburg and the successor of Frederik VII, the last sovereign of the Oldenburg line, who died Nov. 15, 1863. The heir apparent is Prince Frederik, born July 28, 1843.

The Cabinet constituted on May 23, 1897, was composed of the following Ministers: President of the Council and Minister of Finance, H. E. Hørring; Minister of Marine and Acting Minister of Foreign Affairs, Vice-Admiral N. F. Ravn; Minister of Justice and for Iceland, N. R. Rump; Minister of Ecclesiastical Affairs and Public Instruction, Bishop H. V. Sthyr; Minister of War, Col. C. F. F. E. Tuxen; Minister of the Interior and of Public Works, V. von Bardenfleth; Minister of Agriculture, Alfred Hage.

Area and Population.—Denmark has an area of 15,289 square miles, with a population estimated in 1896 at 2,304,000. The number of marriages in 1896 was 16,823; of births, 70,271; of deaths, 36,090; excess of births, 34,181. There were 2,876 emigrants in 1896.

Finances.—The revenue for the year ending March 31, 1897, was 65,235,336 kroner; expenditure, 65,957,594 kroner. The budget for the year ending March 31, 1898, makes the revenue 66,847,101 kroner, of which 43,455,400 kroner come from indirect taxes, 10,182,550 kroner from direct taxes, 4,540,331 kroner from interest and income, 1,390,000 kroner from lotteries, 764,957 kroner from domains, 202,610 kroner from posts and telegraphs, 722,145 kroner from miscellaneous receipts, and 5,589,108 kroner from expenditure of capital and contraction of debt. The total expenditure is calculated at 64,734,189 kroner, of which 10,385,152 kroner are for public works, 10,011,745 kroner for the army, 6,973,370 kroner for the charges of the public debt, 6,571,406 kroner for the navy, 4,492,088 kroner for the interior, 4,387,368 kroner for the Department of Justice, 4,225,493 kroner for education and worship, 3,686,511 kroner for finance, 3,197,178 kroner for pensions, 2,250,001 kroner for agriculture, 1,155,200 kroner for the civil list and appanages, 620,656 kroner for foreign affairs, 319,016 kroner for the Rigsdag and Council of State, 81,764 kroner for the administration of Iceland, 4,362,641 kroner for extraordinary expenditure, and 2,014,600 kroner for loans, advances, and reduction of debt. The public debt at that date amounted to 196,405,438 kroner, of which 66,515,250 kroner were owed to foreign creditors. The reserve fund on March 31, 1897, amounted to 17,864,565 kroner, and the total value of state investments was 62,706,131 kroner, not including the domains nor the capital of the state railroads, which was 206,942,082 kroner. Recent budgets have shown a steady increase of revenue from indirect taxation, increased expenditure on railroads, a decrease in the interest on the public debt due to conversion, a decrease in expenditure on the army, and a reduction in taxation, beer being the only article on which the tax has been increased since 1891.

The Army and Navy.—All young men of good physique on reaching the age of twenty-two are

drilled six months for the infantry service, eight for the cavalry, or three or four for the artillery and engineers, which is supplemented by a second period of drill lasting from eight months to a year for those who do not show sufficient proficiency after the first course of training. The liability to service lasts eight years in the regular army and reserve and eight in the extra reserve. The regular army in 1896 numbered 751 officers and about 10,000 men with the colors, while the war strength was 1,352 officers and 45,910 men. The volunteer forces bring the total strength up to 60,000, not including 16,500 in the extra reserve, or second line.

The Danish fleet consists of the turret ship "Helgoland," of 5,300 tons; the coast-defense ironclads "Odin," of 3,050, "Gorm," of 2,350, and "Lindormen," of 2,050 tons; the "Tordenskjold," of 2,400 tons, carrying a 52-ton gun in an armored barbette; the barbette ship "Iver Hvitfeldt," of 3,250 tons; the new turret ship "Skjold," of 4,500 tons; and the deck-armored cruisers "Fyen," of 2,540, "Valkyrien," of 2,850, and "Geiser," "Hekla," and "Heimdal," of 1,270 tons.

Commerce.—The value of the agricultural produce in 1896, including 37,350,000 bushels of oats, 20,600,000 of barley, 19,480,000 of rye, 3,575,000 of wheat, 21,040,000 of potatoes, and 147,200,000 of beets and other root crops, with the crops of hay and vegetables, was 323,598,188 kroner. The production of proof spirits was 7,444,000 gallons; of beer, 48,160,000 gallons; of beet sugar, 44,152 tons.

The value of the imports in 1896 was 383,936,695 kroner, and of exports 283,878,946 kroner, of which 218,600,000 kroner represent the domestic exports. Of the total value of imports 138,200,000 kroner were for articles of food and drink, 121,800,000 for raw materials, 42,500,000 kroner for machinery and other means of production, and 81,400,000 kroner for manufactured articles. In the total value of exports articles of food are represented by 217,600,000 kroner, raw materials by 33,300,000 kroner, means of production by 19,000,000 kroner, and manufactured articles by 14,000,000 kroner. The imports of colonial goods were 31,788,000 kroner, and exports 11,892,000 kroner in value; imports of beverages 5,467,000, and exports 2,713,000 kroner; imports of textile manufactures 42,645,000, and exports 5,384,000 kroner; imports of metal and hardware 44,268,000, and exports 9,041,000 kroner; imports of wood and its manufactures 21,598,000, and exports 2,676,000 kroner; imports of coal 22,138,000, and exports 1,610,000 kroner; imports of animals 3,169,000, and exports 24,440,000 kroner; imports of butter, eggs, pork, and lard 35,485,000, and exports 169,744,000 kroner; imports of cereals 40,801,000, and exports 8,500,000 kroner. The exports of live stock were 16,972 horses, 91,794 cattle, and 4,366 sheep.

The distribution of the foreign trade of 1896 among commercial nations is shown in the following table, giving values in kroner:

COUNTRIES.	Imports.	Exports.
Free port of Copenhagen.....	26,810,000	7,541,000
Great Britain.....	78,264,000	169,684,000
Germany.....	126,077,000	57,842,000
Sweden and Norway.....	56,465,000	30,089,000
Russia.....	32,839,000	5,619,000
United States.....	17,023,000	1,758,000
France.....	17,975,000	1,974,000
Netherlands.....	8,814,000	299,000
Belgium.....	6,555,000	780,000
Danish colonies.....	2,332,000	4,533,000
Other American colonies.....	614,000	170,000

Navigation.—The number of vessels in the foreign trade entered at Danish ports during 1896 was 31,559, of 2,275,815 tons; the number cleared was

31,257, of 662,152 tons. In the coasting trade 35,800 vessels were entered and 35,719 cleared.

The commercial navy of Denmark and colonies on Jan. 1, 1897, numbered 3,651 vessels, of 345,583 tons, of which 439, of 164,075 tons, were steamers.

Communications.—The length of railroads is 1,434 miles, of which 1,067 miles belong to the Government, built at a cost of 206,942,000 kroner.

The postal traffic in 1896 was 74,606,941 letters and postal cards and 69,038,468 newspapers and samples.

The telegraphs, which all belong to the Government, had a total length on Jan. 1, 1897, of 3,349 miles, with 9,375 miles of wire. The number of dispatches in 1896 was 577,062 internal, 1,218,941 international, and 145,751 official. The telegraph receipts for the fiscal year 1897 were 1,357,194 kroner; expenses, 1,571,048 kroner.

Political Affairs.—The neutrality of Denmark has been for several years a part of the programme of the Radical party in the Folkething. Vice-Admiral Ravn, having endeavored to ascertain the views of the European powers on the subject, declared in January his conclusion that there was no probability of obtaining an international guarantee of Denmark's permanent neutrality. In the elections to the Folkething on April 5 the Conservative and Moderate Liberal parties met with a signal defeat, and the Radicals, who had before depended on Socialist support, commanded a considerable majority of the whole house. This did not, however, drive the Conservative ministry to resign, since it justified its continuance in office by the support of the majority of the Landsting and the confidence of the King. The elections resulted as follows: Conservatives, 15; Moderate Left, 23; Radical Left, 63; Socialists, 12. In the previous Folkething there were 24 Conservatives, 25 Moderates, 55 Radicals, and 9 Socialists. One half of the elective members of the Landsting were renewed in September. The Socialists were disappointed in not obtaining an increase in their numbers, the Agrarian Radicals in a doubtful district having joined the Conservatives against them. The Conservatives lost 4 seats, making the house consist of 43 Ministerialists and 23 members of opposition groups.

Colonies.—The colonies of Denmark are Iceland, Greenland, and the West Indian islands of St. Croix, St. Thomas, and St. John. The latter are inhabited by a negro population whose prosperity has been much impaired by the fall in the price of sugar. The total area of the islands is 118 square miles, and the population numbers 32,786. The imports in 1896 amounted to 306,000 kroner, and the exports to 80,000 kroner. Greenland has an area of 46,740 square miles under Danish jurisdiction, with a population of 10,516 souls. The imports in 1896 were 557,000 kroner, and the exports 406,000 kroner. The trade has fallen off, owing to the competition of Japan, in the supply of train oil. The trade in this article and in eider down and furs, the other products, is carried on by a bureau of the Finance Ministry and entails a loss to the Government.

Iceland, which has an area of 39,756 square miles and 70,927 inhabitants, has its own legislative system. The trade returns for 1896, which are imperfect, show 2,089,000 kroner of imports and 3,291,000 kroner of exports.

DEWEY, GEORGE, an American naval officer, born in Montpelier, Vt., Dec. 26, 1837. For portrait, see frontispiece of this volume.

At daybreak on May 1, 1898, Commodore George Dewey, flag officer of the Asiatic squadron, was known in army and navy circles as a faithful and meritorious officer who had distinguished himself

as a subaltern in the civil war, and who had risen by the slow steps of regular promotion in time of peace to his present grade. When the sun went down he stood in the front rank of the victorious naval commanders of his race.

Since he won his brilliant victory over the Spanish at Manila numerous sketches have been published describing his career from boyhood with more or less of authority; and he has been so far away that he could neither confirm nor deny the accuracy of such accounts. His brief official record, as published by the Department, shows that he was appointed to the Naval Academy at Annapolis from Vermont in 1854, and the summary that follows sets forth his term of duty on different ships, the actions in which he participated during the civil war, and the important bureau work in which he was engaged from time to time at the academy and in the Departments at Washington.

His father, Julius Yemans Dewey, M. D., was a typical New England doctor, driving about in his

THE HOUSE IN WHICH ADMIRAL GEORGE DEWEY WAS BORN.

well-known gig over the Green mountain hills in the vicinity of the little city. Like many country doctors of his day, he was an influential citizen and commanded the affection and confidence of a large portion of the community. Montpelier has not changed very much in the sixty years that have passed since Dewey's birth; it is still the clean, thrifty, typical New England town that it was in those days, not very much larger and still cherishing many of the traditions that governed it then. Dr. Dewey was one of the founders of the first Episcopal church in the place, and there his son George and three other children were baptized. George, as soon as he arrived at the mischievous and adventurous age, developed all the energy characteristic of an ambitious Yankee boy. The house where he was born stood on the slope of the hill at the foot of which glides the beautiful but misnamed Onion river, and he is described as having been a barefoot lad driving the cows to and from pasture, attending school, and foremost in all the enterprises and in much of the mischief of his kind.

His father, if report be true, was of the stern Puritanical type of New-Englander, and when George's teacher one day sent him home from school with his back smarting from a liberal use of the birch, George was comforted by the information that unless he showed some evidences of contrition for his wrongdoing his father would repeat the punishment. In these modern days it is to be feared either that the wrongdoer would not receive the punishment that he deserved, or that the weak-minded and indulgent father would go to law and have the daring teacher indicted for cruelty. It was not in this milk-and-water school that young Dewey was brought up, and the result certainly speaks well in

his case. The old doctor, like many of his generation, was conscientiously if not constitutionally an early riser, and he usually succeeded in enforcing his principles upon the rest of the family, so that all hands were usually afoot at an early hour.

George was sent first to the Washington County Grammar School in Montpelier, and there he came under the stern government of Major Z. K. Pangborn, now editor of the "Jersey City Journal." It was a species of revolution, in which young Dewey took a conspicuous part, that brought down upon him the vengeance of Major Pangborn's good right arm and forever put a stop to the spirit of insurrection in that school. Young Dewey, when the smart of the justly administered thrashing passed away, had sense enough to consider judiciously the rights and wrongs of the case, and instead of cherishing enmity in his heart against the man who had corrected him, as a smaller nature would have done, he became sincerely attached to his teacher, and when Major Pangborn went to Johnson, Vt., to establish a private academy, George was sent there at his own request, and there completed the first period of his education, going thence at fifteen years of age to the Norwich Military Academy. There for the first time the attraction of discipline made an impression upon the boy's mind. Prior to that time he had occasionally seen training days in the country when the county militia disported itself upon the village green; but this miscellaneous training had made but small impression on his mind. At Norwich he developed a strong taste and aptitude for military affairs and, greatly against his father's wishes, he evinced a fixed purpose of entering the Naval Academy at Annapolis. After combating his son's expressed wish as long as he deemed prudent, the doctor discreetly yielded, for it was not according to his theory of education to oppose what appeared to be the serious convictions of his children.

So it came to pass that an appointment was secured, and in 1854 George Dewey reported for duty at Annapolis. He was seventeen years of age, an athletic boy of medium height, with such meager knowledge of nautical affairs as could be picked up through the navigation of a flat-bottomed scow along his native river and an occasional voyage of discovery on Lake Champlain. Beyond this his nautical knowledge extended merely to Cooper's novels and the various pirate stories that were available at that day. Boys who came to the Naval Academy were not expected to know one end of a boat from the other until after they had been there long enough to pick up the rudiments; so the subject of our sketch was neither better nor worse off than most of his comrades. But he entered the academy at a momentous period, and there were many among his mates whom he was destined to face in active service before many years had passed. North and South at that period were fast drifting into the political and sectional conditions that led to an actual rupture in 1861; and then, as now, it was customary for the cadets to settle personal differences with the weapons that Nature had given them. The leader of the Southern faction very soon took occasion to give George his opinion of Yankees in general and of George in particular, and was promptly provided with a black eye for his pains. A challenge to mortal combat followed, which George cheerfully accepted; seconds were appointed, and a hostile meeting according to the articles of the "code of honor" would doubtless have taken place had not some of the more peaceably minded cadets informed the authorities in time to have the proceedings stopped and the principals put upon their word of honor to preserve the peace. This, however, was not the end of it, and

there was bad blood between the representatives of the two sections throughout Dewey's academic career.

When he was graduated in 1858 he stood number five in his class, and he was presently assigned to duty as a midshipman on board the steam frigate "Wabash," under the command of Capt. Samuel Barron, of Virginia, afterward a commodore in the ill-fated Confederate navy. The "Wabash" cruised in European waters, visiting many ports of the Mediterranean, and as she was a fine type of the steam frigate of the day she attracted much attention from the naval authorities at the ports that she visited. The Americans at this time, in the early stages of steam as applied to war ships, had evolved a type of frigate as much superior to those in vogue in European navies as was the "Constitution" and her sister ships to those of 1812. As the fine ship lay at Malta, in the midst of the British Mediterranean squadron, one day a handsome steam yacht came in from sea and anchored near the stern of the "Wabash." It was presently whispered about that she was the property of a distinguished nobleman, one of the few first-class steam yachts then afloat, and some curiosity naturally arose among the officers of the American frigate regarding her equipment and her owner. A day or two afterward a general invitation was given out to visitors, and many of the officers and their families from the garrison of Malta and from the British and other men-of-war at anchor in the port came to inspect the formidable man-of-war from across the Western ocean. With his fellow-midshipmen young Dewey was on duty to do the honors, and with his usual enterprise and good luck was fortunate enough to touch his cap to a kindly looking gentlemen who, with a small party, came up the gangway and saluted the quarter-deck with the air of an old sailor. Dewey, who was a handsome boy and self-possessed withal, asked this gentleman if he could be of any service, and being told that he would like to see what was to be seen, proceeded without more ado to show him over the ship, from quarter-deck to engine room, wherever visitors were allowed to go. It was not until the tour of the ship had been nearly completed that Dewey became familiar enough to tender his own card by way of introduction, and to receive a similar courtesy from him whom he now regarded as his guest. The gentleman extracted a card from a stout wallet, and Dewey read thereon one of the most distinguished names in the British peerage. "Yes," his lordship remarked, "that is my little 'teakettle' anchored under your quarter. I am afraid she'll look rather cramped after we go aboard of her from this." Dewey's official conscience began to trouble him as soon as he found out who his guests were, so he insisted upon taking them to his commanding officer and turning them over to the proper authorities, although, as he foresaw, his own presence as an insignificant little midshipman in a roundabout jacket was thereafter totally ignored.

In 1860 George returned to the academy for his examination as passed midshipman, and he was on leave at home in Montpelier when the first shot of the civil war was fired in Charleston harbor. A few days afterward, in the hurried expansion of our naval resources, he was commissioned lieutenant and assigned to the old steam sloop of war "Mississippi." This vessel, with Capt. Melancton Smith in command, was ordered to the western Gulf, and early in 1862 Farragut was assigned to the squadron as flag officer. He immediately began preparations for ascending the Mississippi, reducing the forts at the head of the passes, and securing possession of New Orleans.

Dewey was by this time first lieutenant of the "Mississippi," and she with her heavy-draught sisters of the squadron was with difficulty lightened and hauled over the bar at the mouth of the river, and by the end of February all were re-equipped for service in the deep and swiftly flowing current of the turbid river.

It is not necessary here to recount at large the various incidents of that daring fight when Farragut led his fleet past the heavy batteries of Forts Jackson and St. Philip in the face of channel obstructions and fire-rafts and a formidable Confederate fleet. The "Mississippi," according to the column formation, was third in line, and it devolved upon young Dewey, by the order of Capt. Smith, to con the ship on the way past the batteries. The conning bridge of the "Mississippi" extended across from top to top of her lofty paddle boxes, and there Dewey took his stand. "Do you know the channel, sir?" asked Capt. Smith, somewhat anxiously, as the bell rang "Go ahead!" "Yes, sir," replied Dewey; and every time the question was repeated he gave a similar answer, although he admitted afterward that his knowledge of the channel was derived entirely from a study of a chart and from a sublime confidence in being able to tell from the look of the water where it was best to steer.

No lights were allowed on the decks of Farragut's battle ships save in the binnacle. The decks were whitewashed, but only a dim reflected light from the sky made it possible to see dark shapes of men and guns on the white surface below, until the Confederates lighted the great bonfires on shore. When the ball opened there was no lack of light of a lurid and intermittent character; and then his brother officers who were on the main deck could look up and see Dewey on the bridge, coolly directing the course of the ship as close as he dared under the guns of the Confederate batteries; for the nearer he could go to the shore the less likelihood was there of the vessel's being destroyed by their heavy projectiles. Chief-Engineer Baird of the navy, who was on board the "Mississippi," describes young Dewey's figure as it started out from time to time against the blackness of night in the glare of the almost continuous discharges of guns on shore and afloat. "Every time the dark came back," he says, "I felt sure that we should never see Dewey again. His hat was blown off, and his eyes were aflame, but he gave his orders with the air of a man in thorough command of himself." At a critical point of the battle the Confederate ram "Manassas" came suddenly in sight, bearing down directly upon the "Mississippi." But Dewey was on the alert, and by ordering a quick shift of the helm received a slanting blow from her prow instead of a direct one, and the old frigate was enabled to pour the fire of her battery down into her adversary with such good effect that the ram had immediately to be run ashore and abandoned, while the stately procession of dark Federal ships moved on up the river and on the following day held the Crescent City at the mercy of their guns.

Dewey remained with this ship until it became necessary for the fleet to ascend the river and take part in the investment of Port Hudson. That was a rather disastrous venture, for only Farragut's flagship, the "Hartford," succeeded in passing the formidable batteries. The "Mississippi" grounded directly under the bluffs, where she offered a fair target for the Confederate gunners, and it was soon evident that she must be abandoned. All hands were ordered to the boats and made their escape to the "Richmond" and to the shore, Dewey making several trips back and forth under the terrific fire from the Confederate works, until he alone with

Capt. Smith remained on the quarter-deck. The ship had been fired to prevent her falling into the enemy's hands. "Are you sure she will burn to the water?" asked Smith; and Dewey, at the risk of his life, went down into the ward-room to see if the inner fittings were fairly ablaze. Then, and not till then, the two officers left the ship in the last boat, and an hour later the "Mississippi" went skyward in a great column of fire and smoke, when her magazine exploded.

After this Dewey was placed in command of one of Farragut's smaller gunboats, and he saw much river service during the time that intervened between the fall of Port Hudson and Vicksburg, and a complete rescue of the Mississippi river from Confederate control. He was afterward transferred to be first lieutenant on the "Colorado," under Commodore Henry Knox Thatcher, and took part in the severe engagements at Fort Fisher in December and January, 1864 and 1865. Commodore Thatcher paid the highest possible compliment to Lieutenant Dewey in his report of the engagement, and in March, 1865, Dewey received his commission as lieutenant commander.

After the civil war Dewey served for two years on the "Kearsarge" and the "Colorado," on the European station. In 1867 he married Miss Goodwin, the daughter of Ichabod Goodwin, who was Governor of New Hampshire when the civil war began in 1861. She died in 1872, leaving one son, George Goodwin Dewey, who, after graduation at Princeton, entered upon a business career in New York.

In 1875 Dewey was promoted commander, and not long afterward he was placed in command of the "Juniata" on the Asiatic squadron, where, as recent events indicate, he may have made observations that have since proved of distinguished service. After a period spent in the command of the "Dolphin," one of the first ships of the modern navy, Dewey went to the "Pensacola," of the European squadron; and he has since been engaged as a member of the Lighthouse Board and chief of the Bureau of Equipment.

He was promoted to the rank of commodore, Feb. 28, 1896, and on Nov. 30, 1897, he was assigned, at his own request, to sea service, partly because of impaired health, owing to the confinement of office work, and partly, as it is intimated by some of his friends, because he foresaw naval operations in which the Asiatic squadrons of the world were, in his estimation, destined to play a conspicuous part. For whatever reason, he was assigned to this command, and when he was notified by telegraph, April 21, that war had been declared with Spain, we may believe that he was convinced that his old fighting luck had stood by him. His fleet, consisting of six ships, was in the British harbor of Hong-Kong, and, as in duty bound, the British Government, through its local representative, immediately notified him that he must put to sea within forty-eight hours. Prior to this, every effort had been made to secure supplies of all kinds, and little remained to be done except to fill the coal bunkers to their utmost capacity and steam across by the shortest route to engage the Spanish squadron, which it was believed lay in the harbor of Manila. Before the declaration of war Dewey had purchased two ships, one of which was loaded with 3,000 tons of the best Welsh coal, and the other carried a six months' supply of provisions for the fleet. The coal supply was of course the crucial question, and with modern rapid-fire guns it is impossible for a man-of-war to carry ammunition enough to last her through more than a few hours of active work. No port where he could obtain supplies, or where he could refit in ease one or

more of his ships became disabled, was open to him. His nearest home port, San Francisco, was 7,000 miles away, and it behooved him either to conquer a base where he could lie in safety and obtain coal or ignominiously sail for home. His orders were brief and to the point. "Capture or destroy the Spanish fleet," the dispatch read, and Dewey was not the man to waste time in idle speculation. The squadron took advantage of China's failure to proclaim neutrality and lay for two days in Mirs Bay, until final preparations could be completed and final information acquired. Waiting only for the arrival of Mr. Williams, the United States consul, the squadron headed direct for the Philippines. The cable from Manila to the mainland was still intact, and it was assumed—correctly as it afterward proved—that the Spaniards were advised of Dewey's movements up to the time of his departure from Mirs; but they did not count upon the precise manner in which a graduate of the Farragut school of maritime warfare would conduct subsequent operations.

The fleet arrived off the entrance to Manila Bay in the dark of the last night of April, and instead of lying to in the open, as the Spanish admiral no doubt expected him to do, Dewey led the way with his flagship, the "Olympia," directly into the harbor mouth, past the fortified island of Corregidor whose batteries might wake up at any moment, and over unknown fields of mines and torpedoes whose locality could only be guessed.

The Spanish outlook on Corregidor could not have been very alert, or else it trusted to luck, and luck went against it. The head of the column was nearly abreast of the lighthouse before an alarm signal was fired and an answering flash came from the mainland; but the ships moved on, and not a gun was discharged while the grim procession advanced up the narrow strait.

By some unexplained accident, a life buoy was dropped overboard from one of the leading ships, perhaps from the flagship itself, and as it was one of the automatic-lighting variety, the squadron was startled by seeing a bonfire on the surface of the water immediately in the track of the advancing ships. The nature of the blaze was quickly detected by the sharp-eyed lookouts, and barring a slight precautionary sheer to port or starboard, as the case might be, the squadron moved on, only alarmed and exasperated by the smoke of the "McCulloch," which insisted upon igniting from time to time at the top of her smokestack and making an admirable target for the enemy's gunners should they be disposed to take advantage of it. Three times this provoking smoke flared up, and at last came the first shot of the battle of Manila from a battery only half a mile distant from the passing squadron. There was no halt in the progress, and no acceleration of speed, but with a few answering shots the fleet passed on, leaving the Spanish gunners to waste their ammunition, if they chose to do so, upon the dark waters of the bay.

Thence onward until daylight the fleet steamed at a slow rate, calculated to bring them off the city at about daybreak, and as the first light of morning appeared in the east the masts of the shipping off Manila became visible. The men were at quarters, and coffee was served while the squadron steamed through the fleet of merchant vessels toward the Spanish war ships that could now be seen off the fortress of Cavité. Then battle flags were broken out, and with the "Olympia" in the lead the squadron headed in without a moment's pause in as regular order as if they were engaged in a holiday parade in Hudson river. The Spaniards began firing as soon as our fleet came within range, but Dewey's orders were not to reply until signal was

made from the "Olympia." When the American firing did begin it was terrific, and the superiority of the American gunners was at once apparent as the range was caught up and heavy projectiles began to hammer the sides of the Spanish war ships.

The commodore led the procession on his flagship, and after delivering the full weight of his battery against fleet and forts turned and was followed by all the ships in succession, passing five times up and down the line of fire from the Spanish ships and fortress. The expenditure of ammunition was so rapid and destructive that the commodore feared some of the magazines must be nearly exhausted, and so, after passing the fifth time, he led the way out of the range and was followed by the rest of his fleet. This was the real reason for the lull in the fight, not because he deliberately stopped, as has been reported, to give his men their breakfast. However, when he had satisfied himself that the ammunition was sufficient, he improved the opportunity and gave the men their breakfast before returning to finish the work that he had begun. This was effected in short order, and a little before 1 o'clock in the afternoon the victory was complete, the last Spanish flag came down, and the American squadron anchored just outside the fleet of foreign merchant vessels whose crews had watched the whole action with absorbed interest. The commodore had obeyed his orders—the enemy's fleet was totally destroyed. Negotiations followed through Mr. Ramsay Walker, the British consul in Manila, and from that time until the final surrender of the city not a hostile act was committed by the Spaniards, thanks, no doubt, to Capt.-Gen. Augustine, who was then in charge.

The telegraphic cable that connects Manila with Hong-Kong and the rest of the world was as yet uncut, and Dewey notified the Spanish authorities that he would not interfere with it provided they would allow him to use it to communicate with his own Government. This they declined to do, so that the commodore had the best of all reasons for promptly sending one of his ships to grapple the cable and prevent any further mendacious messages to the Government at Madrid. The cable, however, had already been utilized to telegraph the probable annihilation of the American fleet by the Spaniards, and such was the first news of the engagement that went out to the world. A true version of the affair was not transmitted until Dewey sent one of his vessels back to Hong-Kong with his official report.

As soon as the news went abroad, the great powers of Europe, represented by strong squadrons in Asiatic waters, telegraphed to their respective flag officers to proceed to Manila and supervise the doings of this Western upstart who had presumed to trespass upon their preserves. A Frenchman was the first to appear, and he was promptly followed by a fleet of German ships that would probably have overmatched our own squadron had it come to blows. These Germans immediately began to make the situation very uncomfortable for Commodore Dewey. They established obtrusively friendly relations with the Spanish authorities, and not until Rear Admiral Dewey (for he had now received his promotion) notified Vice-Admiral von Diederichs that he regarded his actions as verging upon unfriendliness, were the objectionable and defiant practices discontinued. He distinctly intimated that he would expect the German admiral to pursue a different course in the future. This message, it is understood, was backed up by such friendly relations with the British squadron that had then arrived in the harbor, that from that day there was less cause for complaint.

Some time necessarily elapsed before re-enforcements could reach Manila from San Francisco, and

this was naturally a period of great anxiety and responsibility for Admiral Dewey. He, however, conducted everything with great discretion and success, treating the Filipinos with due consideration and firmness and restraining them from excesses which they might otherwise have committed. The threatened approach, too, of Admiral Caméra's fleet was a cause of constant anxiety; the news that it had reached Suez with ships coaled and ready to sail for Manila brought the crisis, as was estimated, within ten or twelve days of fulfillment. Caméra's fleet comprised ships that were greatly superior in equipment to any of Dewey's; and with the reduced supply of ammunition and the impossibility of procuring additional stores beyond those captured from the Spaniards at Cavité, the situation certainly was extremely critical. But on July 17 a steamer was seen coming in, which proved to be a Japanese cruiser, and after communicating with her a fleet signal was run up on the "Olympia," and immediately on each of her gun turrets a signal boy was busily at work transmitting a message to the neighboring ships. Through a hundred glasses the little signal flags were watched, and letter by letter the message was spelled out: "Cervera's fleet destroyed off Santiago; Caméra's fleet recalled from Suez." Such was the substance of the dispatch. The enthusiasm and relief experienced by every man in the squadron at this news, which practically closed the war and was in fact shortly afterward succeeded by a suspension of hostilities, can be readily imagined.

Apparently only one portrait of Admiral Dewey is extant. This has been reversed and touched up and reproduced in various forms and in all sorts of publications, but obviously it is from the same photograph. It is a good likeness, conveying upon the whole an excellent idea of the man's personality. In stature he is of medium height, not conspicuously erect, somewhat stout, but apparently of a good and still athletic physique. In manner he is extremely quiet and reserved; no one would ever think of him as a resolute and determined fighter of the old "sea-dog" type, although his piercing black eye and a certain curtiness of speech indicate an active intelligence and a strong will that are pretty sure to make themselves felt when an emergency arrives. Fortunately for him the admiral's sphere of duty in the recent war was so far removed from the arena of politics and rivalries at home and in Washington that he encountered no enemies in the field of his fame save those whom he was sent out to capture or destroy. He persistently allows it to be understood that he does not wish to return home until the duties for which he was sent to Asiatic waters have been performed.

On May 9 Senator Lodge, of Massachusetts, offered the following resolution, which was agreed to without debate: "That the Secretary of the Navy be and he is hereby authorized to present a sword of honor to Commodore George Dewey, and to cause to be struck bronze medals, commemorating the battle of Manila Bay, and to distribute such medals to the officers and men of the ships of the Asiatic squadron of the United States under command of Commodore George Dewey on May 1, 1898; and that, to enable the Secretary to carry out this resolution, the sum of \$10,000 is hereby appropriated."

On March 3, 1899, Rear Admiral Dewey was promoted to the rank of Admiral.

See "Life of Admiral George Dewey, from Montpelier to Manila," by Adelbert M. Dewey (New York. The Woolfall Company, 1899).

DISASTERS IN 1898. A list of the accidents and disasters occurring during a calendar year can not be verified by comparison with official returns until several months have passed. Hence such a list

as the one printed herewith should not be taken as absolutely accurate and exhaustive. It is safe to assume, however, that the actual fatalities and losses of the year are largely in excess of the figures here given. The fire losses and the statistics regarding railway accidents may be regarded as approximately correct. They are quoted from the "Journal of Commerce and Financial Chronicle" and from the "Railroad Gazette." Of these disasters a very large proportion might have been avoided by the exercise of moderate prudence and foresight. When it is shown, as in the year 1898, that the fire losses in the United States and Canada amounted to \$119,650,000, it may well cause thoughtful persons to ask whether it would not be well to restrict the use of fireworks, of explosive parlor matches, of inflammable draperies, and the like, to the end that life and property might be spared at least some of the perils that beset them.

January 1. Shipwreck: French steamer *St. Louis* lost in the Mediterranean, 15 perish.

3. Faulty structure: a floor gives way in the City Hall in London, Ontario, 25 killed.

7. Explosion: Glasgow, Scotland, 4 killed. Shipwreck: steamer *Clarissa Radeliffe*, off Cape Vincent, several lives lost.

9. Train derailed, Shorters, Ala., 21 hurt.

12. Earthquake in the Molucca or Spice Islands, Malay Archipelago, about 50 killed, 200 hurt.

18. Train derailed, Colfax, Cal., 3 killed, 3 hurt.

21. Trains in collision during fog, Ashley Junction, S. C., 2 killed, 4 hurt.

23. Trestle falls, New Albany, Ind., 2 killed, 2 hurt.

24. Fire, Spokane, Wash., 8 lives lost.

25. Trains in collision, Upton, Ky., 3 killed, 3 hurt.

29. Train derailed, Orono, Me., 4 killed, 30 hurt.

Fires in January: Stockton, Cal., granary, loss, \$500,000; Chicago, business houses, \$450,000; East St. Louis, grain elevators and business houses, \$1,500,000; Spokane, Wash., business houses, \$240,000; Chicago, business houses, \$200,000; Milwaukee, tin works, \$200,000; and 192 others; aggregate loss, \$9,472,500.

Summary of train accidents in January: 113 collisions, 130 derailments, 14 others; total, 257. Killed: 39 employees, 6 passengers, 3 others; total, 48. Hurt: 105 employees, 72 passengers, 3 others; total, 180.

February 1. Canada, New England, and several of the Western States visited by destructive blizzard, \$1,500,000 damage in Boston alone; other heavy losses in the country at large. Shipwreck: British steamer *Channel Queen*, off island of Guernsey, 19 perish.

2. Fire: lighthouse burned, Crosby, England, 3 lives lost.

4. Fire in Boston, 6 firemen killed.

5. Train derailed by a stray cow, Hematite, Mo., 2 killed, 5 hurt.

9. Fire: Pittsburg, Pa., warehouses burned, loss, \$1,500,000, 18 killed.

10. Trains in collision, Kirkland, Ala., 4 killed, 3 hurt. Also at Benham, Texas, 3 killed.

11. Shipwreck: British steamer *Marbella* sunk in Hull roads by collision with H. M. S. *Galatea*. Fires in New York cause damage to the amount of \$1,000,000.

12. Shipwreck: Holland-American steamer *Veenendam* lost at sea; all hands saved by American liner *St. Louis*.

15. Explosion: United States battle ship *Maine* destroyed in Havana harbor, 266 killed, many injured.

16. Shipwreck: French steamer *Flachat* cast away on Canary Islands, 87 perish.

17. Explosion: fire damp in a Westphalian coal

mine, about 75 killed. Trains in collision, Hubbard, Iowa, 4 engines wrecked, 4 men killed.

18. Trains in collision, Cramer, Cal., 2 killed.

Fire: London, large amount of stage properties burned belonging to Sir Henry Irving.

25. Train derailed by burning woods, Wayeross, Ga., 1 killed, 4 hurt.

27. Shipwreck: French steamer *La Champagne* disabled at sea, towed into Halifax by steamship *Roman*. Storm: many lives lost on the Colorado Islands, near Madagascar.

Fires in February: Naugatuck, Conn., rubber works, loss, \$700,000; Winnipeg, Manitoba, \$400,000; Scranton, Pa., Young Men's Christian Association building, etc., \$160,000; Savannah, Ga., Roman Catholic cathedral, \$225,000; Fort Worth, Texas, business houses, \$250,000; Pittsburg, Pa., warehouses, etc., \$1,500,000; Cleveland, Ohio, business houses, \$375,000; New York office buildings, \$250,000; Pittsburg, Pa., wall-paper works, \$260,000; Dyersburg, Tenn., mills, \$200,000; Louisville, Ky., tobacco warehouses, \$350,000; and 294 others; aggregate loss, \$12,629,300.

Summary of train accidents in February: 76 collisions, 97 derailments, 2 others; total, 175. Killed: 22 employees, 1 passenger, 4 others; total, 27. Hurt: 58 employees, 45 passengers; total, 103.

March 1. Hurricane in the western Pacific, many shipwrecks, French gunboat sunk, heavy loss of life.

2. Train derailed, Fayetteville, N. Y., 2 killed, 2 hurt.

9. Trains in collision, Walkerton, Ind., 3 boys stealing a ride killed.

12. Fire: New York lodging house burned, 11 perish.

16. Fire in Chicago, 16 perish. Shipwreck: unknown steamer sunk off Lowestoft, all hands lost.

18. Explosion: Santa Isabel mine, Cordova, Spain, 60 killed, many missing.

19. Earthquake in the Spice Islands, 60 lives lost.

21. Trains in collision, New Cross, England, 3 killed, several hurt.

22. Trains in collision, Roseoe, Ill., 2 killed, 5 hurt. Floods cause much distress and loss in Ohio and Indiana.

23. Faulty structure: bridge breaks over White river, near Columbus, Ind., whole train falls into the water, 20 injured, 1 fatally.

25. Storms of great severity in the British Islands, Spanish torpedo boat *Audax* badly damaged, nearly 200 fishing boats lost.

26. Severe storm and cold on the coast of Newfoundland, 48 seal hunters perish, 50 badly frozen.

31. Earthquake in San Francisco, the city severely shaken, much damage done to large buildings and to the United States navy yard at Mare Island.

Fires in March: Providence, R. I., warehouses, loss, \$150,000; Deadwood, S. Dak., smelting works, \$230,000; Baltimore, Md., factories, \$180,000; Cohoes, N. Y., mills, \$450,000; Chicago, Ill., hotel and business houses, \$680,000; San Francisco business block, \$150,000; and 171 others; aggregate loss, \$7,645,200.

Summary of train accidents in March: 66 collisions, 98 derailments, 8 others; total, 172. Killed: 15 employees, 1 passenger, 3 others; total, 19. Hurt: 92 employees, 31 passengers, 1 other; total, 128.

April 3. Avalanches: about 150 persons perish in the Chilkoot pass, Alaska. Flood: the Ohio river bursts its levees at Shawneetown, Ill., many persons drowned.

5. Severe snowstorm in Middle and Eastern States, considerable damage to growing crops; floods in Illinois, 23 persons drowned at Shawneetown, 7 missing.

6. Flood: Mississippi river passes the danger line at Memphis.

7. Fire: about 1,000 houses burned in Tokio, Japan.

17. Explosion in Charlestown, Mass., on Hoosier Tunnel docks, fire follows, damage, \$600,000.

21. Fire: the Rev. Dr. Spurgeon's Tabernacle, in London, burned.

26. Explosion: powder mills at Santa Cruz, Cal.; fire in Glasgow, Scotland, \$750,000 damage.

30. Explosion: Clipper Gap Powder Mills, near Auburn, Cal., struck by lightning.

Fires in April: Lincoln, Neb., business houses, loss, \$200,000; Rockhill, S. C., sundry buildings, \$200,000; Union Islands, Ga., mills and lumber, \$200,000; Sacramento, Cal., railroad stores, \$250,000; Erwin, Pa., plate-glass works, \$550,000; Chester, Mass., grain elevator, etc., \$500,000; Belt, Mont., coal crusher, \$250,000; and 171 others; aggregate loss, \$8,211,000.

Summary of train accidents in April: 50 collisions, 68 derailments, 7 others; total, 125. Killed: 17 employees, 1 other; total, 18. Hurt: 23 employees, 21 passengers, 4 others; total, 48.

May 7. Train derailed by exploding dynamite, Maria's, Mont., 3 killed, 2 hurt.

8. Train derailed, Columbus, Ohio, 4 killed, 20 hurt.

21. Fire and explosion in Zollern mines, 45 killed. Trains in collision, Rossville, Tenn., 1 soldier killed, 6 hurt; also at Formosa, Ill., 4 killed, 20 hurt.

23. Collision: military train wrecked near Ways, Ga., 2 soldiers killed.

27. Trains in collision, Graysville, Tenn., 5 killed, 2 hurt.

Fires in May: Augusta, Ga., grain elevator, loss, \$200,000; Ballardsville, Mass., storehouses, \$425,000; Philadelphia, toys, etc., \$225,000; Chicago grain elevators, \$1,200,000; Attleboro, Mass., jewelry, \$300,000; Toledo, Ohio, stores, \$340,000; Dallas, Texas, furniture, etc., \$375,000; Baltimore, Md., stables, etc., \$255,000; and 155 others; aggregate loss, \$11,072,200.

Summary of train accidents in May: 68 collisions, 76 derailments, 6 others; total, 150. Killed, 28 employees, 4 passengers, 4 others; total, 36. Hurt: 78 employees, 42 passengers, 18 others; total, 138.

June 1. Shipwreck: schooner *Lady Jane Gray* founders off coast of Alaska, 34 lost, 27 saved.

2. Fire: Peshawar, India, about 4,000 houses burned.

3. Train derailed, Sedgwick, Col., 10 hurt.

7. Train derailed, Parkersburg, W. Va., 2 killed, 3 hurt. Rock placed on track by depraved boys.

9. Train derailed, Clyde, N. Y., 1 killed, 4 hurt.

10. Train derailed by a landslide, Williston, N. Dak., 2 killed, 1 hurt.

14. Explosion: steam boiler, Ironton, Mo., 1 killed, 4 hurt. Trains in collision, Richmond, Va., 1 killed, 4 hurt.

19. Trains derailed, Shawsville, Va., 3 killed, 8 hurt; also at Glen Onoko, Pa., 2 killed, 5 hurt.

21. Faulty structure: Blackwall, England, a platform falls at the launching of British battle ship *Albion*, 37 drowned.

22. Runaway engine at Niagara Falls, 1 killed.

24. Train derailed, St. Joseph, Mo., 2 killed.

26. Train wrecked, Tupelo, Miss., 6 killed, 14 hurt, most of them soldiers. Fire: Clifton House burned, Niagara Falls.

28. Train derailed, Vinegrove, Ky., 2 killed.

Fires in June: Superior, Wis., chair factory, loss, \$200,000; Portsmouth, Ohio, rolling mill, \$300,000; Detroit business block, \$295,000; Park City, Utah, various buildings, \$600,000; Albuquerque, New Mexico, opera house, etc., \$200,000; Lincoln, Neb., stores,

\$200,000; Louisville, Ky., foundry, \$275,000; Philadelphia, oilcloth works, etc., \$260,000; Peoria, Ill., distillery, \$200,000; New Whatcom, Wash., lumber, \$400,000; and 166 others; aggregate loss, \$9,206,900.

Summary of train accidents in June: 52 collisions, 88 derailments, 4 others; total, 146. Killed: 21 employees, 5 passengers, 2 others. Hurt: 67 employees, 60 passengers, 4 others; total, 131.

July 2. Trains in collision, Grovetown, Ga., 3 killed, 7 hurt.

3. Trains in collision, Park Station, Ky., 2 freight trains at full speed meet on a trestle, 34 cars derailed and wrecked, 1 man killed, all others saved themselves by jumping; alleged cause, disregard of orders.

4. Shipwreck: French steamer La Bourgogne in collision with British ship Cromartyshire, near Sable island, 560 lives lost, including the captain and several officers.

6. Explosion: Royal Albert docks, England, 5 killed, several hurt.

13. Trains in collision, Jefferson, Ala., 1 killed, 3 hurt.

14. Explosion: boiler bursts in Niagara Starch Works, 6 killed, 26 hurt.

18. Trains in collision, Georgetown, Ind., 3 killed; cause, neglect to flag.

21. Severe thunderstorms throughout New England, many buildings struck by lightning.

23. Earthquake in Chili: province of Concepcion severely shaken.

25. Fire: town of Pugwash, Nova Scotia, partly destroyed.

26. Train derailed, Columbia, S. C., 16 hurt.

27. Explosion: Hereules Powder Works, California, 5 killed; malice the supposed cause.

29. Destructive storms in the British Islands: many shipwrecks and much property destroyed along the coast. Trains in collision at McComb City, Miss., 2 killed, 1 hurt.

30. Storms continue on the northeast coast of England.

Fires in July: Boston, stores, etc., loss, \$200,000; Allegheny, Pa., theater, etc., \$175,000; West Hammond, Ind., starch works, \$250,000; Stevens Point, Wis., paper-pulp works, \$200,000; Oswego, N. Y., malt house, \$170,000; Pittsburg, Pa., railway stables, \$175,000; Escambia, Mich., business houses, \$150,000; and 171 others; aggregate loss, \$8,929,750.

Summary of train accidents in July: 76 collisions, 80 derailments, 4 others; total, 160. Killed: 30 employees, 1 passenger, 9 others; total, 40. Hurt: 95 employees, 32 passengers, 5 others; total, 132.

August 2. Train derailed, St. Joseph, Arizona, 2 killed, 14 hurt. Cloud-burst, Madiana, Spain, 40 drowned.

4. Train derailed, South Norwalk, Conn., 1 killed, 11 hurt.

7. Train wrecked, Cass lake, Minnesota, 2 killed, 6 hurt.

8. Fire: town of Bismarck, N. Dak., partly destroyed. Boats upset in Lisbon harbor, Portugal, 20 drowned.

9. Train derailed, Canton Junction, Mass., 3 killed, 3 hurt.

10. Collision, Sharpsboro, Mo., 1 killed, 5 hurt; another at Churubusco, Ind., 2 killed, 3 hurt. Violent storms reported in Formosa, hundreds of lives lost by tidal waves and other causes.

12. Train wrecked in Italy, 9 killed, 40 hurt.

13. Cloud-burst in Hawkins County, Tennessee, 17 persons drowned, others missing.

14. Fire: Fresno, Cal., 4 killed, loss, \$500,000.

15. Tornado, Minnesota, 7 killed. Shipwreck: steamer C. C. Funk, on Flanders island, nearly all hands lost.

16. Fire at Niji-Novgorod, factories and houses burned, loss, 1,500,000 rubles.

17. Another fire at Niji-Novgorod, public buildings burned, many lives lost.

19. Cloud-burst, Pittsburg, Pa., 6 drowned.

21. Trains in collision, Sharon, Mass., 4 killed, 30 hurt. Train wrecked at Speed, Ind., 1 killed, 15 hurt; cause, a loose door on a refrigerator car.

25. Shipwreck: collision at sea, steamer Norge and French schooner La Coquette, 16 lives lost.

27. Storm in Italy, 18 killed by fall of building at Foggia.

28. Train derailed, New Castle, Ala., 3 soldiers killed, 15 hurt.

29. Four persons perish while climbing a mountain in Canton Valois, Switzerland.

Fires in August: Dayton, Wash., grain elevator, loss, \$300,000; Bismarck, N. Dak., various buildings, \$675,000; Fresno, Cal., railroad property, \$500,000; Chicago, grain elevator, \$250,000; Pottsdam, N. Y., paper-pulp works, \$300,000; Nashville, Tenn., business houses, \$292,000; Buffalo, N. Y., sundry buildings, \$200,000; and 116 others; aggregate loss, \$7,793,500.

Summary of train accidents in August: 83 collisions, 94 derailments, 5 others; total, 182. Killed: 15 employees, 14 passengers, 4 others; total, 43. Hurt: 93 employees, 152 passengers, 6 others; total, 251.

September 1. Train derailed, Fulton, N. Y., 1 killed, 10 hurt, switch maliciously misplaced.

5. Train derailed, Washington, D. C., 2 killed, 1 hurt.

6. Faulty structure: bridge breaks at Hogansville, N. Y., 18 killed, 27 missing. Train wrecked at Whippenton Junction, Mass., 1 killed, 14 hurt.

10. Fire: Ocean Hotel burned, Newport, R. I. Train derailed, Apache, Col., 2 killed, 1 hurt.

11. Hurricane in the British West Indies, thousands of buildings wrecked, about 500 lives lost. Fire: town of Jerome, Arizona, nearly destroyed, 3 lives lost; town of New Westminster, British Columbia, partly burned.

12. Cloud-burst, Sulphur, Texas, 1 killed, 2 hurt. Typhoon: central provinces of Japan desolated, about 100 lives lost and great damage to property.

16. Trains in collision, Osceola, Mich., 2 killed.

21. Explosion in coal mine, Brownsville, Pa., 8 killed, many hurt.

22. Trains in collision, White River, Wis., 1 killed, 1 hurt.

23. Violent storm in the Baltic Sea, 120 fishermen reported lost.

27. Storm in the vicinity of Buffalo, N. Y., 11 killed, many hurt; damage, \$250,000.

29. Forest fires of wide extent in Wisconsin, Colorado, and South Dakota. Trains in collision, Dillsboro, Ind., 3 killed, 3 hurt.

30. Train derailed, Savoy, Wis., 2 killed, 1 hurt.

Fires in September: Owosso, Mich., furniture warehouse, etc., loss, \$200,000; Memphis, Tenn., grain elevator, etc., \$245,000; Prescott, Arizona, many buildings, \$1,000,000; New Westminster, British Columbia, \$2,500,000; Toledo, Ohio, grain elevator, \$650,000; Washington, D. C., stores, etc., \$250,000; North Weymouth, Mass., factory, \$480,000; Colorado, forests, \$600,000; Cumberland, Wis., lumber, etc., \$225,000; Wisconsin, forests, \$800,000; and 154 others; aggregate loss, \$14,203,650.

Summary of train accidents in September: 99 collisions, 82 derailments, 4 others; total, 185. Killed: 33 employees, 6 passengers, 11 others; total, 50. Hurt: 78 employees, 43 passengers, 7 others; total, 128.

October 1. Fire: Colorado Springs, loss, \$1,000,000.

2. Hurricane: South Atlantic coast devastated,

estimated loss, \$500,000, about 20 lives lost. Fire at Hang-Kow, China, many hundreds of houses burned, unknown number of lives lost.

4. Ferryboat capsizes in the Indus, British India, about 100 lives lost.

8. Trains in collision, Omaha, Neb., 2 killed, 3 hurt.

14. Shipwreck: British steamer Mohegan lost on Manacle Rocks, 106 lives lost.

15. Trains in collision, Great Falls, Mont., 2 killed, 1 hurt.

17. Train wrecked, Drawby Junction, England, 9 killed, many hurt. Explosion of naphtha on ship-board off Margate, 9 killed.

18. Destructive storms and wreckage on the coast of the British Islands.

20. Violent storms in Texas, 2 killed, many hurt, great damage to the cotton crop.

22. Train wrecked, Fort Worth, Texas, 5 tramps killed, 3 hurt.

26. Two steamers in collision in Japanese waters, 60 lives lost. Trains wrecked, Omaha, Neb., 3 killed, 1 hurt.

Fires in October: Colorado Springs, hotel, loss, \$875,000; Clarksville, Tenn., tobacco warehouses burned, \$575,000; Atlantic City, N. J., sundry buildings, \$200,000; Tacoma, Wash., hotel, etc., \$200,000; Dallas, Texas, warehouses, \$150,000; South Brooklyn, N. Y., naval stores, etc., \$275,000; Vancouver, British Columbia, lumber, \$200,000; Shreveport, La., drugs, etc., \$175,000; and 147 others; aggregate loss, \$7,539,400.

Summary of train accidents in October: 111 collisions, 105 derailments, 1 other; total, 217. Killed: 33 employees, 1 passenger, 11 others; total, 45. Hurt, 87 employees, 15 passengers, 8 others; total, 110.

November 5. Faulty structure: roof falls in Detroit, 11 killed, several hurt.

6. Explosion in the Capitol at Washington, Supreme Court and adjoining rooms damaged.

11. Trains in collision, Newport, Pa., 6 killed, 5 hurt. Train derailed, Bridgeport, Conn., 2 killed.

24. Train derailed, Burlington, Iowa, 2 killed, 3 hurt. Locomotive explosion and bridge burned, Swallows, Col., 2 killed, 3 hurt.

26-27. Destructive storm of wind, rain, and snow on the north Atlantic coast. Steamers Portland and Pentagoet lost with all on board, about 180 souls. Nearly 200 other vessels were wrecked and about 200 lives lost.

27. Explosion: steamboat T. C. Walker, Sacramento river, California, boiler bursts, 6 killed, 11 hurt.

28. Explosion: ordnance stores in Havana, 12 killed.

Fires in November: Glen Cove, Long Island, loss, \$195,000; Sacramento, Cal., railway plant, \$500,000; Joliet, Ill., tin works, \$150,000; Canonsburg, Pa., sundry buildings, \$150,000; Perry, Iowa, business houses, \$337,000; West New Brighton, shipyard, \$225,000; San Francisco, Cal., stores, etc., \$1,500,000; Kansas City, furniture warehouse, etc., \$205,000; and 173 others; aggregate loss, \$10,235,000.

Summary of train accidents in November: 112 collisions, 119 derailments, 8 others; total, 239. Killed: 37 employees, 2 passengers, 9 others; total, 40. Hurt: 121 employees, 46 passengers, 2 others; total, 169.

December 2. Shipwreck: British steamer Clan Drummond in the Bay of Biscay, 37 lives lost.

3-4. Violent gales on the middle and north Atlantic coasts, much damage on sea and land.

3. Explosion in coal mine at Wilkesbarre, Pa., 13 hurt.

5. Fire: factories burned, Vilna, Russia, 15 killed, 50 hurt, mostly women and girls.

10. Defective construction: sewer falls in at Barcelona, Spain, 18 killed.

13. Explosion: a shell bursts at Kronstadt, Russia, 9 soldiers killed, 10 hurt.

16. Shipwreck: British steamer Brinkburn, on the Scilly Islands.

17. Shipwreck: British steamers Pierremont and Ilios in collision in the North Sea; the Ilios sinks, 20 lives lost.

19. Fire: steamer Cape Charles burned and sunk near Norfolk, Va.

31. Accidental deaths in the city of New York during 1898, 2,317; sunstroke, 548.

Fires in December: New York, stores and offices, loss, \$720,000; Los Angeles, Cal., oil works, \$225,000; Terre Haute, Ind., various buildings, \$875,000; Burlington, Vt., lumber, etc., \$250,000; Minneapolis, Minn., grain lift, \$200,000; Shreveport, La., stores, etc., \$195,000; and 216 others; aggregate loss, \$12,712,100.

Summary of train accidents in December: 106 collisions, 107 derailments, 7 others; total, 220. Killed: 25 employees, 6 passengers, 1 other; total, 32. Hurt: 127 employees, 53 passengers, 3 others; total, 183.

DISCIPLES OF CHRIST. The table of statistics of the churches published in the "Independent" newspaper, New York, for Jan. 5, 1898, gives this body 5,922 ministers, 10,088 churches, and 1,085,615 members.

The forty-ninth annual Missionary Convention of the Disciples of Christ met at Chattanooga, Tenn., Oct. 13 to 20, beginning with the meeting of the Christian Women's Board of Missions. This society reported one of the most prosperous years in every department in its history. It had received \$74,369 and expended \$64,291, and had at the close of the year a surplus of \$10,078, against a deficiency in 1897. It supported 47 missionaries in the United States, India, Jamaica, and Mexico. Reports were made to the meeting concerning the development among children of interest in missions, orphanages in India, the mission in Jamaica, and "Bible chair work." The last concerned the establishment of chairs of Biblical instruction in certain universities, toward which \$10,000 each had been secured for chairs in the Universities of Michigan and Virginia. As relating to this subject addresses were made to the meeting by Prof. C. A. Young, on "Religious Instruction at State Universities," Prof. W. M. Forest on "Bible Chair Work at Ann Arbor," and Prof. C. W. Kent on "Bible Chair Work at Charlottesville."

The American Christian Missionary Society (Domestic) had received \$41,345, a gain of \$3,446 over the previous year. The 71 missionaries employed by it had visited 377 places, organized 58 new churches, and baptized 3,886 persons. The sum of \$25,192 had been raised for self-support by the stations served by these missionaries. In addition to the domestic missionary work done under the auspices of the national board, 401 missionaries employed by district and State societies had served 1,373 places, organized 234 churches and 203 Bible schools, and received 23,604 members, 15,500 of them by baptism. The report represented that the sentiment had grown during the year in favor of unifying the home-mission work of the national and the district and State societies by making the State boards auxiliary to the national board and having their work reported to the national convention. Forty-two State and district societies were doing home-mission work within their own boundaries. Contracts for co-operation had been made during the year with 29 of these boards. The action of the convention at Springfield, Ill., proposing such co-operation had been generally complied with, only one State board having refused to declare itself auxiliary to the General Board, and

declined the help of the American Christian Missionary Society. The reports on city evangelization gave details of very rapid growth, and even multiplication, of churches and members in the cities of Chicago, St. Louis, Des Moines, Washington, Kansas, Cleveland, Buffalo, Pittsburg, and San Francisco; and the board regarded the cities as being now the most promising field before the church.

The receipts of the Foreign Christian Missionary Society for the year had been \$130,925, being an increase of \$24,703 over the previous year, while the number of contributing churches, now 2,907, had increased 321. Fourteen missionaries had been sent out, including one sent from Australia to India and supported by the Australian churches. Two missionaries were exploring for a place to begin work in Africa, and would probably establish their first station on the Congo. Two houses had been erected, and money had been loaned to build two small chapels in Japan; aid had been granted for building a home for young women and a chapel in Nanking, for a house in Chu-Chu, a school and chapel and two houses in Shanghai, and a hospital and a home in Lu-Chu-Fu, China. A girl's school building and home were in course of erection at Hurda, India. Detailed reports were presented from missions in India, Japan, China, Sweden, Norway, Denmark, Turkey, and England.

The Board of Church Extension had received \$41,324, of which \$27,557 were classed as "new receipts," contributions, bequests, annuities, etc., and \$13,767 as collected on loans. The Extension fund amounted to \$167,243. From the beginning of the operations of the fund, \$66,987 had been collected on loans, \$25,115 of interest had been paid, and 389 churches had been aided, 104 of which had paid back their loans. Two hundred and eighty-five loans were outstanding. The secretary of the

society, visiting the churches, had secured "five-year pledges," aggregating for the year \$13,205.

A union between the American Christian Missionary Society and the Board of Negro Education and Evangelization went into operation on Jan. 1, 1898, whereby the Board of Negro Education and Evangelization is allotted 20 per cent. of the receipts after deducting special contributions and the expenses of both boards. A considerable gain in the receipts for negro evangelization had been made. The ordinary receipts for the year had been \$9,661; the real-estate fund was credited with \$4,079; and \$4,292 had been obtained through contributions for self-support, cash raised by evangelists, and a payment on a church debt; making the entire resources of the board \$48,032. A special effort, suggested by an offer of one fourth of the amount, on condition that the rest was raised, for building and furnishing a college edifice for the Southern Christian Institute at Lum, Ala., lacked only \$100 of completion.

The Board of Ministerial Relief had received \$41,156, and returned a permanent fund of \$9,375. Eighty persons, including 28 preachers and their wives, 22 widows, and 10 orphans, had been assisted, with the expenditure of \$4,156.

Reports were received from 4,633 Christian Endeavor Societies, an increase during the year of 646. The reports of the General Society place the Disciples third in rank among the denominations in their representation in the societies, only the Presbyterians and the Congregationalists exceeding them.

The aggregate amount of the contributions of the Disciples for missionary and benevolent objects in the year 1897-'98 was, according to a table presented to the convention, \$426,463.

DOMINION OF CANADA. See CANADA.

E

EAST AFRICA. The coast of Africa between Cape Guardafui and Cape Delgado, over which the Sultan of Zanzibar formerly exercised sovereign rights, has been divided, by agreement between Germany, Great Britain, and Italy, among those three powers. German East Africa is divided from the Portuguese possessions on the south by the river Rovuma; from British East Africa on the north by a conventional boundary running north-westward from the Umbe river to the shore of Victoria Nyanza, deflected so as to include Mount Kilimanjaro in the German territory, and continued west of the Victoria lake along 1° of south latitude to the boundary of the Congo Independent State, which forms the western limit of German East Africa. British East Africa, according to the agreement made with Italy, is divided from the protectorate that was asserted by the latter power over Abyssinia and adjacent territories by the Juba river up to 6° of north latitude, by that parallel as far as 35° of east longitude, and that meridian northward to the Blue Nile. The British sphere merges into the equatorial and Soudanese provinces formerly ruled by Egyptian governors and still nominally belonging to Egypt and under the suzerainty of Turkey. The Italian sphere embraces Somaliland, with the exception of the district reserved to Great Britain that fronts on the Gulf of Aden, extending from Wahadu to Bandar Ziyada in 49° of east longitude. A British protectorate has been established over the territory that was acquired by the British East Africa Company from the Sultan of Zanzibar, having an area of about

270,000 square miles and 5,000,000 inhabitants, and extended over Uganda, which has an area of 58,000 square miles and 1,000,000 inhabitants; and another protectorate has been imposed on the islands forming the sultanate of Zanzibar, with an area of 988 square miles and 210,000 inhabitants. Including the former Egyptian conquests, the sphere claimed by Great Britain embraces over 1,000,000 square miles. Italian Somaliland has an area of about 190,000 square miles and 400,000 inhabitants. British Somaliland, 68,000 square miles in extent, is attached to Aden, which is a dependency of the Indian Government. German East Africa has an estimated area of 380,000 square miles and a population supposed to reach 4,000,000.

Zanzibar.—The Seyyid, or Sultan, of Zanzibar, Hamud bin Mohamed bin Said, born in 1858, is still the nominal ruler, under the control of the British agent and consul general. The Sultan's dominions formerly included the whole of the German, British, and Italian spheres inland to the lakes, but they were gradually reduced by successive leases and cessions until they were restricted to the islands of Zanzibar and Pemba. A mixed administration under British control, with Sir L. Mathews as Prime Minister, has been in operation since October, 1891. Zanzibar, the seaport, which has about 30,000 inhabitants, was made a free port on Feb. 1, 1892, with restrictions and imposts as to firearms and powder, spirits, and kerosene. About 50 English traders, as many Germans, and some Greeks, Americans, Italians, and Frenchmen, reside there, but the bulk of the trade is carried on by British

Indians, who number 7,000. The island of Zanzibar has an area of 625 square miles and a population estimated at 150,000, while Pemba has an area of 363 square miles and 50,000 inhabitants. Justice among the natives is administered by the Kazis, from whose decisions any litigant can appeal to the Sultan. In all cases where a European is to be prosecuted civilly or criminally consular jurisdiction is in force under the capitulations. The British consul general has the right under the Sultan's decree of Dec. 16, 1892, to try all cases in which a British subject is plaintiff or complainant. The British consular court has exercised admiralty jurisdiction with reference to the slave trade, and also formerly had jurisdiction over slaves freed by order of the British agent before the legal status of predial slavery was abolished on April 6, 1897, since which date the relations between master and slave are no longer recognized by the tribunals. The act, administered as it is by Arab officials, has no effect on the actual status of the slaves, all of whom were already legally entitled to freedom, having been brought into the islands since the importation of slaves was forbidden in 1873. The new act does not interfere with domestic slavery or concubinage. Out of more than 60,000 slaves in Pemba not more than a score claimed their freedom during the first six months.

The revenue is derived mostly from taxes on cloves and other produce and from customs duties. The Sultan's allowance is now 120,000 rupees a year. The military and police forces number 900 men. The value of the imports in 1896 was £1,275,470, of which £385,537 came from India, £202,813 from German East Africa, £118,022 from Great Britain, £90,975 from the United States, £71,311 from the Netherlands, £64,597 from Germany, £45,422 from British East Africa, £42,021 from Madagascar and Mauritius, £33,433 from Benadir, £17,566 from France, and £69,848 from other countries. The total value of the exports in 1896 was £1,119,841. The re-exports of piece goods were £336,229; specie exports, £137,557; exports of cloves, £102,045; of ivory, £127,109; of rice, £59,738; of copra, £64,802; of rubber, £17,569; of gum copal, £16,060; of hides, £11,306; of tortoise shell, £8,160; of chilies, £5,484; of hippopotamus teeth, £6,285; of sim-sim, £5,519; of other articles, £261,873. There were 166 vessels entered from distant ports in 1896, of which 59, of 98,273 tons, were British, 60, of 88,483 tons, German, and 27, of 49,967 tons, French.

British East Africa.—The Imperial British East Africa Company, which in 1888 acquired by lease the territorial rights of the Sultan of Zanzibar over the coast from the Umba to Kipini, and subsequently the ports and islands north of the Tana, and occupied first the interior as far as the Victoria Nyanza, and then the kingdom of Uganda, west of the lake, whence expeditions were sent to conquer the regions beyond as far as the Semliki river and Lake Albert Edward, retired from Uganda in 1893, and the Imperial Government, continuing the occupation, proclaimed a protectorate over this territory on June 19, 1894. The rest of the company's territory was transferred to the imperial administration on June 30, 1895. Zanzibar had become a British protectorate in 1890. The British agent at Zanzibar, Sir Arthur H. Hardinge, directs the administration of the East Africa protectorate as commissioner under the control of the Foreign Office in London. The protectorate, which extends inland to the border of Uganda, is divided into the coast province, Ukamba, Tanaland, and Jubaland, and contains 2,500,000 inhabitants, including 13,500 East Indians and 390 Europeans and Eurasians. A submarine cable connects the coast

with Zanzibar. Of the railroad which the Imperial Government is building to Uganda 132 miles were completed and in operation in March, 1898. Parliament voted £3,000,000 for its construction in 1896, and of this £367,927 had been expended up to March 31, 1897. About 6,000 Indian coolies were employed on the work in 1898. The total cost will perhaps be three times as much as was estimated. The customs duties collected in 1897 amounted to 306,191 rupees. The total value of imports was 3,925,597 rupees, and of exports 1,172,026 rupees. The chief articles of export are ivory, rubber, cattle and goats, hides and horns, grain, and gum copal. Banians from India have nearly the whole of the external trade in their hands.

Uganda.—The Uganda protectorate was extended by proclamation in July, 1896, so as to include besides Uganda the country of Usoga on the east and all the countries to the west as far as the border of the Congo State, which is the meridian of 30° of east longitude, northward to the watershed between the Nile and Congo basins, which it follows up to the source of the Mbomu, the northernmost limit of the Congo State. The commissioner and consul general for the protectorate is E. J. L. Berkeley. The King of Uganda is an infant, the son of the late King Mwanga.

Over the mixed population of Uganda, consisting of heathens, Mohammedans, and Protestant and Roman Catholic converts, British rule has been established and upheld by the instrumentality of a disciplined force of black Mohammedan soldiers, Soudanese or Nubians from the valley of the Nile, originally composed of the remnants of Emin Pasha's Egyptian garrisons in the Soudan, enlisted in the service of the British East Africa Company when it first took possession of Uganda, and since replenished by freshly recruited Nubians from the Egyptian Soudan. These black soldiers each had a numerous family, at least three wives apiece, and a large number of dependents. They took the women away from the inhabitants of the country by force or by purchase, and they were allowed to pillage the regions to which the British conquests extended. When not engaged in subduing rebellion or conquering neighboring tribes they carried on agriculture on the choice lands assigned to them at their stations. By their operations the British protectorate was extended beyond Uganda proper over Ankole, Usogo, Kavirondo, Toro, Singo, Unyoro, and Kikuyu, although their original engagement only required them to serve within the borders of the country, following their former contracts with the Egyptian Government. The opportunities for enriching themselves led them to engage willingly in the expeditions to the south, west, and north of Uganda. The struggle with Kabarega and his warlike Wanyoro severely taxed their patience, and as a reward they were allowed greater freedom in the conquered territory. These people were never completely subjugated, and the wars and expeditions on this border were succeeded by others in different directions that strained to the utmost the strength and the discipline of the Uganda Rifles, as these Soudanese troops were called. In 1897 troubles came thick and fast in the protectorate. Revolt was smoldering among the native populations of the lake provinces. In the early spring a force was sent to protect the frontier against the mutinous Mohammedan troops of the Congo Free State, with which there was heavy fighting. A little later a revolt occurred among the Soudanese garrison at Mandi, on the borders of Kavirondo, and to put it down a body of Uganda Rifles was marched 250 miles round the north end of the lake. They were sent afterward against the Wasingo and other rebellious tribes. In the midst of the general

demoralization the King of Uganda, Mwanga, escaped from the custody of the English at Mengo and raised the standard of rebellion among his Mohammedan subjects in Budu, the southern part of Uganda, and was joined by the Wafranza, or Roman Catholic party. He was declared deposed after fleeing into German East Africa, and his son Chua, only two years old, was baptized as a Protestant and proclaimed king. The Soudanese troops had marched back again 300 miles from the eastern side of the lake to Budu, and, when the revolt there had been suppressed and the king driven into German territory, a call came for 300 of them to form the expedition of Major MacDonald, which was getting ready at Mpengs, on Baringo

means in a high state of discipline. These troops, who formed a fifth part of the entire military force of the Uganda protectorate, had no sooner left the lake district than a fresh revolt broke out in Budu. This was suppressed by the Soudanese garrison that had been left there, but Major Thruston, when he took command at Mengo, found a weakened force of discontented troops, wavering in their fidelity in the face of a country on the verge of rebellion, for a great part of the native population in the protectorate was known to be secretly hostile to the English and ready to turn against them if any reverse happened to their arms. Another uprising occurred in Budu during August, which was suppressed by the Soudanese garrison.

A ROYAL RESIDENCE IN UGANDA.

lake, 350 miles away, beyond the northern border of Uganda. This expedition had been planned long before for some mysterious political object, probably to dispute with the French the Bahr-el-Ghazal region and the left bank of the Nile, although the ostensible purpose was to explore the sources of the Juba river and to report on the boundary between the British sphere and the Italian sphere and Abyssinia.

Major Ternan, who was going on leave of absence to England, leaving Major Thruston in command of the forces in Uganda, accompanied the Soudanese troops that were to form the main force of Major MacDonald's expedition, but whom on their arrival at Baringo the latter officer reported to be much fatigued by their recent marches and counter-marches, deficient in native officers, and by no

Major MacDonald had brought from the coast a column about 1,000 strong, but the only trained fighting men were 30 Sikhs and 100 Swahilis. He had been allowed to organize his important mission in his own way, and had desired a force of these Soudanese warriors, whose commander he had once been. Consequently the Uganda authorities were directed to furnish the desired contingent from their scattered, insufficient, and overworked garrison, which numbered altogether not over 1,600. Like all English officers who had served in Uganda, Major MacDonald had a high opinion of the courage and efficiency of these Soudanese blacks and of their amenability to discipline. They, however, had no liking for him, for after a former revolt he had exiled their favorite leader, nor for the other officers, youngsters fresh from Europe, who could

not speak their language. When they arrived at Baringo in August they learned that in their exhausted physical condition they were to be sent on a distant expedition to unknown regions in the north, not knowing what provision would be made for their families, from whom they had long been separated already. They complained of their mis-

MacDonald arrived two days later to find the mutineers in possession of the fort.

On Oct. 19 they came out of the fort, laughing and saying that they did not want to fight, but the English opened fire. Major MacDonald defeated them in battle, killing or wounding a third of their number, and after they were driven back into the fort they killed their English prisoners. The English built another fort alongside in order to prevent them from crossing the Nile and marching upon Mengo, whither the woman missionaries were brought from the different stations to be guarded in the secure fort at Kampala. The Soudanese garrison there, numbering 330 men, was immediately disarmed. The Waganda Mohammedans made common cause with the mutinous troops. About 850 Soudanese still remained loyal and were retained in their stations in the various provinces. The British besieged the fort at Lubwas, but were unable to attack for lack of ammunition until Nov. 24. On Dec. 11 there was another engagement.

Leaving the mutineers besieged by 500 Waganda at Lubwas, Major MacDonald went to Budu, where the Mohammedan Waganda had risen in revolt once more, King Mwanga having escaped from the confinement in which he had been kept by the German authorities, and having appeared again in Budu. The mutineers continued to defend themselves in the fort at Lubwas. In December some of them fled across the White Nile with the object of returning to their old homes in the Soudan. On Jan. 9 the main body, evading the vigilance of the English, escaped in a dhow across the Nile and marched

A NATIVE OF SOMALILAND.

erable rations and of their pay, which was one fourth as much as the soldiers from the coast received. On Sept. 15 they refused to go with the expedition, and when that was ordered to march northward on Sept. 23 they openly mutinied and started back homeward. They offered no violence to any one, and declared repeatedly that they did not wish to fight, but at the first station, while parleying with Mr. Jackson, the commissioner, they were fired on by order of one of Major MacDonald's officers, who came up, and they returned the fire, the men on both sides taking care not to hit. While Major MacDonald followed them by a parallel route, they continued their progress from station to station, joined by other Soudanese garrisons on the way, until on Oct. 16 they reached Lubwas, the fort commanding the Nile where it issues from the Victoria lake. The garrison there, responding to their appeal, mutinied and overpowered the English officers, Major Thruston, and two civilians. Major

slowly in the direction of the capital. They were no longer as formidable, having lost a third of their numbers and run short of ammunition. The danger was greater among the other Soudanese, with whom the rebels had communicated from Lubwas. Capt. Harrison with a force of 200 soldiers and 1,000 Waganda natives set out to intercept the mutineers. In February the mutineers were still at no great distance from Lubwas, to the north of the lake. The Government dispatched at once a regiment of 750 Indian troops from India, followed by 360 more, and set about reorganizing the military system of Uganda. Of the loyal Soudanese 700 were allowed to re-enlist, while the rest of the force was made up of 700 Suahilis and 400 Punjabi Mohammedans specially recruited for the service from India. Before the Indian troops arrived there was no force to maintain order and defend the frontiers except the Waganda and Wasoga spearmen, Major MacDonald's Suahilis, and the

loyal Nubians. In Unyoro all the Soudanese were disarmed and sent to Kampala, where 160 Soudanese were held as prisoners and 800 at large. Mohammedan Waganda rebels assembled at Ūnga.

The Soudanese mutineers established themselves in a fort at Lake Ibrahim. The situation was cleared when Major MacDonald on Feb. 23 defeated them there, and Capt. Harrison on Feb. 25 routed the survivors at Lake Kioga, killing 60, wounding 100, and capturing 200 women. The remnant, having no ammunition, recrossed the Nile and took refuge in the Bukedi country. Mr. Berkeley, the commissioner, who had been absent in England during all the troubles, arrived in February. The Indian re-enforcements were sent to protect the country from the raids of Kabarega and the undisciplined forces of King Mwanga, who ravaged the western half of Uganda, burning churches and committing other outrages. An old wound in Uganda affairs was salved over when the British Government paid to the French the sum of £10,000 as compensation to the Jesuit missionaries for the property destroyed when their missions were broken up on the advent of the East Africa Company.

Causes for discontent among the Uganda Rifles were known to have been accumulating for some time, although there was no mention of these in the official reports. The total strength of this force was about 1,600 men, commanded by British officers. To be sent on frequent expeditions for the extension of British domination to the west and north of Uganda seemed to them to be a serious grievance and injustice, as they had not engaged to serve outside of the boundaries of the country, and they were extremely unwilling to leave their fields uncultivated and their wives and property exposed to risks. Their numerous families depended for support almost entirely upon the tillage of the lands allotted to them, which were the most fertile in the country. The pay that they received was merely nominal. This very economical military system, attended by a mischievous relaxation of discipline, broke down when the cantoned troops were drafted into Major MacDonald's expedition to distant and unknown regions.

German East Africa.—The German possessions are inhabited by tribes that have long pursued agriculture under the tuition of their Arab conquerors. They are Bantus mixed with other races and with a strong infusion of Asiatic blood in the coast districts. There were 635 Europeans, of whom 507 were Germans, in the coast region in 1896, and in the interior over 350. The imperial Governor is Major-Gen. Liebert. There are large banana plantations, and pulse and corn are also cultivated. In the experimental farms established by the Government and in plantations owned by Germans, coffee, tobacco, vanilla, cocoanuts, cacao, and caoutchouc are cultivated, and cattle rearing on an extensive scale is attempted. Cattle, sheep, and goats are also kept by the natives. A railroad has been built from Tanga to Pongwe, 10 miles, and is being carried inland to Karagwe. Telegraph lines have been erected along the coast, and a cable runs to Zanzibar. The budget for 1898 was 5,965,200 marks, of which the Imperial Government contributed 4,369,900 marks and 1,595,300 marks were raised in the colony. The value of the imports in 1895 was 7,608,000 marks, and of the exports 3,258,000 marks. The export of ivory was 1,423,000 marks; of caoutchouc, 772,000 marks; of sesame, 163,000 marks; of gum, 138,000 marks; of cocoanuts, 129,000 marks. The governor of German East Africa, Major-Gen. Liebert, in March, 1898, conducted a punitive expedition against the Wahehe, who had attacked a party of German foresters.

Somaliland.—The Italian protectorate began with the occupation of Obbia in 1889. In 1892 the Sultan of Zanzibar ceded the Somali coast to Italy southward from Obbia to the mouth of the Juba. The interior parts claimed by the Negus of Abyssinia were acknowledged to be his by the treaty of Adis Abeba in 1896. Italy retained a strip 180 miles wide on the coast and the district of Logh on the Juba river. The Italian Benadir Company received in 1896 a charter granting commercial and administrative rights in the country for fifty years.

Obok and the French Somali coast, with dependencies, have an area of 8,640 square miles and a native population of 30,000. The local revenue is about 30,000 francs, and the main cost is borne by the French treasury, which contributed 614,807 francs in 1898.

The coast between Lahadur and Bandar Ziyada was declared a British protectorate in 1884. It is inhabited by nomadic tribes. At the posts of Zaila, Berbera, and Bulhar garrisons of Indian troops are stationed. The revenue in 1897 was 318,780 rupees, and expenditure 152,855 rupees for civil and 82,006 rupees for military purposes. The imports of Berbera, Bulhar, and Karam were 2,355,172 rupees, and exports 2,142,660 rupees in value; the imports of Zaila were 3,512,867 rupees, and exports 4,665,310 rupees. The principal exports are hides and skins, ostrich feathers, sheep and cattle, and gum. An area of 7,000 square miles formerly included in the protectorate was conceded to Abyssinia in an agreement made in 1897.

ECUADOR, a republic in South America. The Senate numbers 30 members, two from each province, elected for four years, one half retiring every two years. The House of Representatives has 33 members, elected for two years by all adult citizens who can read and write. The President, whose term is four years, is Gen. Eloy Alfaro, elected in January, 1897. The Vice-President is Manuel B. Cueva. The Cabinet in the beginning of 1898 was composed as follows: Interior, Police, and Public Charity, Dr. R. Gomez; Foreign Affairs, Justice, Public Instruction, and Immigration, B. Alban Mestanza; War and Marine, Gen. N. Avellano; Finance and Public Works, R. Valdivieso.

Area and Population.—The area of the republic is about 120,000 square miles, with an estimated population of 1,271,861. The Gallapagos, or Tortoise Islands, which have an area of 2,400 square miles, belong to Ecuador.

Finances.—The ordinary revenue in 1896 amounted to 5,128,620 sueres, which was supplemented by loans and bankers' advances to the amount of 3,730,740 sueres, making the total revenue 8,859,360 sueres, while the expenditure was 8,779,520 sueres. For 1897 the revenue was estimated at 9,093,551 sueres, and the expenditure at 11,005,141 sueres. The foreign debt, consisting of a part of the old debt of Colombia assumed by Ecuador after the secession in 1830, is the subject of negotiations between the Government and the bondholders. There were £693,160 sterling of bonds outstanding in 1897. The internal debt in 1896 amounted to 7,500,000 sueres.

Commerce.—The chief article of export is cacao, of which 15,327 tons were received at Guayaquil in 1896. The total value of the imports entering through this port in 1895 was 8,520,000 sueres, and of exports shipped from there 11,562,000 sueres.

The number of vessels entered at this, the principal port, in 1896 was 844, of 277,576 tons, of which 450, of 20,643 tons, were sailing vessels and 394, of 256,933 tons, were steam vessels; total number cleared, 871, of 274,350 tons, of which 469, of 17,297 tons, were sailing vessels and 402, of 257,053 tons, steam vessels.

QUITO, ECUADOR, 9,250 FEET ABOVE SEA-LEVEL. MOUNT PICHINCHA IN THE BACKGROUND.

Communications.—The railroad, 58 miles long, connecting Guayaquil with Chinbo is to be continued by the Government to Sibambe. The length of telegraphs is 1,242 miles.

EGYPT, a principality in northern Africa, tributary to Turkey. The government is an absolute monarchy of the Mohammedan type, though the throne passes by the European law of primogeniture, and the Khedive, or Viceroy, is advised by a Council of Ministers. The reigning Khedive is Abbas Hilmi, born July 14, 1874, who succeeded to the throne on the death of his father, Mehemet Tewfik, Jan. 7, 1892. Since the intervention of Great Britain for the suppression of the military revolt of 1882 the country has been occupied by a British army, and since Jan. 18, 1883, an English financial adviser, who has a seat in the Cabinet, exercises the right to veto any financial measure, and a dominating influence in all important acts of government. The events that took place in 1881 and 1882, consequent upon the bankruptcy of the Egyptian treasury and the abdication of the Khedive Ismail Pasha, led to a conference of the powers in Constantinople, where the principal powers signed a protocol by which they bound themselves to seek no territorial advantage and the concession of no exclusive privilege. But England, owing to the progress of the insurrection in Egypt, intervened by force of arms, and the conference then dissolved. Since then successive Prime Ministers of Great Britain have given assurances that England would evacuate Egypt as soon as Egypt should be able to maintain a firm and orderly government.

The Cabinet of the Khedive, constituted on April 16, 1894, which was in office in the beginning of 1898, was composed of the following ministers:

President of the Council and Minister of the Interior, Mustapha Fehmi Pasha; Minister of War and Marine, Mohammed Abani Pasha; Minister of Public Works and of Public Instruction, Hussein Fakhry Pasha; Minister of Foreign Affairs, Butros Ghali Pasha; Minister of Finance, Ahmet Mazlum Pasha; Minister of Justice, Ibrahim Fuad Pasha.

Area and Population.—The area and population of the governments and *mudiries* of Egypt, according to the census taken in June, 1897, are given in the following table:

DIVISIONS.	Square miles.	Sedentary.	Nomads.	Foreigners.	Total population.
Lower Egypt:					
Cairo.....	6	533,336	1,345	35,381	570,062
Alexandria.....	70	268,669	4,984	43,113	319,766

Total.....	9,116,325	582,263	112,591	9,811,544

The area of Egypt prior to the evacuation of the Soudan and the equatorial province was estimated at 1,406,250 square miles, and the population at 16,952,000. The area at present under Egyptian rule is about 385,000 square miles, not including the newly organized provinces of Dongola, Nubia, and Suakin, and that of the cultivated districts in the Nile valley and delta is 12,976 square miles. Of the total population given above, 4,947,905 are males and 4,786,555 females. The foreigners, numbering 112,526 altogether, comprised 38,175 Greeks, 24,467 Italians, 19,557 British, 14,155 French, 7,117 Austro-Hungarians, 3,193 Russians, 1,277 Germans, 1,301 Persians, and 3,284 others. The population of Cairo, the capital, in 1897, was 570,062; of Alexandria, 319,766.

Finances.—The budget for 1898 makes the total revenue £ E. 10,440,000, of which the land tax produces £ E. 4,872,700, other indirect taxes £ E. 137,300, customs £ E. 850,000, tobacco £ E. 1,000,000, *octroi* duties £ E. 204,000, salt duty £ E. 180,000, fisheries £ E. 75,000, navigation dues £ E. 70,000, stamps and registration £ E. 38,000, other duties £ E. 30,000, railroads £ E. 1,800,000, telegraphs £ E. 47,000, the port of Alexandria £ E. 130,000, other ports £ E. 2,000, the post office and packet service £ E. 191,000, lighthouse dues £ E. 68,000, assay office £ E. 6,000, law courts £ E. 426,000, various ministries £ E. 20,000, exemption from military service £ E. 100,000, interest on deposits £ E. 30,000, Government property £ E. 90,000, Suakin £ E. 13,000, deductions from salaries for pension fund £ E. 60,000. The expenditures are £ E. 253,861 for the Khedive's civil list and appanages, £ E. 3,972 for the Council of Ministers, £ E. 8,270 for the Legislative Council, £ E. 11,116 for the Ministry of Foreign Affairs, £ E. 86,056 for the Ministry of Finance, £ E. 105,220 for the Ministry of Public Instruction, £ E. 391,281 for the Ministry of the Interior, £ E. 391,973 for the Ministry of Justice, £ E. 630,069 for the Ministry of Public Works, £ E. 107,458 for the general expenses of the ministries, £ E. 319,022 for the collection of provincial revenues, £ E. 75,752 for collection of customs duties, £ E. 88,076 for the coast guard, £ E. 34,210 for collection of *octrois*, £ E. 47,068 for collection of the salt duty, £ E. 1,400 for fisheries, £ E. 3,130 for collection of navigation dues, £ E. 907,138 for operation of railroads, £ E. 42,000 for telegraphs, £ E. 28,000 for the port of Alexandria, £ E. 3,699 for other ports, £ E. 99,525 for the post office, £ E. 79,450 for the khedivial packet boats, £ E. 27,192 for light-houses, £ E. 2,597 for the assay office, £ E. 439,570 for the Ministry of War, £ E. 84,825 for the army of occupation, £ E. 120,517 for the Government of Suakin, £ E. 213,000 for the Soudan, £ E. 439,000 for pensions, £ E. 665,041 for the Turkish tribute, £ E. 34,000 for the Daira Khassa, £ E. 150,000 for the Moukabala, £ E. 28,457 for interest and exchange, £ E. 100,000 for the domains deficit, £ E. 34,000 for expenses of the Caisse de la Dette, £ E. 307,125 for interest and amortization of the guaranteed loan, £ E. 1,003,056 for the preference debt, £ E. 2,182,906 for the unified debt, £ E. 250,000 for the suppression of the *corvée*, and £ E. 32,000 for unforeseen expenses, making a total of £ E. 9,831,032, leaving £ E. 265,037 of economies from the conversion of privileged debt, and £ E. 343,931 as the Government's share of surplus receipts.

The cost of the Soudan expedition from March 31, 1896, to March 31, 1898, was £ E. 1,881,805. To balance the budget the sum of £ E. 100,000 for works connected with the proposed storage of Nile water for summer irrigation was struck out, and improvements in every department of the civil administration was postponed, as well as all expenditure for developing the resources of the country, notwith-

standing an estimated increase of £210,000 sterling in the revenue, derived mostly from customs, tobacco, railroads, and justice. The total war expenditure for the year was estimated at £702,000. To cover the extraordinary expenditure for the Soudan incurred in the previous two years £1,218,000 sterling were taken from the special reserve fund. The cost of the war and the administration of the Soudan up to March 31, 1898, making no estimate for a further advance from Dongola, was placed at £ E. 1,881,300. Of this, £ E. 750,000 was expended on railroads and telegraphs. The limit of administrative expenditure, fixed at £6,368,000 sterling by the international convention of 1885, has from time to time been raised until it was £6,237,000 in 1896.

The total amount of the debt at the end of 1896 was £104,413,740 sterling, not including the Moukabala, or internal debt, which will be extinguished by the payment of a fixed annuity equal to £154,000 until 1930. The guaranteed loan, bearing 3 per cent. interest, amounted to £8,628,600, repayable by a fixed annuity of £315,000; the privileged debt, amounting to £29,393,580, pays $3\frac{1}{2}$ per cent. interest, requiring £1,028,775 for 1898; the unified debt, paying 4 per cent., amounted to £55,971,960, requiring £2,238,378; the Daira Sanieh loan, paying 4 per cent., is £6,631,600, the annual charge being £257,260, besides the annual payment of £34,871 to the loan commissioners; and the domains loan, bearing $4\frac{1}{2}$ per cent. interest, amounted to £3,788,000, requiring an annual payment of £149,124. The revenue from the Daira estate and the domains in 1896 was £ E. 10,693,000, and the expenditure £ E. 10,377,000, leaving a surplus of £ E. 316,000. The economies from conversion of debts amounted to £ E. 2,229,726 up to the end of 1896, the general reserve fund to £ E. 3,040,997, and the special reserve fund to £ E. 408,218; total reserves, £ E. 5,678,941. At the end of October, 1898, the amount held by the commissioners of the debt was £ E. 6,148,844. The domains estate, owing to the fall in the price of cotton, has not produced enough to pay the interest on the mortgage debt. The deficit in 1897 was £102,000. The Daira Sanieh properties, consisting of 256,000 acres of excellent land, 9 sugar mills, and 375 miles of railroad, formerly belonging to the Khedive and the khedivial family, were in June, 1898, sold to a syndicate of English, French, and Egyptian capitalists for £6,400,000 sterling, the exact amount of the Daira debt, which will be paid off in 1905. The buyers will gradually take over the property from the Daira administration, and they are bound to resell it within seven years, and to pay to the Government half the net profits, which must not be less than 20 per cent. The khedivial fleet of steamers, together with docks and warehouses at Alexandria and Suez, were sold in January to a British syndicate for £150,000, only a fraction of their cost and of the price that could have been obtained by public tender. This transaction excited the indignation of Frenchmen interested in Egypt. On Dec. 31, 1897, the funded debt had been reduced to £98,107,000. There was a debt of £ E. 780,000 due to the British Government, being the sum advanced to meet the expenses of the Dongola expedition. The Government has contracted for the completion of the Nile reservoir at Assouan, at a total cost of £2,000,000, before July 1, 1903. The dam, 6,000 feet long, will raise the level of the water 46 feet, thus storing 1,065,000,000 cubic metres, which will be released to supplement the supply in the river between April and September. A smaller dam at Assiout raises the river level during summer in order to increase the distributing power of the canals, acting on the same principle as the great barrage north of Cairo. The commissioners of the public debt have released over £500,-

000 of their accumulated funds for the improvement of the barrage and for drainage works. The Government proposed in 1898 to apply during ten years the annual sum of £ E. 216,000, being the interest from the funds in the general reserve and of the economies from debt conversions, to the reduction of the land tax on lauds taxed at more than one third of their rental value, of which lands there are 1,000,000 acres.

The Army.—The Egyptian army consists of 18,000 troops, commanded by about 100 Englishmen, with Major-Gen. Sir Herbert Kitchener as sirdar, or commander in chief. The British army of occupation in 1897 numbered 4,711 officers and men.

Commerce.—The total value of the imports in 1896 was £ E. 9,828,604, and of exports £ E. 13,232,108, exclusive of specie, of which the imports were £ E. 3,720,425 and the exports £ E. 1,826,160. The imports of cotton goods were £ E. 1,679,951 in value; silk, linen, woolen, and other fabrics, £ E. 1,003,066; coal, £ E. 388,935; hosiery and clothing, £ E. 425,984; timber, £ E. 424,357; coffee, £ E. 297,601; wine, beer, and spirits, £ E. 349,883; tobacco and cigars, £ E. 511,508; petroleum and oils, £ E. 240,035; machinery, £ E. 417,817; iron and steel goods, £ E. 456,599; indigo, £ E. 169,630; fresh and preserved fruits, £ E. 216,557; live animals, £ E. 145,529; wheat and flour, £ E. 553,401; rice, £ E. 126,299; refined sugar, £ E. 25,131. The exports of raw cotton were of the value of £ E. 9,986,861; cotton seed, £ E. 1,226,870; sugar, £ E. 765,172; beans, £ E. 413,415; onions, £ E. 128,740; hides and skins, £ E. 92,558; wool, £ E. 63,122; wheat, £ E. 53,818; lentils, £ E. 7,264; corn, £ E. 3,614; gum arabic, £ E. 1,794. The United States and India have become large consumers of Egyptian cotton, taking 55,235 bales in 1897. The increase in exports of cane sugar to the United States has been remarkable, the shipments in 1897 amounting to 52,300 tons, three fourths of the total exports.

The foreign trade in 1896 was divided among different countries as follows:

COUNTRIES.	Imports.	Exports.
Great Britain	£ E. 3,055,830	£ E. 6,972,681
France and Algeria	1,324,495	1,215,978
Turkey	1,988,814	385,561
Russia	371,162	1,473,080
America	79,497	927,874
Austria-Hungary	701,884	610,931
Italy	333,172	370,905
Germany	281,826	325,928
British colonies in the East	523,608	68,674
Belgium	458,048	25,972
Spain	295,472
British Mediterranean colonies	109,051	8,926
Greece	83,853	15,326
China and the East	78,124
Persia	58,914
Morocco	30,321
Other countries	349,945	534,800
Total	£ E. 9,828,604	£ E. 13,232,108

Navigation.—The number of vessels entered at the port of Alexandria in 1896 was 2,132, of 2,123,591 tons. Of these, 610, of 934,450 tons, were British; 145, of 289,996 tons, French; 142, of 249,150 tons, Austrian; 838, of 223,515 tons, Turkish; 80, of 170,505 tons, Russian; 85, of 123,399 tons, Italian; 168, of 54,673 tons, Greek; 30, of 46,070 tons, German; 18, of 26,450 tons, Swedish and Norwegian; and 16, of 5,743 tons, of other nationalities. The number cleared was 2,105, of 2,094,684 tons.

Communications.—There were 1,215 miles of railroads in Egypt on Jan. 1, 1897, and of these 1,143 miles belonged to the Government. Of the total mileage, which does not include the new military railroad into the Soudan nor the railroads on the Daira Sanieh estates, 825 miles were in the

delta and 390 miles in Upper Egypt. There were 64 miles of private and 226 miles of Government railroads under construction, and concessions had been granted for 230 miles of narrow-gauge railroads in the delta. The number of passengers carried on the Government lines in 1896 was 9,854,000; tons of freight, 2,498,000. The gross revenue was £ E. 1,820,970, and the working expenses £ E. 787,930; net receipts, £ E. 1,033,000.

The length of telegraph lines belonging to the Government on Jan. 1, 1897, was 2,269 miles, with 8,450 miles of wire. The number of dispatches in 1896 was 2,392,036.

The number of letters and postal cards that passed through the post office in 1896 was 15,310,000, of which 10,905,000 were internal and 4,405,000 foreign; newspapers, etc., 8,800,000, of which 5,605,000 were internal and 3,195,000 foreign; post-office orders and remittances, 494,250, of the value of £ E. 16,150,000.

The Suez Canal.—The number of vessels that passed through the canal in 1896 was 3,409, of 12,039,859 tons, of which 2,162, of 8,057,706 tons, were British; 322, of 1,120,580 tons, were German; 218, of 819,919 tons, were French; 230, of 594,179 tons, were Italian; 200, of 520,994 tons, were Dutch; 62, of 267,769 tons, were Spanish; 71, of 233,922 tons, were Austro-Hungarian; 47, of 209,509 tons, were Russian; 39, of 98,949 tons, were Norwegian; 37, of 58,357 tons, were Turkish; 10, of 42,695 tons, were Japanese; and 11, of 15,279 tons, were Portuguese, Egyptian, etc. The number of passengers was 308,241. The gross receipts were £3,182,800 sterling. The loan and share capital is 460,569,276 francs, besides which 151,174,307 francs of earnings have been applied to improvements. The net profits in 1896 were 42,283,380 francs. During 1897 the number of vessels that passed through was 2,986, of which 2,103 were merchant ships, 727 mail steamers, 31 vessels in ballast, 112 war vessels and military transports, and 13 yachts, dredgers, and propellers. In nationality 1,905 were British, 325 German, 206 Dutch, 202 French, 78 Austrian, 71 Italian, 48 Spanish, 48 Norwegian, 44 Russian, 36 Japanese, 7 Turkish, 3 Chinese, 3 Egyptian, 3 American, 2 Danish, 2 Siamese, 1 Mexican, 1 Portuguese, and 1 Swedish. The total receipts were 75,607,029 francs, and the total expenditure 36,291,408. The plague and famine in India and the drought in Australia affected the traffic so injuriously that the reserve had to be drawn upon to pay the diminished dividend of 90 francs. The reserve fund was still 2,679,837 francs at the end of 1897. The average time of transit has been reduced to fifteen hours thirty-six minutes, notwithstanding the continuous increase in the size of vessels.

The Mixed Tribunals.—The powers exercised by the mixed tribunals, first conferred in 1876 and renewed for the last time in 1894, would lapse in February, 1899, unless previously renewed. The British have desired, since the decision against the appropriation of the general reserve fund for the Soudan expedition, to curtail the jurisdiction of these international courts. In 1898 the Government submitted to the powers a proposal to modify the organic law of the mixed tribunals by withdrawing from their jurisdiction cases of mixed interest unless the parties are of different nationalities; by allowing complaints and pleadings in English as well as in Arabic, French, and Italian; by transferring to the jurisdiction of the native courts all real-estate cases between natives; by allowing no action to lie against the Government for measures taken by it in the general interest of Egypt or for any act connected with the execution or application of the laws and regulations of the public administration; and by permitting only the Caisse de la Dette collectively,

not individual members, to bring suit against the Government. If France and Russia would not accede to the British proposal the English Government threatened to allow the mixed tribunals to cease by efflux of time on the expiration of the present convention in February, 1899.

The Nile Campaign.—Although the Soudanese blacks of the Egyptian army had shown themselves to be splendid soldiers under British leadership and the *fellahin* had exhibited admirable coolness and discipline under fire, the British military and political authorities were determined that the credit of smashing the Mahdi at Khartoum should be earned by British troops. Hence, before beginning the advance from Berber, the sirdar, Sir Herbert Kitchener, asked for the support of European regiments, of which three were dispatched in January, 1898. The dervishes, whose advanced post was at Metemma, halfway between Berber and Khartoum, were said to be preparing for an attack upon the Egyptian position. The railway was already completed across the Bayuda desert to Abn Hamed and up the river for 20 miles beyond. The rapid construction of the Soudan Railroad by Lient. E. P. C. Girouard and his staff of young engineer officers was the most remarkable achievement in the Nile operations and the most essential for their success.

Three Egyptian gunboats patrolled the river south of Berber, and there was a fortified camp held by the Khedive's Egyptian troops at El Damer, just above the junction of the Atbara and the Nile. The Jaalin and other river tribes were eager to join the Egyptians or to aid them whenever they could feel safe from the vengeance of their Baggara masters. The reconquered province of Dongola was recovering from the effects of dervish misrule, and the population had increased in a year from 58,000, of whom 40,000 were women and children, to 77,000.

In the eastern Soudan the dervish power crumbled away from the hour when the Anglo-Egyptian military authorities took over Kassala from the Italians. The Emir Abdelrahim had 300 riflemen at El Fasher and a force of infantry and cavalry at Osobri. From these posts he had constantly threatened Kassala. Col. Parsons, before he received the transfer of Kassala from Col. Count Sanniniatelli on Christmas Day, enrolled in the Egyptian army 450 of the Soudanese regulars trained by the Italians and the band of irregulars, consisting of 160 Hadendoa and Beni Amer Arabs, who once had fought for the Mahdi. The easy discipline of the Italians had developed the fighting qualities of the Arab warriors far better than the stern methods employed by British officers. The British won the gratitude of the people of Kassala by sending for their exiled spiritual chief, Sidi Ali, the head of the Morgani family, directly descended from the Prophet. Col. Parsons flattered the martial pride of his new recruits by sending them out under their own sheiks to drive the dervishes out of El Fasher and Osobri. They set out on Dec. 20, 1897, before the arrival of the Egyptian garrison of 900 *fellahin* and before the formal surrender of Kassala. The native levies under the Chief Aroda, 400 strong, captured and burned El Fasher without difficulty, but Osobri stood out for a week, and finally the dervishes cut their way through Assabala's 160 men, both sides fighting desperately, and escaped to Kedaref with a loss of half their force of 100 fighting men, the brave Baggara Emir having persistently refused to accept quarter from infidels.

The army that was got ready in January for operations on the Nile consisted of 18,000 Egyptians, 3 British battalions, to be increased later as necessity should require, and the Nile flotilla of

gunboats. Arab irregulars held various posts in the desert between Suakin and Berber, where the route was open since the withdrawal of Osman Digna from that part of the eastern Soudan in the previous autumn. The Arab levies of Col. Parsons extended their operations to Nugatta, Gos Rejeb, and Aderama, clearing of dervishes the whole country east of the Atbara, and also westward across the desert to Es Sofiyeh, nearly halfway to Khartoum, and southward to Tomat and Kedaref. The Khalifa was fast drawing his forces together to make his final stand at Omdurman. At Metemma the Emir Mahmud had a powerful host, which was necessary not only to oppose the Egyptian advance, but also to overawe the riverain and desert tribes and prevent them from joining the invaders. At the sixth cataract Shabluka was well fortified. South of that there was no protection up to the forts of Omdurman, where the Khalifa had elected to fight his great battle, having seen in a vision the destruction of the entire Anglo-Egyptian army by the faithful and a terrible slaughter of the Turks, as the Egyptians are called by the Arabs of the Soudan, whom they once ground down. Now the Egyptians were generally welcomed as deliverers. Prisoners taken in skirmishes and deserters who kept coming into the Egyptian lines were enlisted for service with the Soudanese battalions. After the advanced guard of the Egyptian field army had arrived at Berber, Mahmud, the dervish general, on Feb. 25 took his main force, under a harassing attack of the Egyptian gunboats, over the river to Shendy, on the right bank. There he was joined by Osman Digna and his cavalry, and when detachments of dervishes reconnoitered in the direction of El Damer the Anglo-Egyptians, who held a strong line from the Atbara to the Nile, sent forward Major-Gen. William Forbes Gatacre's British brigade to head off the expected attack. This brigade in its march to the Atbara covered 140 miles in six days, for one of which it was halted. On March 12 the dervishes moved northward out of Shendy in force. Numbering 18,941 fighting men, they marched up the Nile to Aliab, and then crossed the desert to the Atbara, reaching on March 20 a point between Nakheila and Fahada. The sirdar dispatched a force from Berber, consisting of the British brigade, the Egyptian division commanded by Major-Gen. Archibald Hunter, 3 batteries of artillery under Col. Long, and 8 squadrons of Egyptian cavalry, the total strength being 13,000 men, with 24 field guns and 12 Maxims. This force concentrated at Kunur on March 16, and on March 20, being joined by another battery and a brigade of Egyptians, advanced to Ras el Hudi, at the bend of the Atbara. The cavalry of the two armies came in contact with each other on the following day. Finding the Anglo-Egyptians in great force, Mahmud decided to intrench his position and await supplies from the Khalifa. Gen. Kitchener thereupon ordered the gunboats to take the battalion at Atbara fort and the Jaalin levies up to Shendy, which was taken without the loss of a life on the Egyptian side. The dervishes, who were taken by surprise, fled after their leader was killed, leaving Mahmud's reserve stores and cattle to be taken by the enemy, with 650 prisoners, mostly Jaalin women and children, kept as hostages by the Baggaras. Of these fierce warriors, who give no quarter and take none, 170 were killed. The batteries and forts at Shendy were destroyed.

After Gen. Hunter had made a reconnoissance in force on March 30 and found Mahmud not disposed to stir from his intrenched camp, Gen. Kitchener ordered an advance of 5 miles to Abadar, which was carried out on April 4. Another reconnoissance drew out the dervish horsemen, who attempted

to surround the Egyptians, and were checked by the Maxim. The sirdar now determined to attack Mahmud's position, and on April 6 his army moved forward to Umbadia, and thence on the following evening to Mutrus. After resting till after midnight, the troops marched through the desert, and before daylight on April 8 formed in line of battle in front of the dervish *dem*, or fort, consisting of a large irregular inclosure, palisaded in parts with innumerable cross trenches, casemates, and straw huts, besides 10 palisaded gun emplacements, the whole surrounded by a strong *zariba*, or fence of camel thorn. The action began with a bombardment from 12 guns, strongly posted on commanding ground so as to deliver a cross fire into the enemy's intrenchments. The dervish cavalry, as they came out, were driven back by a heavy Maxim fire. After shelling the camp for an hour and a half the Egyptian line advanced, and while case shot and

After the battle of the Atbara the Anglo-Egyptian troops returned to their quarters on the Nile. The railroad was now completed to Genenitti, south of the fifth cataract, 113 miles from Abu Hamed and 346 from Wady Halfa. Beyond Genenitti there is open water to the mouth of the Atbara, where a passage for steamers was scoured out by damming one of the two channels. The purpose of Mahmud's march to the Atbara was to turn the Egyptian position in the fork of the two rivers in order to attack Berber and cut the enemy's line of communication by destroying the railroad at Genenitti. The caravan route from Suakin to Berber was declared closed. From Suakin in the direction of Kassala a railroad was built to Trinkitat. Telegraphs were built from Suakin to Berber and to Kassala. No further advance of the Egyptian army was contemplated until the Nile should rise in the autumn and allow gunboats to proceed all the way

THE NILE AT KHARTOUM.

Maxim fire cleared the way and rockets set fire to the thatched buildings, the infantry tore away the *zariba*, rushed the first line of trenches and stockades, and cleared successively the labyrinth of trenches after each had been raked by the Maxims. At the end of an hour the troops had passed through the camp, and formed in line at the river's edge, whence they mowed down the fleeing dervishes struggling through the shallows. Mahmud was taken prisoner, and all but three of his important emirs were killed, excepting Osman Digna, who ran away with his horsemen before the battle was half over. In the trenches were found men chained together or tied to posts by the Baggaras to prevent their escape and compel them to fight, and others held by forked sticks fixed around their necks. More than 3,000 dervishes were slain and 2,000 made prisoners, while the losses of the British brigade were only 2 officers and 22 men killed and 10 officers and 82 men wounded, and among the Egyptian troops, which bore the brunt of the fighting, 57 killed and 5 British and 16 native officers and 365 men wounded.

The dervishes were in a half-starved condition, and before and during the battle large numbers went over to the enemy. The remnants of their army dispersed toward Gedaref and Abu Delek.

to Khartoum. An advanced post was established at Shendi. Three large new gunboats were put together on the upper Nile. Gen. Gatacre's brigade of 3,000 men went into summer quarters at Darnali, near Berber. The Egyptian forces, distributed between the Atbara and Abu Hamed, consisted of 9,000 infantry, 4 batteries of artillery, and 900 cavalry and camel corps. The dervishes retired from Shabluka to El Boga, inland from the river. The Khalifa extended his line of defense at Omdurman 10 miles northward to Kerreri, a defensible position amid hills.

For the attack on the Khalifa's stronghold 40-pounders were added to the artillery equipment, and new breach-loading howitzers hurling 50-pound shells filled with high explosives, bursting by percussion on striking the earth or crashing through mud walls, and dealing death and destruction within a radius of 40 yards.

The advance upon Khartoum took place after the rains had swollen the Nile and subsided from the ground, leaving it dry enough for marching. Every movement was accomplished on the date scheduled for it in advance by Gen. Kitchener. He concentrated his forces at Wady Hamed, at the foot of the sixth cataract, about 60 miles north of Omdurman, on Aug. 22. The army now consisted of 6 brigades,

2 British and 4 composed of native soldiers under British and native officers, the whole body numbering 25,000 men, of whom 10,000 were British troops commanded by Gen. Gatacre and 15,000 were Egyptians under Gen. Hunter. On Sept. 1 the Anglo-Egyptian forces advanced to a point near Kerreri, driving in the enemy's outposts without loss to themselves. There they halted while the gunboats, under Commander Keppel, having in tow 6 great howitzers on barges, went up the Nile beyond Nasri island, clearing the right bank of dervishes and demolishing the forts on Juti island without suffering damage. The howitzer battery was placed in position on the river bank opposite Omdurman and bombarded the forts, destroying also the mosque and the tomb of the Mahdi. The cavalry on Sept. 2 advanced, with a horse battery, to Kasor Shaubal, whereupon the Khalifa, with his entire force of 40,000 to 50,000 men, marched forth from behind the hills where they had passed the night and drew up in battle order within a mile of the Anglo-Egyptian forces, which were disposed to good advantage in the form of a horseshoe, with guns and Maxims placed at intervals and both flanks resting on the river, protected by the gunboats. The British soldiers built a *zariba*, while the Egyptians threw up intrenchments. The dervishes advanced against the front and both flanks simultaneously. On the right the Egyptian cavalry and camel corps drew off the attack, leaving 2 guns in the hands of the pursuing dervishes. On the front and on the left flank, which was formed by the British division, the attack was fully developed, but under the unerring fire of field guns and Maxims and the withering fusillade of repeating rifles the dervishes melted away before coming within the firing distance of their own weapons. Their ranks were half destroyed while inflicting a loss of not more than 100 on the Egyptians, who cleared the field in less than fifteen minutes. The dervishes retired and reformed behind the shelter of the low range of hills. On the other side of the Surgham hill the Khalifa had a large body of fresh troops in reserve. Toward the close of the action the British lancers led the advance to Omdurman. Beyond the hill they were fired at by concealed riflemen, at which they charged through the dervishes, who numbered 2,000, and faced about on reaching the top of the opposite incline. Meanwhile the sirdar, seeing no more foes in front, ordered a general advance of the brigades in echelon to Omdurman. As Gen. MacDonald's Soudanese took a wide turn, in order to let the Egyptians under Gen. Lewis pass, it was fiercely attacked on flank and rear by dervishes sweeping down from the Kerreri hills. The camel corps, which, followed by the cavalry, was guarding the rear of the transport column, was involved in the attack. Gen. MacDonald wheeled his battalions about so as to form two sides of a square fronting the enemy in both directions, the line being prolonged by the camelry on the right, where the attack was heaviest. The sirdar ordered the rest of the brigades, which were in advance, to change front and wheel to the right round Surgham hill, while he sent one of the British brigades back to re-enforce MacDonald's men. These, however, had broken the force of the attack before the supports arrived. An attack from the Khalifa's camp behind the hill was readily repelled by the British and Soudanese infantry on the extreme left, supported by a field battery and Maxims. The rest of the battle was a mere chase. The battery on the left, co-operating with long-range infantry fire, drove the dervishes off to the west to prevent their re-entering Omdurman. Swinging round Surgham hill, the guns and infantry crumpled up the dervish columns in the plain beyond. The intrepid

Arabs rallied repeatedly and returned to the charge, but were mown down by a deadly cross fire of infantry and artillery from the Anglo-Egyptian line that now enveloped them. The Egyptian cavalry kept the Baggara horse busy throughout the engagement. The dervishes, although kept at long range, 2,000 yards or more, most of the time, nevertheless succeeded in inflicting a loss of nearly 2,000 on the Anglo-Egyptians, but only by a courage that sought death and at the cost of almost total annihilation. More than 8,000 were killed outright. The broken remnant that trailed over the desert could not be collected and reorganized into a fighting force. The battle was over before noon, and on the same day the sirdar entered Omdurman, while his troops encamped under its walls. The Khalifa Abdullah, his power utterly crushed, retired to El Obeid. Slatin Bey, the former governor of Kordofan, who was kept a prisoner by the Mahdi for many years, was installed at Omdurman as Egyptian governor.

The Fashoda Incident.—France, supported by Russia, consistently refused to recognize the Soudanese and Equatorial provinces of Egypt after they were abandoned by the Egyptian Government under British control as either a no-man's land open to European occupation in general or as a British sphere forming a *Hinterland* of British East Africa or falling to England by virtue of her occupation of Egypt. The Italian and German governments in their conventions with Great Britain acknowledged a British claim to these regions, but the French and Russian governments took the view that all the territories that once were Egyptian under the Sultan's suzerainty are still a part of Egypt and of the Ottoman Empire. That they are Egyptian is the view finally adopted by the British Government when it sanctioned the expedition to wrest the Nile provinces from the Khalifa after the French and Russians had arranged a friendly understanding with the Negus of Abyssinia on the east and the French Congo stations were extended up the Ubangi-Welle to the edge of the Nile basin. The French Government asserted that it had an equal right with England to establish stations in the Bahr el Ghazal region or on the Nile and hold the country as custodian for the Khedive and the Sultan. The Anglo-Egyptian Nile expedition, which was carried out with the aid of British money after France and Russia had refused to sanction the application of the Egyptian general reserve fund to this purpose, was regarded by the French as a scheme to strengthen the English hold on Egypt and the Suez Canal and to prolong indefinitely the British occupation, which, according to the pledges of the British Government, will come to an end as soon as a native government can be organized in Egypt that is capable of maintaining order and fulfilling international obligations.

M. Liotard in 1896 had planted the French flag in the Bahr el Ghazal region of the Nile basin by the establishment of a post near Tambura, the residence of the great A Zandeh chief, 30 miles from the left bank of the Sueh. He had founded a string of stations affording a line of communications down the Ubangi. Capt. Marchand followed him with an expedition organized in the second half of 1896 with the distinct object of invading the Nile valley and disputing the British claim of pre-emption. His party included 9 French officers and 8 other whites, and was abundantly equipped with trade goods, which M. Liotard had lacked, although he succeeded in securing the acceptance of a French protectorate from the chief of Tambura. Capt. Marchand succeeded in transporting 6,000 loads of merchandise and munitions from Brazza-

ville to the upper Ubangi, and when the goods began to arrive on the Mbonu, M. Liotard continued his advance, founding a post north of Semio at Jenia and another at Dem Ziber. Capt. Marchand, following with a force of Senegalese soldiery, proceeded to the occupation of Jur Ghattas, near Tambura. Steamers were brought up in parts on the backs of porters, and were set afloat on the Sueh. Another flotilla was transported by way of the Mbonu and finally launched on another tributary and brought down to the Nile by the beginning of 1898. Kutchuk Ali, at the confluence of the Wuau and Sueh, was the starting-point for the advance to the Nile. The other expeditions organized by Prince Henri of Orleans, Count Leontieff, the Marquis of Bonchamps, and others, which were intended to invade the Nile valley from the opposite direction by the aid of the Negus Menelek and Ras Makonnen and with the co-operation of Abyssinian troops, failed to carry out their purposes. Capt. Marchand, however, descended upon Fashoda, and was established there when Sir Herbert Kitchener entered Omdurman. The sirdar, when he heard of a strange force on the Nile which he suspected to be Marchand's, sent gunboats up the river to find out. His emissary found Capt. Marchand there in no great strength and nearing the end of his resources. Gen. Kitchener ascended the Nile to Sobat and dispatched gunboats thence toward Meshra er Rek, the principal trading center of the Bahr el Ghazal region, with instructions to establish outposts. Capt. Marchand during the progress of the diplomatic controversy (see FRANCE) came down from Fashoda on a British gunboat and went to Paris to report to his Government. In the mean time active preparations for war were begun, both in England and in France.

EVANGELICAL ASSOCIATION. The following is a summary of the statistics of this body as they were published in October, 1898: Number of itinerant preachers, 1,045; of local preachers, 482; of members, 115,465; of Sunday schools, 2,140, with 23,288 officers and teachers and 143,216 pupils; of catechetical classes, 855, with 10,033 catechumens; of Young People's Alliances, 974, with 32,911 members; of baptisms during the year, 1,524 of adults and 6,706 of infants; of churches, 1,792; of parsonages, 689; amount of contributions for missions, \$146,645, of which \$15,000 were in the form of bequests and special gifts; total amount of collections for all purposes, \$871,311; average amount of contributions per member, \$7.60.

The total receipts of the missionary society for the year ending Aug. 31, excluding \$18,842 transferred from the permanent to the current fund, were \$171,706, showing an increase of \$19,220 over the previous year, and an aggregate of contributions of \$1.49 per member. The contributions of the Woman's Missionary Society amounted to \$4,131, or \$1.63 per member. Of this sum, \$1,781 were handed over to the general treasury. The observance of a special general mission day resulted in securing collections of \$2,705; the Children's Day collections yielded \$9,418; and the Young People's Societies contributed \$1,980. The 542 home missions returned 551 missionaries, 6 missions changed to stations, 24 new missions, 46,559 members, and 5,240 accessions. The foreign missions returned 103 stations, 128 missionaries, 7 new stations, 13,598 members, and 1,304 accessions. Included in the foreign missions are the Germany and Switzerland Conferences, with 13,237 members, and the mission in Japan, with 19 stations and 18 missionaries, which returned 61 accessions to the church.

The year's earnings of the Board of Publication were \$45,509.

EVENTS OF 1898. The year was remarkable mainly for its wars and rumors of wars. Early in January the situation in the far East became critical, involving the conflicting interests of the great European powers as well as of China and Japan, and at the same time summary measures had to be adopted for the coercion of the Sultan. A formidable insurrection was in progress in northern India, calling for vigorous measures on the part of the British military authorities, and simultaneously the Sudanese dervishes were mustering in unprecedented numbers on the upper Nile, preparatory to a descent upon Egypt. Into this international medley was suddenly projected the Spanish-American War, beginning with the highly dramatic exploit of Admiral Dewey's squadron at Manila, and ending with the equally sensational destruction of Cervera's fleet by Admiral Sampson's, the surrender of Santiago, and the final collapse of the Spanish cause. The year ended seemingly with an assurance that civilization, as it is understood by the English-speaking races, shall be guaranteed to western Africa and to the late Spanish possessions in the Orient as well as in the West Indies.

January 1. City of "Greater New York" inaugurated with appropriate ceremonies. Cuba: Inauguration by Spain of a Provisional Government at Havana. Portugal: Opening of the Cortes by King Carlos.

2. India: A British regiment cut off by tribesmen on the northern frontier. Rome: The Pope observes the sixtieth anniversary of his first mass. Egypt: It is announced that the dervishes are moving to the northward and threatening the British and Egyptian outposts. Sicily: Bread riots in the province of Girgenti; troops called out to preserve order.

3. Great Britain: The Government officially insists that Chinese ports must be open to all powers if to any. China: Li-Hung-Chang recalled to office at Peking. Philadelphia: Fiftieth anniversary of Girard College celebrated; Speaker Reed delivers the address.

4. Washington: More than 1,000 post offices added to the money-order class. Kentucky and Mississippi: Meetings of the State Legislatures.

5. Meeting of the State Legislatures in New York and Massachusetts. Washington: Both branches of Congress reassemble.

6. Maryland: Meeting of the General Assembly. Massachusetts: Inauguration of Roger Wolcott as Governor for the second term.

7. Russia and Japan recognize the imperial rank of Korea.

8. Washington: Secretary Sherman issues an appeal for Cuban aid and appoints a commission. Oklahoma: Two Seminole Indians burned at the stake for felonious assault and murder. Africa: An uprising against British authority in Basutoland.

9. Cuba: First distribution of supplies for starving natives delivered at Havana.

10. Paris: Trial of Count Esterhazy for letters published in "Figaro." Ohio: Inauguration of Gov. Bushnell at Columbus. Africa: Fighting in Basutoland between British and natives.

11. Washington: Resignation of Civil-Service Commissioner Rice. M. A. Knapp elected chairman of the Interstate Commerce Commission. South Carolina and New Jersey: Meetings of the State Legislatures. Paris: Acquittal of Count Esterhazy on the charge of dealing with foreign governments. M. Brisson elected President of the Chamber of Deputies.

12. Ohio: Mark Hanna elected United States Senator for both terms. Japan: Formation of a new Cabinet with Marquis Ito as Premier. Cuba: Capture of an American filibustering expedition by a Spanish cruiser.

13. Iowa: Inauguration of Gov. Leslie M. Shaw at Des Moines. Indiana: The State Supreme Court decides that life-insurance policies are not taxable. Paris: Premier Méline announces in the Chamber of Deputies that M. Zola will be prosecuted for statements made in a letter to President Faure.

15. Washington: M. Cambon, the new French minister, received by the President. Nicaragua: Arrival of the United States Canal Commissioners who are accorded an official reception.

16. India: Gen. Sir Arthur P. Palmer appointed to command the field forces in northern India.

17. Boston: The United States Government purchases a large tract of land for fortifications. Paris: Anti-Dreyfus riots, several students hurt; the Dreyfus question shelved in the Chamber of Deputies.

18. Bohemia: Riotous disturbances in the Diet. New England: Many strikes among cotton-mill workers. Paris: The Minister of War lodges formal complaint against Emile Zola for his action in the Dreyfus case.

19. The President holds his first official reception at Washington. Florida: Opening of the National Fisheries Congress at Tampa. France: Anti-Jewish demonstrations at Paris, Marseilles, and elsewhere; students arrested. Italy: Bread riots at Ancona and elsewhere. Russia strengthens her forces on the Austrian and German frontiers. Austria: Riotous proceedings at Prague.

20. Philadelphia: Launch of the Japanese battle ship *Kassagi*.

21. Washington: Attorney-General McKenna confirmed by the Senate as justice of the Supreme Court. Japan orders a strong fleet to Chinese waters.

22. Paris: Riotous disturbances in the Chamber of Deputies on account of the Dreyfus scandal; troops called in to preserve order. India: Solar eclipse observed by numerous scientific expeditions under highly favorable conditions.

23. Admiral Siccard's squadron reaches Key West. Paris: Stringent precautions taken against Dreyfus riots. Algiers: Anti-Semitic riots suppressed by soldiers; 2 killed.

24. United States battle ship *Maine* ordered to Havana as an evidence of friendly naval relations with Spain. California: Opening celebration of the Golden Jubilee.

25. The *Maine* reaches Havana and exchanges salutes with the Spanish fortifications. Washington: J. W. Griggs, of New Jersey, appointed United States Attorney-General. Maryland: The Hon. Lewis C. McComas, Republican, elected United States Senator, after seven days' contest and ten ballots. New York: National Association of Manufacturers in session. Indianapolis: Meeting of National Monetary Convention to devise currency reform, 400 delegates present. Germany: Imprisonment of an editor for publishing a cartoon disrespectful to the Kaiser.

26. Washington: Arrival of President Dole of Hawaii; he is received as a guest of the nation.

27. Germany: General celebration of the Kaiser's fortieth birthday. Spain: The fleet ordered to Cadiz. England: End of the great engineers' strike, the strikers beaten at all points.

29. India: A British brigade severely handled in an encounter with tribesmen on the northern frontier. Plague riots in Bombay and elsewhere; the mobs fired on by troops. London: Jacobite celebration of the execution of Charles I. Rhode Island: Strike of weavers, Centerville cotton mills closed. Germany: Duel between Count William Bismarck and Herr Manback, the latter wounded. France: Anti-Jewish riots in Paris and Bordeaux.

30. Cuba: Consul-General Lee gives a dinner to officers of the *Maine* in Havana.

31. Washington: Adjournment of the United States Supreme Court. New York: The Senate passes a resolution of sympathy for the Cuban insurgents. Morocco: Encounter off the coast between a British merchant steamer laden with arms and a Moorish gunboat.

February 1. India: British troops under Gen. Westinacook severely punish the tribesmen and recover 22 bodies of their own slain (see Jan. 29). Germany demands indemnity from China for murder of missionaries.

2. Washington: State reception at the White House for Congress and the judiciary. Austria: Several schools and universities closed because of political riots among the students. Germany: Discriminating duties announced against the importation of American horses and living plants.

3. Canada: Meeting of Parliament at Ottawa.

4. Russia and the United States: By mutual agreement, the ministers resident of the two powers are promoted to be ambassadors. Consolidation of New York Central Railway with the Lake Shore and Michigan Southern.

6. Oregon: Government relief expedition sails for the Klondike.

7. Chicago: Opening of a national convention for the preservation of game. Paris: Trial of M. Zola and M. Perreux, proprietor of the "*Aurore*," for libeling the Esterhazy court-martial (see Feb. 23). Austria: The Imperial Government takes general measures to compel order among students.

8. Washington: A letter is published written by the Spanish minister, Señor Dupuy de Lome, making disparaging remarks about the President. Sweden and Norway: William W. Thomas, the new United States minister, received by King Oscar. Great Britain: Opening of Parliament. Guatemala: Assassination of President Barrios. South African Republic: Re-election of Paul Krüger as President.

9. Mobile: Meeting of South Atlantic and Gulf States Quarantine Convention to concert measures against the introduction of contagious diseases.

10. New York: A census of the city under its new organization shows a population of 3,438,899.

11. Alaska: Serious disturbances reported in the Klondike region. Germany: General relations with the United States discussed in the Reichstag. Paris: Further rioting in connection with the Zola affair. Missouri: The Attorney-General rules that recitation of the Lord's Prayer and reading the Bible in the schools is a violation of State law.

13. Boston: Representatives of the Textile Unions recommend the calling out of all operatives in all the New England cotton mills. Texas: The Federal Court issues an order restraining three Texas railways from boycotting a steamship line between Galveston and New York.

14. Washington: The Democratic and Republican Congressional Campaign Committees complete their organization. Russia: The Government orders steel armor for two battle ships from American makers. Spain: Señor Luis Polo y Barnabe appointed minister to the United States. Washington: Luther G. Billings, pay director of the navy, dismissed from service for falsehood and scandalous conduct. Italy: Discovery of the birth record of Amerigo Vespucci in the Church of San Giovanni, Florence.

15. The United States battle ship *Maine* destroyed by an explosion in the harbor of Havana. Intense excitement and indignation all over the United States, sympathy of the whole civilized world. Two officers and 266 enlisted men were killed and many others were injured.

16. Costa Rica: A revolution in progress.

17. Spain officially disavows the De Lome incident. Naval Court of Inquiry appointed to investigate the loss of the *Maine*.

18. Washington: Dispatches of condolence received from all over the world on account of the destruction of the Maine. New York: Arrival of the Spanish battle ship Vizcaya to return the visit of the Maine; the officers now learn for first time of the Maine's loss; extra precautions. France: A protest is made in the Chamber of Deputies against the importation of American horses. Sicily: Troops fire upon the mob to restrain bread riots.

19. Washington: Adjournment of the Woman's Suffrage Convention. Cuba: Insurgent successes reported within a short distance of Havana; Gomez marching in the direction of the city. London: Large shipments of munitions of war sent to West Africa.

20. Cuba: Arrival of the United States Coast Survey steamer Bache with wrecking apparatus in Havana harbor. Washington: Orders issued for the enlistment of 300 men to make good the loss of the Maine. Berlin: Requiem service held for those who lost their lives in the Maine disaster.

21. Washington: Seventh annual convention of the National Society of the Daughters of the American Revolution. England: Irish home-rule bill as introduced by the Government approved by the Irish party.

22. Philadelphia: President McKinley delivers an address at the University of Pennsylvania. China: A loan of £16,000,000 announced with English and German banks. South Carolina: The negro postmaster at Lake City, Fraser C. Baker by name, murdered by a mob, his house burned and his wife and children maltreated.

23. Paris: Verdicts of guilty rendered against MM. Zola and Perreux (see Feb. 7); wild Anti-Jewish demonstrations in the streets.

25. New York: Spanish cruiser Vizcaya sails for Havana. Washington: Col. H. C. Corbin appointed adjutant general in place of Gen. Breck, retired.

26. Greece: An attempt to assassinate King George; the two assailants arrested (see March 31).

27. Key West: Arrival of the Maine Court of Inquiry. New York: Arrival of a large consignment of reindeer on their way to the Klondike.

28. Italy: Bread riots at Galipoli.

March 1. Washington: Large contracts for war material given out by the Army and Navy Departments. Rome: Pope Leo XIII celebrates the twentieth anniversary of his elevation to the throne.

2. Brazil: Senhor Campos Salles elected President. Washington: National Congress for the Purification of Food and Drugs, 200 delegates present. Bristol, R. I.: successful trial of a new United States torpedo boat, the Talbot. Bohemia: The Diet closed by imperial order.

3. Washington: Naval engineers ordered to test the efficiency of old monitors for the navy. Ithaca, N. Y.: Cornell wins the intercollegiate debate with the University of Pennsylvania. Australia: The Federal Convention at Melbourne determines upon an Australian capital, to be located in a Federal district owned in common. Venezuela: A revolution breaks out on the inauguration of President Andrade.

4. The Maine Court of Inquiry goes to Havana on the Mangrove. Madrid and Washington profess peaceful relations, but both governments are negotiating for the purchase of ships and are giving out contracts for munitions of war. Italy: General celebration of the anniversary of the adoption of an Italian Constitution.

5. France: Duel between Col. Piquart and Col. Henry, growing out of the Zola affair (see Aug. 31). Baltimore: Launch of torpedo boat McKee from Columbian Iron Works. Austria: Resignation of the ministry.

6. Spain intimates a wish for the recall of Con-

sul-General Lee; the United States Government declines. Rome: Duel with swords between Signor Cavolotte, a distinguished literary man, and Signor Macola, editor of the "Gazetta de Venezia," both legislators; Signor Cavolotte killed.

7. Philippine Islands: It is announced that a fresh rebellion has broken out against the Spaniards. China leases Port Arthur to Russia for ninety-nine years. New England: A number of the late strikers resume work.

8. Washington: Congress appropriates \$50,000,000 for national defense. Captain W. H. Brownson, U. S. N., detailed to buy war ships in England and France. Cuba: At the request of the Spanish authorities, the Fern, a dispatch boat, is substituted for the Montgomery, a gunboat, to carry stores to the starving Cubans. Italy: Great popular demonstration at Rome at the funeral of Signor Cavolotte (see March 6).

9. A Spanish man-of-war, the Alfonso XII, sails for Cuba with men and munitions. India: Plague riots in Bombay, troops obliged to fire upon the crowd. China: Outlaws raid the island of Hainan. Washington: The President signs the bill appropriating \$50,000,000 for defense.

10. San Francisco: United States gunboat Marietta sails for Key West (see June 4). Ohio: The Society of Separatists at Zoar disbands; assets about \$3,000,000.

11. Key West: United States dispatch boat Fern sails for Matanzas with provisions.

12. Washington: Señor Polo y Barnabe, the new Spanish minister, presents his credentials to the President.

13. England: Two new Brazilian cruisers purchased by the United States. Spanish squadron sails for Cadiz.

14. New York: Naval board for the purchase of auxiliary cruisers begins its duties.

15. Maine Court of Inquiry leaves Havana for Key West. Turkey: Plot discovered to assassinate the Sultan; 100 soldiers killed.

16. A strong fleet of United States war vessels assembles at Key West; Spain remonstrates. Washington: Senator Proctor delivers a notable speech on the situation in Cuba. England: Rear-Admiral Lord Charles Beresford advocates an Anglo-American alliance. The Associated Chambers of Commerce of the United Kingdom favor a compulsory adoption of the metric system.

19. San Francisco: United States battle ship Oregon sails to join the Atlantic squadron.

20. India: It is announced that the rebellion on the northwest frontier is ended. Washington: A flying squadron ordered to concentrate at Hampton Roads. Civil-Engineer M. T. Endicott appointed chief of the Bureau of Yards and Docks.

22. Austria: Opening of the Reichstag at Vienna. Berlin and London: The proposed Chinese loan is considerably oversubscribed. Key West: The Maine Court of Inquiry closes its sessions and sends its report to Washington.

23. Newport News, Va.: Launch of the battle ships Kentucky and Kearsarge. Italy: The Chamber of Deputies censures ex-Premier Crispi for complicity in bank frauds. Egypt: The Anglo-Egyptian army defeats the dervishes in two engagements near Atbara.

24. Washington: The Navy Department purchases a number of auxiliary yachts and tugs. Germany: Large naval credits voted in the Reichstag. Spain: The Government announces a loan of about 50,000,000 pesetas from the Bank of Spain.

25. Washington: Report of the Maine Court of Inquiry made public.

26. Washington: A defense board appointed to secure harmonious action between the army and

navy. New York: National Guard and Naval Reserves ordered to be ready.

27. Spain: The elections for the Cortes result in favor of Sagasta. China: The Russian and Chinese representatives sign the agreement relating to Port Arthur, Tai-Lien-Wan and the railway concession.

28. Commodore Schley takes command of the flying squadron at Hampton Roads. Testimony in the Maine case made public. Germany: Lieut. Niblack, U. S. N., purchases a nearly completed cruiser at Kiel. Spain purchases British yacht Giralda. Ireland: Firearms seized by police as a precautionary measure.

29. Correspondence continues between Washington and Madrid looking to amicable settlement; but the war party in Congress takes aggressive action. Capt. Sigbee, of the Maine, reaches Washington.

30. War vessels of the United States stripped of all superfluous woodwork.

31. Cuba: Capt.-Gen. Blanco puts a stop to reconcentration in several provinces.

April 1. Spain replies to President McKinley's ultimatum. Naval reserves of the Atlantic States asked to be ready for service. Spanish torpedo fleet reaches the Cape Verde Islands and their battle ships leave Havana.

2. Orders sent to Havana to suspend wrecking operations on the Maine.

3. Paris: The Court of Cassation annuls the sentence of Emile Zola.

5. Washington: The Navy Department purchases several large ocean steamers for auxiliary cruisers. Great Britain declines to join the powers in proposing mediation between the United States and Spain. Rome: The Pope proposes conditions for armistice.

6. Cuba: General exodus of Americans. Madrid: Departure of some of the United States legation.

7. Washington: Ambassadors of Great Britain, France, Germany, Italy, Austria, and Russia call upon the President and present a joint note urging peace. Madrid: A Cabinet meeting favors war. China: Rioters sack the American mission in Chung-King-Kinsu and kill residents.

8. Washington: Army officers on special service ordered to rejoin their commands. Egypt: Derivishes defeated in a considerable engagement near Atbara by the Anglo-Egyptian forces under Gen. Kitchener. China: The Government removes restrictions on the use of steam on lakes and rivers.

9. United States steamships Massachusetts and Texas join the flying squadron. Madrid: It is decided to grant an armistice to the free Cuban insurgents, probably by the advice of foreign ambassadors; Cubans decline armistice.

10. Washington: The Spanish minister delivers at the State Department the announcement of an armistice by the Regent's orders. Spain: Senatorial elections result in favor of the Government. Washington: The President asks Congress for power to put an end to the Cuban war. Madrid: Popular disapproval of Cuban armistice, street riots.

12. Washington: Arrival of Consul-General Lee from Cuba, his journey a popular ovation. Hong-Kong: Street fight between British and American sailors on one side, and Russian, German, and French sailors on the other. The Anglo-Americans win. Hampton, Va.: Flying squadron goes to sea for practice cruise.

13. Washington: Both Houses of Congress pass resolutions granting full authority to the President. New York: Atlantic liners St. Louis and St. Paul taken by the Government to serve as auxiliary cruisers.

14. Massachusetts: The Governor signs a bill substituting electricity for hanging in capital cases. Spain: The Cortes summoned to meet. A strong Spanish squadron declared in readiness for sea.

16. Washington: Congress passes a resolution recognizing Cuban independence.

17. Spain: A mob attacks the American consulate at Malaga.

18. Spain appeals to the powers against American misrepresentations and calumnies. Anti-American riots continue at Malaga and elsewhere. Venezuela: Ex-President Crespo killed in action by the insurgents.

20. Washington: The Government sends an ultimatum to Spain, demanding the surrender of Cuba by noon of April 23. The Spanish minister demands his passports.

21. Washington: War declared against Spain by the United States, beginning at 12 o'clock, noon (see Aug. 12). Charles Emory Smith appointed Postmaster-General.

22. Havana blockaded by United States squadron. Two Spanish merchant vessels, the Pedro and the Buena Ventura, captured as prizes by the United States cruisers Nashville and New York.

23. The President calls for 125,000 volunteers.

24. Spain declares war.

25. Washington: Resignation of John Sherman, Secretary of State.

26. Cuba: Lieut. Andrew Rowan, U. S. A., lands with Cubans for co-operation with American troops. Washington: President gives notice to Spanish vessels in American ports to leave by May 21. West Point: The first class is graduated ahead of time, and ordered to duty with the army.

27. Action between United States ships New York, Cincinnati, and Puritan, and Spanish forts at Matanzas, Cuba.

29. Florida: Troops begin to concentrate at Tampa. The Cape Verde Island fleet, under Admiral Cervera, sails westward.

30. United States steamships Oregon and Marietta reach Rio, Brazil. New York: Arrival of the United States auxiliary cruiser Paris. Congress authorizes a bond issue of \$500,000,000. It is taken up at once and largely oversubscribed. The United States auxiliary cruiser New York engages Spanish forts at Port Cabanas.

May 1. Philippine Islands: A United States squadron, under Commodore Dewey, destroys the Spanish fleet of Admiral Montojo in the harbor of Manila. Spanish loss, about 600 killed or wounded; American loss, 7 wounded, none killed.

2. Commodore Dewey's fleet engages the forts in Manila Bay. Italy: Several persons killed in bread riots. Spain: Martial law proclaimed in Madrid because of popular fury over the loss of the Spanish fleet at Manila. A British gunboat sent to Santiago de Cuba to protect the English consul.

4. Italy: Import tax on cereals suspended because of bread riots. Admiral Sampson's squadron sails from Key West.

5. Washington: A large number of appointments of volunteer general officers made by the President. Africa: Insurrection at Sierra Leone.

6. Washington: Col. Leonard Wood authorized to recruit a regiment of volunteer cavalry among the Western cowboys and other rough riders; Theodore Roosevelt resigns as Assistant Secretary of the Navy to accept lieutenant-colonelcy of this regiment. Great Britain refuses to join the powers in intervention. Germany: Closing of the Reichstag; the Kaiser makes a speech.

7. The President sends the thanks of the nation to Commodore Dewey and promotes him rear-admiral. Italy: Bread riots reported in Milan, Florence, Leghorn, and elsewhere; many killed and wounded.

8. Washington: Capture of George Downing, an alleged Spanish spy (see May 12). Arrival of Stewart L. Woodford, late minister to Spain. Milan, Italy: Fatal encounters in the streets between troops and rioters, several hundred killed and wounded. Spain: Martial law declared in Badajoz and Alicante; bread riots.

9. Spain: Riots in Linares, 12 killed, 50 wounded. Public buildings looted; disorders elsewhere.

EXPOSITION, TRANS-MISSISSIPPI AND INTERNATIONAL. Since the World's Columbian Exposition, held in Chicago in 1893, four important interstate expositions that were international in character have been held in the United States. They were the Californian Midwinter International Exposition, held in San Francisco in 1894 (see "Annual Cyclopædia" for 1894, p. 91); the Cotton States and International Exposition, held in Atlanta, Ga., in 1895 (see "Annual Cyclopædia" for 1895, p. 269); the Tennessee Centennial and International Exposition, held in Nashville in 1897 (see "Annual Cyclopædia" for 1897, p. 756); and the Trans-Mississippi and International Exposition, held in Omaha from June 1 to Oct. 31, 1898, and of these the last-named was the largest and most successful.

Organization.—The beginning of the Exposition may be said to date from the meeting of the Trans-Mississippi Congress, held in Omaha in November, 1895. On Nov. 27, 1895, the Hon. William J. Bryan presented the following resolution before the Congress:

"Whereas, we believe that an exposition of all the products, industries, and civilization of the States west of the Mississippi river, made at some central gateway where the world can behold the wonderful capabilities of these great wealth-producing States, would be of great value, not only to the Trans-Mississippi States but to all the home seekers in the world; therefore *Resolved*, That the United States Congress be requested to take such steps as may be necessary to hold a Trans-Mississippi exposition at Omaha, during the months of August, September, and October, 1898, and that the representatives of such States and Territories in Congress be requested to favor such an appropriation as is usual in such cases to assist in carrying out this enterprise."

It was adopted unanimously, and after the ad-

jourment of the Congress the proposition was thoroughly canvassed in Omaha, resulting in the publication of a call for a meeting to be held in the Commercial Club on Jan. 18, 1896. The Trans-Mississippi and International Exposition was then organized and articles of incorporation adopted. The latter provided that the capital stock should be \$1,000,000, issued in shares of \$10 each, and that the life of the Exposition should be from June 1 to Nov. 1, 1898. The following officers were chosen: President, Gurdon W. Wattles; Vice-President, Jacob E. Markel; Treasurer, Herman Kountze; and Secretary, John A. Wakefield. Agitation was at once begun to secure national aid, and for that purpose bills were introduced in both the House and the Senate asking for an appropriation of \$250,000, such appropriation to be available only after a like amount of the capital stock of the exposition had been obtained. Meanwhile, the local canvass for subscriptions had been energetically carried on, so that in November, 1896, the amount promised reached \$330,000. This sum being sufficient to warrant the beginning of building operations, a meeting of the stockholders was held on Dec. 1, when it was decided to divide the work of the Exposition into seven departments, the heads of which should constitute the executive committee, who should have the active management of the affairs of the association. The officers elected were as follows: President, Gurdon W. Wattles; Resident Vice-President, Alvin Saunders; Treasurer, Herman Kountze; and Secretary, John A. Wakefield. Executive committees: Chairman and Manager of Department of Ways and Means, Zachary T. Lindsey; Manager of Department of Publicity, Edward Rosewater; Manager of Department of Promotion, Gilbert M. Hitchcock; Manager of Department of Buildings and Grounds, Freeman P. Kirkendall; Manager of Department of Exhibits, Edward E. Bruce; Manager of Department of Concessions and Privileges, Abram L. Reed; and Manager of Department of Transportation, William N. Babcock. Later the departments of publicity and promotion were consolidated under the management of Edward Rosewater. The organization was then completed by the appointment of a vice-president by each of the 24 governors of the Trans-Mississippi States. The success of the enterprise seemed assured, and as the requirements of the bill providing for Government appropriation were satisfied, the Secretary of State notified foreign governments of the international character of the Exposition, and invited them to participate. The failure of President Cleveland to sign the sundry civil bill containing the Government appropriation which had been cut down to \$200,000 was a source of some disappointment, and delayed work on the Government Building until the passage of the bill by the extra session of Congress called for by President McKinley. Meanwhile, local subscriptions had increased until the amount of \$420,000 had been promised, and later the State of Nebraska and Douglas County each appropriated \$100,000. Aid from various State legislatures was also received as follows: Illinois, \$45,000; Iowa, \$35,000; Montana, \$15,000; Utah, \$8,500; and New Mexico, \$1,500. Among Eastern States the following sums were appropriated by their respective legislatures: Georgia, \$10,000; New York, \$7,500; Massachusetts, \$6,000; and Ohio, \$3,000. The Kansas Legislature refused to appropriate any money, but the people themselves made contributions equivalent to nearly \$30,000, and the following amounts may be credited to the people representing their respective States: Minnesota, \$20,000; Montana, \$15,000; and Wisconsin, \$12,000.

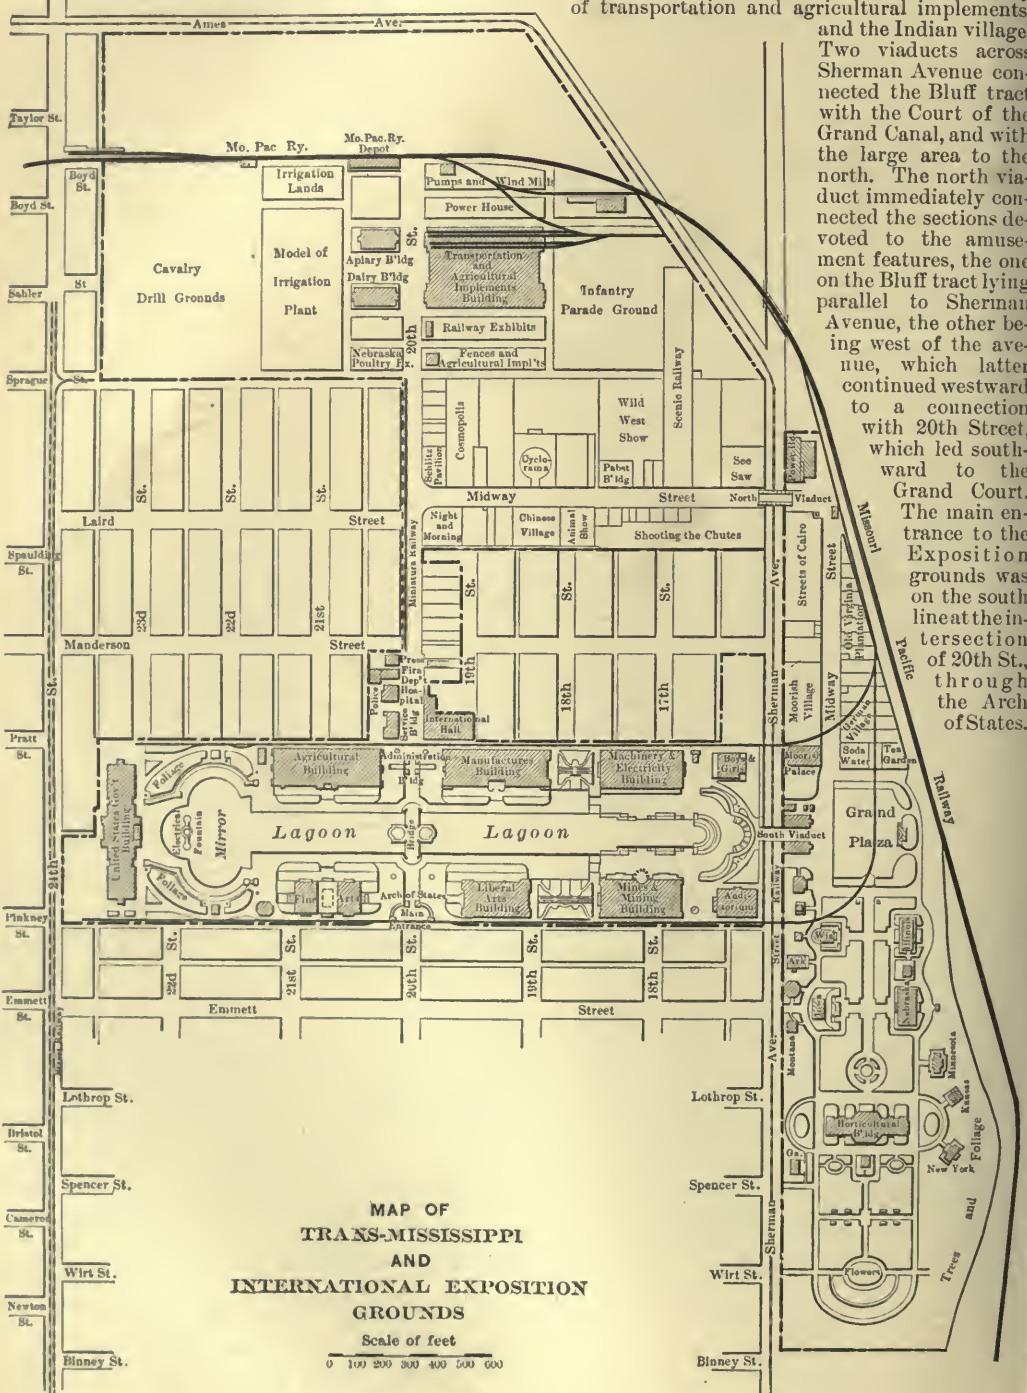

Location.—The site chosen was on the north side of Omaha, within the city limits. The area

known as the Kountze tract, lying across Twentieth Street, and extending from Sherman Avenue to Twenty-fourth Street, on account of its location, topography, symmetry, and accessibility, was selected for the group of main buildings. This property was 670 feet in width and about half a mile in length, and through the center extended a canal which was 150 feet wide at the east end, while at the west end it widened into a three-lobed lake 400 feet across.

On the east, lying at right angles to the

Kountze tract, was an area of sixty acres, known as the Bluff tract, stretching along the bluffs and overlooking the river country beyond. In this tract were grouped the State buildings. The remainder of the Exposition grounds were north of the Kountze tract, west of Sherman Avenue, and included the old fair grounds and the land beyond it, embracing in all about eighty acres. In this tract were the amusement features. On the old fair-ground site were the live-stock and irrigation exhibits, the display of transportation and agricultural implements,

and the Indian village. Two viaducts across Sherman Avenue connected the Bluff tract with the Court of the Grand Canal, and with the large area to the north. The north viaduct immediately connected the sections devoted to the amusement features, the one on the Bluff tract lying parallel to Sherman Avenue, the other being west of the avenue, which latter continued westward to a connection with 20th Street, which led southward to the Grand Court. The main entrance to the Exposition grounds was on the south line at the intersection of 20th St., through the Arch of States.

Buildings.—The conversion of the accepted locality into a convenient building site was begun early in 1897, and on April 22—Arbor Day—the corner stone that marked the inauguration of the building was laid on the site of the prospective Arch of States with full Masonic ceremonial, after which a series of short appropriate addresses were delivered, including one by Hon. J. Sterling Morton, former Secretary of Agriculture, who said:

“A truth and a tree outlive generations of men. That this admirably planned Trans-Mississippi Exposition may plant truths as to the economic and material resources of its vast and opulent empire in the minds of the tens of thousands of intelligent visitors and sojourners who may attend it, with as cheerful a certainty and as serene a satisfaction as we experience in planting these trees on the never-deceiving, never-disappointing soil of the fertile Nebraska, is my sincere and intense desire.”

A month later architects met in Omaha to consider the preliminary plans for the larger buildings, and during the following sixty days the plans were completed and the contracts let. By midsummer the construction was in progress all round the main court, and the bulk of the grading had been completed. The general scheme of the architecture was the concept of Messrs. Walker and Kimball, of Boston and Omaha, who were chosen to be the supervising architects of the Exposition. The main buildings were ranged along either side of the lagoon. At the west end stood the Government Building, flanked by imposing colonnades, which converged toward the west. The Arch of States, the main entrance, was on the south line at Twentieth Street. After passing through this arch the visitor arrived at the Court of the Grand Canal. To the west was the Fine Arts Building, while to the east was the Liberal Arts Building, followed by the Mines and Mining Building. Opposite was the Administration Arch, with the Palace of Agriculture on the west, and the Manufactures Building, followed by the Machinery and Electricity Building, on the east. The Grand Canal was spanned by a picturesque bridge, built with little arches, to permit the passage of gondolas and various small boats. Its ends terminated respectively at the Government Building on the west and at the viaduct on the east. Vine-shaded promenades of columns treated in the Pompeian manner extended between all the buildings, and provided visitors with nearly a mile of continuous shade all round the lagoon. As the eastern end was approached the ground rose in terraces and was adorned with shrubbery and flowers mingled with pieces of statuary, ending in a great hemicycle stairway crowned by a kiosk or minaret on the viaduct. On either side of the esplanade beyond were fanciful structures with irregular spires. The buildings were covered with white staff. Intricate carving and classic statuary was imitated to a nicety, and the artistic effect produced by the finished buildings was such as has seldom been seen in this country. Statuary of heroic size surmounted some of the main buildings, and all these were done in staff. The imposing columns of the long colonnades and of the beautiful porticoes facing the main court were constructed of the same material. The landscape gardening was designed and executed by Rudolf Ulrich, of New York, under whose direction over 700,000 feet of ground was seeded and 14,500 square yards of sod laid and sprouted. More than 3,000 trees and nearly 9,000 shrubs, chiefly of varieties native to Nebraska, together with over 100,000 plants and flowers, were used in beautifying the “Magic City.”

Considering the buildings more in detail, and entering the grounds at the main entrance, the first structure to greet the visitor was the

Arch of States, which was designed by Walker & Kimball, and was 50 feet wide, 25 feet deep, and 68 feet to the top of the parapet. It was in the form of a triumphal arch, the opening being 20 feet wide and 35 feet high to the keystone. The arch was flanked on either side by exedras, which advanced in semicircles, partially embracing the plaza in front of it. In these exedras were the main ticket offices. It was originally intended that the Arch of States should be built of granite gathered from the various Trans-Mississippi States and Territories, and should remain a permanent memorial of the Exposition, but it was finally decided that the cost would be out of proportion to its utility, and the plan was abandoned. This arch, one of the most noticeable in the group of structures, was decorated with a frieze composed of the arms in colors of the different States, the whole being surmounted by sculptured figures bearing the shield of the United States.

Fine Arts Building.—This structure, designed by Eames & Young, of St. Louis, Mo., was 246 feet long and 130 feet wide, and had its longer side parallel to the Grand Canal. It consisted of two separate, symmetrical, domed buildings connected by a peristyle, or open court, surmounted by colonnades. The building rested on a balustraded terrace, and was approached from the plaza by flights of steps, and also from the avenue bordering the lagoon between it and the building. Entrance was had through the portico and vestibule to the central dome for each building, and it was lighted from the top, forming a suitable place for the exhibition of statuary. Surrounding this central feature were the galleries, all lighted by skylights, and so arranged as to afford the greatest degree of wall surface for the display of pictures, and to allow for the proper circulation of visiting crowds. Two separate buildings offered a better opportunity for the classification of material, and at the same time brought the scale of the architecture to its proper relation with its surroundings, and in accord with the general scheme of the Exposition grounds. The colonnade connecting the two parts formed an effective architectural feature conspicuous from the canal and opposite avenue, and afforded a place for the installment of architectural fragments and models, which could not be so effectively arranged inside the wall. A touch of landscape art added special interest to the treatment of the court. In the exterior design a somewhat free rendering of classic *motif* was adopted, the usual severe simplicity of outline being modified sufficiently to bring it into accord with the purpose of the building. The basis of the design was the Corinthian order, which was applied in two dimensions—the larger emphasizing the entrance porticoes and repeated on the galleries fronting the lagoon and opposite side; the smaller was adjusted to the height of the flanking walls and connecting peristyle, and served as a tie to bind the separate elements into one composition. Mr. Armond H. Griffith, of Detroit, Mich., was in charge of the exhibit, and to him credit is also due for the collection and installation of the exhibition.

The Government Building.—In the place of honor, at the extreme west end of the grounds, stood the building erected by the United States Government, designed under the direction of the supervising architect of the Treasury Department in Washington. The style of architecture followed was classic, the Ionic order being used. The building was arranged in three sections, that at the center having a frontage on the lake of 208 feet and a height to the top of the balustrade over a cornice of 58 feet, with a depth of 50 feet. The main entrance facing the center of the lagoon was reached by a

broad flight of steps and through a colonnade. The entrance was flanked on either side by pavilions, capped by richly decorated domes. The main building was surrounded by a colossal dome which towered above all other buildings, and which was capped by a heroic figure representing "Liberty Enlightening the World." At night the dome was lighted by electricity, and the torch was 178 feet above the ground. The side sections, which were separated from the central portion of the building by colonnades connecting with the Fine Arts Building on the south and the Agricultural Building on the north, each had a frontage of 148 feet and were 100 feet deep, with a height at the top of the balustrade of 44 feet, making a total length of the building of 504 feet and height at pinnacle of 178 feet. The floor space approximated 50,000 square feet, which was apportioned to the exhibits of the executive department and the

was richly decorated in this manner, and on either side of it were figures representing the "Sower" and the "Digger" from Millet's famous paintings, supported on either side by lesser figures and the arms of the State and nation. At each side of the great central arch were recessed niches, and crowning this central composition were three sculptured groups, those on either side representing the zodiac and the seasons, while the central figure crowning the whole composition represented "Prosperity," supported by "Labor" and "Integrity." At the corner pavilion there were figures representing the seasons and the favorable winds, and inscriptions relating to the subject of agriculture. Names of those who have been patrons of agriculture, or who have made notable inventions in that field of labor, were inscribed upon panels in the frieze. The superintendent in charge of this building was Prof. F. W. Taylor, of Lincoln, Neb.

THE GRAND CANAL AT NIGHT.

Smithsonian Institution, with its dependencies, and the Fish Commission. It was conceded that this exhibit was "better rounded, more attractive, and decidedly more instructive than any previous display of the United States Government." The commission under whose direction the exhibits were prepared and cared for consisted of J. H. Brigham, representing the Department of Agriculture, Chairman; C. E. Kemper, Treasury; F. W. Clarke, Interior; Lieut.-Commander E. M. Stedman, Navy; Major Henry C. Ward, War; W. H. Michael, State; J. B. Brownlow, Post Office; Frederick W. True, Smithsonian Institution; and William de C. Ravenel, Fish Commission; with William V. Cox, National Museum, as Secretary.

Agricultural Building.—This building was designed by Cass Gilbert, of St. Paul, Minn., and was 400 feet long and 148 feet wide, with a total floor space of 84,260 square feet. The style of architecture was of Renaissance or classical type, and the decorations and ornament were entirely modeled from agricultural products; festoons of corn and other cereals, and even common market garden products, were given place in the decorations. The great semicircular niche forming the main entrance

Administration Arch.—This building was designed by Walker & Kimball, and was 50 feet square and 150 feet high. Like the other buildings on the Main Court, the Administration Arch was Renaissance in style, and the graceful lantern that surmounted the sharply inclined roof was the highest point on the grounds, with the single exception of the colossal figure of "Liberty Enlightening the World," which capped the dome of the Government Building. On the front of the arch near the main cornice line were the seals of the State of Nebraska and of the city of Omaha, one on either side. Statuary of heroic size was used above the cornice to heighten the architectural effect. On each of the four pavilions were four symbolic figures, and at the center of the south side, facing the lagoon, was a group symbolizing "Administration." Between the roof and the main cornice was an open space, which was utilized as a point of observation, it being above the roofs of other buildings. The arch was used by the president of the Exposition as a place of exchange of official courtesies in the entertainment of distinguished visitors, and also contained certain of the offices of administration. At either side of the

arch were covered colonnades, connecting with the Manufactures Building on the east and the Agricultural Building on the west.

Manufactures Building.—This structure was designed by John J. Humphreys, of Denver, Col., and was 400 feet long by 152 feet wide. Its façade, fronting on the lagoon, was accentuated at the center and end with pavilions 64 and 40 feet long, respectively, thereby presenting a sufficient variety of mass. The height of the building to the top of the main cornice was 40 feet, the height of order 30 feet, resting on a stylobate 10 feet high. The height of the center pavilion to the top of the crowning group of statuary was 85 feet, while the end pavilion was 65 feet to the top of the dome. The large windows, 10 feet wide by 24 feet high, were placed at intervals of 16 feet, and the roof having a large skylight area made the interior very bright and cheerful. The center entrance was 24 feet wide by 34 feet high, and very rich in decoration, flanked on either side by coupled columns and their accompanying pilasters, standing 6 feet from the walls. The main cornice broke around a projection of columns supporting pedestals for groups of statuary 12 feet high. The center of the pavilion was crowned by a colossal group of statuary. There were also single statues between columns resting on a stylobate projected out to receive them. The spandrels above the arch were decorated with bas-reliefs. The end pavilions, with their entrances, were crowned with shallow domes. The entire interior elaboration was confined to classic ornaments. The ceiling, a large barrel vault with intersecting cross-vault, was richly coffered and elaborately decorated. On the walls were emblematic paintings. The superintendent was H. B. Hardt.

Machinery and Electricity Building.—This building was designed by D. H. Perkins, of Chicago, Ill., and was 304 feet long and 144 feet deep. The style of architecture followed was modern Renaissance, and was in harmony with the adjacent structures. There were triple entrances on the main floor level in the center of the main front, and similar groups in the centers of the east and west fronts, with four emergency exits in the north wall. In front of the building, flanking both sides of the main entrance, was an open portico 16 feet wide, running the entire front of the building. The center entrance feature projected beyond the portico, thus forming the grand-entrance vestibule. The main floor covered the entire area of the building. Above was a gallery 32 feet in width, extending around the four outer walls. The gallery was reached by spacious staircases in the front corners of the building. This left a high central court 248 feet long by 80 feet wide, lighted from the skylights and clerestory windows above the roof. The ornamental spandrels and panels received all of their *motifs* and suggestions from machinery. The cresting at the top was composed of cogwheels, this principle being carried out in all of the decorations. The underlying principles and functions of machinery were symbolized by the groups of statuary on the top of the building. At each of the four corners were groups representing the early supremacy of man over the untamed forces of Nature. A higher supremacy was shown by the center group, which was the dominating feature of the entire design. In this, man, developed beyond the youthful stage, having wisdom, takes these same untamed, unharnessed forces of Nature and harnesses them to his chariot, making them do his bidding, symbolizing in a direct way the service which machinery does for man in using the power of steam, fire, electricity, and gravity. The superintendent of both the department of machinery and the department of electricity was Prof. R. B. Owens.

Mines and Mining Building.—S. S. Beman, of Chicago, was the architect of this building which was 304 feet long and 140 feet wide. The Greek Ionic style of architecture characterized this structure. On the façade, facing the lagoon was a circular dome 150 feet in circumference that formed a grand, open vestibule and which served as an approach to the building. The inner dome was richly ornamented with ribs and panels, while the outer one was formed by a series of steps rising in the shape of a cone to the apex. An outer row of dome columns was detached and the entablatures were broken at the head of each, over which was a statue on a pedestal with a background formed by the stylobate of the dome. This treatment produced a monumental effect, and while in perfect harmony with the architectural style, was both original and interesting. Flanking the central dome were beautiful Ionic colonnades which formed covered ways along the entire façade, stopping at the corner towers. Over these colonnades were balconies that opened out from the interior galleries of the building. The four corners of the building were marked by square, plain towers surmounted by ornate, open, columned pavilions that were circular in form. Dr. David T. Day, of the United States Geological Survey, was in charge of the department, and most of the exhibits were secured through his efforts.

Liberal Arts Building.—The architects of this building were Fisher & Laurie of Omaha, Neb., and in length it was 246 feet with a depth of 130 feet. The design was of the French Renaissance style of architecture. Its location was immediately to the east of the Arch of States. The exterior of the building presented the appearance of two stories, the first story or stylobate being low in treatment, with small windows cut into a plain wall surface. The second story was enriched by Corinthian columns, set in pairs with ornamental windows between, and the top of the building was finished with an open balustrade which added to the general effect. At each corner of the building were pavilions with ornamental pediments projecting sufficiently from the main line wall to show a strong corner treatment. Above the pediments at each corner of the building were octagonal bases on which were set groups of statuary. Each group was composed of four heroic figures, the main one, representing the Liberal Arts, being supported by two kneeling figures suggesting industrial art, while in front of all was a smaller figure supporting a shield on which the attributes of pottery and wrought iron were inscribed. The class of exhibits for which the building was used was indicated by the free use of statuary and ornament on the exterior. Mrs. Frances M. Ford was the superintendent of the building.

To complete the group of buildings forming the Grand Court of Honor, mention must be made of the *Boys' and Girls' Building*, which was designed by Walker & Kimball, and the cost of which, \$9,000, was contributed by the children of the Trans-Mississippi region, and of the *Auditorium*, which was designed by Fisher & Laurie, of Omaha, Neb. These two buildings occupied respectively the northeast and southeast corners of the Court of Honor. On the Bluff tract was the

Horticultural Building, which was 300 feet long, 130 feet wide, and 160 feet high. It was designed by Charles F. Beindorf, who succeeded in producing a building singularly striking in its splendid masses, effective features, and excellent grouping. While a classic *motif* was adopted, it was handled with an unconventional freedom that gave to the whole a rich Oriental effect. The basis of design was the chaste Ionic. The details were modeled from flowers, fruits, and foliage. On either side of the stately

central entrance were towers, or rather mosquelike minarets. This feature was reproduced on four sides, forming an octagon from which sprang the dome. Between these minarets were placed circular colonnades, surrounded by statuary emblematical of the seasons. Above the dome was an open observatory balcony from which could be obtained a grand view not only of the Exposition grounds, but of the city and adjacent lakes, the picturesque valley of the Missouri, and the city of Council Bluffs, five miles away. Above this open balcony was the belfry. At the ends of the wings were octagonal-roofed pavilions in harmony with and emphasizing the general form of design. The wide frieze was beautifully ornamented with cupids reveling amid fruits and flowers. On either side of the main entrance on a high stylobate were placed groups of statuary representing "Night" and "Morning," festooned, the one with morning-glory and the other with night-blooming cereus. The building was profusely decorated with flower urns, hanging baskets, and ornamental plants of every description from semitropical climes.

At the extreme north end of the grounds was the *Transportation Building*, designed by Walker & Kimball. It was 432 feet long, 249 feet wide, and covered more than three acres of ground. Being one of the farm group, it had its characteristic architecture of half timber and half plaster. Its whole surface was marked off into panels by an interesting network of framing timber, posts, brackets, and braces. A deeply recessed porch sheltered the east and west entrances, and a soft light pervaded all portions, shed from a skylight of new and interesting material which promises to soon replace glass for that purpose. Wide, overhanging, bracketed cornices gave the broad shadows so necessary to this style of architecture. Here were housed all forms of vehicles, from the bicycle to a Pullman train, as well as all farm machinery and implements. D. H. Elliott was the superintendent of the Department of Transportation and Agricultural Implements.

To the west and directly opposite the Transportation Building were the *Apiary Building*, of Swiss mediæval architecture, designed by John McDonald, of Omaha, Neb., and the *Dairy Building*, in the German style, designed by F. A. Henninger.

Likewise on the Bluff tract were the State buildings. These included the

Georgia Building, built of Georgia pines and filled with an interesting state exhibit of minerals and other native resources.

Illinois Building, designed by Wilson & Marshall, of Chicago, Ill. The architecture was a combination of Colonial, Greek, and Byzantine styles.

Iowa Building, designed by Josselyn & Taylor, of Cedar Rapids, Iowa. It was 90 feet long and 56 feet deep, and was of a composite style of architecture with Corinthian porches.

Kansas Building, designed by John F. Stanton, of Topeka, Kan. It was 57 feet long by 55 feet deep, and is described as "a dignified structure with broad porticoes and ample balconies."

Minnesota Building, designed by James A. McLeod, of Minneapolis, Minn. It was 100 feet long and 160 feet wide, two stories high, and made of native logs, somewhat resembling a Swiss cottage.

Montana Building, a plain structure, 75 feet long by 60 feet deep.

Nebraska Building, designed by Craddock & McDonald, of Lincoln, Neb., and was of classic style following the Ionic order. It was 145 feet long, 90 feet deep, and 85 feet high.

New York Building, designed by Dunham Wheeler, of New York city, a one-story building surrounded by a broad portico.

Wisconsin Building, designed by A. C. Clas, of Milwaukee, Wis. It was in the classic style, with an imposing entrance through four immense fluted Corinthian columns.

Amusement Features.—These were grouped for the most part on the north side of the grounds on the thoroughfare at right angles to each other, and known, respectively, as North and East Midway Streets. The usual mechanical devices—such as a Giant Scesaw, a Scenic Railway, and Shooting the Chutes—were conspicuous, and as a novelty in this class of attractions there was a Union Pacific Miniature Train, said to be the smallest in the world, having a total length of 29 feet, including the locomotive, tender, 4 observation cars, 1 box car, and a caboose. Each diminutive car seated two children comfortably. The engine weighed about 450 pounds, and its nearest competitor was said to be a London locomotive weighing 5,000 pounds. Ethnological shows were common, and included an Afro-American village, a Chinese village, an English county fair, a Flemish village, a German village, an Irish village, a Japanese tea garden, a Moorish village, streets of all nations, Streets of Cairo, and the usual Wild West Show. There were a mammoth whale and an ostrich farm, as well as Hagenbach's trained animals for those who cared for natural history, and a baby incubator was a feature that attracted many. The little Cuban lady, Chiquita, only 26 inches in height and twenty-eight years old, was of interest. Cycloramas of Havana and the "Maine," and of the great fight between the "Merrimac" and the "Monitor," were adjacent to each other on the North Midway. The weird Night and Morning, the Haunted Swing, the Mirror Maze, Lunette, and other optical illusions were conspicuous. Several vaudeville theaters, concert halls, and beer gardens completed the catalogue of amusement features in the Midway.

Likewise to be included under this heading were the daily concerts given in the Auditorium by famous orchestras and bands, including those led by Theodore Thomas, William H. Santelmann, and F. N. Innes. Also fireworks were conspicuous and frequent features that attracted visitors in the evenings.

The Congress of Indians.—An ethnological exhibit of rare interest was the gathering of over 500 Indians, representatives of 25 tribes, who, by permission of the Commissioner of Indian Affairs, were brought from various reservations and assigned to camping grounds within the Exposition tract. For this purpose an appropriation of \$40,000 was obtained from Congress, and under the direction of Capt. William A. Mercer, U. S. A., the Indians were selected and brought to Omaha. As it was desired to exhibit the native methods of living so far as possible, the Indians came prepared accordingly to erect their various kinds of homes. The Sioux and other Indians from the plains raised their tipis of cloth decorated with the totem marks of their respective tribes. The Indians of the South built wickiups, which are little more than cloth spread over bushes, the tops of which were drawn together and tied. Those who came from Wisconsin prepared wigwams made almost wholly of birch bark stretched over poles. One of the homes that was conspicuous was a grass house made by the Wichitas of Oklahoma. In shape it was similar to the cloth tipis and covered with grass laid on the poles that run over the side of the structure. Also of interest was an adobe house built by the Santa Clara Pueblos, of New Mexico, that was identical with similar buildings erected centuries ago by the ancestors of these Indians. They came with their special costumes,

THE INDIAN ENCAMPMENT.

their weapons, utensils, industrial appliances, ceremonial objects, burial structures, and handiwork. At regular intervals entertainments were given, including horn dances, war dances, grass dances, scalp dances, and friendly dances, which were participated in by the Sioux, Blackfeet, Assiniboin, Crows, Apaches, and Wichitas; also sham battles, in which the Indians were divided into two parties led by chiefs and illustrative of their methods of warfare. The Sioux usually took the part of the attacking party, and appeared on the scene just in time to rescue a comrade from the stake. After brief engagements they succeeded in releasing the captives and driving off the enemy, only to be attacked in return by the re-enforced Indians, and on each occasion in the final charge they were defeated, leaving many of their braves upon the field. Under the supervision of James Mooney, of the Bureau of American Ethnology, there was a miniature reproduction, historically correct in all details, of the last great council of the amalgamated tribes of the Kiowas and Apaches. In the preparation of this circle Mr. Mooney had the assistance of several survivors of that famous council. Among the famous Indians present were Natchi, the chief of the Apaches, and his noted head man, Geronimo; also White Swan, a Crow, who was a scout under Gen. Custer, and who was badly wounded at the fight of Little Big Horn. It was considered doubtful as to whether it would be possible to ever again secure the presence of so many different representatives of the fast-vanishing aboriginal inhabitants of this country.

Stamps and Medals.—The Post Office Department issued a commemorative series of stamps in recognition of the Exposition. A picture indicative of the development of the region beyond the Mississippi river formed the center of the stamp. The denominations and views were as follow:

One-cent, "Marquette on the Mississippi," from a painting by Lamprecht, representing Father Marquette in a boat on the upper Mississippi preaching to the Indians. Color, dark green.

Two-cent, "Farming in the West," from a photograph representing a Western grain field with a long row of plows at work. Color, copper red.

Four-cent, "Indian hunting Buffalo," reproduction of an engraving in Schoolcraft's "History of the Indian Tribes." Color, orange.

Five-cent, "Frémont on the Rocky Mountains," from a wood engraving, representing the pathfinder planting the United States flag on the highest peak of the Rocky mountains. Color, dark blue.

Eight-cent, "Troops guarding Train," representing a detachment of United States soldiers conveying an emigrant train across the prairies, from a drawing by Frederic Remington. Color, dark lilac.

Ten-cent, "Hardships of Emigration," from a painting by A. G. Heaton, representing an emigrant and his family on the plains in a "prairie schooner," one of the horses having fallen from exhaustion. Color, slate.

Fifty-cent, "Western Mining Prospector," from a drawing by Frederic Remington, representing a prospector with his pack mules in the mountains searching for gold. Color, olive.

One-dollar, "Western Cattle in Storm," representing a herd of cattle, preceded by the leader, seeking safety from a gathering storm, reproduced from a steel engraving after a picture by J. Mac Whirter. Color, light brown.

Two-dollar, "Mississippi River Bridge," from an engraving of the great bridge over the Mississippi at St. Louis. Color, sapphire blue.

The issue included 100,000,000 1-cent, 200,000,000 2-cent, 5,000,000 4-cent, 2,000,000 8-cent, 5,000,000

10-cent, 500,000 50-cent, 50,000 \$1, and 50,000 \$2. The stamps were discontinued on Dec. 31, 1898.

The commemorative medal issued by the exposition authorities was unique and characteristic, and as usual was struck under the direction of the United States Treasury Department, by whom the dies were made. The obverse showed a medallion made after a composite head, the creation of an eminent artist, from the photographs of 48 beautiful young women, natives of the 24 Western States and Territories, thus idealizing the highest type of Western young womanhood. The legend was "Trans-Mississippi Exposition, Omaha, 1898." The reverse side bore in low relief a spirited group showing a typical American Indian mounted on a pony, in the act of spearing a buffalo. It represented a scene suggestive of the conditions existing in the West before the encroachments of the white man drove both Indian and buffalo into the mountains and finally accomplished their almost complete extinction. Below this design was "1848," being the date, half a century ago, when the Indian hunted the buffalo undisturbed.

Opening Exercises.—The opening of the Trans-Mississippi Exposition was set for June 1. On that day a civic procession two miles long marched to the Arch of States from the business center of Omaha, under the grand-marshalship of Major T. S. Clarkson, assistant to President Wattles and general manager of the fair. Owing to the war with Spain the escort of the military was omitted, except in so far as its place was filled by the High School Cadets and the Sons of Veterans. There were four divisions in the procession, and the organized bodies that marched included representatives from various fraternal and benevolent organizations. The Exposition officials, State and county officers, and invited guests were conveyed in carriages. The procession entered the grounds just before noon and proceeded to the wide space at the east end of the main court, where a temporary platform had been erected. This was occupied by the officials and distinguished visitors, the United States Marine Band, and the Exposition chorus. The "Star-Spangled Banner" was sung by the chorus to the accompaniment of the band, and after an invocation by Rev. Samuel J. Nichols, of St. Louis, addresses were delivered by President Wattles, Hon. John L. Webster, of Omaha, Hon. John N. Baldwin, of Council Bluffs, and the Hon. Silas A. Holcomb, Governor of Nebraska, and then came the following telephone message direct from President McKinley, who, with Vice-President Hobart, Speaker Reed, the Nebraska congressional delegation, and members of the Committees of Ways and Means of the House and Appropriations in the Senate, were gathered in the reception parlors of the White House:

"The events of the memorable half century which the Trans-Mississippi and International Exposition commemorates are interwoven with the history of the whole nation, and are of surpassing importance. The mighty West affords most striking evidence of the splendid achievements and possibilities of our people. It is a matchless tribute to the energy and endurance of the pioneer, while its vast agricultural development, its progress in manufactures, its advancement in the arts and sciences, and in all departments of education and endeavor, have been inestimable contributions to the civilization and wealth of the world. Nowhere have the unconquerable determination, self-reliant strength, and sturdy manhood of our American citizenship been more forcibly illustrated. In peace or war the men and women of the West have ever been in the vanguard. I congratulate the management upon its magnificent enterprise, and assure all who

participate in this undertaking of the deep interest which the Government has in its success."

At the conclusion of this message President McKinley touched the electric button that gave life to the waiting dynamos, and the Exposition was formally declared open to the world.

Exhibits.—There were 4,642 separate exhibits, which were distributed among the various buildings, including some from foreign sources that were housed in a small building north of the Administration Arch. Also 245 concessions and privilege contracts were made, which yielded a revenue of \$306,365.45.

Admissions and Attendance.—The price of admission was 50 cents for adults and 25 cents for children, except on Sundays and Monday and Thursday evenings, when the charge was 25 cents for adults and 15 cents for children, which rate also prevailed on Oct. 31, the closing day. The number

ber, provided that the presence of President McKinley and his Cabinet could be secured. The scheme was agitated in the local newspapers, and on Aug. 20 the President said: "I accept the invitation. . . . It seems to me proper that a President who has conducted a successful war should manifest his appreciation of the achievements and arts of peace as illustrated by the Trans-Mississippi Exposition." This acceptance led to the following action on Aug. 22 by the Exposition authorities: *Resolved*, That the Trans-Mississippi and International Exposition hold a Peace Jubilee under its auspices on the Exposition grounds at Omaha, Neb., from the 10th day to the 15th day of October, 1898, to celebrate the victories of the army and navy in the war between the United States and Spain and the terms of the proposed peace in the protocol between the two nations entered into by approval of the national administration."

EXHIBITION BY LIFE-SAVING SERVICE.

of persons visiting the Exposition was: Paid, 1,778,250; free, 835,258; total, 2,613,508. The record of admissions on the more important days was: June 1, Opening Day, 27,998; Sept. 22, Modern Woodman's Day, 52,725; Oct. 11, Government Day, 48,051; Oct. 12, President's Day, 98,845; Oct. 13, Army and Navy Day, 49,710; and Oct. 31, Omaha Day, 52,725. The largest single week was that of Oct. 7-15 (Jubilee Week), when the admissions amounted to 314,151, for which \$116,320.10 gate receipts were received. The total gate receipts during the Exposition were as follow: Preliminary period, \$20,074.37; Exposition period, \$781,441.10; total, \$801,515.47.

Peace Jubilee.—When the defeat of Cervera's fleet off Santiago made the result of the war with Spain a foregone conclusion, it was suggested to the Exposition authorities that it would be a wise plan to celebrate the conclusion of the hostilities by a peace jubilee, and accordingly it was decided to hold the same during the second week of Octo-

A committee headed by Senator Thurston was appointed to invite the President, his Cabinet, the members of the Supreme Court, members of the Senate and of the House of Representatives, foreign ministers and ambassadors, governors of States and Territories, officers of the army and navy, and other distinguished citizens, as well as the President of Mexico and the Governor General of Canada. Invitations to the number of 3,000 were sent to the governors of the States, and 2,000 were sent to the mayors of the larger cities. The President having designated Wednesday, Oct. 12, as the time when he would visit the Exposition, that day was appropriately designated as President's Day. The remaining days of the week were as follow: Monday, Mayor's Day; Tuesday, Governor's Day; Thursday, Army and Navy Day; Friday, Civil Government Day; and Saturday, Children's Day. Interest, however, naturally centered on Wednesday, and on that occasion 98,470 persons were registered as passing into the grounds. President Me-

Kinley arrived in Omaha on Tuesday attended by a brilliant suite, including Secretaries Gage, Smith, Bliss, and Wilson; Gens. Miles, Sumner, and Greeley; and ministers from the Argentine Republic, Brazil, China, and Korea, as well as other Government officials. He was escorted to the Omaha Club, where apartments had been provided for him, and on Wednesday was conducted, with visiting guests, to the Exposition grounds. When in their itinerary the Plaza was reached more than 75,000 people were gathered to greet the President. After an invocation by Rev. John McQuoid, Mr. Wattles presented President McKinley, who spoke eloquently, and on that occasion first indicated his opinion in regard to the acquisition of new territory, saying: "Shall we deny to ourselves what the rest of the world so freely and so justly accord to us? The men who endured in the short but decisive struggle its hardships, its privations, whether in field or camp, on ship or in the siege, and planned and achieved its victories, will never tolerate impeachment, either direct or indirect, of those who won a peace whose great gain to civilization is yet unknown and unwritten."

He was followed by Postmaster-General Smith, after which the other members of the Cabinet and Gen. Miles were informally introduced. The tour of the grounds was continued, and after a luncheon the Government Building was reached, where a short reception was held, and then the Indian encampment was visited, where a sham battle was given specially in honor of the visit of the Great Father. There were no public ceremonies on the remaining days of the week, although an unusually large attendance was had, and many distinguished persons visited the Exposition as guests of the authorities.

Receipts.—The total receipts of the Exposition from all sources up to Dec. 1 were \$1,924,077.69, of which amount the gate receipts were \$801,575.47 and the receipts from concessions \$306,365.45. The money on hand, Dec. 1, after the payment of 75 per cent. dividends to those stockholders who had paid up their subscriptions in full was \$115,833.79, a sufficient amount to return to all stockholders the remaining 25 per cent. subscribed by them. This financial result is unparalleled in the history of expositions.

Literary and Artistic Features.—The Exposition authorities have appropriated \$10,000 for the compilation and publication of an authorized illus-

trated history of the Exposition. During its life illustrated circulars were issued from time to time giving information of the principal features. The "Omaha Bee," whose editor, Edward Rosewater, was foremost in giving publicity to the Exposition, published two special illustrated numbers, giving a complete history of the fair; the first, on the opening day, June 1, and the second on the President's Day, Oct. 12. The larger magazines all gave accounts of the Exposition, accompanied with illustrations made by Mr. F. A. Rinehart, the official photographer. The photographs that illustrate the present article were taken by Mr. J. B. Morrey, who was connected with the Government Building, and to whose courtesy we are indebted for their use.

Greater America Exposition.—Soon after the close of the Exposition the desirability of holding during 1899 a Greater America Exposition was discussed. Accordingly a meeting was held on Dec. 15, when in sympathy with the statement included in the following petition, a permanent organization was affected.

"In view of the extension of the domain of the United States, which has created an irresistible popular demand for information concerning the people and resources of Cuba, Puerto Rico, Hawaii, and the Philippine Islands, and as the grounds and buildings devoted to the recent Trans-Mississippi Exposition are eminently adapted for an exposition illustrative of the manners, habits, and industrial capacity of the people of those countries, the undersigned citizens of Nebraska earnestly favor the proposed Greater America Exposition at Omaha in 1899, and respectfully urge our representatives in Congress to procure the necessary legislation for the recognition and participation of the United States Government and such national aid as may be deemed essential to its success."

Subscriptions exceeding \$100,000 were received, and a committee was named to draft a form of government and to secure the incorporation of the stockholders of the new exposition. The committee was as follows: Edward Rosewater, W. S. Poppleton, Herman Kountze, Herman Cohen, Frank Murphy, Charles W. Wilhelm, P. E. Iler, Thomas Kilpatrick, George A. Joslyn, J. H. Millard, Edward W. Nash, F. J. Coates, William R. Bennett, Dudley Smith, G. M. Hitchcock, T. P. Cartwright, N. A. Kuhn, Frederick Pattenrath, Samuel Gamble, George W. Kelley, J. J. Brown, J. H. Dumont, W. F. White, George P. Bemis, and Samuel Burns.

F

FARMERS' CONGRESS. More than a thousand delegates, who had been appointed and commissioned by the Governors of the several States and Territories as members of the Farmers' National Congress of the United States, convened in the auditorium of the Chamber of Commerce in its eighteenth annual session, at Fort Worth, Texas, Dec. 6, 1898. The Congress was in session four days. At 10 o'clock the Congress was called to order by ex-President Benjamin F. Clayton, who introduced the Hon. William D. Hoard, of Wisconsin, the president-elect. The permanent officers of the organization are as follow: President, Hon. William D. Hoard; Vice-Presidents, F. L. Maxwell, of Louisiana, and C. A. Wieting, of New York; Secretary, John M. Stahl, of Chicago, Ill.; Assistant Secretaries, D. O. Lively, of Texas, George A. Stockwell, of Rhode Island, and A. H. Dunlap, of Michigan; Treasurer, N. G. Spaulding, of New York; Executive Committee, Benjamin F. Clay-

ton, of Iowa, T. E. Orr, of Pennsylvania, H. E. Heath, of Nebraska. When the Congress had been called to order Bishop A. C. Garrett, of Dallas, offered prayer.

The Hon. John F. Henderson, acting mayor of Fort Worth, then welcomed the delegates in behalf of the city.

The Hon. Charles A. Culbertson, Governor of the State, extended a welcome in behalf of Texas. The addresses of the mayor and the Governor were responded to by Secretary Stahl and ex-President Clayton.

The president of the Congress in the course of his annual address said: "I congratulate you on the increased hope and encouragement that has come to the homes of the great mass of American farmers the past year. In almost every branch except cotton farming there has been a manifest improvement in prices. Let us hope that our brethren of the cotton field have gained something

in economic knowledge, which is, after all, the keynote of profit everywhere.

"Our agriculture is becoming nationalistic. This Farmers' Congress is one of the proofs of this assertion. The march of study, investigation, knowledge, have opened to the farmer a new view of the marvelous array of forces which surround him. Both the farmer and the men of science are coming to see that the farm constitutes a magnificent domain of intellectual conquest. We are just beginning to feel as a people that agriculture is an intellectual as well as a manual pursuit; that from the humblest tenant to the lordliest ranchman progress and profit depend on mental comprehension of the principles involved, and an energetic obedience to that comprehension. Comprehension means intellect; obedience means business. Some men are all intellect and no work; others are all work and no intellect. The true farmer unites both. Our common schools recruit the academy, the college, and the university, and they, in turn, recruit every profession but farming. Our young men flee to the towns and cities because we have educated them to do so. Nearly every European country is putting forth strenuous efforts to stop this tendency by teaching the elements of scientific agriculture in the common schools. It can be done as easily as the teaching of the elements of scientific arithmetic, or chemistry, or philosophy.

"The Farmers' National Congress is a patriotic body. The meaning of patriotism is self-sacrifice. Without sacrifice there can be no patriotism. The very fact that you have assembled here, many from a great distance and at your own expense, gives proof of your public spirit, your anxiety to benefit the cause of agriculture, and of your practical patriotism.

"Heretofore the cry has been more land, until the farm has become bigger than the farmer. This makes expensive farming. The necessities of the hour say, make the farmer bigger than the farm. The progress of economic thought and understanding has enriched every other class of society more than the farmer. A number of our farm products are produced just as expensively as they were forty years ago. Ancient farming no longer pays. Our ability to retain the markets of the world depend entirely upon our economic skill. Our talk about cheap land has, I fear, cheapened our thought and our estimate of what is involved. Expansion in acres or in national possessions will not help us. The expansion of the brain, skill, and judgment of the farmer will help. Let us never lose sight of, or forget, that the great objective point of all farmers' organizations is to make better farmers."

The usual standing committees were appointed and the routine business was transacted.

The Constitution has been amended in several particulars, mainly of minor importance.

Resolutions were adopted in favor of the Nicaragua Canal, rural free mail delivery, good roads and State aid in building them, laws against noxious weeds, liberal appropriations for the improvement of rivers and harbors, an American mail service to foreign countries in American steamships, more stringent laws against food adulteration, the development of the beet-sugar industry, laws providing that butterine, oleomargarine, and similar products shall not be exempt from the laws of any State by reason of being introduced into that State in the "original package," a law to prohibit the false branding of any food product as to the State in which it is produced or manufactured, the teaching of the elementary principles of agriculture in the common schools, farmers' institutes, laws requiring that the true name of any adulterated article of food be stamped thereon when exposed for

sale, more stringent laws against Texas fever, textile departments in connection with State agricultural colleges, and the bill to give the Interstate Commerce Commission adequate powers.

Many addresses were delivered, covering nearly every phase of farm industry. Among these the most prominent were that of Booker T. Washington, of Tuskegee, Ala., a promoter of industrial education of the negro race, that of Señor Miguel J. Romero, of Venezuela, and of Señor F. M. Del Rio, of the republic of Mexico.

The Legislature of Massachusetts had made an appropriation to cover the expense of the Congress, provided it would come to Boston in 1899, and that city was selected. After a free excursion of four days via Houston, Galveston, Waco, and back to Fort Worth, the Congress adjourned.

FINANCIAL REVIEW OF 1898. Political tension, more or less acute, prevailed in Europe, America, and Asia throughout the greater part of the year, though there was a remarkable absence of severe financial disturbance as the result of these political troubles. The occupation of Port Arthur by a Russian naval force, which was accomplished in December, 1897, was followed by preparations for the permanent retention of that port, and by further aggressive movements by Russia, which, early in the year, seemed to threaten a rupture of friendly relations between that country and England. Happily, however, the differences were adjusted and, through diplomatic representations and conferences, harmony was restored. One event was the deposition of the Emperor of China on Sept. 19 by the Empress Dowager, which was apparently the result of the influence of Russia. Germany and France retained the territorial and commercial concessions in China which they secured early in the year, England also retaining those privileges which had been previously enjoyed, and likewise securing important railway concessions. One notable event in the near East was the enforced evacuation, Nov. 14, of Crete by the Turks, at the demand of the allied naval forces, and the subsequent installation of Prince George of Greece as the High Commissioner of that island for the powers. An Anglo-Egyptian expedition, under command of Gen. Kitchener, captured Omdurman, Sept. 4, and disclosed the presence at Fashoda, south of Khartoum, of a French force under Major Marchand, which was held by the British general to be an unfriendly intrusion. The attitude of the British Government regarding this intrusion by Major Marchand caused intense irritation in France, resulting in a ministerial crisis. Active warlike preparations by England gave some color to the rumors that the situation would soon become acute and the financial markets at London and Paris grew tense, the bank discount rates advancing and international securities declining. The situation grew less grave toward the end of October, though during the following month the internal troubles in France at intervals threatened a revolution. The outbreak of war between the United States and Spain seemed likely to provoke intervention by France and Germany. The holdings in France of the Spanish external debt were very large and German bankers were also, to a great extent, interested in these securities. Hence the motive for possible intervention. The Spanish Government early in the year sought the material assistance of these powers, but the friendly attitude of England toward this country effectually prevented active interference, and later assurances were given of an intention to observe strict neutrality. The effect in the European markets of the war was chiefly observable in the fluctuations in Spanish 4-per-cent. external bonds, these being at first sharply depressed, and then irregularly par-

tially recovering when it was seen that the Spanish dynasty was not imperiled, and also that the interest on these securities would continue to be paid though the war had involved Spain in financial ruin.

Though there was some disturbance in our money and security markets following the disaster to the "Maine" in the harbor of Havana, Feb. 15, and also immediately succeeding the declaration of war, the derangement was only temporary owing to the strong financial position which the country enjoyed, and after the destruction of Admiral Montejó's fleet in the harbor of Manila by Commodore Dewey, on May 1, the utmost confidence was felt in the speedy termination of the war. The annihilation of Admiral Cervera's fleet at Santiago de Cuba, on July 3, and the surrender of the Spanish Gen. Toral, July 17, were quickly followed by overtures by Spain for peace. The war ended Aug. 12, one hundred and ten days after its beginning, and the treaty of peace was signed at Paris, Dec. 10, one hundred and twenty days after the signing of the protocol and seventy days after the assembling of the Peace Commissioners. Puerto Rico was formally surrendered by the Spanish on Oct. 18, and at the end of the year preparations were completed for the surrender of Havana.

On March 9 both houses of Congress unanimously placed at the disposal of the President \$50,000,000, to be employed at his discretion in the national defense. This fund being inadequate, Congress, on June 13, passed the war revenue act, authorizing a 3-per-cent. popular loan, not to exceed \$400,000,000, and also provided for additional internal-revenue taxes. The law required that the bonds should be issued at par, and that in allotting said bonds the several subscriptions of individuals should be first accepted and the subscriptions for the lowest amounts should be first allotted. Subscriptions for \$200,000,000 of the bonds were opened on June 13, and on the closing of the books, July 14, it was found that the total of subscriptions for \$500 and less was \$100,444,560, and the total in greater amounts than \$500, including certain proposals guaranteeing the loan, amounted to more than \$1,400,000,000, the loan being subscribed for seven and a half times over. The number of subscriptions for \$500 or less was 232,224, and the number for more than \$500 was 88,002. Allotments were made to 325,000 persons, but from the moment the bonds were issued a movement of concentration began, and gradually the original holdings of about 116,000 subscribers passed into the ownership of a little more than 1,000 persons, firms, and corporations. Toward the end of December the market price of the bonds was 107, indicating that the compulsory offering of the bonds at par resulted in a loss to the Government of a premium of at least 5 per cent., and, in the opinion of the Secretary of the Treasury, the whole loan of \$200,000,000 could have been sold, at the moment when the authorizing act was approved, at a premium of probably $2\frac{1}{2}$ per cent. In order to avoid derangement to the money market resulting from payments for the bonds, provision was made for settlements in installments of subscriptions for amounts of \$500 and over, and the Treasury Department also made liberal selections of specially designated depository banks throughout the country for the custody of public money. Consequently the money market was disturbed for only a brief period early in the fall, when there was a concurrent drain of money to the West for crop purposes and into the Treasury for bonds. After bond settlements were practically completed the holdings of the national bank depositories were about \$97,000,000, of which nearly \$50,000,000 were in banks

in New York city. At the end of the year the total deposits of public money in the banks amounted to \$94,085,680.

The expenses of the war with Spain were officially estimated by the Treasurer of the United States at \$164,932,228 up to the end of October. This result was obtained by deducting from the total expenditures of the War and Navy Departments the cost of the peace establishments of the previous year. Though the disbursements by the State Department were not included in this estimate, it was regarded as probable that the total war expenditures to the date above mentioned would not materially exceed the amount here stated. Adding the payments during November would make the total \$177,150,229. The disbursements in December were about \$16,000,000, making the total war expenditures for the year approximately \$193,000,000.

The following tabular survey of the economical conditions and results of 1898, contrasted with those of the preceding year, is from the "Commercial and Financial Chronicle."

ECONOMICAL CONDITIONS AND RESULTS.	1897.	1898.
Coin and currency in the United States, Dec. 31.....	\$1,948,665,430	\$2,179,019,124
Bank clearings in the United States.....	\$57,316,000,000	\$68,883,948,580
Business failures.....	\$154,800,000	\$130,662,899
Imports of merchandise (year).....	\$742,631,350	\$684,958,229
Exports of merchandise (year).....	\$1,099,743,554	\$1,255,494,358
Gross earnings 205 roads (year).....	\$1,037,502,518	\$1,117,615,560
Railroad construction, miles.....	1,850	3,018
Wheat raised, bushels.....	530,149,168	675,148,705
Corn raised, bushels.....	1,902,967,833	1,924,184,660
Cotton raised, bales.....	10,257,080	10,745,108
Pig iron produced (tons of 2,240 pounds).....	9,652,680	11,773,934
Anthracite coal (tons of 2,240 pounds).....	41,637,866	41,809,751
Petroleum (runs) production, barrels.....	34,625,386
Immigration into the United States (fiscal year).....	230,832	229,233

The foreign commerce of the fiscal year ending June 30, 1898, was phenomenal. Exports of domestic products and manufactures amounted in value to \$1,210,291,913, while imports were \$616,049,654, an excess of exports over imports of \$594,242,259. The value of exports of agricultural products alone was \$853,683,570, exceeding by \$54,355,338 the highest ever before recorded. Exports of manufactures were \$290,697,354, also the greatest on record. One notable fact shown by the foreign-trade statement was that for the first time in our history exports of domestic manufactures were larger than the imports of foreign manufactured goods, while the total exports of the fiscal year were twice as great as the imports, and the favorable trade balance was more than double that of any previous year. The imports of gold for the fiscal year were larger than in any preceding year, amounting to \$120,391,674, while the exports were smaller than in any year in the present decade, being only \$15,406,391, making the net imports \$104,985,283. Domestic gold deposits at the mints were \$69,881,120 and foreign gold deposits \$73,687,448. The improvement in foreign-trade conditions continued after the close of the fiscal year. The returns for November showed the unprecedented total of \$129,783,512 exports, while imports were \$52,100,560, making a favorable trade balance of \$77,672,952. The statement for eleven months of the calendar year ending Nov. 30 showed exports of \$1,117,681,199, and imports \$579,844,153, a favorable trade balance of \$537,837,046. Net gold imports for the eleven months were \$134,421,054, and net silver exports \$22,048,703. The

statement for twelve months of the calendar year ending Dec. 31 showed merchandise exports of \$1,255,494,358 and imports of \$634,958,229, making the favorable trade balance on the merchandise movement \$620,536,129. Exports of gold were \$16,194,954 and imports \$158,151,852, a net import of \$141,956,898. Exports of silver were \$53,797,104 and imports \$29,126,256. Exports of merchandise, gold and silver, \$1,325,486,416, imports \$822,236,337, making an apparent favorable balance of \$503,250,079. Exports of manufactures were \$307,924,994.

Money.—The most striking feature of the money market this year was the abundance of gold coin in the Treasury, in the banks of this city, and in circulation. The net gold held by the Treasury at the end of 1897 was \$160,911,547, while at the close of the current year it was \$246,529,176. On May 4, 1898, the net gold was \$181,240,389, but the extraordinary expenses of the war caused a reduction by June 18 to \$163,474,057. The proceeds of the war loan, which were largely paid in gold, afforded relief, the reserve grew rapidly, and on Oct. 7 it was \$245,063,796, the highest point ever attained. Then followed a reduction, due to the increased use of gold in disbursements, but in November the reserve recovered, and on Dec. 17 it stood at \$246,027,638. At the beginning of the year the associated banks of New York held \$106,588,500 specie, largely consisting of gold. By July 2 this had increased to \$186,070,200. Then came a reduction, caused by payments for the 3-per-cent. bonds, to \$128,899,800 by Sept. 17, followed by a recovery to \$169,756,300 by Dec. 31. The amount of gold reported by the Treasury in circulation Jan. 2, 1898, was \$547,568,360, and on Jan. 2, 1899, \$667,796,579, a gain during the year of \$120,228,219. Gold was so abundant during the last half of the year that payments of the metal for duties at the New York customhouse were very largely in this coin, reaching 80.5 per cent. in December. Still another notable fact is that there was a wide distribution of money throughout the country, and even in comparatively remote agricultural sections the bank reserves were so large that money ruled at abnormally low rates.

The condition of the New York Clearing House banks, the rates of interest, exchange and silver, and the prices of United States bonds on Jan. 3, 1899, compared with the same items for the preceding two years, are given in the following table:

ITEMS.	1897.	1898.	1899.
NEW YORK CITY BANKS:			
Loans and discounts.....	\$491,375,900	\$607,781,600	\$713,803,800

The loans of the New York associated banks at the beginning of January were \$609,776,900. After rising to \$646,915,200 by Feb. 19, the disturbances occasioned by the disaster to the "Maine" caused a reduction to \$570,193,100, the minimum of the year, by April 30. Then confidence was restored by the naval victory at Manila, and loans rapidly increased to \$672,173,900 by Sept. 3. After a reduction to

\$635,572,800 by Oct. 1, loans were again increased, reaching the unprecedented total of \$718,308,700 on Dec. 31. The movement in legal tenders was the reverse of that for specie, these notes being more desirable for circulation. The amount held at the opening of the year was \$87,074,200. This was increased to \$104,150,300, the maximum, by Feb. 4. Then came a decrease to \$49,029,200, the minimum, by May 7, followed by an increase to \$63,462,000 by July 2, and the amount at the end of the year was \$55,184,100. Deposits were \$685,592,500 at the beginning of the year, rising to \$738,683,300 by Feb. 11, falling to \$658,503,300, the minimum, April 23, and reaching the unprecedented maximum, \$823,037,700, Dec. 31. The surplus reserve was \$22,264,575 at the beginning of the year. The maximum, \$62,206,250, was reached June 18, and the minimum, \$4,240,400, Sept. 17. The amount at the close of the year was \$19,180,975.

Money on call loaned at the Stock Exchange during the year at 6 per cent. and at 1 per cent. The higher rate was recorded during the first week in January and again in September, the market being influenced at the first-named period by operations incident to the January settlements, and in September by the concurrent drain of money from the banks into the Treasury for bond payments and to the interior for the crop movement. With these exceptions, the money market had an easy tendency, and the weekly average was from 1½ per cent. to 3½ per cent., the latter in April, until the fall months, when the average was about 2½ per cent., reflecting an increased demand resulting from the large business in stocks and other securities. With the exception of a brief period during March and in April, when the situation was disturbed by the events anterior to the outbreak of the war with Spain, money on time was in abundant supply, and though the demand was only fair, rates were not unusually low. The apprehension of widespread derangements of the money market as the result of war, which led to large withdrawals of deposits by the interior banks and more or less hoarding of money, was quickly dispelled after the signal victory of Commodore Dewey at Manila, and rates for sixty-day money, which ranged from 3½ per cent. to 6 per cent. in March and April, fell to 3 per cent. in May, and to 2 per cent. in July, while ninety-day to six-months' money dropped from 6 per cent. in March and April

to 3 per cent. in May, and to 2½ per cent. in June. In the fall rates were a little firmer, ruling at 2½ to 3 per cent. for sixty-day, and at 3½ to 4½ per cent. for ninety-day to six-months', until December, when money for the last-named periods was obtainable at 3 per cent. Commercial paper commanded from 3 per cent. to 6 per cent. for sixty- to ninety-day indorsements, until May, influenced by the conditions

above noted, but after May rates grew easier and the range for the remainder of the year for indorsements was from $2\frac{1}{2}$ per cent. to $4\frac{1}{2}$ per cent., the former in December and the latter in September. First-class four to six months' single-name paper ranged from $3\frac{1}{2}$ per cent. to 7 per cent. until May, and from $3\frac{1}{2}$ per cent. to 5 per cent. thereafter, being easy at $3\frac{1}{2}$ to $3\frac{3}{4}$ per cent. in December. The general revival of business and growth of confidence which followed the victories in July and the ending of the war enabled collections by merchants to be promptly made, and therefore there was comparatively little need for borrowing, and hence the offerings of commercial paper were small. At the same time the demand for paper was quite general, not only from New York and Eastern banks and other institutions, but from banks in the chief Western cities, who thus sought to employ their increasing balances. Investments were also made by these Western institutions in railroad and other mortgages, and in sterling exchange, and in the last two months of the year reports were quite general of abnormally large balances held by banks in comparatively remote sections of the country, and of reductions in rates of interest on deposits, indicating an unexampled plethora of unemployed money. One notable feature was the large clearings of the associated banks of New York. On Nov. 15 the clearings amounted to \$240,800,402, and on Dec. 13 to \$233,468,989. The clearings for the week ending Dec. 17 were \$1,119,883,255, and in the following week the total was \$1,022,436,939. The daily average during the week ending Dec. 17 was \$186,647,209, and the largest previous daily average was \$159,232,190 in 1881.

The following is the New York Clearing House statement of totals at the beginning of each quarter of 1898 and at the end of the year:

DATE.	Loans.	Specie.	Circulation.	Deposits.	Legal tenders.
January 3.....	\$609,776,900	\$106,588,500	\$15,571,900	\$685,592,500	\$87,074,200
April 2.....	595,851,200	141,556,200	13,865,500	682,236,800	64,723,800
July 2.....	620,983,800	186,070,200	14,659,800	750,074,600	63,462,000
October 1.....	635,572,800	136,314,400	15,498,400	702,128,200	54,544,800
December 31.....	718,308,700	169,756,300	16,270,600	823,037,700	55,184,100

Stocks.—The stock market was favorably influenced in January by the improvement in trade conditions, by ease in money, and by increased railroad earnings, and there was an exceptionally good demand for railroad bonds, sales of which were almost unprecedented in magnitude, reaching a total for the month of \$92,870,210. The Vanderbilt stocks were the favorites with speculators and investors, and Lake Shore and New York Central were directly affected by the proposed merger of the two roads. The completion of payments to the Government for the Union Pacific road caused the stock of this company to advance sharply, and the large increase in earnings and the acquisition of the Seattle, Lake Shore and Eastern Railroad by the Northern Pacific stimulated buying of the stock of the last-named road. Among other influences operating on the market were the success of the Illinois Central bond negotiation, the offer of refunding bonds by the Rock Island, the purchase by the Erie of the New York, Susquehanna and Western, and the declaration of a dividend by the Mobile and Ohio. The discussion of the Cuban question in the House of Representatives, and the dispatch of the "Maine" to Havana served to depress the market only temporarily, and the tone was generally strong at the close of the month. After opening active and higher in February there was an unsettling fall caused by the De Lome incident, followed by a general decline on news of the disaster to the "Maine" in the harbor of Havana, and the

tendency was downward until near the end of the month, when European buying of our securities aided in a recovery. The rally was feverish, however, the indications pointing to a speedy rupture of friendly relations between the United States and Spain. The market was almost continuously weak during March, influenced by the Cuban situation. The dispatch of two transport vessels by the Government with supplies for the starving *reconcentrados* at first caused some friction at Havana, and the reported demand by Spain that Gen. Lee, the United States consul general, be recalled, created a feeling of uneasiness which was reflected in the stock market. The action of Congress in unanimously placing \$50,000,000 at the disposal of the President for strengthening the national defenses, and the immediate preparations for war on the part of the Government, had a greatly disturbing effect upon the stock speculation. The market was unsettled and lower until the 28th, when, concurrently with the transmission to Congress by the President of the report of the Court of Inquiry on the "Maine" disaster, there came rumors that the Spanish Government had consented that the United States should be allowed to feed the starving *reconcentrados*, and had also made other material concessions. These rumors caused a sharp upward reaction in the market, but immediately after news that Spanish war ships had left Cartagena, and that an unsatisfactory reply had been received by this Government to its demands upon Spain, distinctly foreshadowed the outbreak of war, and stocks were unsettled and weak at the close of the month. The market was less excited early in April, notwithstanding the rupture of diplomatic relations with Spain, mainly for the reason that our foreign trade position was exceptionally strong, giving us control of large amounts of foreign gold, thus furnishing

assurance that our finances would not be disturbed by war. Moreover, preparations for a conflict were being actively made, and the feeling prevailed that, owing to the disparity in strength of the combatants, the war would be of brief duration. The President's message, urging intervention in Cuba and asking for authority to use the army and navy for this purpose, was followed by the adoption of resolutions by Congress practically in accordance with the President's suggestion, and diplomatic relations with Spain ended on the 21st. These events had comparatively little influence upon stocks, and the market was almost stagnant at intervals until news came of captures of Spanish vessels by the blockading fleet off Cuba and the bombardment of Matanzas, whereupon there was a partial recovery, and the speculation was more active for the remainder of the month. News of the decisive victory won by Commodore Dewey on May 1, involving the destruction of the Spanish fleet at Manila, caused a sharp advance in the stock market on the following day, and on the receipt on May 7 of official details of the engagement there was a further rise in prices. Speculators and investors manifested great confidence in the situation; purchases were large, not only for domestic but for European account, and the tendency was upward thereafter, especially in the Granger stocks, which were affected by the encouraging outlook for the crops. Until the Spanish fleet commanded by Admiral Cervera was definitely located in Santiago harbor there was some apprehen-

sion lest an attack might be made upon some of the Northern cities, but the stock market was only temporarily disturbed, and the tone was strong at the close of the month. The chief favorable influences operating upon stocks early in June were easy money, continued improvement in trade conditions, and European purchases of leading properties. The speculation gradually grew broader and the tone more confident, and one important feature was the demand for railroad mortgages, notwithstanding the impending authorization of an issue of \$200,000,000 Government bonds. Naval operations were chiefly concentrated upon Santiago de Cuba, with a view to the capture of Admiral Cervera's fleet, while the army, under Gen. Shafter, began a siege against that stronghold, and there appeared to be the utmost confidence felt by speculators in stocks that these operations of the navy and of the army would be successful. The news of the sinking of the "Merrimac" on June 3 by Naval-Constructor Hobson at the mouth of the harbor of Santiago de Cuba had a decidedly stimulating effect upon the market. The collapse of the Chicago wheat deal on June 13 had a disturbing influence upon stocks, for it was feared that it might result in heavy failures and in a derangement of the money market. The realizing sales in stocks were large and the tone was heavy for a few days, but this was succeeded by a more confident feeling, caused by news that the Chicago trouble was likely to be wholly local, and, influenced by the foreign-trade statement for May and by the offering of the Government loan of \$200,000,000 3-per-cent. bonds, the market gradually advanced, and it closed strong with good buying of leading properties stimulated by news of a general movement of our forces upon Santiago de Cuba. The announcement of the destruction of Admiral Cervera's fleet as it was endeavoring to escape from Santiago de Cuba caused a sharp advance in stocks at the beginning of July, and there was a further improvement following news of the surrender of the Spanish army in Santiago to Gen. Shafter. The speculation was less active after the middle of the month, though the tone was generally strong, and it was not greatly affected by the prospects for dearer rates for money resulting from the payments for the 3-per-cent. Government bonds. The opening on the 26th by Spain of negotiations for peace had no specially stimulating influence upon the market, and it was comparatively quiet for the remainder of the month. The signing of the peace protocol and the suspension of hostilities had a marked effect upon the speculation in August, and the tendency was upward on large transactions led by the Grangers. The withdrawal of our troops from Santiago de Cuba, the occupation by Gen. Miles of Puerto Rico, and the capture of Manila encouraged buying of stocks by the arbitrage houses; and though money was more active in consequence of the absorption of the proceeds of the 3-per-cent. bonds by the Treasury, this fact had little depressing effect, mainly for the reason that imports of gold from Europe had been resumed and also that the Treasury Department was seeking to relieve the money market by depositing funds in specially designated depository banks. The stock market was heavy during the greater part of September, influenced by active money, but chiefly by realizing sales in the Grangers and by vigorous bearish demonstrations upon the industrial stocks, principally Sugar and Tobacco. As bank reserves decreased in consequence of the drain into the Treasury of money paid for bonds, and to the interior for the movement of crops, loans upon stock collateral were called, resulting in liquidation of speculative accounts, and the violent declines in industrial properties led to such discrimination against these

stocks by lenders of money as made borrowing upon them difficult. One notable exception to the general declining tendency was Baltimore and Ohio, which advanced on news that the president of the Great Northern had acquired a large interest in this property. The market improved in October, influenced by easier money, encouraging trade reports, and good crop prospects, but the movement was comparatively slow, the most active stocks being Sugar and Tobacco. Toward the end of the month there was a disposition on the part of speculators to await the result of the November election, and some apprehension was felt lest the sound-money and the Administration majority in the House would be materially reduced. This expectant attitude continued during the first week in November. The news of an increased sound-money majority in the Senate, as the result of the election of legislatures favorable to such policy, and the assurances of the retention of an Administration majority in the House of Representatives, caused the market to rise sharply after the election, and it was quite strong, with large transactions in leading stocks and bonds, to the close of the month. The anthracite coal properties were early in November depressed by speculative selling, based upon the unfavorable conditions of the coal trade, but later there was a recovery on rumors of the adjustment of the differences between the various interests. The market was active and higher in December, gradually broadening, and during the second week transactions were unprecedentedly large, reaching 4,311,433 shares of stock and \$39,244,400 railroad mortgages. Though the advance was accompanied by realizing sales, the offerings were promptly absorbed and the tendency was almost uninterruptedly upward. Among the favorites was Federal Steel, which was directly influenced by the improved condition of the iron trade and by the largely increased demand for manufactured products of iron and steel. A very decided impetus was imparted to the speculation by the signing of the peace treaty and also by the foreign-trade statistics for eleven months of the current calendar year. The market was strong to buoyant after the middle of the month, so continuing to the close.

Total sales of stocks at the New York Stock Exchange for 1898 were 112,699,957 shares, against 77,324,172 in 1897; 54,490,643 in 1896; 66,583,232 in 1895; 49,075,032 in 1894; 80,977,839 in 1893; 85,875,092 in 1892; 69,031,689 in 1891; 71,282,885 in 1890; and 72,014,600 in 1889.

The following shows the highest prices of a few of the speculative stocks in 1897, and the highest and lowest in 1898:

STOCKS.	1897.	1898.	
	Highest.	Highest.	Lowest.

The Crops.—There was an improvement in the grain crops of Europe during 1898, but this gain was not sufficiently marked to meet the requirements of these countries without large importations. The wheat crop in the United States was greatly in excess of that of 1897, and indeed the largest on record, exceeding by 63,368,705 bushels the phenomenal yield of 1891. The conditions during the maturing and the harvesting of the staple were exceedingly favorable. The crops of corn and of oats were also in excess of those of the previous year, while the yield of cotton was almost the largest on record. Early in April wheat for May delivery advanced to \$1.25 per bushel, stimulating a rise in the price of other cereals, and the market value of cotton also improved. In May there was a further rise in wheat, on news of the suspension by France and Italy of their import duties, and the price of the May option in the New York market rose to \$1.91 per bushel. Later in the month there was a sudden fall in the price, due to realizing sales based upon the report of the Agricultural Department, which made the general condition of winter wheat 86.5 per cent., against 80.2 at the same time in 1897. The speculative wheat deal in Chicago collapsed in June, and the price of the July option fell from \$1.03 on June 1 to 75½ cents on June 20. The official report of the condition of winter wheat on June 1 was 90.8 per cent., and of spring wheat 100.9 per cent. The report for July 1 showed a decline in the condition of winter wheat to 83.7 per cent. and of spring wheat to 95 per cent., but conditions improved in the following month not only for wheat but for corn, copious rains relieving the drouth. Stocks of wheat in farmers' hands were small at the beginning of the season, the grain was in large request at the harvest, and visible supplies were reduced in August to the lowest in many years. The export demand for wheat was good in September and it grew urgent in the following month, stimulated by the unsettled political situation in Europe, and cash wheat in New York advanced from 73½ cents on Oct. 1 to 80½ on Oct. 24. The improvement in price continued to the end of the year, responding to the large domestic and foreign demand, and the New York market closed on Dec. 31 with wheat 81½ cents, while cash corn was 44½ cents per bushel. Cotton was also strong at 5½ cents per pound for middling uplands.

The following shows the yield and the value of the crops for the years 1897 and 1898 on the basis of the price at New York at the beginning of the years 1898 and 1899:

PRODUCTS.	CROP OF 1897.			CROP OF 1898.		
	Yield.	Price, Jan. 3, 1898.	Value.	Yield.	Price, Jan. 3, 1899.	Value.
Wheat, bnshels.....	530,149,168	\$1 02½	\$542,077,524 28	675,148,705	\$0 81½	\$548,558 322
Corn, bnshels.....	1,902,967,933	33½	642,251,678 48	1,924,184,660	44½	\$56,262,173

Total values.....			\$1,488,934,781 76			\$1,720,358,042

Foreign Exchange.—The exports of merchandise for the year ending Dec. 31, 1898, were \$155,785,313 above those of 1897, and the imports of domestic and foreign merchandise were \$107,637,000

less. The excess of merchandise exports over imports for the year was \$620,536,129, against \$357,113,816 for 1897. The excess of exports over imports of merchandise, coin, and bullion for 1898 was 503,250,079, against \$382,946,395 in 1897. Gold exports were \$141,956,898 in excess of the imports in 1898, against \$253,589 imports in excess of exports in 1897.

Purchases of sixty-day sterling for investment operations, to hold until it ran to sight, which were the feature of the exchange market at the close of 1897, continued to be the feature in January. After opening at \$4.82½ for sixty-day and \$4.85½ for sight, the market gradually advanced to \$4.83½ for the former and \$4.86 for the latter, but on the 10th the tone grew easier, though rates declined only fractionally, and the feature for the remainder of the month was a good inquiry for long sterling and commercial bills resulting from investment operations in exchange. The inherent weakness of the market was disclosed in February, when, influenced by the disturbing events of that month and by the advance in rates for money, investment holdings of sterling were marketed and concurrently there were large offerings of exchange drawn against purchases of stocks for European account. Rates fell heavily and gold began to move from London for New York toward the close of the month. After opening at \$4.83½ for sixty-day and \$4.86 for sight, and advancing to \$4.84 for the former and \$4.87 for the latter by the 14th, there was a decline to \$4.82½ for sixty-day and \$4.85 for sight by the close of the month, and long bills were then freely sold as low as \$4.81½ and short bills at \$4.84. The tendency for exchange was downward during March, rates falling from \$4.82½ for sixty-day and \$4.85 for sight at the opening of the month to \$4.81 for the former and \$4.84½ for the latter by the close. The importations of gold from Europe and from Australia, amounting to \$29,158,400, were remitted for with bills which had been bought for investment, and therefore these remittances had no influence upon the market. In April the exchange market was weak, rates falling from \$4.82 for sixty-day and \$4.85 for sight at the beginning of the month to \$4.80 for the former and \$4.84 for the latter by the 12th, and fractionally reacting by the close of the month, when there was a firmer tone. The Bank of England rate of discount was advanced on the 7th, and this tended to widen the difference between long and short. One feature was the sale of sixty-day bills at \$4.79½ and of sight bills at \$4.83½ on the 21st. Imports of gold from Europe and Australia amounted to \$24,259,791. The tone of the exchange market was firmer in May, and gold imports fell off to \$9,518,990. Easier money here induced some buying of long sterling for investment, purchasers taking advantage of the low prices ruling for these bills early in the month. Rates opened at \$4.81½ for sixty-day and \$4.85 for sight, with sales at \$4.80½ for the former and \$4.84 for the latter, and there was an advance by the close of the month to \$4.85 for sixty-day and \$4.88 for sight.

The movement was irregular in June, the tone being strong early in the month and easier thereafter, partially recovering by the close. Then business in exchange was somewhat restricted, owing to the un-

certainty which existed regarding the effect of the stamp tax upon bills under the new internal-revenue law. Rates opened at \$4.85 for sixty-day and \$4.88 for sight, advanced to \$4.85½, falling to \$4.84½ for the former, and closed at \$4.85 for sixty-day and \$4.86½ for sight. The business in exchange was deranged early in July, first by the inability of bankers to obtain a supply of stamps, and also by a misunderstanding of the requirements of the internal-revenue law. One drawer of exchange, acting under the advice of counsel, affixed a two-cent stamp to demand drafts instead of a four-cent *ad valorem* stamp, and Canadian bankers claimed that drafts drawn in Canada and payable abroad were not taxable in this country. The Commissioner of Internal Revenue on the 7th ruled that demand drafts were taxable as bills of exchange and not as checks, and thereafter all drawers conformed to this ruling, but trading in these bills was greatly restricted. The market opened at \$4.85 for sixty-day and \$4.86½ for sight, rose to \$4.85½ for the former and \$4.87 for the latter, fell to \$4.84½ for sixty-day and \$4.86 for sight, and closed only fractionally higher at \$4.85 for the former and \$4.86½ for the latter. A small engagement of gold was made in London for shipment to New York at the end of the month. Early in August the Commissioner of Internal Revenue reversed his ruling of the previous month in the matter of stamps on demand exchange, holding that they required only a two-cent stamp, the same as domestic checks. The effect of this decision was shown in the revival of trading in demand bills and in a broader market for exchange. Rates opened at \$4.84½ for sixty-day and \$4.86 for sight, advanced to \$4.85 for the former and \$4.86½ for the latter, fell to \$4.84 for sixty-day and \$4.86 for sight by the middle of the month, and closed at these figures. Engagements of gold in Europe for shipment hitherto were small, amounting to \$2,855,000. The exchange market was influenced in September by dearer rates for money and also by an advance in the Bank of England rate of discount, which was made in order to check the movement of gold from London to America and to the Continent of Europe. The tendency was downward throughout the month. Rates opened at \$4.84½ for sixty-day and \$4.86 for sight, fell to \$4.82 for the former and \$4.84½ for the latter, closing at these rates. Gold imports during the month were \$11,738,242, but part of this gold was in transit for Cuba. Buying of long sterling for investment was resumed early in October, though the purchases were somewhat limited, but there was a profit in the operation, discounts in London advancing in consequence of financial tension at Berlin. The tone of the market was easy, there being a liberal supply of cotton and grain bills. After the middle of the month the market grew firmer, purchases of long sterling for investment were light, and gold imports fell off, the total for the month amounting to \$8,319,000 from Europe and \$3,750,000 from Australia. Rates opened at \$4.82½ for sixty-day and \$4.85 for sight, and advanced by the 21st to \$4.83 for the former and \$4.86½ for the latter, closing at these figures. In November the business in cable transfers was unsettled by the fact that some bankers, contending that these drafts were clearly taxable as checks, affixed a two-cent stamp instead of a four-cent *ad valorem* stamp. The attention of the Commissioner of Internal Revenue was called to the matter, and late in the month he ruled that the law was clear and that four-cent *ad valorem* stamps were required. Thereupon the use of two-cent stamps was discontinued by all drawers. Rates opened at \$4.83 to \$4.83½ for sixty-day and \$4.86 to \$4.87 for sight, fell to \$4.82 for the former and \$4.85 for the latter,

in consequence of a pressure of commercial bills and also because of dearer rates for money here and easier discounts in London, and the market closed heavy at \$4.82 to \$4.82½ for sixty-day and \$4.85 to \$4.86 for sight. The lower rates for exchange and more or less financial tension at Berlin caused a renewal of purchases of long sterling for investment early in December, and by the middle of the month it was estimated that about \$30,000,000 had been so bought and that it was hypothesized with New York banks and other institutions. The offerings of commercial bills were liberal, but these were promptly absorbed and the tone of the market remained firm, so continuing to near the end of the month, when it grew dull and barely steady. Rates were \$4.82 to \$4.82½ for sixty-day until after the middle of December, when the latter were uniformly quoted at \$4.82½. Rates for sight were \$4.85½ to \$4.86 during the entire month. Though rates for actual business in sight were slightly above the gold-importing point, gold continued to move in moderate amounts from London to New York and from Australia to San Francisco, and there were comparatively large sums shipped from Paris to this city in transit for Cuba.

Railroads.—The revenues of the railroads of the country gradually improved after the beginning of the war with Spain and the improvement was rapid in the last half of the year. Reports of gross earnings of 200 roads show a total of \$1,117,615,550, against \$1,039,298,831 in 1897, a gain of \$76,316,719 on an increase of 1,506 in mileage. The gain in earnings was largely due to the increase in the volume of agricultural products moved, to the general revival of trade which followed the ending of the war with Spain, to the prosperity of the farming sections of the country, to the wide distribution of merchandise, and to the movement of iron ore from the lake regions. There were no general labor troubles and the floods in the Mississippi valley, which were so disastrous in the previous year, proved comparatively unimportant in 1898. The Southern roads greatly benefited by the transportation of troops, and there was an enlarged passenger traffic over Western lines. The rate situation was discouraging, especially between Chicago and the seaboard, and in the latter part of the year grain was carried as low as ten cents per hundred pounds. One important event was the decision in October by the United States Supreme Court against the legality of the Joint Traffic Association. In March the decision of the court of last resort against the Nebraska maximum freight-rate law was announced. Among the other important events of the year were the consolidation of the Lake Shore and the New York Central; the purchase by the Northern Pacific of the Seattle, Lake Shore and Eastern; the acquisition of the New York, Susquehanna and Western by the Erie; the promulgation of the reorganization plan of the Baltimore and Ohio, followed by the obtaining by the President of the Great Northern of a large interest in the company; the acquisition by the Atchison of the San Francisco and San Joaquin Valley road; the absorption by the Union Pacific of the Oregon Short Line; and the announcement of increased dividends by many of the principal roads of the country, while the Atchison and the Northern Pacific began paying dividends. The reorganization operations during the year were chiefly in the direction of completing plans previously initiated, and at the end of the year nearly all these reorganization plans had been carried into execution. The railroad refunding operations of the year caused the listing on the Stock Exchange of more than \$91,000,000 of bonds by the Lake Shore, Northern Pacific, New York Central, Rock Island, and the Chicago and North-

western companies alone, and the total amount of railroad and industrial bonds listed during 1898 was \$700,064,680, nearly double the amount listed in the previous year, while the amount of new railroad and other stocks listed was \$528,153,996, of which that of the Federal Steel Company was \$100,000,000.

The following shows gross and net earnings of the trunk lines:

ROADS.	1896-'97.	1897-'98.
PENNSYLVANIA:		
Gross earnings.....	\$64,233,176	\$65,603,612
Net earnings.....	20,532,068	20,659,962
NEW YORK CENTRAL:		
Gross earnings.....	45,643,949	45,393,773
Net earnings.....	15,367,236	16,117,941
ERIE:		
Gross earnings.....	31,331,926	32,800,010
Net earnings.....	8,486,792	8,178,290
BALTIMORE AND OHIO:		
Gross earnings.....	25,582,122	26,163,177
Net earnings.....	5,570,028	6,148,312

Manufacturing Industries.—As was the case in 1897 the cotton-goods trade and manufacturing was in a depressed condition throughout nearly the whole of the year 1898. Competition of Southern mills in the manufacture of cheaper grades of cotton goods and overproduction by the Eastern mills caused such congestion of stocks in the hands of New England manufacturers that a policy of restriction of production became necessary early in the year, and an attempt to reduce wages led to a strike of the operatives at New Bedford, Mass., while the Fall River and Lowell operatives accepted the reductions. The price of print cloths at first fell to 2½ cents, subsequently recovering to 2¾ cents, but later there was a gradual fall to 1½ cent per yard. The price did not improve until late in the year, when, through combinations of manufacturers and the regulation of production to meet the requirements of the market, there was a recovery to 2½ cents. The woolen-goods industry was also depressed, chiefly because of accumulated foreign stocks early in the year, and likewise because of the quite general demand for cheap grades of goods. In the iron and steel trades the production was large at the beginning of the year, and it gradually grew to enormous proportions by the close. Prices of manufactured products of iron and steel were maintained at comparatively low though profitable figures, thus enabling our manufacturers successfully to compete with those of the principal European countries, and large quantities of steel rails, naval armor, and plates, and other material for shipbuilding were exported during the year to England and to the Continent of Europe. Several important contracts for the construction of vessels of war for Russia and for Japan were placed in this country, and contracts for similar work for the United States navy made the shipbuilding industry and allied industries extremely active during the greater part of the year, and particularly after the practical ending of the war with Spain. The output of pig iron was about 2,000,000 tons larger than in any year on record, the total production being 11,773,934 gross tons against 9,652,680 in 1897. The consumption and export were also notably large, amounting to 12,383,579 gross tons in 1898, against 9,783,178 tons in 1897. The most remarkable record for the year was that of exports of manufactures, these amounting to \$307,924,994, against \$279,652,721 in 1897 and \$253,690,533 in 1896. Exports of articles of iron and steel showed a gain, compared with 1897, of about \$20,000,000; shipments of copper ingots were \$2,971,000 larger, those of agricultural implements gained \$3,700,000, steel rails were \$2,800,000 greater,

and exports of pumps and hydraulic machinery gained \$1,300,000. In almost every article of manufacture there was an increase, the most notable exception being in refined mineral oils, the value of which decreased \$7,126,000 compared with 1897.

Business failures for the year 1898 were 12,186 in number, involving \$130,662,889 against 13,351 failures in 1897, involving \$154,322,071. It is worthy of note that the number of failures and the amount involved were smaller in the last half of the year than in the first six months, indicating the progressive character of the industrial development. It is also noteworthy that the comparisons of the number of failures and of the amount of liabilities in 1898 with those of recent panic years make a very satisfactory exhibit, the number being 2,800 less than in 1896 and 3,100 smaller than in 1893, while the liabilities in 1898 were \$95,000,000 less than in 1896 and \$216,000,000 below those of 1893.

FINE ARTS IN 1898. Under this title are treated the principal art events of the year ending with December, 1898, including especially the great exhibitions in Europe and the United States, sales and acquisitions of works of art, and erection of public statues and monuments.

Paris.—The preparations for the Universal Exposition of 1900 led to the eviction of both of the Salons from the buildings previously occupied by them, and the two were obliged to make a sort of compromise and to give their exhibitions together in the Galerie des Machines, the only one preserved of the great structures of the exposition of 1889. A single entrance and a single admission gave access to both, the exhibitions being divided only by a buffet. Two thirds of the receipts went to the Société des Artistes Français and one third to the Société Nationale des Beaux Arts. The total receipts amounted to 348,000 francs.

Paris: Salon of the Artistes Français.—The Société des Artistes Français elected the following officers for the year: President, Jean Paul Laurens; Vice-Presidents, Benoit Édouard Loviot, Emmanuel Fremiet; Secretaries, Albert Maignan, A. Bartholdi, Jean Louis Pascal, Alphonse Lamotte; Corresponding Secretary, Tony Robert-Fleury; Treasurer, Émile André Boisseau. President of the Jury of Painting, Léon J. F. Bonnat; Sculpture, Louis Ernst Barrias; Decorative Arts, Jules Félix Coutan; Architecture, Honorary President, Charles Garnier, President, Pierre Daumet; Engraving and Lithography, François Eugène Burney.

The annual exhibition (April 20 to June 30) comprised 5,024 numbers, classified as follow: Paintings, 2,105; cartoons, water colors, pastels, miniatures, enamels, porcelain pictures, etc., 974; sculptures, 859; engraving on medals and precious stones, 86; decorative art, 226; architecture, 221; engraving and lithography, 548.

The following are the honorary awards for 1898: Section of Painting; Medal of honor, Jean Jacques Henner, "Le Lévitte d'Ephraïm et sa Femme Mort." No first-class medal awarded. Second-class medals: Alexandre Bouché "An crépuscule"; Paul Sinibaldi, "L'Industrie—Les Sciences et les Arts présentent leurs Découvertes à l'Industrie" (decorative panel for the Ministry of Commerce and Industry); Jules Adler, "Joies Populaires"; Auguste Leroux, "Samson et Dalila"; Georges Frédéric Roussel, "L'Empereur!—entrée des Cendres de Napoléon I^{er} dans la Chapelle des Invalides (15 Décembre, 1840)"; Henri Guinier, "Printemps"; André Devambaz, "Conversion de Marie-Madeleine"; Jacques Wagnez, "Un Maître de Chapelle de Saint-Marc de Venise—XV^e Siècle"; Jean Hippolyte Paul Lazerges, "Repos au Campement le Soir—près Biskra"; Émile Wéry, "Fille de Pen-marché"; Paul Joseph Jamin, "Cité Lacustre—le

retour des Hommes est signalé": Mlle. Angèle Delasalle, "Le Retour de la Chasse"; Fernand Sabatté, "Un Philosophe"; Léon Gagneau, "Le Viaduc des Moulineaux"; Edmond Georges Grandjean, "Le Char du Soleil"; Edmond Debon, "Les Varches à Carolles"; Jules Charles Aviat, "Portrait de Mme. la Marquise de X—"; Jean Joseph Enders, "La Veillée au Presbytère"; Auguste Prévoy-Valéri, "Le Clos Monsieur—Seine-et-Marne"; Honoré Umbrecht, "Le Vieux Fumeur." Third-class medals: Louis Ridet, Louis Cavallier, Jean Laronze, Eugène Antoine Guillon, Marcel Rieder, Fortunio Soriano, Louis Roger, Maurice Jeannin, Charles Crès, Henri Edmond Kudaux, Adolphe Henri Laisement, Henri Courseilles-Dumont, Henri Dabadie, Julien Adolphe Duvoelle, Louis Abel Truchet, Léon Pierre Félix, Albert Thomas, Georges Alexandre Chicotot, Giacomo Grosso, — Mihie, Amédée Buffet, Désiré Lueas, Max Bohm, Victor Ferdinand Bourgeois, Eugène Henri Cauchois.

Section of Sculpture: Medal of honor, Georges Gardet, "Tigres et Lions" (marble group). First-class medals: Henri Louis Levasseur, "La Peile" (marble group); Hippolyte Lefebvre, "Niolo" (marble group); Paul Loiseau-Rousseau, "Le Supplée de la Croix" (statue, marble and bronze). Second-class medals: Victor Peter, "Maternité" (lioness and whelps, marble group); Joseph Antoine Bernard, "Espoir Vaincu" (marble statue); Henri Honoré Plé, "Echo des Bois" (marble statue); Léo Laporte-Blaisry, "Le Réveil de Morphée" (marble statue); Auguste Maillard, "Chute d'Icare" (marble); Paul Roussel, "Le Pèlerin de la Vie" (bas-relief plaster). Third-class medals: Georges Émile Mühlenbeek, André Vermare, Paul Darbefeulle, Louis Castex, Eucher Girardin, Paul Duchuing, Émile Derré, Paul Eugène Bréton, Émile Guillaume.

Section of Architecture: No first-class medal awarded. Second-class medals: Émile André, Joanny Bernard (with M. Robert), Henri Fernand Sirot. Third-class medals: Charles Letrosne, — Bénard, Louis Jaumin, Charles Chauvet, Pierre Choret, Gaston Munier, Joseph Charlet, Edmond Fatio, Justin Ernest, Marcel Bidoire.

Section of Engraving and Lithography: Medal of honor, Jean Patriot. No first-class medal awarded. Second-class medals: Jules Simon Payrau (engraving); Georges Sanvage, Agriool Charles Bénard, Marie Edmond Honer (lithography); Louis Valère Ruet, Lucien Marcellin Gautier, André Charles Coppiet, Gaston Albert Manchon (etching). Third-class medals: Abel Jarnas (engraving); Alexandre Félix Lelieu, Firmin Bouisset (lithography); Léon Bazin, Ernest Maître (wood engraving); Mme. Clémence Élixa Chauvel (etching).

Henner's "Le Lévitte d'Éphraïm et sa Femme Morte," the medal-of-honor picture, attracted much attention from the public and, with a few exceptions, commendation from the critics. The dead wife shows the same nude, with the ruddy glory of flowing hair against pale-gray flesh tints, which Henner has painted faithfully for nearly half a century, and the head of the Levite looking down on her face from the shadowy background is a good illustration of his peculiar handling of light and shade.

Roche-grosse contributed a large decorative canvas, intended for the staircase of the library of the Sorbonne, entitled, "Le Chant des Muses éveille l'âme humaine." The sky is filled with the Muses, who with shadowy garments float past singing to the accompaniment of a lyre borne by one of the foremost; below them, in the foreground and at the right, many specimens of prehistoric man, arrested in various acts characteristic of him and of his age, look up in evident amazement at the novel sight and sounds. In the center are the inevitable nudes,

one on her back, the other posing to the front and looking askance over her shoulder at her sisters in the sky.

The "Décoration d'une Salle du Muséum," by Fernand Cormon, is a still larger decorative work, to which an entire apartment of the Salon was given up. A large ceiling exhibits the several human races, the Aryan, the Semitic, and the yellow, black, and red races. In the foreground is primitive man, behind him at the left the Aryans, to the right, on high, the Semites, and below the yellow races, the blacks of Africa, and the red men of America. Ten panels exhibit the rise to civilization: 1. The quaternary period, with the megatherium and other prehistoric animals. 2. Glacial period, with the mammoth and cave bear. 3. Polished stone age, in the distance the funeral of a chief. 4. Bronze and iron age, in the foreground a primitive forge. The next six panels show the development of humanity: 5. Primitive man devouring the crawfish which his woman digs out for him among the rocks. 6. The flint age. Man conceives the idea of a tool. 7. Huntsmen in the ice age, with perfected stone and bone weapons. 8. Fishermen, age of polished stone—a lacustrine village in Switzerland. 9. Age of bronze; agriculturists. 10. Age of iron; emigration of a Gallic horde.

Jean Paul Laurens contributed another of his scenes of Paris history for the Hôtel de Ville, "L'Arrestation de Broussel," a staircase filled with descending men at arms, their leader with drawn sword at the foot and the guarded prisoner closely following him. On the balcony above crying women look down, and on the stairs several men seem to make energetic protest.

Gérôme contributed one of his oft-painted interiors, an Arab or Moorish porcelain bathroom, superintended by a blue-draped eunuch in the background, and three nude odalisques in the middle and foreground, two chatting beside the water and the third posing to the spectator in front.

One of the strongest pictures of the year is Roybet's "L'Astronome," representing a number of Parisian celebrities of the present, including Jules Lefebvre, Cormon, and others, in costumes of the time of Louis XIII, grouped around a celestial globe listening to a lesson in astronomy.

Paris: Salon of the Société Nationale.—The ninth annual exhibition of the Société Nationale des Beaux Arts comprised 2,569 numbers, of which 1,286 were paintings, 599 designs, drawings, etc., 147 engravings, 209 sculptures, 240 art objects, and 88 architecture.

The death of Puvion de Chavannes, the mainstay of the secession Salon, made necessary the election of a new president, resulting in the choice of Édouard Détaillé.

Prominent among the exhibits was the great decorative panel which the late president added to the history of St. Geneviève, for the Panthéon, entitled "Ste. Geneviève veille sur la Ville Endormie." The saint stands on a terrace which dominates the ancient Lutetia. She has just left her cell, which is lighted by her lamp, and with her hand on the stone balustrade, beside which is a single pot of flowers, looks down on the roofs of the city that cluster around a basilica within the narrow precinct of the ramparts. Back of the ramparts the river mirrors the moon, and back of that spreads the country, tinged with blue and dotted with villas under a sky full of starlight. St. Geneviève stands immovable in the silence of the night, her head and shoulders covered by a white veil falling over a robe marked by straight folds of greenish brown, and, though her head is marked by no aureole, impresses the spectator with all the supernatural charm which belongs to her legend.

Another picture to command attention was a large triptych, entitled "L'Âge de l'Ouvrier," by Léon Frédéric, of Brussels. In three compartments the painter has pictured from birth to old age the life of the mechanic. In the first panel mothers with drawn, serious faces and amid poor surroundings give suck to their children. In the second some *gamins* play on the pavement of a populous street, in the back of which passes by in the crush of a dense crowd a band of revolutionaries. In the third carpenters are raising a scaffold in a timber yard. The work is a wonderful piece of technique, worthy of the traditions of the Flemish school.

Another noteworthy triptych is "Au Pays de la Mer," by G. Cottet. The central panel, "Le Repas d'Adieu," represents a sailor's family seated around a rustic table in a basement room illuminated by the light of a lamp suspended from the ceiling. A man has risen and, glass in hand, has just uttered some words of farewell, to which the old grandmother listens with drooping eyelids, while a young man and woman clasp hands without speaking. All the faces (there are a dozen or more) and attitudes reveal a restrained emotion and a meditative gravity befitting the occasion. The left panel shows the full sea stretching to infinity round the little boat where the sailors are resting; the right, the strand on the edge of the sea where the young women await the return home.

"Le Christ et les Pèlerins à Emmaüs," by Dagnan-Bouveret, is especially interesting to Americans because it was purchased by Henry C. Frick, of Pittsburgh, and has already found a home in the galleries of the Carnegie Institute, in that city. The artist has represented all the light as emanating from the white-robed person of Christ, who is seated at the table in the little inn, and spreading thence over all the persons and the back of the picture. Surprise, admiration, and the fervor of prayer are all expressed in the faces of the two disciples, the servant, and three other figures, especially in those of the young woman and the little boy on their knees at the left with hands clasped. The picture is one of the best of the year, and the Pittsburgh gallery is to be congratulated on its acquisition.

The exhibition was marked by an unusual number of good portraits, and by a new irruption of nudes, which during the past few years have not been quite so prominent. Under many titles, such as "Nue," "Eve," "Réverie," "Baigneuses," "Près de Feu," "La Toilette," "Étude de Nu," etc., the various models exhibited their charms in attitudes and in scenes which would have been startling in the Garden of Eden. Whatever one may think of the opinion of the Italian sociologist who attributes the present condition of the Latin races to their preoccupation of sex, it must be acknowledged that their figure painting is of the best.

Among the sculptures of the year none occasioned more discussion and indignation than a plaster model for a statue of Balzac by Rodin, which the admirers of the great writer pronounced a caricature and rejected. A new work by Falguière, which represents Balzac sitting and writing, is to be substituted for it.

The American sculptor St. Gaudens had a large exhibit in the Salon, consisting of plaster models of the monument to Col. Robert G. Shaw at Boston, the statue of a Puritan at Springfield, bust portraits of Gen. Sherman and others, medallion portraits, etc.

Paris: Miscellaneous.—Mme. Meissonier, second wife of the late Jean Louis Ernest Meissonier, who died recently at Poissy, bequeathed to the state a remarkable collection of the works of the great painter, including finished pictures and numerous studies of landscapes, figures, costumes,

etc., and nearly all the properties of his *atelier*. Among the pictures are the "Madonna del Baccio," the portrait of Meissonier of 1872 and the more famous one of 1889, the "Vue de Venise" and many studies for it, "Clair de Lune à Venise," "Cavaliers Louis XIII en route," "Jean Jacques descendant l'Escalier de Bois de Lausanne," "Samson abattant les Philistins," "Les Ruines des Tuileries," and "Le Siège de Paris," one of the artist's last compositions. The collection, of great artistic as well as pecuniary value, will ultimately find its way into the Louvre.

Mme. Meissonier bequeathed also to the city of Lyons, where the artist was born, and to Grenoble, where he passed his youth, several of his pictures and a series of bronzes cast from models executed by him for certain of his compositions.

An interesting picture, sold at the rooms of Georges Petit in May, was a slightly modified copy of the famous "Sacre de Napoleon I^{er}," by David, in the Louvre. The artist became dissatisfied with this, his first conception, and began the picture anew, preserving the original proportions. The fall of Napoleon and the return of the Bourbons having forced the painter into exile, he did not finish this picture until 1822. One of his admirers then paid him 80,000 francs for it, and it had remained in the family of the purchaser at Montpellier until fate brought it to the auction room. It was sold for 32,000 francs to M. Singer.

The collection of the late M. Goldschmidt, sold in Paris in May, produced a total of 798,904 francs. The paintings brought 594,000 francs, of which 393,190 francs were for modern pictures and 201,710 for old pictures. Among the best prices obtained for modern pictures were: Corot, "Allée sous Bois," 43,500; Diaz de La Peña, "Clairière," 37,000; Jean François Millet, "Les Bâcherons," 54,000; Théodore Rousseau, "Environs de Fontainebleau," 46,000, "L'Étang," 37,500; Troyon, "Le Retour du Marché," 39,500. Of the old pictures, Hobbema's "L'Avenue" brought 51,000, and A. Van de Velde's "Vue de Hollande" 11,000 francs.

The Alphonse de Neuville sale, May 23–25, realized 218,592 francs. Of his own pictures, "Le Patriementaire" brought 41,200 francs, and "Héricourt" 28,000; water colors—"Officier d'état-major," 6,900; "Officier Prussien," 6,900; "Charge de Cavalerie," 3,650 francs.

The sale of the *atelier* of the late Mihály Munkácsy took place on June 2–4. Among many studies sold were: "Ecce Homo," 15,100; "Mozart mourant," 3,000; "Au Mont de Piété," 800 francs.

At the Second sale, June 18, Rosa Bonheur's "Le Pâturage" brought 15,900 francs; Corot's "La Cueillette," 53,000; Théodore Rousseau's "La Mare," 101,100; and Ziem's "Venise," 20,000 francs.

The Collection Tabourier, sold at the Hôtel Drouot, June 21–22, brought in the aggregate 942,963 francs. Among the best prices obtained were: Nicolas Lancret, "La Ronde Champêtre," 112,000 francs; J. B. J. Pater, "L'Arrivée au Camp," 28,100; "Le Campement," 29,000; Van der Weyden, "Mater Dolorosa," 15,000; Delacroix, "Lutte de Jacob avec l'Ange," 15,500; "Chassé du Temple par Héliodore," 15,500.

A series of decorative paintings executed by Fragonard for Mme. Dubarry's chateau of Louveciennes before he fled from Paris in 1789, and afterward adapted by him to the walls of a room in the Maison Malvilain at Grasse, were sold lately to an English buyer for £50,000. The pictures, entitled, "La Vierge et l'Amour," "La Surprise de l'Amour," "Le Sacrifice de la Rose," "La Lettre d'Amour," and "La Couronne de l'Amour," are executed on canvas, stretched on wooden frames intended to cover the space between the dado and the ceiling. They were

never completely finished, the return of the artist to Paris having put an abrupt end to the undertaking.

London: Royal Academy.—The Royal Academy elections were held in January and February, with the following results: Academicians—B. W. Leader, E. J. Gregory, George Aitchison, Seymour Lucas, Edwin A. Abbey; Associates—H. H. La Thangue, Lionel Smythe, C. Napier Henry.

The twenty-ninth annual winter exhibition was devoted to the life work of the late president, Sir John Everett Millais. The collection, although by no means complete, filled seven galleries and formed a magnificent and representative whole. All classes of his pictures, from his pre-raphaelite efforts down to his latest works, all more or less marked by his earlier predilections, were shown.

The one-hundred-and-thirtieth summer exhibition was fully up to the general standard.

One of the most noteworthy of the exhibits is "The Skirt Dance," contributed by the president, Sir Edward John Poynter, representing a young girl dancing for the delectation of groups of Roman maidens who are lolling and chatting while they gaze with admiration on her movements. Marble-paneled walls and a richly tiled pavement, bounded by a circular marble seating for the spectators, suggest the garden house of a Roman villa. The dancer is clad in diaphanous pink gauze, revealing the outlines of her perfect form as she poses in the figures of the dance. The blue sky, the green of ivy, and the pink of oleanders seen through the marble pillars furnish a poetic background.

"The Road to Camelot," by George H. Boughton, inspired by Tennyson's "Lady of Shalott," represents the wondrous vision of picturesque life and movement passing down to Camelot, on which the lady was forbidden to look save as reflected in the clear mirror before her. In the foreground a fair-haired page, in crimson, holds in leash a hound, with which court damsels on the right, accompanied by minstrels, are toying, while on the left red-hooded market girls follow. In the background a long line of knights, riding two and two, press on toward Camelot, whose gray towers are seen in the background.

Mr. Watts's "Love Triumphant" is one of the allegorical mysticisms which characterize so many of his efforts. A nude winged figure with arms stretched upward and with face gazing into the infinite is supposed to typify universal charity. At his feet, recumbent, are a male figure with a scythe and a female figure, apparently dead, said to typify earthly love. A richly-colored robe which floats around the middle of the principal figure seems to divide the picture into the two parts demanded by the allegory.

Edwin Abbey followed his "Richard III" and "Hamlet and Ophelia" of preceding exhibitions by a scene from "Lear," in which Cordelia is the dominant figure. She is clad in a yellow-green vestment with a deep-blue border which, opposed to the reds and blacks of Goneril and of Regan, presents a triumph of originality and of decorative art. A suggestion of motion is given to the picture by the drooping figure of Lear, who, sustained by pages and followed by men-at-arms, moves across the canvas from left to right.

Mr. Sargent exhibited eight portraits, among them one of Miss Leiter, of Washington, the sister of Lady Curzon.

Ernest Croft's "Charles II at Whiteladies" represents the monarch and his body guard arrived, after hard riding from the battle of Worcester, at the entrance to the mansion and clamoring for refuge.

Alina-Tadema's "Conversion of Paula by St. Jerome" is one of his very best pictures, if not his

masterpiece. Across the picture, illumed by glowing sunlight, is a terrace of white marble, a pergola with its vine foliage and hanging grapes, a marble staircase leading to a temple, and in the background the blue sky and the sea. On the terrace is an altar of Bacchus, with vessels of silver upon it, and beside it reclines Paula, clad in purple and amber tissues shot with gold. Her features indicate her voluptuous temperament, and a jeweled diadem and a wealth of auburn tresses are in keeping with her costume and magnificent surroundings. Leaning backward upon one hand, she is listening intently to the words of the saint, a handsome young man in dark blue, purple, and white robes, and with a somewhat austere and self-restrained air, who sits at the right holding a scroll in his lap with one hand and raising the other to give emphasis to his words. The artist has never before succeeded so well in portraying human emotion, while no part of the gorgeous canvas is unworthy of him at his best.

London: Miscellaneous.—The National Gallery has acquired by purchase the two wings of the altarpiece of which the "Madonna of the Rocks," attributed to Leonardo da Vinci, now in the collection, formed the central portion. They represent angels playing on musical instruments. The first is said to be by Leonardo, in conjunction with his pupil Giovanni Ambrogio de Predis, and the second entirely by the latter. The genuineness of the Madonna, bought from the Earl of Suffolk's collection, in 1880, for £9,000, has been often attacked by Dr. Richter, who asserts that the genuine picture is the one in the Louvre.

The Ruston sale of the Monk's Manor collection, May 21 and 23, comprised pictures by both modern and old masters. The highest price paid was for Burne-Jones's "Mirror of Venus," which brought 5,450 guineas. At the Leyland sale (1892) this picture fetched 3,400 guineas. The "Chant d'Amour," which many consider his best work, brought 3,200 guineas, a slight advance on its price at the Graham sale (1886) of 3,150 guineas. "Dawn" and "Night," two drawings, realized 1,050 guineas. Rossetti's "Dante at the Bier of Beatrice," a smaller replica of the work in the Liverpool Gallery, brought 3,000 guineas. It was sold in the Graham sale for 1,000. "La Ghirlandata" (Graham sale, 1,000), also fetched 3,000 guineas, and "Veronica Veronese" (Leyland sale, 1,000) 1,550 guineas. G. F. Watts's "Eve of Peace" (Rickard's sale, 1887, 950) fetched 1,350 guineas; "Portrait of the Artist," 650. Gainsborough's "Lady Clarges" (J. Price sale, 1895, 2,000), 1,850 guineas. Turner's "Falls of the Clyde" (1884, 330) sold for 880 guineas. Rembrandt's portrait of "Nicholas Ruts" (Adrian Hope sale, 1894, 4,700) brought 5,000 guineas. Del Sarto's "Pieta" (Novar sale, 1888, 1,700; Dudley sale, 1892, 1,040) fell to 600 guineas. Van Dyck's "Virgin and Child" (Blenheim sale, 1886, 500) advanced to 1,000 guineas.

The death of Burne-Jones, a few weeks after the Ruston sale, was followed by the disposal of the works left in his studio, consisting of some finished pictures, pastels, and water-color drawings, and many studies and sketches. Eighteen water-color drawings fetched £7,000, and 28 pastel drawings, £5,000. "Love and the Pilgrim" (1897), dedicated to Algernon Charles Swinburne, brought 5,500 guineas. Among the minor pictures sold were the following, the prices in each case being in guineas: "Departure of Knights in Quest of the Holy Grail," 610; "Dream of Lancelot at the Ruined Chapel," 650; "Stoning of Stephen," 150. Water-color drawings: "Head of Ninne," 500; "Sir Galahad at Shrine of the Holy Grail," 400; "St. Cecilia," 720; "The Tree of Life," 770; "Paradise," 520; "Last Judgment," 600. Studies in oil: "Per-

seus and Andromeda," 440; "The Sirens," 490; "Elijah in the Wilderness," 950; "The Wizard," 530; "Fall of Lucifer," 1,000.

The Renton sale in June brought to the hammer several notable works of the late Sir John Everett Millais: "The Order of Release" (Arden sale, 1879, £2,835) brought 5,000 guineas; "The Black Brunswicker" (Plint sale, 1862, £819) advanced to 2,650 guineas; "Yes," 1,000; "Urquhart Castle," 650; and "Afternoon Tea," 1,300 guineas. Luke Fildes's "Playmates" brought 700 guineas and Sir Edward Poynter's "Corner in a Villa," 880 guineas.

A sale at Christy's in July was noteworthy for the disposal of a few pictures by prominent artists: Millais, "The Ruling Passion" or "The Ornithologist," 850 guineas; "Time," 260. Van Dyck, "Time clipping the Wings of Love," 800. Burne-Jones, "The Story of Pygmalion" (Craven sale, 1895, £3,675), 2,800. Corot, "La Chevreière," 1,600. Meissonier, "Valentine," 400.

The Grant Morris sale of pictures and water-color drawings formerly at Allerton Priory, Liverpool, brought a few good works into market. Turner, "Malmesbury Abbey," 780 guineas; Millais, study for "Sir Isumbras at the Ford" (Knowles sale, 1877, 95), 280; Alma-Tadema, "Roman Flower Market" (1873, £640), 880; L. Knaus, "Cup of Coffee," 1,050; Israel, "Anxious Family," 950.

The sale of the Bilton Hall collection, chiefly family portraits, was remarkable for its historic interest; the pictures formerly belonged to Addison and the Countess of Warwick, whom the essayist married after the death of the sixth earl.

The Boyle sale was noteworthy for its two examples of Romney, "The Marchioness of Townshend," which was bought in at 5,200 guineas, and "Madam Susan Jouenne," which sold for 3,000 guineas. A Hoppner portrait "Mrs. Inchbald," the actress and dramatic writer, brought 1,000 guineas.

Amsterdam.—The Rembrandt Exhibition, held in the new Town Museum, Sept. 8 to Oct. 31, in honor of the coronation of the Queen of Holland, comprised 155 of his works, including many famous examples from foreign countries. Queen Victoria lent two from Buckingham Palace, including the "Lady with a Fan," the Duke of Westminster sent six, including the celebrated "Man with a Falcon," and the Dukes of Devonshire and Buccleugh, the Earls of Derby and Spencer, and other noblemen contributed valuable canvases. Of course "The Night Watch" and "The Syndics" were given the places of honor. It is singular that the exhibition was marked by the absence of the famous "School of Anatomy" and the portrait of "Madame Jacobs Bas," which, as the property of the state, can not be removed without a vote of the Dutch Parliament. It is remarkable also that no effort seems to have been made to secure the splendid Rembrandts in the United States, especially the "Standards Bearer" of Mr. George J. Gould, and "The Gilder" and "The Burgomaster of Delft" in the Havemeyer collection.

Berlin.—The National Gallery in Berlin is undergoing a thorough reorganization, a large part of its treasures, both in painting and in sculpture, having been distributed to collections in other cities of the empire, with a view to kindling a sense for art in the provinces. The leading motive in the works to be retained is the formation of a complete and exhaustive presentation of German art, from its beginnings to the present time, in the central collection.

Florence.—An interesting discovery made lately in the Chapel of St. Elizabeth, in the Church of Ognissanti, is an altarpiece by Domenico Ghirlandajo containing a portrait of Amerigo Vespucci, from whom America was named. Vasari, in his life of

Domenico, says: "His first pictures were in Ognissanti in the Vespucci Chapel, where is a dead Christ and saints, and above, in the arch, a Misericordia, in which is the portrait of Amerigo Vespucci, who sailed to the Indies." Bottari says that in the remodeling of the chapel in 1616 the picture of Ghirlandajo was whitewashed over. But, in February last, in removing an altarpiece by Matteo Rosselli, Ghirlandajo's fresco was discovered on the wall behind it, not whitewashed, but merely covered by the picture. The Pietà, in the lower part of the fresco, has been badly repainted, but the Misericordia, in the arched panel above, is in good preservation. It represents the Madonna of Mercy standing with outstretched hands, her mantle upheld by angels, and beneath it, kneeling, a dozen members of the Vespucci family, the men on her right, the women on her left. Amerigo is supposed to be a young man with dark hair, nearest to the Madonna, the old man with white hair being perhaps his father, Ser Anastagio. Among the women, one is noteworthy for her resemblance to Piero di Cosimo's portrait of the celebrated beauty La Bella Simonetta, in the Chantilly collection. As there is no doubt of the authenticity of the painting and it is the earliest probably of Ghirlandajo's works, the discovery is interesting from both a historical and an artistic point of view.

Madrid.—A recent discovery of a marble bust of Christ, with eyes of blue rock crystal, has created some discussion among artists and critics. It is said to be a remarkable work and has been pronounced by experts to be by either Michael Angelo or Donatello. It has been purchased by the Russian ambassador at Madrid.

Vienna.—At the International Art Exhibition gold medals were awarded to several American artists: First-class, Edwin Abbey, for his "Hamlet," and Alexander Harrison, for his "Arcadia." Second-class, F. A. Bridgman.

New York: National Academy of Design.—The council for 1898-'99 consists of the following: President, Thomas W. Wood; Vice-President, James M. Hart; Corresponding Secretary, Harry W. Watrous; Recording Secretary, George H. Smillie; Treasurer, James D. Smillie; Council, F. S. Church, Frederick Dielman, H. Bolton Jones, J. Carroll Beckwith, J. C. Nicoll, C. D. Weldon. The Academy has 93 academicians and 53 associates.

At the seventy-third annual exhibition (March 28 to May 14) 364 canvases were exhibited. The prizes were awarded as follow: The Thomas B. Clark prize (\$300), for the best American figure composition, to Abbott H. Thayer for his "Portrait of a Lady"; the first Julius Hallgarten prize (\$300), to Robert Reid's "Dawn"; the second Hallgarten prize (\$200), to Harry Roseland's "An Important Letter"; the third Hallgarten prize (\$100), to Walter C. Hartson's "Fields in September"; and the Norman W. Dodge prize (\$300), to Miss Letitia B. Hart's "The Keepsake." Among other noteworthy exhibits were Gilbert Gaul's "News from the Front," Horatio Walker's "The Harrower," Theodore Wores's "A Chinese Fishmonger," and J. H. Twachtman's "Niagara."

The catalogue of this year has as a frontispiece an illustration of the front elevation of the projected new Academy on Cathedral Boulevard and Amsterdam Avenue. Beginning with the seventy-third annual exhibition, the Academy exhibitions will be thrown open in future to the public free on Sundays.

New York: Society of American Artists.—The twentieth annual exhibition was held at the Fine Arts Building from March 18 to April 30. The Webb prize (\$300), for the best landscape in the exhibition painted by an American artist under

forty years of age, was awarded to George H. Bogert for his "Evening: Houlleur," a little landscape in which a lonely road traverses a melancholy-looking bog. The Shaw fund of \$1,500, for the purchase of a figure composition in oil by an American artist, was devoted to the acquisition of Mr. Barse's allegory "Night and the Waning Day," two floating figures in a twilight sky. Among the more noteworthy exhibits was John La Farge's "The Goddess Minerva making the First Sketch from Nature," in the presence of Ceres and Proserpine, a large decorative canvas for Bowdoin College. John W. Alexander's "Pot of Basil" represents Isabella, in a flowing robe of black and white, placing an urn in a niche. Four masterly subjects by Whistler, entitled "Westminster Bridge," "The Blue Wave," "Symphony in Blue and Violet," and "Note in Carmine," belong to a private collection in Cleveland, Ohio.

The year has been marked by the resignation from the society of a number of members with the motive of starting a more restricted society with more definite aims in view. These include Messrs. Edmund C. Tarbell, Frank W. Benson, and Joseph De Camp, of Massachusetts, and J. Alden Weir, Edward Simmons, J. H. Twachtman, Thomas W. Dewing, Childs Hassam, Willard L. Metcalf, and Robert Reid, of New York. These 10 gentlemen gave an exhibition of their own, without any private view or reception formalities, at the galleries of Durand-Ruel, March 30 to April 16.

New York: The National Sculpture Society.

The officers elected for 1898 are as follow: President, J. Q. A. Ward; Vice-Presidents, Charles de Kay, Charles R. Lamb; Treasurer, I. Wyman Drummond; Secretary, Barr Ferree. The third annual exhibition was held in the Fine Arts Building from April 30 to May 14.

New York: American Water-Color Society.

The thirty-first annual exhibition, held (Jan. 31 to Feb. 26) at the National Academy of Design, showed the usual average of good work among the 517 pictures contributed. The William T. Evans prize of \$300 was awarded to C. Harry Eaton's "The Brook," a clear-aired landscape with a Corot motive. The prize was first awarded by mistake to Albert Herter for his work entitled "Sorrow," which was not eligible for competition because it was painted abroad. This picture represents a woman seated upon a sofa sharing the grief of a man prostrated at her feet, his head buried in her lap. Both are clad in black, and the picture throughout is somber and subdued in tone. Other noteworthy works were H. B. Snell's "Wreck of the Jason," "Haunt of the Sea Gull," and "Her Majesty's Ship 'Renown,'" all characteristic pieces; W. L. Lathrop's "Moonrise" and "A Farm Road"; Horatio Walker's "Milk—A Summer Morning"; D. W. Tryon's "Early Spring"; J. G. Brown's "Making a Soaker"; and Childs Hassam's "Alice in Wonderland, Isles of Shoals."

A loan exhibition of portraits, for the benefit of the Orthopedic Hospital, held at the National Academy of Design (Dec. 14, 1898, to Jan. 14, 1899), was one of the important art events of the year. Most of the principal American portrait painters were fully represented, and contributions by many foreign artists, including Chartran, Madrazo, Carolus Duran, Benjamin Constant, and Dagnan-Bouveret, as well as many examples of the early English portrait painters, made it a most attractive and representative exhibition.

The sale of the great collection of the late William Hood Stewart at Chickering Hall, Feb. 3 and 4, was one of the principal art events of the season. One hundred and twenty-eight pictures brought \$401,335, some bronzes and furniture bringing the

total receipts up to \$409,790. The highest price paid for a single canvas was \$42,000 for Fortuny's "Choice of a Model," which was bought by William A. Clark, of Butte, Mont. Others by Fortuny sold as follow: "Court of Justice, Alhambra," Harry P. Whitney, \$13,000; "Arab Fantasia," H. Harrison, \$12,000; "The Antiquary," Herman Schaus, \$15,500; "Arab Butcher," Stanford White, \$2,300; "Gipsy Caves, Granada," W. A. Clark, \$2,200; "Arab on a Divan," F. A. Bell, \$4,300; "Breakfast in the Old Convent Yard," George J. Gould, \$6,900; "The Masquerade," Knoedler & Co., \$4,750; "A Street in Tangiers," W. A. Clark, \$5,000; "Meissonier's Portrait," G. B. Berckman, \$2,300; "The Alberca Court, Alhambra," D. P. Douglas, \$7,000. Other good prices obtained were: Corot, "Ville d'Avray," \$5,000; "Sunset," \$6,200; Daubigny, "Anvers on the Oise," \$6,000; Zamacois, "Checkmated," \$10,700; "The Infanta," \$5,000; Troyon, "Chickens feeding," \$6,300; "The Lane," \$13,700; "Cow among the Cabbages," \$12,000; Baudry, "The Wave and the Pearl," \$8,600; "Fortune and the Child," \$6,500; Rousseau, "The Woodcutter, Fontainebleau," \$7,450; Meissonier, "The Stirrup Cup," \$12,500; "The End of a Game of Cards," \$9,000; Leibl, "Village Politicians," \$15,000; Madrazo, "Departure from the Masked Ball," \$16,500; "Pierrette," \$5,000; Von Mareke, "Cows in the Valley," \$11,500.

Another important sale was that of the Fuller and Dana collections, Feb. 25-27, consisting of paintings of the old English and Barbizon schools belonging to William H. Fuller, and of the pictures and porcelains of the late Charles A. Dana. The Fuller pictures realized \$166,200, and the Dana collection, pictures and ceramics, \$194,830. Of the Fuller pictures, Rousseau's "The Charcoal Burner's Hut," which was in the first exhibition of a hundred masterpieces in Paris in 1883, sold for \$36,500. The same artist's "Marais dans les Landes" brought \$7,600. Troyon's "Cattle in the Pasture," which sold at the Secretan sale for \$9,000, brought \$22,000. Dupré's "The Open Sea" sold for \$7,600. Of the English pictures, Constable's "Windermere Lake" brought \$5,300, and "The Lock," \$5,200. Several portraits by Gainsborough brought good prices, as "Lady Inness of Norfolk," \$5,500, and "Countess of Buckinghamshire," \$5,000. "The Blue Boy," attributed to Gainsborough and called a replica of the famous picture in Grosvenor House, London, was put up at the upset price of \$50,000, but received no bids and was withdrawn.

The few well-chosen pictures of the Dana collection brought good prices. The beautiful and well-known Corot, "Danse des Amours," sold for \$36,000, and Millet's "Turkey Herder" for \$20,000. Daubigny's "On the River Oise," brought \$6,500; Courbet's "Sea Shore," \$3,800; Rousseau's "Harvest Field," \$4,200; Jacque's "Sheep in the Forest," \$5,400; and Ziem's "Une Fête à Venise," \$3,800.

On Oct. 31, the birthday of the late architect Richard M. Hunt, was unveiled the memorial erected to his memory by the principal art organizations of the city. The monument, the work of Daniel Chester French, the sculptor, and Bruce Price, the architect, consists of a semicircular marble and granite bench supporting an architrave upheld by Ionic columns, recessed in the wall of Central Park opposite the Lenox Library, one of Mr. Hunt's most characteristic works. In the center, on a granite pedestal, is a bronze bust of Mr. Hunt, and on each of the fronts is a pedestal designed to hold statues, one representing Architecture, the other the Allied Arts.

Chicago: Art Institute.—A large and varied programme was presented during the year. Four exhibitions were held in the spring: The annual

exhibition of artists of Chicago and vicinity, Feb. 1 to Feb. 27; the annual exhibition of the Society of Western Artists, a collection exhibited successively at Cincinnati, St. Louis, Detroit, Chicago, and Indianapolis, Feb. 24 to March 14; Chicago Architectural Club, March 22; annual exhibition of American water colors, April 20.

Philadelphia: Pennsylvania Academy of Fine Arts.—Though not chartered until 1806, the Academy really dates from 1791, when Charles Wilson Peale organized in Philadelphia a school of art. The first Academy building, on Chestnut Street between Tenth and Eleventh Streets, was partly destroyed by fire in 1845, and in 1876 the present building, on Broad Street, was completed. The collection, a descriptive catalogue of which has lately been published, contains many works of the earlier American painters, such as Benjamin West, Charles Wilson Peale, Gilbert Stuart, and Washington Allston, and continuing down to the painters of the present day. "The Dead Man restored to Life by touching the Bones of the Prophet Elisha," by Allston, and "Death on the Pale Horse," by West, were purchased by the Academy in 1816 and 1836 respectively. Sully's full-length portrait of George Frederick Cook was presented by contribution in 1812, and the "Christ Rejected," considered by many the best of West's works, and the "Ariadne" of Vanderlyn, were presented in 1878 by Mrs. Joseph Harrison. Besides these are representative works by Trumbull, Gray, Huntington, and May, and portraits by Rembrandt Peale, Stuart, Sully, Eichholtz, Neagle, Inman, and many others. The honors awarded by the Academy are the Temple gold and silver medals; the Academy gold medal of honor founded in 1893 by John H. Converse; the Walter Lippincott prize and the Mary Smith prize, the latter founded by the late Russell Smith in memory of his daughter. The president of the Academy is Edward H. Coates.

The sixty-seventh annual exhibition, held in March, was very successful, having attracted contributions from all parts of the country. The Temple medals were awarded to Milton Lockwood, of Boston, for his picture "The Violinist," which received honorable mention at the exhibition of the Carnegie Institute, Pittsburgh, last year, and to Edward F. Rook, of Newport, R. I., for his canvas entitled "Pearl Clouds—Moonlight." The place of honor in the exhibition was held by the "Mother and Child," by George de Forest Brush, purchased by the Academy from the Temple fund, created by the late Joseph E. Temple. Gold medals of honor were awarded to Miss Cecilia Beaux and Edwin A. Abbey, both of whom were born in Philadelphia and received their early art education at the Academy.

Pittsburgh: Carnegie Institute.—The third annual celebration of Founder's Day was signalized by the usual picture exhibition and by the presence of the founder, Andrew Carnegie, who delivered the address. The collection of pictures, including many notable examples from Europe, selected by an advisory committee composed of some of the most eminent artists of London, Paris, and Munich, was fully up to the standard of previous exhibitions—a standard which bids fair to make Pittsburgh one of the principal art centers of the country. The awards of medals and honors by the international jury were as follow: Gold medal, carrying with it an award of \$1,500, Dwight William Tryon, South Dartmouth, Mass., for his "Early Spring in New England." Silver medal, with award of \$1,000, Childe Hassam, New York, for "The Sea." Bronze medal, with award of \$500, Alexander Roche, Edinburgh, Scotland, for "The Window Seat." Honorable mention, E. A. Walton.

London, England, for "The Shepherd"; John F. Weir, New Haven, Conn., for "Roses." Most noteworthy among the permanent acquisitions of the gallery is Dagnan-Bouveret's "The Disciples at Emmaus," the gift of Henry C. Frick.

FLORIDA, a Southern State, admitted to the Union, March 3, 1845; area, 58,680 square miles. The population, according to each decennial census since admission, was 87,445 in 1850; 140,424 in 1860; 187,748 in 1870; 269,493 in 1880; and 391,422 in 1890. By the State census of 1895 it was 464,639. Capital, Tallahassee.

Government.—The following were the State officers during the year: Governor, William D. Bloxham; Secretary of State, John L. Crawford; Treasurer, James B. Whitfield; Comptroller, W. H. Reynolds; Attorney General, William B. Lamar; Superintendent of Public Instruction, William N. Sheats; Adjutant General, Patrick Houstoun; Commissioner of Agriculture, Lucius B. Wombwell; State Chemist, W. A. Rawls; State Examiner, W. V. Knott; Railroad Commissioners, R. H. M. Davidson, H. E. Day, J. M. Bryan; Board of Health, W. B. Henderson, J. P. Taliaferro, H. L. Simpson; Chief Justice of the Supreme Court, R. F. Taylor; Associate Justices, Milton H. Mabry and Francis B. Carter.

Finances.—The report of the present Treasurer, from the date of his commission, June 9, 1897, to the end of the year, shows that he received from his predecessor, of funds belonging to the State the sum of \$267,487.74, and of special funds \$17,279.84. The deficit in the treasury at the date of the resignation of the former Treasurer, C. B. Collins, was \$52,591.97. The records showed a further deficit of \$12,906.62 of the tax-redemption fund due the several counties, making a total of \$65,498.59. Mr. Collins was tried on a criminal charge of defrauding the State of \$52,591.97, and was acquitted. Civil suits were brought against him and his bondsmen by the State, and judgments were obtained.

The Treasurer's report at the close of business Nov. 30, 1898, showed balances to the credit of the several State funds amounting to \$341,711.45.

The total assessed valuation of property in 1897 was \$95,117,031.01, or \$272,935.37 less than the assessed value for 1896.

The total tax levy for 1897 was 5½ mills; for 1898 it was 4½ mills. The additional half mill in 1897 was made necessary by the deficit in the treasury. The general revenue tax is 3 mills; the pension tax, ½ mill; the board-of-health tax, ¼ mill; and the school tax, 1 mill.

Education.—The average attendance at the public schools is 69,477. The amount levied for the 1-mill State school tax, \$95,117.17; amount collected, \$87,683.13; number of polls assessed, 68,068; number collected, 31,721.

The value of school property is \$755,824. The number of buildings is 2,121, of which 14 are brick, 1,855 frame, and 252 log. The cost *per capita* of the average daily attendance is \$9.93 for both races; *per capita* for the negro schools on the basis of the average daily attendance, \$6.20. The amount expended for negro schools for the last biennial period was \$171,485.56.

The cost of instruction at the institutions for higher learning, as shown in the catalogues, is given as follows: State Agricultural College—total salaries per annum, \$14,859; number of students, 168; average per student per year, \$88.39. West Florida Seminary—total salaries per annum, \$8,160; number of students, 137; average per student per year, \$59.56. State Normal College for Whites—total salaries per annum, \$4,300; number of students, 50; average per student per year, \$86. State Normal College for Negroes—total salaries per annum,

\$7,200; number of students, 213; average per student per year, \$33.80.

The enrollment in the summer schools this year was 1,026, of whom 733 were whites and 293 negroes, the former being 36 per cent., and the latter 46 per cent. of all the teachers employed in the State during 1897. This was 43 per cent. greater than in 1897, 60 per cent. above 1896, and 102 per cent. in excess of 1895. The average daily attendance was 678, of whom 484 were whites and 194 negroes. The number of actual teachers was 687, of whom 492 were whites and 195 negroes. Those intending to become teachers numbered 339, of which 241 were whites and 98 negroes. The fund provided for these schools consisted of an unexpended balance of \$285.80; Peabody donations, \$1,200; appropriated by the State, \$3,000; making a total of \$4,485.80. Of this amount, \$4,438.98 was expended, \$4,317.50 going for salaries of instructors.

Charities.—The report of the State Asylum for the Indigent Insane for 1897 shows that there were at the end of the year 443 patients, of whom 227 were men and 216 women, 70 more than at the close of 1896.

The attendance at the Institute for the Blind and the Deaf in 1897-'98 was as follows: White deaf—boys 15, girls 18; white blind—boys 5, girls 14; negro deaf—boys 9, girls 9; negro blind—boys 1, girls 1. Total white, 42; negroes, 20; grand total, 62. This is but 42.4 per cent. of the actual number of such children in the State.

Prisons.—The number of convicts in all the camps Jan. 1 was 687, an increase of 37 over 1897. Of these, 91 are white men, 21 colored women, and 1 is a white woman. During the year 362 were received and 253 discharged, 6 were pardoned, 31 died, 1 was sent to the insane asylum, 4 were killed in attempted escapes, and 44 escaped, of whom 11 were recaptured.

The work of building the Reformatory at Marianna, for offenders under sixteen, has been in progress during the latter half of the year.

Militia.—The report of the Adjutant General for 1897 shows the total of the active military force of Florida to be 1,134, of whom 94 were officers and 1,040 noncommissioned officers and enlisted soldiers, a gain of 32 enlisted men during the year. The Naval Militia had an aggregate of 240 men, 28 of whom were commissioned officers.

Insurance.—The number of fire insurance companies in the State is 50; life companies, 11; miscellaneous (accident, plate-glass and surety companies, etc.), 13; total, 74.

The aggregate premium receipts in Florida for the year 1897 were as follows: Fire, \$612,540.19; life, \$568,797.86; miscellaneous, \$58,676.83; total, \$1,240,014.88. The aggregate losses paid in Florida during 1897 were: Fire, \$203,615.70; life, \$254,408.78; miscellaneous, \$45,574.53; total, \$503,599.01. The net outgo for insurance during the year was: Fire, \$408,924.49; life, \$314,339.08; miscellaneous, \$13,102.30; total, \$736,415.87.

Railroads.—The Railroad Commission gives the total mileage as 2,987.33. The number of roads reported on is 22. The commissioners have been busy hearing complaints and adjusting rates on the roads. A passenger tariff, to go into effect July 18, was published in June, whereby the full fare on some roads was made four cents, and on others three.

Periodicals.—The following list of periodical publications in the State is believed to be accurate: Dailies, 20; tri-weeklies, 2; semi-weeklies, 4; weeklies, 137; semi-monthlies, 3; monthlies, 21; total, 187.

Reclamation of Lands.—According to the "Manufacturers' Record," a company has been incorporated for the purpose of developing a large

tract of land in the southeastern section of the State. The company, which has a capital of \$2,000,000, has acquired 800,000 acres in what is known as the Everglades. According to the prospectus, it is intended to construct a canal system 144 miles in extent, which will comprise 8 lateral canals, each 12 miles long, 50 feet wide, and 12 feet deep, and one 48 miles long, of the same width and depth. It is claimed that with this system of drainage the water which now covers a large area of the territory will be removed, as the surface of the Everglades averages 11 feet above tide water at the edge, and 20 feet above tide water in the highest portion. Several rivers that traverse the section will be used for drainage by being connected with the canals.

A number of projects of the same character have already been undertaken in Florida with successful results in reclaiming some of the richest land in the State.

Judicial Decision.—A law made by the Legislature of 1893 "to provide for the service of non-resident defendants and others in chancery causes" was declared unconstitutional by a judge of the circuit court, "in so far as it undertakes to provide for obtaining a service upon nonresident defendants when the only relief sought against said defendants is to obtain a decree *in personam* against them."

Political.—The officers to be chosen at the November election were: Two Congressmen, two Justices of the Supreme Court, one for two years, to fill the vacancy caused by the resignation of Justice Liddon, since filled by appointment, and one for the full term of six years; three Railroad Commissioners; one Treasurer to fill the vacancy caused by the resignation of Treasurer Collins, since filled by appointment; State Senators from the even-numbered districts, and one to fill the vacancy caused by the death of Senator Perrenot; representatives from all the counties; tax collectors, tax assessors, and treasurers in all the counties.

The State convention of Democrats met at Orlando, Aug. 3. Following is a part of the platform: "We congratulate the people on having as a visitor so distinguished a Democrat as William Jennings Bryan, our late Democratic candidate for President of the United States, and who is now serving his country as a patriot and soldier, and we appreciate his great ability as Democracy's national leader.

"We rejoice in the brilliant successes attained by the American sailors and soldiers in the present war with Spain, and glory in the fact that the last vestige of sectional feeling has been swept away forever.

"We condemn the policy of insular territorial expansion upon which the administration at Washington has embarked as unwise, un-American, unjust to the masses of our people, and especially to the laboring and producing classes, and as dangerous to our free institutions; and we pledge the Democracy of the State of Florida to the opposition of the same."

The nominations were: For Treasurer, J. B. Whitfield; Justices of the Supreme Court, R. F. Taylor and Francis B. Carter; Railroad Commissioners, H. E. Day, J. M. Bryan, and J. L. Morgan; Congressmen, Stephen M. Sparkman and Robert W. Davis.

The Republican convention was held at Ocala, Aug. 9. The candidates for the offices of Supreme Court Justices were William C. Marshall for the long term and Leroy B. Vaillant for the short term. H. L. Anderson and E. R. Gunby were candidates for Congress.

The result of the election was a complete victory for the Democrats. The Legislature, consisting of

32 Senators and 68 Representatives, will be unanimously Democratic. A constitutional amendment, which was carried by a large majority, changes the section regarding sureties on the official bonds of State officers by including county and municipal officers, and adding that "any duly organized and responsible guarantee or surety company, either foreign or domestic, lawfully doing business in this State, may become and be accepted as surety on all such official bonds."

FRANCE, a republic in western Europe, proclaimed on Sept. 4, 1870, when the Emperor Napoleon III was deposed. The legislative power is vested in the Senate and the Chamber of Deputies, which unite to form the National Assembly for the election of a President or to revise the Constitution. The Senators number 300. They are now elected for nine years by electoral bodies in the departments formed of chosen electors and the representatives of the departments in the Chambers and the local councils. Of the 75 Senators who were elected for life under the law of 1875, there were 26 survivors at the end of 1897. The Deputies number 584, elected for four years by *arrondissements* or by subdivisions of *arrondissements* when the population exceeds 100,000. No candidate can stand for more than one constituency at a time, and no prince of a deposed French dynasty can be a candidate, nor any person previously condemned by a court of law. The President is elected for seven years. Félix Faure was elected President of the republic on Jan. 17, 1895, to succeed Sadi-Carnot.

The Cabinet, formed on April 30, 1896, was composed at the beginning of 1898 as follows: President of the Council and Minister of Agriculture, J. Méline; Minister of the Interior, M. Barthou; Minister of Finance, G. Cocheru; Minister of Foreign Affairs, M. Hanotaux; Minister of War, Gen. Billot; Minister of Marine, Admiral Besnard; Minister of the Colonies, A. Lebon; Minister of Public Worship and Education, M. Rambaud; Minister of Justice, M. Milliard, appointed on Dec. 2, 1897; Minister of Commerce and Industry and of Posts and Telegraphs, Henri Boucher; Minister of Public Works, M. Turrel.

FINANCES.—The budget estimates for 1898 make the total revenue 3,413,916,088 francs, of which 3,232,992,549 francs are the ordinary revenue, 55,495,059 francs various extraordinary receipts, 6,800,000 francs exceptional receipts, 66,591,338 francs *recettes d'ordre*, and 52,037,152 francs the revenue of Algeria. Of the ordinary revenue 482,132,136 francs come from direct taxes, 39,832,577 francs from taxes assimilated to direct taxes, 1,975,069,400 francs from indirect taxes, 679,867,550 francs from Government monopolies and factories, and 56,090,886 francs from state domains and forests. The direct contributions comprise 93,273,138 francs from the personal and property tax, 118,632,730 francs from the land tax, 82,005,308 francs from the tax on buildings, 59,717,140 francs the tax on doors and windows, 127,442,990 francs from trade licenses, and 1,060,830 francs from the tax for advertisement. The taxes assimilated to direct taxes are 7,006,650 francs from property in mortmain, 2,275,070 francs from mines, 5,154,500 francs from verification of weights and measures, 12,800,000 francs from carriages and horses, 3,326,000 francs from velocipedes, 5,947,535 francs from the military tax, and 3,322,822 francs from other taxes. Of the indirect taxes registration yields 506,221,100 francs, the stamp duty 170,295,200 francs, income from transferable securities 67,661,000 francs, the tax on stock-exchange operations 5,053,000 francs, import duties 382,884,000 francs, statistical dues 6,779,000 francs, navigation dues 7,667,000 francs, customs duty on salt 24,968,000 francs, various dues and

finer 5,925,190 francs, taxes on wine, cider, etc., 170,484,000 francs, tax on beer 23,723,500 francs, tax on spirits 268,733,000 francs, railroad taxes 54,083,500 francs, licenses for beverages 13,693,000 francs, various excise duties 74,435,500 francs, and the duty on sugar 192,463,500 francs. The revenue from Government monopolies and factories is made up of 392,885,900 francs from tobacco, 43,040,600 francs from matches and gunpowder, 230,196,200 francs from posts, telegraphs, and telephones, and 13,744,850 francs from other establishments.

The total expenditure for France was estimated for 1898 at 3,342,632,679 francs and Algerian expenditure at 71,147,857 francs, making the total budget 3,413,780,536 francs. Of the expenditure for France 1,247,832,789 francs are for the public debt, 13,313,737 francs for the President, Senate, and Chamber of Deputies, 19,397,710 francs for the Ministry of Finance, 35,039,533 francs for the Ministry of Justice, 15,239,800 francs for the Ministry of Foreign Affairs, 74,171,495 francs for the Ministry of the Interior, 603,684,297 francs for the ordinary and 25,867,100 francs for the extraordinary expenses of the army, 284,795,500 francs for the navy, 213,602,604 francs for the Ministry of Instruction and Fine Arts, 43,065,553 francs for the Ministry of Worship, 205,284,888 francs for the Ministry of Commerce, Industry, Posts, and Telegraphs, of which 170,252,211 francs are the working expenses of the post office and telegraphs, 88,030,868 francs for the Ministry of the Colonies, 28,767,268 francs for the Ministry of Agriculture, 195,157,494 francs for the Ministry of Public Works, 208,657,881 francs for the *régie* and collection of taxes, and 40,724,162 francs for repayments.

The national debt on Jan. 1, 1896, amounted to the capital sum of 31,094,356,744 francs, of which 22,005,373,951 francs represent the consolidated debt, 227,450,532 francs the Morgan loan, 3,936,491,000 francs redeemable debt, 3,371,429,015 francs annuities, etc., 1,143,607,551 francs floating debt, and 310,004,695 francs guaranteed debts. The debt charges in 1898 amounted to 1,247,832,789 francs, of which 693,680,314 francs were for the consolidated debt, 321,896,231 francs interest and amortization of redeemable loans, and 232,256,244 francs for floating debt.

The revenue of the departments amounted collectively to 273,527,833 francs in 1895, and the expenditure to 272,328,307 francs; departmental debts, 418,992,744 francs. The ordinary revenue of the communes of France for 1896 was estimated at the aggregate sum of 740,146,826 francs, and their expenditure at 705,590,038 francs; the sum of their debts in 1895 was 3,515,153,501 francs. The revenue of Paris was estimated for 1897 at 302,271,967 francs of ordinary and 42,119,660 francs of extraordinary receipts; debt, 1,769,000,000 francs.

THE ARMY.—The French army is composed of 145 divisional regiments of infantry, each of 62 officers and 1,591 men; 18 regional regiments, containing 51 officers and 1,560 men each; 30 battalions of chasseurs of 4 or 6 companies, each company containing 19 officers and 552 men; 4 zoneve regiments, each numbering 73 officers and 2,551 men; 4 regiments of Algerian tirailleurs, each having 103 officers and 2,632 men; 2 regiments of 5 battalions of foreign legionaries; 5 battalions of African light infantry; 13 regiments of cuirassiers, 21 of mounted chasseurs, 14 of hussars, and 6 of African chasseurs, each regiment containing 5 squadrons, with 37 officers, 792 men, and 722 horses; 3 regiments of spahis, 2 of 5 squadrons and 1 of 8 squadrons, and 1 regiment of Tunisian spahis; 8 remount companies, each of 299 men; 40 regiments of field artillery, comprising 428 mounted, 52 horse, and 16 mountain batteries, besides 4 mounted and 8 monn-

tain batteries in Algeria and Tunis; 16 battalions of foot artillery, each of 6 batteries; 4 batteries of foot artillery serving in Africa; 6 regiments of sappers and miners, containing 3 or 4 battalions, and 1 company of sapper conductors; 1 regiment of railroad sappers; and 20 squadrons of train, 12 of 4 and 8 of 3 companies.

The peace strength of the army, as fixed in the budget for 1898, was 546,044 men, including 26,402 officers, in France; in Algeria, 55,911 men, of whom 2,197 are officers; in Tunis, 13,458 men, of whom 552 are officers. The total number of horses is 142,038. Of the troops stationed in France 332,390, including 12,005 officers, belong to the infantry; 66,611, including 3,489 officers, to the cavalry; 80,482, including 3,880 officers, to the artillery; 12,155, including 460 officers, to the engineers; 8,668, including 361 officers, to the train; 11,846 to the administrative service; 3,222, including 373 officers, to the military schools; 1,959, of whom 1,709 were officers, were detailed; and 3,418 officers and 707 men belonged to the general staff, making the total strength of the army corps 512,152 men, including 20,195 officers. The total active army in France numbered 521,458 men, including 25,695 officers, besides which there were the gendarmerie, numbering 21,536, including 624 officers, and the Garde Républicaine, numbering 3,050, including 83 officers. In Algeria there were 378 officers and men on the general staff, 757 detailed among the troops, 36,865 infantry, 3,537 administrative troops, 7,643 cavalry, 2,584 artillery, 867 engineers, and 2,158 train; the total active army numbering 53,654, including 1,340 officers, and the gendarmerie 1,122 officers and men. In Tunis there were 91 on the general staff, 108 detailed, 8,842 infantry, 1,853 cavalry, 854 artillery, 340 engineers, and 696 train, the total active forces numbering 13,303, including 584 officers, and the gendarmerie 155. Deducting vacancies, sick, and furloughed, the present effective in 1898 was returned as 541,026 active troops and 25,790 in the gendarmerie and Garde Républicaine. The war effective of the active army and reserves is estimated at 2,350,000, besides which there is the territorial army of 900,000 and 1,100,000 territorial reserves, making the nominal military strength 4,350,000 men, of whom not more than 2,500,000 would be available.

The Navy.—The naval force afloat on Jan. 1, 1898, comprised 18 first-class, 10 second-class, and 9 third-class battle ships, 16 coast-defense vessels, 11 first-class, 14 second-class, and 2 third-class cruisers, 12 lookout vessels, 13 torpedo gunboats, and 119 first-class, 78 second-class, and 45 third-class torpedo craft. Of these, 2 battle ships, 11 first-class and 16 other cruisers, 2 lookouts, 6 torpedo gunboats, and 13 destroyers were unfinished. A new programme of construction has been proposed, involving the expenditure in eight years, beginning with 1898, of 721,816,000 francs, which will add to the navy 8 battle ships, 10 armored cruisers, 10 other cruisers, 10 destroyers, and 42 torpedo boats. The type of the "Charlemagne," with the heavy guns coupled in turrets, displacing about 12,000 tons, with 15½-inch side armor, engines of 14,000 horse power, designed to make 18 knots, and having an armament of 4 12-inch breech loaders, 10 5.5-inch quick firers, 8 more of 4-inch caliber, and 34 small ones, is chosen for the latest battle ship laid down at Brest. Of this class the "St. Louis," "Gaulois," and "Jena" have been launched. The new armored cruiser "Montcalm" and three sister ships now in hand will have a displacement of 9,517 tons, and three screws, giving a speed of 21 knots. Like these, the smaller "Dupleix," "Desaix," and "Kléber" will have both deck protection and side armor. One of the latest torpedo boats, the "Forban," shows a speed of over 31 knots.

The French navy was commanded in 1897 by 15 vice-admirals, 30 rear admirals, and 125 captains, with 1,782 other officers, and manned by 39,846 petty officers, seamen, etc., to which number about 1,000 were added in 1898.

Commerce and Production.—The production of wheat in 1896 was 110,742,316 hectolitres; of barley, 16,241,431; of oats, 92,033,398; of rye, 24,464,730; of buckwheat, 8,604,669; of corn, 10,721,936; of mixed grain, 4,130,481; of potatoes, 129,543,389 quintals; of sugar beet, 84,846,336; of other beets, 114,109,034; of colza, 595,441; of flax, 188,463; of flaxseed, 132,881; of hemp, 243,892; of hemp seed, 97,077; of tobacco, 262,480. The vintage was 44,044,279 hectolitres, but fell off in 1897 to 32,351,000 hectolitres. There were 2,849,658 horses, 569,312 mules and asses, 13,334,631 cattle, 21,190,603 sheep, 6,402,370 pigs, and 1,499,005 goats on Jan. 1, 1897. The production of cocoons in 1896 was 9,318,765 kilogrammes. The value of the mining products for 1896 was 345,289,311 francs. There were 28,019,893 tons of coal and lignite raised, and 3,679,767 of iron, while there were 2,003,860 tons of pig iron, 756,793 of manufactured iron, and 714,523 of steel made. The production of sugar in 1896 was 593,647 tons. Of alcohol 2,022,000 hectolitres were distilled.

The total value of the general commerce of 1896 was 4,929,000,000 francs for imports and 4,594,000,000 francs for exports. The value of the special imports was 3,799,000,000 francs, and of the special exports 3,401,000,000 francs. In 1897 the special imports amounted to 4,000,126,000 francs, and exports to 3,401,000,000 francs. The imports of food products in 1896 were 1,007,000,000 francs, and the exports 652,000,000 francs in value. The imports of raw materials were 2,174,000,000 francs, and exports 856,000,000 francs. The imports of manufactured goods were 618,000,000 francs, and exports 1,913,000,000 francs. The values of the principal imports in the special commerce of 1896 were as follow: Wool, 365,000,000 francs; wine, 293,000,000 francs; raw silk, 180,000,000 francs; coffee, 175,000,000 francs; coal, 174,000,000 francs; cotton, 167,000,000 francs; timber, 150,000,000 francs; oil seeds, 148,000,000 francs; cereals, 123,000,000 francs; hides and furs, 111,000,000 francs; flax, 62,000,000 francs; cattle, 58,000,000 francs; ores, 51,000,000 francs; silk goods, 50,000,000 francs; woolen goods, 45,000,000 francs; sugar, 44,000,000 francs; cotton goods, 38,000,000 francs. The values of the leading exports were as follow: Woolen goods, 294,000,000 francs; silk goods, 247,000,000 francs; wine, 242,000,000 francs; fancy articles, 161,000,000 francs; raw wool and yarn, 145,000,000 francs; cotton goods, 131,000,000 francs; linen cloth and garments, 99,000,000 francs; raw silk and yarn, 93,000,000 francs; metal wares and tools, 85,000,000 francs; leather, 83,000,000 francs; leather goods, 82,000,000 francs; cheese and butter, 82,000,000 francs; chemical products, 63,000,000 francs; skins and furs, 62,000,000 francs; spirits, 49,000,000 francs; sugar, 40,000,000 francs.

Of the general imports in 1896 the value of 1,516,000,000 francs came by sea in French ships, and 1,963,000,000 francs in foreign ships, making a total of 3,481,000,000 francs imported by sea, while 1,448,000,000 francs represent the trade over the land frontiers. Of the total value of the general exports 3,137,000,000 francs went by sea, 1,694,000,000 francs being carried in French, and 1,443,000,000 francs in foreign ships, while 1,457,000,000 francs went by land.

The imports of precious metals in 1896 were 266,107,602 francs, of which 159,147,520 francs were gold and 106,960,082 francs were silver. The exports of coin and bullion were 481,714,245 francs, of

which 286,743,155 francs were gold and 194,971,090 francs were silver.

The values imported from and exported to the principal foreign countries in the special commerce of 1896 are shown in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain.....	511,000,000	1,031,000,000
Belgium.....	282,000,000	501,000,000
Germany.....	308,000,000	340,000,000
United States.....	314,000,000	225,000,000
Algeria.....	197,000,000	218,000,000
Spain.....	288,000,000	100,000,000
Argentine Republic.....	213,000,000	56,000,000
Italy.....	127,000,000	115,000,000
Russia.....	181,000,000
Switzerland.....	180,000,000
India.....	168,000,000
Brazil.....	69,200,000

Navigation.—During 1896 there were 101,843 vessels, of 21,753,227 tons, entered and 102,891, of 22,385,657 tons, cleared at French ports. Of the total number entered 8,432, of 4,323,226 tons, were French vessels engaged in the foreign trade, of which 7,644, of 4,210,683 tons, carried cargoes and 788, of 112,543 tons, came in ballast; 19,766, of 10,374,025 tons, were foreign vessels, of which 17,451, of 9,865,925 tons, carried cargoes and 2,315, of 508,100 tons, were in ballast; and 73,645, of 7,055,976 tons, were French coasting vessels, of which 55,932, of 6,080,736 tons, carried cargoes and 17,713, of 975,240 tons, were in ballast. Of the total number cleared 9,122, of 4,810,734 tons, were French vessels in the foreign trade, of which 7,645, of 4,222,708 tons, carried cargoes and 1,477, of 588,026 tons, were in ballast; 20,124, of 10,518,947 tons, were foreign vessels, of which 13,176, of 6,041,952 tons, carried cargoes and 6,948, of 4,476,995 tons, were in ballast; and 73,645, of 7,055,976 tons, were coasting vessels, of which 55,932, of 6,080,736 tons, carried cargoes and 17,713, of 975,240 tons, were in ballast.

The French commercial navy on Jan. 1, 1897, consisted of 14,301 sailing vessels, of 390,394 tons, and 1,235 steamers, of 503,677 tons. Of the sailing vessels 266, of 142,588 tons, and of the steamers 174, of 263,051 tons, navigated the high seas, while 192 sailing vessels, of 20,288 tons, and 248 steamers, of 186,881 tons, were employed in European seas, and the rest in the coasting trade or in port service or the fisheries.

Communications.—The railroads of France have been constructed for the most part by companies with a Government guarantee on the condition that they shall become the property of the State at the end of a fixed period. The State in recent times has built lines that the companies would not undertake and afterward leased them to companies. It also operates a system comprising 1,700 miles. Local lines receive subventions from the Government or from the departments. The guarantees for four of the six great companies will come to an end in 1914 and for the other two in 1934 and 1935. All their properties will revert to the State between 1950 and 1960. The length of line in operation in 1896 was 23,500 miles, not including 2,519 miles of local interest. In 1895 there were 22,505 miles, built at a cost of 15,521,000,000 francs.

The post office in 1895 transmitted 760,708,000 internal letters, 39,899,000 registered letters and packets, 49,015,000 postal cards, and 951,267,000 newspapers, samples, etc., and in the international and transit service 147,397,000 letters, 2,268,000 registered letters and packets, 6,516,000 postal cards, and 136,683,000 newspapers, samples, etc.

The telegraph lines on Jan. 1, 1896, had a total length of 58,267 miles, with 197,307 miles of wire. There were 44,793,860 telegrams sent in 1895, of which 36,596,627 were internal, 5,379,917 interna-

tional, 1,391,601 in transit, and 1,425,715 official. In Paris there are 237 miles of pneumatic tubes.

The Dreyfus Affair.—The case of Alfred Dreyfus, captain of artillery detailed on the general staff, who was convicted of treason in December, 1894, and has since been kept in solitary confinement on the Île du Diable, Cayenne, gave rise to a controversy affecting the political, military, and judicial institutions of France, the social, economic, and religious divisions of the French people, the foreign relations of the Government, the course of domestic policy, and the fate of parties and statesmen. Dreyfus was arrested secretly on Oct. 14, 1894. His wife was intimidated into silence by Col. du Paty de Clam, so that it was two weeks before the public knew, through a newspaper that got the information from a leakage in the War Office, that an officer had been arrested. He was tried by court-martial with closed doors and sentenced to military degradation and imprisonment for life. The public was led to believe that he had been caught carrying on a treasonable correspondence with the military *attaché* of a foreign embassy, presumably that of Germany, that the proofs of his guilt were flagrant. The facts of the case were known scarcely to the ministers of the Dupuy Cabinet, except Gen. Mercier, who was so convinced of the guilt of Dreyfus that he controlled the proceedings of the court in a measure and influenced its judgment. There had been found a memorandum of military information, none of it very important—notes on a hydraulic gun brake, on covering troops and tactics of the coming autumn manœuvres, the firing manual, the dispatch of troops to Madagascar, and contemplated changes in the artillery. Where this was found, the military police never divulged. The officials who investigated the matter concluded that none but a staff officer possessed such a variety of information, and that none but an officer of artillery would employ the technical language in which one or two of the notes were couched. Col. Sandherr, the head of the intelligence department, had his suspicions directed soon to Capt. Dreyfus, the more readily because he was a Jew, studious, inquisitive, ambitious, taciturn, an object of dislike to his comrades. The handwriting resembled his, and the moral evidence deduced from his circulating among the bureaux seeking knowledge that would be valuable to a spy and from reports as to his private life and circumstances, which were not well founded, as it turned out afterward, carried conviction to the chief of the military police, who was one of the most prejudiced Anti-Semites in the army. The motive of avarice seemed to be wanting, for Dreyfus belonged to the family of Alsatian Jewish financiers who had acquired wealth in Chilian speculations, but this fact inclined his fellow-officers to judge him the more harshly, imbued as they generally were with the peculiar form of Anti-Semitism developed in France, where Jewish capitalists are few, but very wealthy and powerful, and are distrusted not alone because they have acquired control of the Bank of France and the railroads and great influence over the Government of the republic, but because at the same time they have enormous interests and family and business connections in other countries and are believed to have the power and the inclination to shape domestic and foreign policy so as to serve the purposes of international finance.

The proceedings of the Dreyfus court-martial, when they became known little by little to leading statesmen, impressed some of them, especially jurists, like ex-Minister Trarieux, with doubts as to the sufficiency of the evidence. There was the *bordereau* of notes and the indirect evidence as to the condemned man's habits and character. As to the

bordereau, which was the only material evidence, nothing connected it with him except the similarity of handwriting. Five experts gave testimony, of whom two declared that the writing was not that of Dreyfus, three that he had written the *bordereau*, but of these latter two held that he had written it in a disguised hand, introducing strokes and features essentially different from his own, though no motive was apparent for such a proceeding, and one put forward a theory that he had traced or copied each word from other documents written by a person whose writing resembled his own. Dreyfus from his island prison wrote piteous letters to his wife and family, adjuring them to spare no efforts to establish his innocence and save his honor. His brother Mathieu spent half his fortune in endeavors to reopen the case. The officials of the War Office became more and more stubborn in resisting the proposal of revision, more emphatic in their con-

justice; jurists and lovers of freedom that arbitrary military power should override the barriers protecting the life and liberty of the individual. On the other hand, Clericals, Monarchists, Boulangists, some of the Radicals and Socialists, all those who believed that the republic was undermined by financial corruption or that it had rendered France weak through its rulers' incapacity and want of authority, and who looked to the army to establish a more authoritative *régime*, made a political issue of the Dreyfus case and by an abusive press campaign stirred the passions of the multitude against all who favored a retrial by tales of an international Jewish syndicate for the deliverance of Dreyfus, of foreign political machinations to insult and demoralize the army. The indictment presented against Dreyfus in November, 1894, as drawn up by Major Bexon d'Ormescheville, intimated that Germany was the foreign power to which he had sold mili-

PRISON OF CAPT. DREYFUS, ON ILE DU DIABLE, COAST OF FRENCH GUIANA.

victions of the prisoner's culpability. In answers to interpellations and in semi-official notes in the press it was hinted that there were grounds for their belief more certain than the evidence of the *bordereau*. Inquiring statesmen were told in confidence that the verdict was not only just, but well founded, because secret documents carrying absolute proof were shown to the judges in their chamber, documents which for reasons of state could not be produced in the courtroom, even behind closed doors. This staggered jurists still more than the idea that hasty and prejudiced military men, unskilled in weighing evidence, had convicted an innocent man. The logical French mind, wedded to legality and the safeguards of liberty, was disturbed at the thought that any one could be convicted in a French court on evidence with which the accused was not confronted and which he and his counsel had no opportunity to rebut. Patriots were annoyed at the thought that fears of war or foreign complications should interfere with the course of French

tary secrets, mentioning as a suspicious circumstance his visiting relatives in Alsace without the interference of the German authorities. Premier Méline and Gen. Billot, when the agitation became violent for and against revision toward the close of 1897, took the ground that the matter was *chose jugée*, not subject to discussion or appeal except in the improbable case of new evidence being discovered, denouncing those who asked for a rectification of the judicial irregularities as assailants of the authority of the law and the honor of the army.

Some of the documents and facts that left no doubt in the minds of the army chiefs of the guilt of Dreyfus, but which they refused to publish, were letters of Col. von Schwarzkoppen to the Italian *attaché*, Col. Panizzardi, found in the early part of 1894, one of which referred to a person designated by his initial D. as having brought "a number of very interesting things," another to plans of one of the French fortresses furnished by the "Commaile de D." Another, dated in November, 1895,

in reference to a coming interpellation on Dreyfus in the French Chamber, contains a warning from one diplomatist to the other to say, if questioned, that he never had any relations with this Jew. There was the fact that Dreyfus when ordered to copy the *bordereau* previous to his arrest trembled and was unable to finish, pleading numbness. More convincing were the confessions that Dreyfus is said to have made on the day of his degradation. Capt. Lebrun-Renaud reported him as saying that if he handed over documents to the foreigner it was as a bait to get more important ones, that they were copies, not original documents, and that the minister knew his motive. To Capt. d'Attel he is reported to have said that what he handed over was worth nothing, and if he had been left alone he would have had more in return. Doubt was thrown on these confessions by the statement of Major Forzinetti that Capt. Lebrun-Renaud told him at the time that Dreyfus would not confess, and by the fact that Capt. d'Attel died without reporting a confession, the report coming from a friend who conversed with him at the time. Both confessions, therefore, seemed like afterthoughts.

The *bordereau*, which formed the material evidence against Dreyfus, was believed to have been delivered to the military authorities by an Alsatian porter in the employ of Col. Von Schwarzkoppen, the German military *attaché*. Lient.-Col. Picquart, chief of the intelligence bureau, who had presented the proofs against Dreyfus in 1896, came upon a telegram indicating a treasonable correspondence between Major Walsin Esterhazy, an infantry officer, and the German *attaché*. Getting hold of letters written by Esterhazy, he was struck with the resemblance of the writing to that of the Dreyfus *bordereau*. Pursuing his inquiries, he found that Esterhazy had taken pains to obtain the very information contained in the *bordereau*. Mathieu Dreyfus, M. Scheurer-Kestner, Vice-President of the Senate, whom he interested in the matter, and others besides Col. Picquart, became convinced that Major Esterhazy, not Dreyfus, was the traitor and the author of the *bordereau*. The handwriting was more like his—so much so that when confronted with a facsimile he declared that Dreyfus had imitated his hand. Esterhazy, by his antecedents, character, and circumstances, was a more likely subject for treasonable practices under pecuniary temptations, and the indications appeared stronger when letters of his were found in which he reviled the army and its generals, and expressed a wish to be a Prussian Uhlan and kill hosts of Frenchmen. Mathieu Dreyfus had his suspicions directed to Esterhazy by a broker who had done business for the latter, and who recognized in a facsimile of the *bordereau* printed in a newspaper the exact characteristics of Esterhazy's handwriting. While Col. Picquart was investigating the case against Esterhazy he was dismissed from his post and sent on an insignificant detail to Algeria, Col. Henry taking his place at the War Office. The chiefs at the War Office afterward said that Picquart was sent away because he occupied himself too much with the Dreyfus case. He was ordered to the frontiers of Tunis, but the general commanding the district would not allow him to proceed, on account of the danger. While he was away he learned from Col. Henry that he was charged, not only with opening Esterhazy's letters in the post, but with attempting to suborn two officers to say that a letter incriminating Esterhazy was written by the German Emperor, and with having abstracted the document from the secret *dossier* which fell into Esterhazy's hands. He also received mysterious telegrams purporting to come from a female friend, who, using the familiar nicknames of their private correspondence, let him know

that his forgery of the document incriminating Esterhazy had been discovered. Col. Picquart, on receiving confirmation from his superiors of the charges against him, placed his interests in the care of an advocate, M. Leblois.

Major Esterhazy said that he had first been informed of the investigations of Col. Picquart by a mysterious veiled lady, who made an appointment with him and gave him a copy of one of the secret documents relating to Dreyfus in the *dossiers* of the War Office, which he delivered up again to the Minister of War. On a denunciation lodged by Mathieu, Major Esterhazy was tried by court-martial in January, 1898, on the charge of dealing with a foreign power or its agents to incite them to commit hostilities against France, or to procure the means of so doing. The trial was determined on by the Council of War in spite of the report of Gen. Ravary censuring Lient.-Col. Picquart and denouncing the proceedings as aiming at a revision of the Dreyfus trial. It was held expressly by reason of the directness of the accusation and of the sensation caused by it in public opinion. After one public sitting at which nothing was elicited except the denials of Esterhazy one was held behind closed doors, at the end of which the court unanimously found that the accused was not the author of the *bordereau* nor guilty of treason. The experts who had testified in 1894 that the *bordereau* was in the handwriting of Dreyfus, now gave as their opinion that Dreyfus had prepared it by tracing the separate words from documents written by Esterhazy. After the trial Lient.-Col. Picquart was placed under arrest. The result of the secret trial of Esterhazy was to redouble the sensation which it was held to appease. Émile Zola, the novelist, printed an open letter to the President of the republic in which he accused Lient.-Col. du Paty de Clam of having been the author of the original judicial error committed in the conviction of Capt. Dreyfus and of having afterward bolstered up his pernicious work by absurd and culpable machinations. The chiefs of the general staff—Gen. Mercier, Gen. de Boisdeffre, Gen. Gonse, and Gen. Pellieux—with Major Ravary and other subordinates, were charged with being accomplices in the conspiracy against Capt. Dreyfus, and the Minister of War, Gen. Billot, with having in his hands certain proofs that the convicted man was innocent at the time when he pledged his honor in the Chamber that he believed him guilty, the motive being a purely political one, that of shielding the general staff from the consequences of the first miscarriage of justice. The first court-martial, M. Zola declared, committed an illegal act, though acting, no doubt, in good faith, by convicting an innocent man on the strength of a document which was kept secret; the second court-martial screened the illegal act committed by the first by knowingly acquitting a guilty man in obedience to orders. He challenged the persons whom he accused to bring him before the assize court and give him an opportunity to prove his charges in the light of day. A petition signed by many scholars and professional men of eminence called on the Government to order a revision of the Dreyfus trial on account of the violation of judicial forms and the mysteries in which it was enveloped. The Minister of Justice ordered the prosecution of M. Zola and the publisher of the newspaper "Aurore," on the complaint of the Minister of War, acting in behalf of the military personages attacked. M. Cavaignac in the Chamber interpellated the Government, asking for publication of the declarations of Dreyfus to Capt. Lebrun-Renaud, so that men of good will might find in them the necessary elements of conviction. Student demonstrations in Paris against Zola and the Jews were followed by

Anti-Jewish riots in Nantes and other French towns and more serious ones in Algeria. When the Cavaignac resolution was discussed insults and blows were exchanged between Clericals and Socialists. M. Méline acknowledged the existence of a document containing a confession of Dreyfus, but refused to produce it lest it should be discussed and the *chose jugée* called in question. The judgment was the legal truth, which he appealed to all good Frenchmen to accept in deference to the authority of justice. He gave warning that the coming Zola trial would not be transformed into a revision of the Dreyfus affair, endangering the domestic peace, the military power, and the good repute of France abroad; the jury would simply have in charge the defense of justice and of the army. The Chamber sustained the Government in upholding the inviolability of the *chose jugée* by the great majority of 376 to 133. The prosecution of M. Zola and the "Aurore" for defamation was based on the following passages in his letter, a single item in his long and detailed arraignment:

"A court-martial has, in obedience to orders received, dared to acquit M. Esterhazy—a supreme rebuff dealt at all truth and justice. It is over. France bears on her cheek this stain. History will write that it was under your presidency that such a social crime was possible.

"They have brought in an iniquitous verdict which will forever weigh upon our courts-martial, which will sully with suspicion all their decisions. The first court-martial may have been unintelligent; the second is necessarily criminal.

"I accuse the second court-martial of having screened this illegality by order, by committing, in its turn, the judicial crime of knowingly acquitting a culprit."

M. Zola summoned over a hundred witnesses, including the members of the Government and the military authorities who were in office during the trial of Dreyfus. M. Delegorgue, the president of the court, would not allow any questions to be put regarding the prosecution of Dreyfus. Women who had trafficked in the secrets of the War Office remained away on the plea of illness. The generals, in full uniform, were allowed to impress the jury with the necessity of a conviction to save the dignity of the army. Gen. de Pellieux said that if they deprived the soldiers of their confidence in their chiefs they would be sending their sons to a butchery in the day of danger, which was nearer, perhaps, than they supposed. M. Labori, counsel for the defense, protested that there was no question of attacking the army or the courage of its officers. Gen. De Pellieux quoted the letter supposed to have been found in 1896 in the waste-paper basket of a military *attaché*, in which the latter mentioned Dreyfus by name, and cautioned his colleague never to speak of the relations they had had with that Jew. Gen. Gonse said that there were other documents too delicate to be brought there. Gen. de Boisdeffre warned the jury, as representing the nation, that if the nation had not confidence in the chiefs at the head of the army, who organize the national defense, those chiefs were ready to leave the task to other men.

This threat of the resignation of the general staff had a profound effect on the jury, and not less so the rulings of the judge, who refused the counsel the right to interrogate the generals, refused Lieut.-Col. Picquart the right to summon other distinguished generals to clear his character from the aspersions of his superiors. The jury found the defendants guilty, and the court imposed the maximum penalty, a year's imprisonment and 3,000 francs fine on Zola, and the same fine and three months' imprisonment on M. Perreaux, the publisher

of his letter. The verdict, which was delivered on Feb. 23, the trial having taken fifteen days, was received with frantic exultation by the public in the courtroom, who had freely carried on hostile demonstrations against the chief defendant during the proceedings, and they dispersed in tumult, acclaiming Esterhazy, who had refused to answer M. Labori, as a hero, and while shouting for the army and the generals, mishandling the few who cried "Vive la République." On an interpellation of M. Hubbard, Radical, regarding the attitude of the subordinates of the Government during the trial, the Government was sustained by a vote of 416 to 41, M. Méline having declared the army to be the respectful servant of the nation and the law. M. Zola appealed from the judgment on the ground of the irregularity of its proceedings, and on the technical ground that the Council of War, not the minister, should have lodged the complaint. The Court of Cassation quashed the judgment on this latter ground, holding that a military court is a permanent tribunal, and the sole judge of its own honor. A new indictment was framed so as to exclude all reference to the Dreyfus case or the secret documents, being based on one clause only of Zola's letter, the following words:

"A court-martial, acting under orders, has dared to acquit an Esterhazy, a blow at justice and truth."

The venue was changed to Versailles, and the date of trial was postponed till after the elections. The case was called on May 23, but M. Zola demanded to be tried before a Paris jury. The Court of Cassation denied the appeal, and the trial was opened on July 15. M. Perivier, the presiding judge, ruled so stringently against enlarging the scope of the inquiry that M. Zola and his counsel declined to proceed, and allowed judgment to go by default. The defendants were again condemned to undergo the maximum punishment. Lieut.-Col. Picquart, who meanwhile had fought a duel with Lieut.-Col. Henry and wounded his antagonist, was tried by court-martial and retired from the army, in which he was the youngest officer of his grade. Major Esterhazy challenged him, too, but with the man whom he believed to be a traitor he would not fight. Lieut.-Col. Picquart was not tried for forgery, and all the other charges fell through, except that of communicating to his lawyer his correspondence with Gen. Gonse relative to the Esterhazy affair, which was adjudged a breach of discipline.

The military authorities were finally led to take cognizance of the rumors of treasonable relations that Major Esterhazy had entertained with Col. Schwarzkoppen, the former German *attaché*, and he, to escape arrest, fled the country, after having been dismissed from the army with Col. du Paty de Clam, who was supposed to have concocted with him the plot against Col. Picquart and sent the suspicious telegrams.

When M. Cavaignac's speech reciting the documents that gave absolute proof of the guilt of Dreyfus was placarded in all the communes of France, Col. Picquart wrote a letter to the Minister of War, undertaking to prove that the first two documents had nothing to do with Dreyfus, and that the third was a forgery. About the same time a careful examination of this last document was instituted at the War Office, and it was discovered that the blue paper on which it was written was different from that used by Col. von Schwarzkoppen. The discovery of one forgery threw doubt upon other papers which had carried conviction to the heads of the Government and of the army, but which never had been made public. In the pigeonholes of the Ministry of War were said to be some letters signed by the name of the German Emperor, mentioning the

services of Dreyfus, but these had long been suspected to be forgeries.

This new development rendered more doubtful than ever the justice of Dreyfus's condemnation. That letter of 1896 in which he was mentioned by name, which had been the most convincing evidence of his guilt to the officers of the general staff and had removed all doubts from the mind of M. Cavaignac, was subjected to further tests, and found to be a document composed of scraps of different colored paper joined together. The wording of the document, and also the handwriting, showed additional indications that it was a forgery. Lieut.-Col. Henry, its suspected author, was arrested in the beginning of September, and under the examination of M. Cavaignac he broke down and confessed that he had fabricated the entire letter. He said that his chiefs were much disturbed and he wanted to quiet them, to restore tranquillity to their minds, so that they might be better prepared if war should come; that he acted for the good of the country. The documents of 1894 he had altered and put dates to. Henry killed himself in prison on Aug. 31 without making any more revelations. The confidence of statesmen and of the public in the justice of the Dreyfus judgment in spite of its illegality melted away. The press veered about and demanded revision. Mme. Dreyfus made an application for a new trial on the ground of a fresh incident such as the law calls for, and the Government placed the matter before the Court of Cassation, which granted the demand and decided to try the case itself instead of referring it to another court-martial. A commission was sent in November to take the deposition of Alfred Dreyfus in the Île du Diable. Gen. de Boisdeffre and Gen. Mercier resigned from the general staff, with others who resisted revision to the last.

The action of Col. Picquart in publicly challenging the documents cited by M. Cavaignac was followed by his arrest on the criminal charge of having communicated secret documents, presumably the charge which was not proved against him at the court-martial, of showing the contents of the secret dossier to M. Leblois, his lawyer. He was put into prison on July 13. While there he prepared at the request of M. Brisson a statement of all he knew about the Dreyfus case. When he was brought up for trial on Sept. 21 the military authorities intervened, and he was handed over to them to be tried by a military tribunal, presumably on the charge of having forged the letter implicating Esterhazy. As he was being led away to solitary confinement in a fortress he exclaimed that if he was found dead in his cell, as Henry was, it would not be a suicide, but an assassination.

The Elections.—Parliament was convened on Jan. 11. M. Brisson was re-elected president of the Chamber by 283 votes to 59. After the budget was voted both houses adjourned on April 7. The work of the expiring Parliament included the reform of criminal investigation, the protection of children, benefit societies, workmen's pensions, industrial accident insurance, and succession duties. The general elections were held on May 8. A small number of candidates of the old monarchical parties came forward. Most of the former royalists and imperialists now appeared frankly as republicans, mostly supporters of the Méline Cabinet, whose opponents were the Radicals and Socialists of all shades, advocates of an income tax and of a revision of the Constitution curtailing the powers of the Senate. The ephemeral Nationalist party (composed of the elements that once adhered to Boulanger), making capital of the Dreyfus case, denounced foreigners as exercising deleterious influence on the national character and interests, and sought elec-

tion as champions of the army. The first ballot promised but a slender majority for the Government. The second ballot took place on May 22. The final result gave the Cabinet a majority of only 12, including the Rallied Republicans. The new Chamber contained 253 Moderate Republicans, 38 Rallied, 44 Conservatives, 104 Radicals, 107 Socialists, 20 Anti-Semites, and 15 of uncertain views, two thirds of whom were probable supporters of the Government. At the opening of the session on June 1 the ministry won a dubious victory by the election of Paul Deschanel as provisional president of the Chamber by 282 votes to 278 for Henri Brisson. M. Lebon, who had lost his seat, resigned the post of Minister of the Colonies. He was confirmed by a majority of 10. The Government was dependent on the support of the monarchists, and, on an interpellation on its general policy on June 14, mustered a majority of only 12, including the ministers themselves. This vote was a virtual defeat, inasmuch as the Chambers insisted on adding an amendment of the Radicals, accepted with a bad grace by M. Méline at the last moment, confiding in the Government's efforts for Democratic reforms by a union of Republicans only on the condition of its relying on a majority exclusively Republican. The Right naturally rejected the amendment, which was carried by Radical votes. In accepting it, after first refusing, M. Méline adopted a policy of Republican concentration, necessitating a thorough reconstruction of the Cabinet, if he desired to retain office. Having broken with the right, he still did not see his way to a coalition with the Left, and consequently decided on the following day to resign with his colleagues. He firmly declined M. Faure's invitation to form a new ministry.

The Brisson Cabinet.—The Méline Cabinet was the longest-lived of any under the third republic, having lasted over two years. Its chief mission was to develop the policy of protection for French agriculture and industry, of which its head was the leading exponent. In seeking a successor to M. Méline, the President of the republic first asked M. Ribot, chief of the Progressive party, the most numerous group of the Chamber, comprising the bulk of the Moderate Republicans, to form a ministry of conciliation. After M. Ribot had failed to effect conciliation with the Radicals, M. Sarrien, one of the least aggressive of the latter, endeavored to frame a programme on which both wings of the Republicans could unite. M. Peytral, another Radical, who was not an uncompromising advocate of the reform of the Senate and the progressive income tax, next attempted to form a Cabinet of union, but the advanced Radicals declined to support his efforts or to agree to any compromise with the Moderates. Hence, after the crisis had lasted two weeks, M. Faure turned to a representative Radical, M. Brisson, who, on June 28, organized a homogeneous Cabinet, as follows: President of the Council and Minister of the Interior, Henri Brisson; Minister of Finance, Paul Peytral; Minister of Education, Léon Bourgeois; Minister of Justice, Ferdinand Garrien; Minister of War, Godefroy Cavaignac; Minister of Marine, Édouard Simon Lockroy; Minister of Foreign Affairs, Théophile Delcassé; Minister of the Colonies, Georges Trouillot; Minister of Commerce, Émile Marnéjols; Minister of Agriculture, Albert Viger; Minister of Public Works, Senator Tillaye. The new Premier, in reference to the incidents of the Dreyfus agitation which had brought about the electoral defeat and the downfall of the Méline ministry, promised to uphold the supremacy of the civil power over the military, to insure freedom of discussion in the Chamber, and to defend with energy the inde-

pendence of law and society against attempted encroachments. He announced the Cabinet's intention to carry out the democratic desires of the people, as expressed in the elections. The Government programme embraced two principal reforms, one fiscal and the other social, the first through a special bill replacing the taxes on personality and realty by a graduated income tax, the second by means of retiring-pensions for working people. The new Government also proposed to settle the question of the succession duties, to reform the liquor laws, to create chambers of agriculture and loyally carry out the economic system of protection to industry and agriculture, to curb the speculation which is injurious to production, to expedite preparations for national defense, and to settle the question of a colonial army and of emigration to the colonies.

After the Henry episode the question of the revision of the Dreyfus sentence brought about the fall of the Brisson Cabinet by a coalition of the Moderates, the Rallied, the Monarchists, and the Nationalists. M. Cavaignac held out against revision, and finally resigned, and was succeeded by Gen. Zurlinden, who also opposed revision. M. Brisson and the Minister of Justice were determined to have the Dreyfus case reopened, if possible, and consequently Gen. Zurlinden resigned. The Minister of Justice then placed the matter before the Court of Cassation. The prosecution of Col. Picquart was compassed by Gen. Zurlinden after he left the Cabinet. Gen. Chanoine accepted the portfolio of Minister of War, but on account of a difference of opinion with the Premier as to the proceedings against Lieut.-Col. Picquart he also resigned during the recess of Parliament. The Radical and Socialist newspapers expressed suspicions of a military plot to overthrow the Government. When the Chamber reassembled on Oct. 25 the public were in a fever of excitement, and when the anti-revisionist, M. Déroulède, assailed the Government from the tribune, Gen. Chanoine suddenly offered his resignation as Minister of War to the Chamber. The Prime Minister was compelled by the extraordinary action of Gen. Chanoine to ask the adjournment of the discussion until the vacant post could be filled. Premier Brisson accepted an order of the day affirming the supremacy of the civil power, and it was carried by a majority of 13 votes. Demands were made, however, that the campaign against the army must cease, and when M. de Mahy offered a resolution demanding that the Government put an end to the insults to the army, it was adopted by a vote of 296 to 243. The ministry thereupon drew up a resolution to the effect that the Chamber was confident that the Government would take the necessary measures to prevent the campaign against the army, and this was defeated by 286 votes to 234. The ministers then left the House in a body and presented their resignations to President Faure. The fall of the Cabinet was followed by disturbances in the streets, created mainly by the Anti-Semites, which the police had difficulty in quelling.

The Dupuy Cabinet.—The presidents of the Chambers and party leaders urged upon M. Faure the formation of a Cabinet of Republican union, excluding the Right. M. Dupuy was commissioned to form a ministry. On Oct. 31, two days after the Court of Cassation had ordered the revision of the Dreyfus trial, the list was published as follows: Premier and Minister of the Interior, Charles Dupuy; Minister of Foreign Affairs, Théophile Delcassé; Minister of War, Charles de Freycinet; Minister of Marine, Édouard Simon Lockroy; Minister of Finance, Paul Peytral; Minister of Public Instruction, M. Leygues; Minister of Jus-

tice, M. Lebreton; Minister of Commerce, Paul De-
lombre; Minister of Public Works, Camille Krantz; Minister of the Colonies, M. Guillaumet; Minister of Agriculture, Albert Viger.

The ministerial declaration affirmed the supremacy of the civil power and expressed confidence in the army, which would not be left exposed to a campaign of insult. Justice also should be respected, and the Government would insure the execution of its decisions. The Government would prepare for the universal exhibition of 1900, and strive to strengthen the international position won for France by her loyalty, strength, and love of peace, and consecrated by a valuable alliance. A Cabinet of union among Republicans, the Government relied on a majority of Republicans pursuing Democratic, but not Utopian, objects. The fiscal measures announced included the substitution for the personal and household impost of a tax based without vexation or inquisition, on the external signs of wealth, and graduated so as to insure large remissions to the small taxpayers. The drink duties would be reformed. The passing of a workmen's superannuation bill for town and country was regarded as a social duty. For the benefit of agriculture, measures were promised for the organization of agricultural credit and insurance and the development of small holdings. The Chamber by 429 votes to 64 approved the intention of the Government to pursue a policy of reforms by relying solely upon a Republican majority.

Commercial Treaties.—After eight months of negotiations, a commercial convention was concluded with the United States, which was duly ratified and proclaimed by President McKinley on May 30, 1898. It was the first commercial treaty made under the provisions of the Dingley tariff bill giving the President power to suspend duties on a limited list of articles in exchange for reciprocal and equivalent reductions in favor of products and manufactures of the United States. As the result of the agreement France reduced her rates one half on American pork and lard and lard compounds, and imposed the minimum rates on fruits and timber, while the United States reduced the tariff rates about 20 per cent. on argols, brandies, still wines, vermouth, works of art, and some other articles.

The Fashoda Question.—The fall of the Brisson Cabinet occurred at the moment when the controversy with England regarding the presence of Capt. Marchand at Fashoda reached its most critical stage. The Egyptian Government, under English dictation, had in 1884 unwillingly abandoned to the Mahdists the annexed provinces in the Soudan and Equatorial Africa. In the treaties with Germany in 1890, and Italy in 1891, England obtained a recognition from those powers of the whole valley of the upper Nile as a British sphere of influence. France protested, and in 1890 organized the Liotard mission for the purpose of extending the French posts on the Congo and its tributaries up the Ubangi and into the Bahr el Ghazal valley so as to secure an outlet on the Nile. In 1893 Great Britain protested against the occupation of any part of the Nile valley by France while negotiations regarding their respective rights were proceeding. When, by the agreement of May 12, 1894, England leased the bank of the upper Nile as far north as Fashoda to the Congo State, France declared the convention of no effect, England not being in effective occupation of these territories, and prevailed upon the King of the Belgians to renounce the intention of occupying the left bank between Lado and Fashoda. In 1896 Capt. Marchand set out with a party of 7 other Frenchmen and 160 trained soldiers from Timbuctu to extend M. Liotard's line of stations down the
